Lem-n-oil

Particular description of goods.—Shampoos.
Claims use since June 1, 1921.

168,031. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) JACQUES KREISLER & CO., New York, N. Y. Filed May 12, 1922. Serial No. 163,757.

PLATINUM-KLAD 14 KT. JK CORE

Particular description of goods.—Chains for Personal Adornment.
Claims use since about Mar. 1, 1922.

168,032. (CLASS 37. PAPER AND STATIONERY.) WESTFIELD RIVER PAPER COMPANY, New York, N. Y. Filed Mar. 17, 1923. Serial No. 177,641.

PAPERGLAS

Particular description of goods.—Wrapping and Transparent Paper.
Claims use since the year 1918.

168,033. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AMERICAN BLEACHED GOODS COMPANY, INC., New York, N. Y. Filed Feb. 24, 1923. Serial No. 176,527.

Particular description of goods.—Cotton Piece Goods.
Claims use since on or about Mar. 15, 1921.

168,034. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AMERICAN BLEACHED GOODS COMPANY, INC., New York, N. Y. Filed Feb. 24, 1923. Serial No. 176,523.

Particular description of goods.—Cotton Piece Goods.
Claims use since on or about Jan. 31, 1921.

168,035. (CLASS 2. RECEPTACLES.) THE NATIONAL GRAVE VAULT CO., Galion, Ohio. Filed Jan. 29, 1923. Serial No. 175,263.

Particular description of goods.—Grave Vaults.
Claims use since Mar. 1, 1922.

168,036. (CLASS 38. PRINTS AND PUBLICATIONS.) ORAZIO POLIZZI, New York, N. Y. Filed Jan. 23, 1923. Serial No. 174,951.

Particular description of goods.—Picture Postal Cards.
Claims use since Aug. 16, 1921.

168,037. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FLORENCE N. LEWIS, doing business as Elizabeth Arden, New York, N. Y. Filed Jan. 11, 1923. Serial No. 174,462.

Savon Kenott

Particular description of goods.—Dentifrice.
Claims use since Aug. 8, 1916.

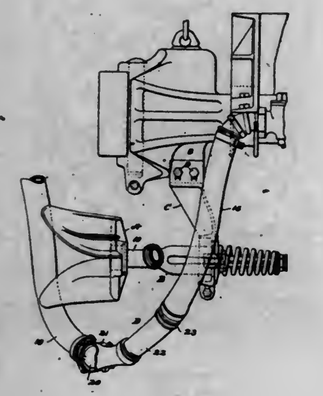
REISSUES.

MAY 8, 1923.



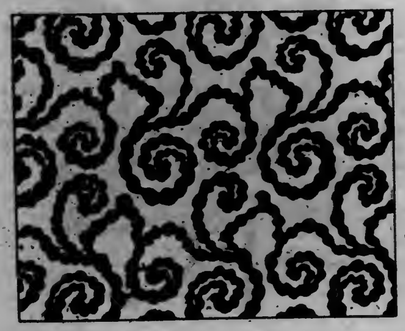
15,595. ADJUSTABLE DRAINAGE FITTING FOR WATER CLOSETS, ETC. JACKSON A. BENNETT, Los Angeles, Calif. Filed Jan. 5, 1923. Serial No. 610,933. Original No. 1,410,526, dated Mar. 21, 1922, Serial No. 407,944, filed Sept. 3, 1920. 8 Claims. (Cl. 137—75.)

4. A drainage fitting for water closets comprising a series of inclined pipe sections, and couplings uniting and maintaining said sections in alignment, each coupling being formed with a laterally disposed receiving chamber closed by a front wall having a vertically disposed elongated opening therein, whereby water closet nipples extended through the respective openings may be maintained in horizontal alignment irrespective of the inclination of the pipe sections.

15,596. AUTOMATIC TRAIN-PIPE CONNECTOR. JOSEPH V. ROBINSON, Santa Monica, Calif. Filed Oct. 30, 1919. Serial No. 334,567. Original No. 1,245,799, dated Nov. 6, 1917, Serial No. 866,825, filed Oct. 15, 1914. 9 Claims. (Cl. 285—58.)

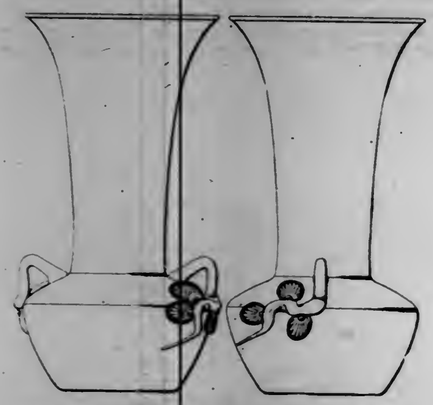
1. In an automatic train pipe connector, the combination of a coupling head, a conduit leading from said head, a hose for conducting pressure fluid, means for connecting said hose to said conduit so as to provide a substantially straight passage for the flow of pressure fluid from one of said parts to the other, an interchange coupling and means for connecting said coupling and hose so as to provide a substantially straight passage for the flow of pressure fluid from one of said last named parts to the other.

DESIGNS.



MAY 8, 1923.

62,315. COMBINED BOTTLE AND CAP. PIERRE BASSLER, New York, N. Y., assignor to Houbigant, Inc., New York, N. Y., a Corporation of New York. Filed June 13, 1922. Serial No. 2,660. Term of patent 14 years.



The design for a combined bottle and cap substantially as shown.

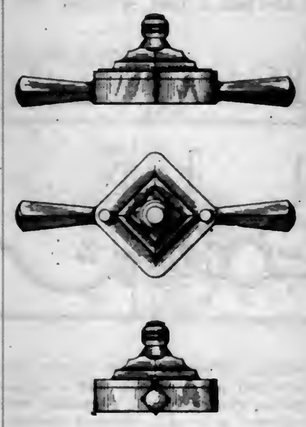
62,316. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Nov. 23, 1922. Serial No. 4,386. Term of patent 7 years.

The ornamental design for a textile fabric as shown.

62,317. VASE. FREDERICK CARDER, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed May 11, 1922. Serial No. 2,186. Term of patent 3½ years.

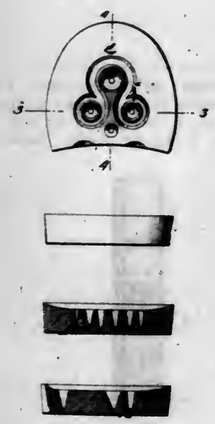
The ornamental design for a vase, as shown.

62,318. BOTTLE. FRANCOIS JOSEPH DE SPOTURNO COTY, Paris, France. Filed June 14, 1922. Serial No. 2,680. Term of patent 14 years.



The ornamental design for a bottle substantially as shown.

62,319. BRACE FOR LIGHTING FIXTURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Apr. 20, 1922. Serial No. 1,861. Term of patent 7 years.



The ornamental design for a brace for lighting fixture, as shown.

62,320. RADIATOR CAP. WILLIAM L. DAVIS, Dayton, Ohio. Filed Apr. 10, 1922. Serial No. 1,682. Term of patent 3½ years.

The ornamental design for a radiator cap, as shown.

62,321. SHOE HEEL. FRANK G. DELBON, Brooklyn, N. Y. Filed Feb. 24, 1922. Serial No. 876. Term of patent 7 years.

The ornamental design for a shoe-heel, as shown.

62,322. BUTTON, EMBLEM, BADGE, PIN, OR SIMILAR ARTICLE. JOSEPH J. DI NATALE, New York, N. Y. Filed July 12, 1922. Serial No. 3,045. Term of patent 3½ years.

The ornamental design for a button, emblem, badge, pin, or similar article, as shown.

62,323. HOLDER FOR SPECTACLES, EYEGLASSES, AND THE LIKE. LOUIS FARBER, Yonkers, N. Y. Filed June 20, 1922. Serial No. 2,748. Term of patent 3½ years.

The ornamental design for a holder for spectacles, eyeglasses, and the like as shown.

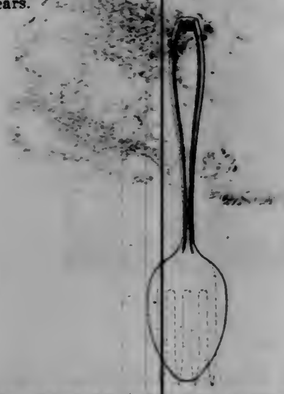
62,324. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,687. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown.

62,325. TEXILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,688. Term of patent 3½ years.

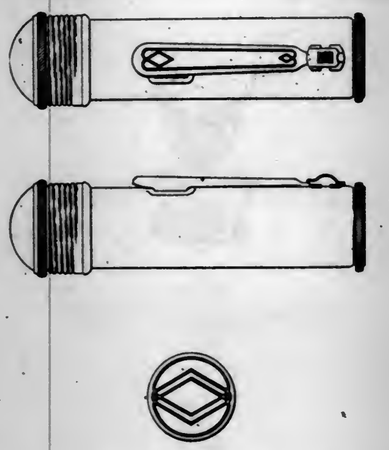
The ornamental design for a textile fabric, substantially as shown.

62,326. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,689. Term of patent 3½ years.



The ornamental design for a textile fabric, substantially as shown.

62,327. TEXTILE FABRIC. GUSTAVE M. FAUSER, Ardsley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,690. Term of patent 3½ years.



The ornamental design for a textile fabric, substantially as shown.

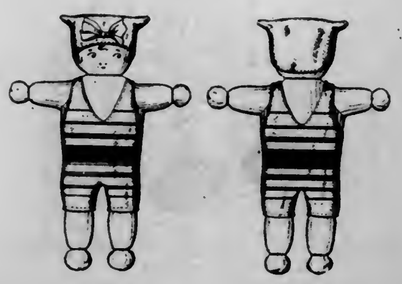
62,328. SPOON OR SIMILAR ARTICLE. HENRIK HILLBOM, Wallingford, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed May 2, 1922. Serial No. 2,038. Term of patent 7 years.

The ornamental design for a spoon or similar article, as shown.

62,329. FLASH LIGHT. GUSTAF I. JOHNSON, Malden, Mass. Filed Feb. 21, 1922. Serial No. 816. Term of patent 3½ years.

The ornamental design for a flash light as shown.

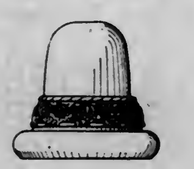
62,330. DOLL. WILLIAM S. KAISER, Milwaukee, Wis. Filed Aug. 10, 1922. Serial No. 3,340. Term of patent 3½ years.



The ornamental design for a doll, as shown.

62,331. INCENSE BURNER. SEIZO KODAMA, San Francisco, Calif., assignor of one-half to Hisano Kodama, San Francisco, Calif. Filed Oct. 10, 1921. Serial No. 506,886. Term of patent 3½ years.

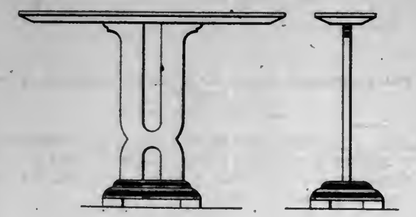
The ornamental design for an incense burner, as shown.



62,332. DRESSED DOLL. ELEANOR A. LOCHRIDGE, Long Beach, Calif. Filed May 20, 1922. Serial No. 2,332. Term of patent 3½ years.

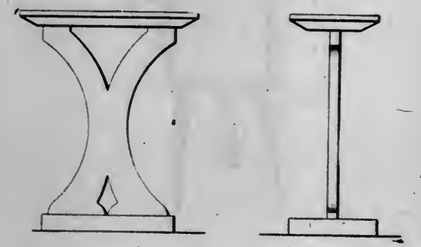
The ornamental design for a dressed doll, as shown.

62,333. SOCKET COVER FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed May 27, 1922. Serial No. 2,441. Term of patent 14 years.



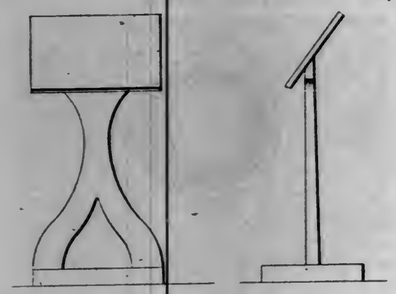
The ornamental design for a socket cover for lighting fixtures, as shown.

62,334. CANDLE PLATE FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed May 27, 1922. Serial No. 2,442. Term of patent 14 years.



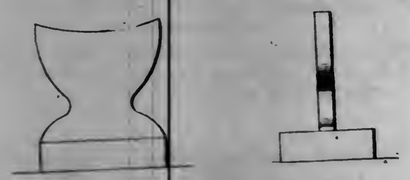
The ornamental design for a candle plate for lighting fixtures, as shown.

62,335. DISPLAY STAND. HENRY J. NUTRIZIO, New York, N. Y. Filed June 14, 1922. Serial No. 2,668. Term of patent 3½ years.



The ornamental design for a display stand as shown.

62,336. DISPLAY STAND. HENRY J. NUTRIZIO, New York, N. Y. Filed June 14, 1922. Serial No. 2,669. Term of patent 3½ years.



The ornamental design for a display stand as shown.

62,337. DISPLAY STAND. HENRY J. NUTRIZIO, New York, N. Y. Filed June 14, 1922. Serial No. 2,670. Term of patent 7 years.

The ornamental design for a display stand as shown.

62,338. DISPLAY STAND. HENRY J. NUTRIZIO, New York, N. Y. Filed June 14, 1922. Serial No. 2,671. Term of patent 3½ years.

The ornamental design for a display stand as shown.

62,339. ILLUMINATED SEAT INDICATOR FOR AUDITORIUMS AND THE LIKE. HENRY ARTHUR PAGE, Richmond, Va. Filed Dec. 3, 1921. Serial No. 519,779. Term of patent 3½ years.

The ornamental design for an illuminated seat indicator for auditoriums and the like, as shown.

62,340. COMBINED PHONOGRAPH AND MOVING-PICTURE CABINET. JULES A. PERRAULT and WILLIAM ALVAN HITCHCOCK, Boston, Mass. Filed Aug. 14, 1922. Serial No. 3,370. Term of patent 7 years.

The ornamental design for a combined phonograph and moving picture cabinet, as shown.

62,341. HEEL PAD FOR A BOOT OR SHOE. WALTER WILLIAM PHILLIPS, London, England. Filed Aug. 8, 1922. Serial No. 3,313. Term of patent 14 years.

The ornamental design for a heel pad for a boot or shoe, as shown.

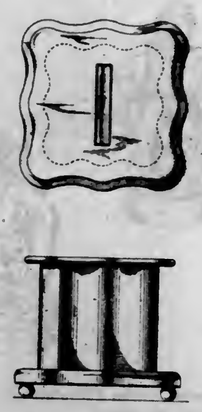
62,342. HEEL PAD FOR A BOOT OR SHOE. WALTER WILLIAM PHILLIPS, London, England. Filed Aug. 8, 1922. Serial No. 3,314. Term of patent 14 years.

The ornamental design for a heel pad for a boot or shoe, as shown.

62,343. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed June 10, 1922. Serial No. 2,614. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

62,344. LEAF ORNAMENT FOR ELECTRIC FIXTURES, ETC. JOHN WILLIAM SCHULZE, Providence, R. I., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Jan. 17, 1921. Serial No. 438,028. Term of patent 3½ years.



The new and ornamental design for a leaf ornament for electric fixtures, etc., as shown.

62,345. DOLL. HÉLÈNE SILBERFELD, New York, N. Y. Filed Nov. 17, 1922. Serial No. 4,321. Term of patent 3½ years.

The ornamental design for a doll, substantially as shown.

62,346. CIGARETTE HUMIDOR. FRANK A. SILEO, New York, N. Y. Filed June 7, 1922. Serial No. 2,559. Term of patent 3½ years.

The ornamental design for a cigarette humidor, as shown.

62,347. FINGER RING. VINCENT SORRENTINO, Providence, R. I., assignor to Uncas Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 20, 1921. Serial No. 523,779. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

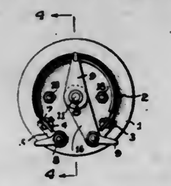
62,348. LIGHTING FIXTURE. GUSTAVE E. VILLARET, New York, N. Y. Filed Mar. 8, 1922. Serial No. 1,080. Term of patent 14 years.

The ornamental design for a lighting fixture as shown.

62,349. STATUETTE, INCENSE BURNER, OR SIMILAR ARTICLE. ERNEST M. VIQUESNEY, Spencer, Ind. Filed Sept. 22, 1922. Serial No. 3,797. Term of patent 14 years.

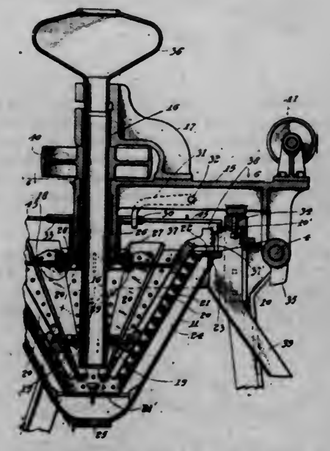
The ornamental design for statuette, incense burner, or similar article, as shown.

62,350. ELECTRIC-LIGHTING GLOBE. ALFRED A. WOHLAUER, New York, N. Y. Filed May 23, 1921. Serial No. 471,979. Term of patent 3½ years.



The ornamental design for an electric lighting globe substantially as shown and described.

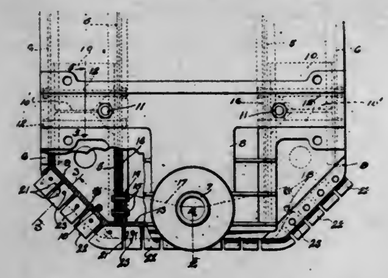
PATENTS



GRANTED MAY 8, 1923.

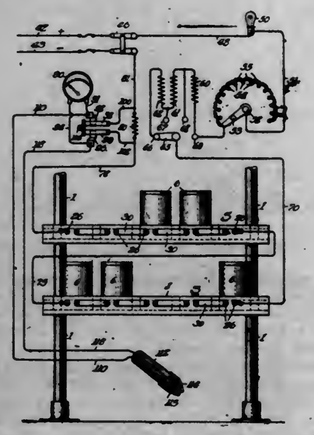
1,454,030. RHEOSTAT. RALPH BROOKE AUSTRIAN, New York, N. Y., assignor to Union Radio Corporation, New York, N. Y., a Corporation of New York. Filed July 14, 1922. Serial No. 574,898. 6 Claims. (Cl. 219—48.)

1. In a device of the kind described, a flexible insulating strip, a resistance wire wound thereon, means for supporting the strip adjacent its ends and a base having a positioning ridge adapted to cooperate with the strip.



1,454,031. FINISHING MACHINE. LELAND A. BABCOCK, Chicago, Ill., assignor to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1919. Serial No. 321,960. 11 Claims. (Cl. 146—9.)

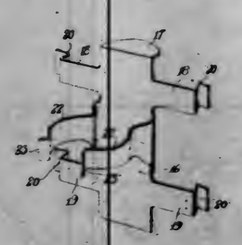
1. In a finishing machine, a conical screen; a brush mounted to revolve about the axis of said screen and adapted to be moved longitudinally of said axis; rotatably mounted means for adjusting said brush longitudinally of said screen axis; and a pivoted latch engageable with openings provided in said adjusting means for locking said means in positions of rotary adjustment.



1,454,032. EXCAVATOR FRONT-END CONSTRUCTION. SVANTE R. W. M. BAGER, WERNER LEHMAN, and FREDERICK C. RUHLOFF, South Milwaukee, Wis., assignors to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 16, 1922. Serial No. 544,328. 12 Claims. (Cl. 214—135.)

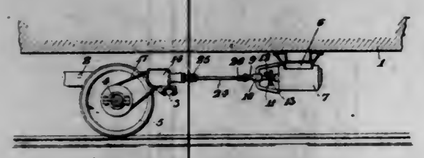
1. An end construction for an excavator car, comprising a boom supporting base plate, inner sills extending to the outer end of the base plate, shorter outer sills, and a transom structure binding the inner and outer sills together, said transom structure including separator casting which form substantially bevel corners for the car.

4. An end construction for an excavator car, including supporting sills, a boom supporting base plate mounted on the sills, a transom structure binding the sills together, said transom structure including a separator casting having pockets formed therein, and renewable buffer blocks secured in said pockets.



1,454,033. CHARGING RACK. FRANK T. BAIRD, Blue Island, Ill. Filed Oct. 24, 1921. Serial No. 509,880. 6 Claims.. (Cl. 204—29.)

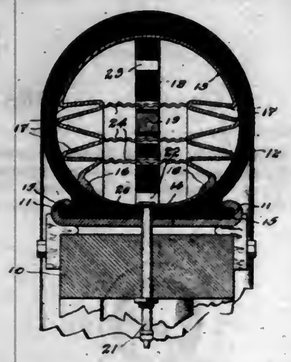
1. A rack for charging batteries of the type wherein the battery terminals are both located at the same end of the battery casing, one at the center and one eccentrically, the rack having stalls for holding the batteries centered, charging terminals arranged in series, two terminals in each stall, one of the charging terminals being centered in the stall and the other arranged eccentrically, the terminals consisting of clips arranged horizontally and adapted to receive the battery terminals when the battery is moved horizontally towards the clips, and self



closing switches for electrically connecting the terminals, the switches having upstanding projections adapted to be engaged by the bottom of the battery casing to be opened thereby when the battery is lowered into a position to bring the plane of the battery terminals into the plane of the charging terminals.

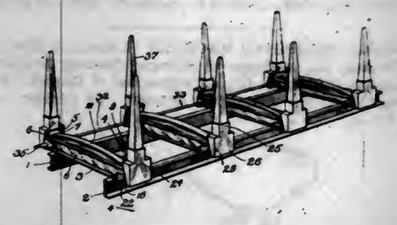
1,454,034. MINER'S CARBIDE-LAMP HOLDER. EDWARD SIDNEY BARNSTABLE, Nokomis, Ill., assignor of one-half to D. E. Aylward and one-half to John W. Busker, both of Livingston, Ill. Filed Sept. 19, 1921. Serial No. 501,801. 3 Claims. (Cl. 240—60.)

1. A miner's carbide lamp holder, in combination with a shield fixed to the miner's cap, a body plate having retaining arms adapted to engage the shield and hold the plate thereto, the said shield having an abutment member engaged with certain of said retaining arms to prevent upward movement of the body plate on the shield, means to prevent downward movement of said body plate, and lamp engaging means carried by said body plate.



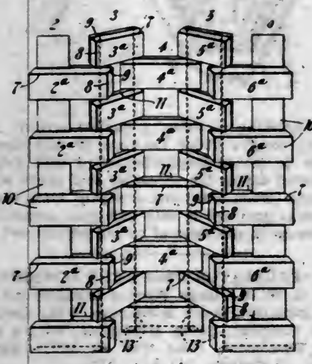
1,454,035. DYNAMO-DRIVING MEANS. WILLIAM F. BOUCHÉ, Lancaster, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Feb. 3, 1922. Serial No. 533,196. 7 Claims. (Cl. 105—102.)

1. In apparatus of the character described, the combination with a railway car body, a car truck with sills and axles, and a dynamo supported rigidly from the car body, of a gear case supported from one of said sills, a jack shaft supported within said case and having one end extending out of the same, a flexible driving connection between said extended end and one of said car axles, a propeller shaft extending into said case at right angles to said jack shaft, bevel gears within said case on said shafts, meshing together, and connections between said propeller shaft and dynamo.



1,454,036. RESILIENT TIRE CONSTRUCTION. SAMUEL C. B. BROWN, Amity, La. Filed July 2, 1919. Serial No. 308,109. 1 Claim. (Cl. 152—8.)

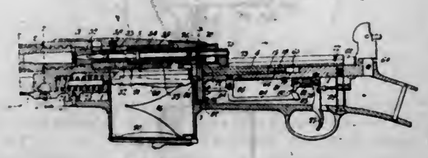
In a tire, a pneumatic element including a tread part and a rim part, and a planiform annular cushion element medially and concentrically mounted on one part to coengage between the two first-named parts at times, being of a radial dimension less than the distance between the tread and rim parts, whereby the cushion will prevent



excessive depression of the pneumatic element, but will be inoperative normally.

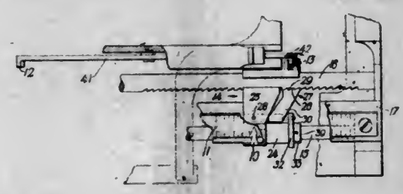
1,454,037. VEHICLE BED. RALPH E. BYRNE, Kansas City, Mo. Filed June 13, 1921. Serial No. 477,075. 5 Claims. (Cl. 296—43.)

1. A vehicle bed comprising side sills, transverse sills connecting them, the transverse sills being arranged in pairs, blocks between the sills of each pair and at each end thereof, stake pockets hinged to the sides of the vehicle bed, and sliding latches carried by the blocks and engageable with the stake pockets to normally hold them in vertical position.



1,454,038. COLLAPSIBLE DISPLAY DEVICE. WILLIS M. CARTER, Jersey City, N. J., assignor to The Carter-Ludwig Company, Incorporated, Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 21, 1921. Serial No. 509,294. 3 Claims. (Cl. 40—126.)

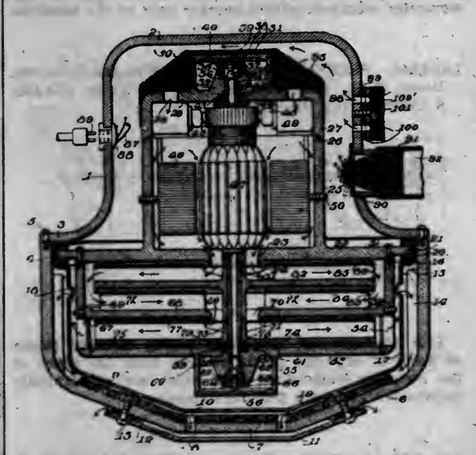
3. A collapsible display device including in combination a pair of opposite lengthwise strips of sheet material each



having portions projecting transversely therefrom, flanges projecting backwardly from edges of said transverse portions respectively, and intermediate unit of sheet material having flanges projecting backwardly therefrom, a series of aligned holes through said flanges, and pivot rods through said holes whereby the several members are assembled into an articulated whole.

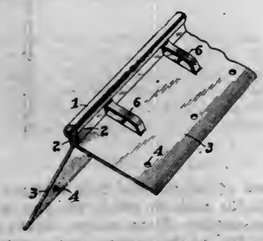
1,454,039. AUTOMATIC FIREARM. ARNOLD LOUIS CHEVALLIER, London, England. Filed Dec. 12, 1916. Serial No. 136,531. 14 Claims. (Cl. 42—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an automatic fire arm, the combination of a shoe, a magazine and trigger mechanism both fast with the shoe, a barrel, a raceway secured to the barrel, the barrel and raceway being capable of recoiling upon the shoe, a weight capable of sliding on the raceway, means for normally locking the weight to the shoe and a bolt carrier and bolt within the weight.



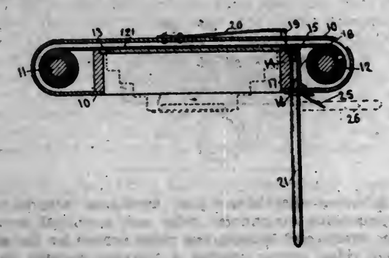
1,454,040. TYPEWRITING MACHINE. CLIFTON B. CORELL, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1918. Serial No. 224,428. 8 Claims. (Cl. 197—63.)

1. In a typewriting machine, the combination with a traveling carriage, of a stop comprising a body, a rack bar, an arm swingable on said body into and out of engagement with said rack bar, a handle rotatable on said body transversely to said rack bar, and means including a double-action cam member fast to said handle to swing said arm into and out of engagement with said rack bar.



1,454,041. BEARING. STANLEY S. CRAMER, Camden, N. J. Original application filed Aug. 21, 1919, Serial No. 318,886. Divided and this application filed Apr. 20, 1920. Serial No. 375,208. 4 Claims. (Cl. 64—49.)

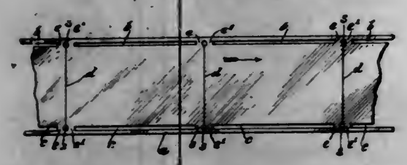
4. In combination with a shaft having a bore, means having a journal bearing for said shaft and an enlarged internally threaded aperture in said means concentric with said bearing, a ball of greater diameter than the bore of said shaft and in uniform contact with the sides of said bore, and a plug extending into said aperture in



threaded contact therewith and supporting said ball to adjustably determine the longitudinal movement of said shaft in one direction.

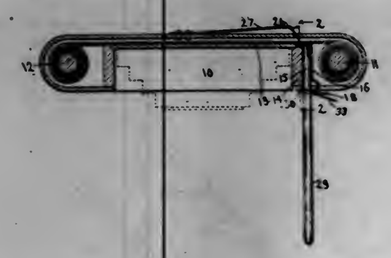
1,454,042. CORNER BEAD. LEWIS E. CURTIS, Warren, Ohio, assignor to The Youngstown Pressed Steel Company, Warren, Ohio, a Corporation of Ohio. Filed May 25, 1921. Serial No. 472,569. 3 Claims. (Cl. 72—121.)

1. A plasterer's corner strip having in combination, a corner bead, support elements, diverging attaching elements and bracing members extending from the bead, above the junction of the supporting elements and attaching elements, to the attaching elements remote from said junction and out of the plane of said member.



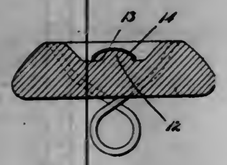
1,454,043. ENVELOPE. WILLIAM L. DODGE, Dover, N. H. Filed Jan. 23, 1920. Serial No. 353,454. 4 Claims. (Cl. 95—31.)

1. As a new article of manufacture a film receiver for use with photographic cameras consisting of an envelope



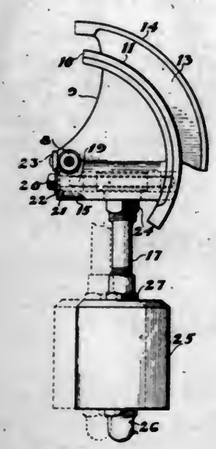
of flexible and tough material having a transversely extending fold, whereby one part of the envelope is telescopically contained within another part of the envelope.

1,454,044. PHOTOGRAPHIC FILM. WILLIAM L. DODGE, Dover, N. H. Filed Jan. 23, 1920. Serial No. 353,456. 8 Claims. (Cl. 95—9.)



1. A photographic film strip having interior panels or fields of exposure partly severed from the edges of the strip by longitudinal cuts which are substantially coextensive with said fields of exposure.

1,454,045. CAMERA. WILLIAM L. DODGE, Dover, N. H. Filed Feb. 14, 1920. Serial No. 358,804. 14 Claims. (Cl. 95—31.)

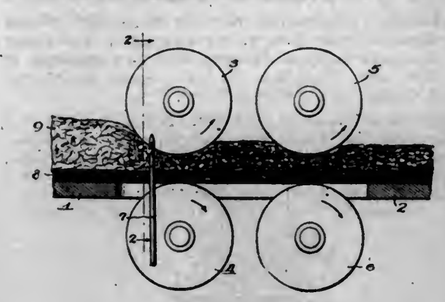


1. A camera of the roll film type having a passage extending from the path in which the film is adapted to travel to the exterior of the camera, means for severing sections of a film in the camera, and a gate adapted to open and close the interior entrance to said passage whereby, when opened, to permit travel of such severed film section into the passage.

1,454,046. SHANK BUTTON. TIMOTHY DONOVAN, Portsmouth, N. H., assignor to Morley Button Manufacturing Company, Boston, Mass., a Corporation of Maine. Filed Jan. 11, 1921. Serial No. 436,417. 2 Claims. (Cl. 24—90.)

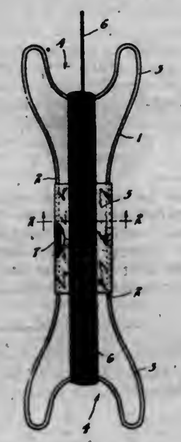
1. A button comprising a body having an integral contour presenting an annular ridge and a central mound wholly within and beneath the plane defined by the said annular ridge having thereon a lustrous metallic coating, the button being provided with a loop shank having its ends embedded in the substance thereof.

1,454,047. PENDULUM MECHANISM. WILBER EMERY, Monroe County, Mich., assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,632. 6 Claims. (Cl. 265—62.)



1. In a weighing pendulum, in combination an eccentric power sector, a movable weight connected to said eccentric power sector, means for rectilinearly moving said weight in one direction, and means for translating said weight in another direction, substantially as described.

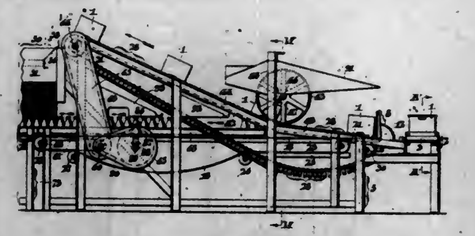
1,454,048. METHOD OF AND APPARATUS FOR SIDE-TRACKING IN DEEP-WELL DRILLING. NIELS ESPERSON, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Sept. 29, 1921. Serial No. 504,120. 13 Claims. (Cl. 255—1.)



1. The herein described method of side tracking in drilling oil wells consisting in cutting an opening through the wall of the casing and thereafter spreading the wall of the casing outwardly at the upper end of said opening, substantially as described.

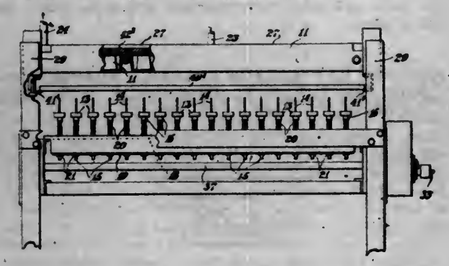
1,454,049. UPHOLSTERY MATERIAL. CHARLES E. GENUNG, Chicago, Ill., assignor to Morris & Company, a Corporation of Maine. Filed Feb. 11, 1921. Serial No. 444,255. 2 Claims. (Cl. 28—4.)

1. An upholstery material including a base layer of hair felt embodying short hairs and a superimposed layer of curled hair, portions of the curled hair being disposed transversely of the layers and interlaced therewith throughout the thickness of both layers so as to provide a continuous hair connection of the same length as the combined thicknesses of both layers to prevent lateral shifting of the parts in the completed material and to form a hair to hair connection wherein the ends of the short hairs transversely engage the curled hair.



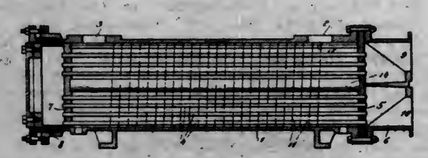
1,454,050. WIRE TROLLING-LINE AND TWINE WINDER. WILLIAM H. GRUENHAGEN, St. Paul, Minn. Filed Aug. 22, 1922. Serial No. 583,479. 3 Claims. (Cl. 242—96.)

3. A hand trolling line holder comprising an elongated flat frame formed of a continuous piece of wire, said frame having a central portion and end portions of greater width than the central portion, each of said end portions having an open-ended recess therein, and a plate extending between the central portions of said frame and having its side edges bent around the same and secured thereto.



1,454,051. CASE-EMPTYING MACHINE. SAMUEL M. HEULINGS, Haddonfield, N. J. Filed Mar. 19, 1920. Serial No. 367,225. 19 Claims. (Cl. 214—1.)

1. A bottle case emptying machine, comprising, in combination, a conveyor with means for grasping and supporting the lower edges of inverted cases; and a conveyor travelling beneath the cases so progressed serving to support and progress the bottles along a course

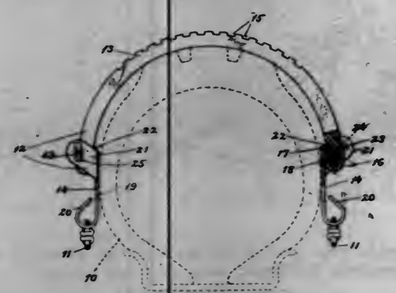


divergent from that of the cases, so that the cases are progressively withdrawn from about the bottles.

1,454,052. CANDLE-FORMING MACHINE. ERNEST A. HOUCHIN, New York, N. Y. Filed Sept. 27, 1920. Serial No. 413,125. 20 Claims. (Cl. 18—27.)

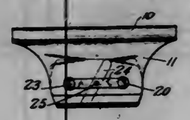
1. A candle molding machine comprising, a plurality of plungers each designed to mold the tip of a candle, a vertically movable frame, downwardly diverging molds carried thereby above said plungers and a platen adapted to be inserted between the plungers and the molds to receive the molded candles from said downwardly diverging molds.

1,454,053. OIL COOLER. RUSSELL C. JONES, Bronxville, N. Y., assignor to The Griscom Russell Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1920. Serial No. 359,607. 6 Claims. (Cl. 257—236.)



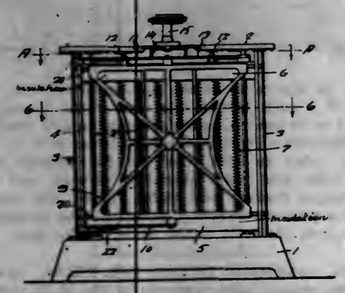
5. In an apparatus of the class described, the combination of a shell having inlet and outlet passages for the fluid to be treated, baffles arranged in said shell forming a continuous circuitous passage from inlet to outlet opening, tubes in said shell for the passage of the second fluid, said tubes projecting through said baffles and passages through said baffles around said tubes for producing cross currents in the fluid flowing through said passage from the inlet to the outlet of the shell.

1,454,054. ANTISKID DEVICE FOR TIRES. IRWIN F. KEPLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1922. Serial No. 535,507. 2 Claims. (Cl. 152—14.)



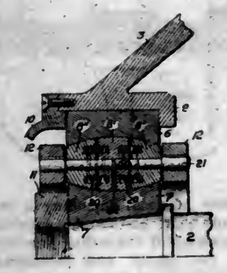
2. An end-fastener for tractive tire straps comprising a metal plate formed with a hook at one end and with a

pair of ears at the opposite end, the edge of said plate being turned over to form a bead between the ears constituting one of a pair of strap-gripping members, the



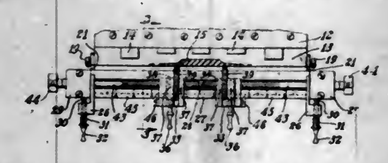
other strap-gripping member being a pin mounted in apertures in said ears and having a head at one end, the other end being bifurcated and spread to retain the pin in place.

1,454,055. RAZOR-BLADE HOLDER. WILFRIED KLAMROTH, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,551. 2 Claims. (Cl. 30—25.)



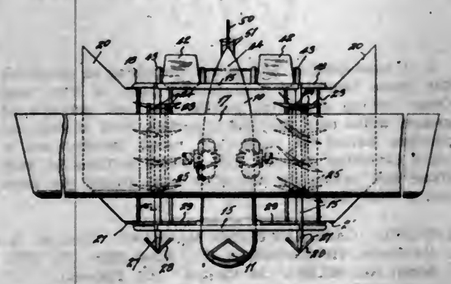
1. A razor blade holder comprising a sheet metal device constructed to form a substantially cylindrical back and a pair of flanges extended therefrom having adjacent flat surfaces adapted to be pressed against the surfaces of a safety razor blade, one of said flanges being provided with parts arranged to extend through perforations in the blade and through the other member, the ends of said parts being bent inwardly, and a latch pivoted to the perforated flange and arranged to engage the bent ends of said parts to hold the members pressed against the blade.

1,454,056. ELECTRIC TOASTER. HENRY KRUESHELD, New Washington, Ohio, assignor to The Perfection Electric Products Co., New Washington, Ohio, a Corporation of Ohio. Filed Mar. 20, 1922. Serial No. 545,277. 10 Claims. (Cl. 219—19.)



1. An electric toaster comprising a supporting frame, a heating element standing therein, a pair of bread holders, swinging arms pivoted to the frame and to the holders, and an operating lever pivoted on the frame and having a pivoted link connection at each end with the bread holders respectively, and adapted to swing the arms and reverse the bread holders substantially as described.

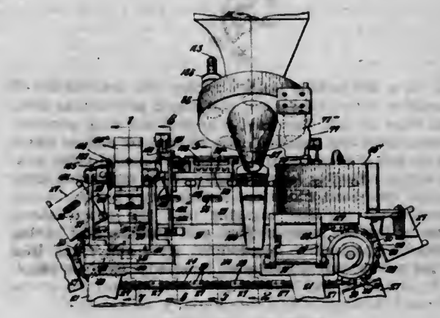
1,454,057. COMPOSITE ROLLER BEARING. JULIUS KUTTNER, New York, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 13, 1918. Serial No. 222,061. 4 Claims. (Cl. 64—38.)



1. A composite roller bearing comprising races, a plurality of barrel-shaped rollers mounted between said races, each of said rollers comprising a plurality of relatively rotatable sections, and means for spreading said sections.

1,454,058. MARKING ATTACHMENT FOR STRIP-FORMING APPARATUS. SILAS C. LOWE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 3, 1921. Serial No. 512,682. 9 Claims. (Cl. 18—12.)

2. In apparatus for making tire-tread stock, the combination of an extruding machine for forming a strip of rubber composition, and means supported in front of and immediately adjacent to the delivery end of said machine in engagement with the lower surface of the strip for making parallel impressions thereon as the strip is formed.

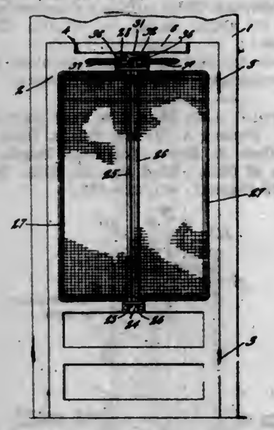


1,454,059. AIRSHIP. JOHN G. LUKACS, New York, N. Y. Filed Aug. 1, 1921. Serial No. 488,854. 6 Claims. (Cl. 244—29.)

1. A flying machine comprising a sustaining plane, horizontally disposed vertically adjustable balancing planes

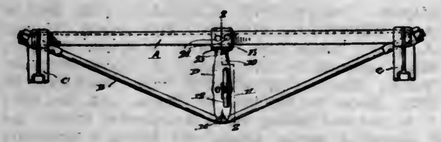
associated therewith, and vertically disposed horizontally adjustable steering air foils associated therewith, and a plane adjusting means associated with each set of planes comprising a threaded shaft, a threaded collar for receiving the shaft, a gear for driving the shaft, a crank for rotating the gear, and means for indicating the position of the planes with which the shaft is connected.

1,454,060. BAG FILLING AND CLOSING MACHINE. JOHN D. LANE, Boston, and JAMES MACNAUGHTAN, Brookline, Mass., assignors, by direct and mesne assignments, to Gordan Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed May 15, 1922. Serial No. 561,056. 14 Claims. (Cl. 226—49.)



1. A bag-filling machine comprising, in combination, an endless belt, means maintaining an upper stretch of the belt in a substantially horizontal position, said means including spaced apart wheels engaging the belt, and a fixed guide between said wheels supporting the upper stretch, jaw-carriers fixed to the belt, bag-engaging jaws supported by said carriers and arranged in groups, each group arranged to engage a bag, the carriers and jaws on the upper stretch of the belt being maintained in a predetermined path by said guide, a driving-shaft substantially parallel with the guide, operating mechanism connecting the driving-shaft with one of said wheels, and organized to impart a step-by-step movement to the belt, the arrangement being such that each jaw-carrier on the upper stretch is held successively at a series of stations, the first of which is a bag-receiving station, a bag-supplying mechanism organized to engage a bag with the jaws at the receiving station, operating connections between said supplying mechanism and the driving-shaft, a series of following mechanisms organized to cooperate successively with a bag held by the jaws at the other stations, to fill, gum, crease and close, the engaged bag, and operating connections between said mechanisms and the driving shaft.

1,454,061. DOUBLE-EYED GUIDE. JESSE F. MADDEN, Brooklyn, N. Y. Filed Aug. 24, 1921. Serial No. 495,008. 6 Claims. (Cl. 242—157.)



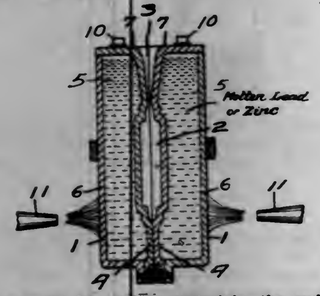
5. In devices of the character described, a guide comprising a circular body having its periphery provided with a groove for engagement with a holder, and having its faces on opposite sides of its periphery concaved and provided with a plurality of eyes extending through the guide from one face to the other.

1,454,062. FLY SWATTER. LEWIS B. MCDANIEL, La Belle, Mo. Filed May 15, 1922. Serial No. 560,948. 4 Claims. (Cl. 43—110.)

1. In a device of the class described, a frame; a door hinged to the frame; panels mounted to swing on the door; a member movable on the door; means for connecting said member operatively with the panels to swing the panels away from the door and together when the door is opened and when said member is held against movement with the door; means on the frame for holding said member against movement with the door when the door is opened, the holding means being automatically releasable from said member after the door has been opened a predetermined amount; and spring means for swinging the panels toward the door and for advancing the movable member with respect to the door after said member has been released from the holding means.

1,454,063. REVERSIBLE STRUT FOR RAILWAY BRAKE BEAMS. ISAK MOELLER, New Glasgow, Nova Scotia, Canada. Filed July 17, 1922. Serial No. 575,740. 7 Claims. (Cl. 188—232.)

3. A brake beam comprising a compression member, a tension member, a strut extending centrally between the compression and tension member, the said strut having means to engage the tension member in either of two angularly adjusted positions having interlocking means at the opposite end, a connecting member slidably mounted on the compression member having means to interlock with the interlocking means on the head of the said strut and means for retaining the connecting member in longitudinal adjusted position on the brake beam, the said means comprising a projection on the brake beam adapted to engage a suitable recess in the end of the strut.



1,454,064. PROCESS OF CASTING METALS. HUBERT A. MYERS, Toledo, and ARTEMUS D. STRAW, Wauseon, Ohio, assignors, by direct and mesne assignments, to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 27, 1921. Serial No. 440,501. 99 Claims. (Cl. 22—192.)

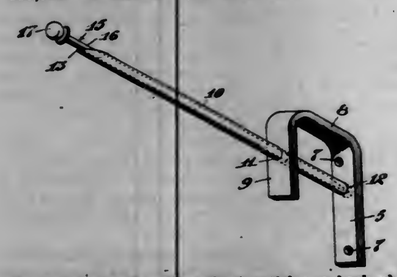
1. The process of preventing adherence of a metal casting to a mold, which consists in treating the mold with a metalliferous substance and forming between the mold and the casting a gas from the metalliferous substance by the heat of the metal cast.

1,454,065. MOLD FOR CASTING METALS AND PROCESS OF MAKING AND USING THE MOLDS. HUBERT A. MYERS, Toledo, Ohio, assignor to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 30, 1921. Serial No. 457,085. 25 Claims. (Cl. 22—188.)

1. In a mold for casting metals, the mold formed of ingredients comprising a nickel cobalt metal.

1,454,066. MOLD AND PROCESS FOR CASTING MATERIALS. HUBERT A. MYERS, Toledo, Ohio, assignor to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 15, 1921. Serial No. 461,623. 32 Claims. (Cl. 22—177.)

1. In a mold for casting materials, the mold having a chamber and a molding cavity, a wall separating the chamber and the cavity, the chamber containing a material having a boiling point above 1,000° F.



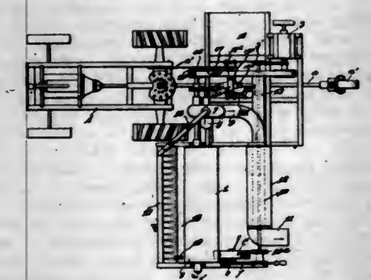
1,454,067. CONTAINER AND MOLD FOR MOLTEN METAL. HUBERT A. MYERS, Toledo, and ARTEEMES D. STRAW, Wauseon, Ohio, assignors to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Jan. 27, 1921, Serial No. 440,501. Divided and this application filed Jan. 13, 1922. Serial No. 529,030. 29 Claims. (Cl. 22—188.)

1. An iron mold for casting metals having zinc distributed over its matrix surface.

1,454,068. PROTECTIVE MATERIAL FOR MOLDS AND METHOD OF FORMING THE SAME. HUBERT A. MYERS, Toledo, and ARTEEMES D. STRAW, Wauseon, Ohio, assignors to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 30, 1922. Serial No. 532,909. 69 Claims. (Cl. 22—189.)

1. A container having metal incorporated therein and for containing molten metals, and having a protective coating comprising carbon, iron, and an oxide of a metal gasifiable below the melting point of iron.

1,454,069. PATTERN FILE. FRANZ OBRIKAT, Jr., Los Angeles, Calif. Filed July 18, 1921. Serial No. 485,527. 3 Claims. (Cl. 129—8.)

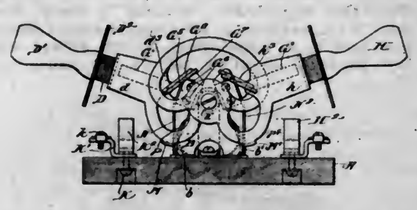


3. In a device for filing sheet articles, a back plate, an upwardly inclined tube carried by said back plate opening at its outer end, a brace for the tube, and a pin insertable in and removable from said tube.

1,454,070. SELF-LOCKING WIRELESS MOLDED ROOFING. FRED OPENSHAW, Gonville, Wanganui, New Zealand. Filed Mar. 31, 1921. Serial No. 457,564. 5 Claims. (Cl. 108—10.)

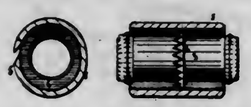
1. In a self-locking molded roofing, the combination of successive layers of recessed and ribbed interlocking tiles, each layer of said tiles having hooked end strip portions, battens extending longitudinally of the roof and on which the hooked ends of the tiles engage, horizontal ridge locking strips extending longitudinally of the uppermost layer of tiles, said horizontal ridge locking strips having hooked lateral strip portions engaging over the upper lateral edges of the top layer of tiles, said portions also having outwardly projecting longitudinal ribs, and ridge tiles having correspondingly recessed inner edge portions adapted to engage on and interlock with the rib portions of the aforesaid locking strips substantially as set forth.

1,454,071. GRAIN HARVESTER. CHARLES OWENS, Chattanooga, Tenn. Filed Mar. 26, 1921. Serial No. 455,801. 2 Claims. (Cl. 56—19.)



1. In combination, a main frame having a caster wheel at its rear end, an auxiliary frame mounted upon the main frame and extending laterally thereto, a threshing cylinder and concave mounted on the auxiliary frame at its forward end, the cylinder and concave having an absolutely free and unobstructed grain entrance to their threshingfield of action, the auxiliary frame being supported at its outer end by a grain wheel, means for raising and lowering the auxiliary frame vertically in its relation to the main frame and means for tilting the auxiliary frame on the axis of its vertical raising and lowering means, the said tilting means being under the control of the operator as the machine is traveling, so as to adjust the position of the threshing cylinder and concave to the varying height of grain.

1,454,072. DOUBLE-THROW QUICK-MAKE AND QUICK-BREAK SWITCH. HERMAN G. PAPE, New York, N. Y., assignor, by mesne assignments, to Beaver Machine and Tool Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 14, 1919. Serial No. 271,129. 24 Claims. (Cl. 200—67.)



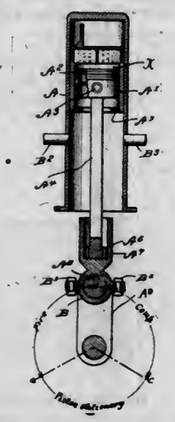
1. A device of the character described comprising two sets of terminal contacts, each set comprising one or more

of such contacts; a handle; a switch member adapted to be electrically connected to a main circuit; a spring directly connected to said handle and to said switch member and being put under stress by said handle and when so

stressed causing said member to engage either one of said sets of contacts as desired with a quick snap action and to be disengaged from either one of said sets as desired with a quick snap action, the path of movement of said switch member being unobstructed at all times

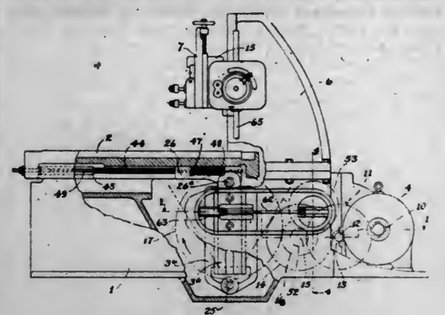
1,454,073. HOSE MENDER, BAND, AND COUPLING. FRANK H. PARADICE, Denver, Colo. Filed Oct. 9, 1922. Serial No. 593,409. 2 Claims. (Cl. 285—84.)

1. In a hose mender, the combination of an inner tube, and an outer bendable longitudinally split band, without locking device said inner tube and outer band held together by a compressible ring between the two substantially as described.



1,454,074. PNEUMATIC TUBE AND METHOD OF MAKING THE SAME. WINFIELD P. PORTER, New York, N. Y. Filed Jan. 30, 1922. Serial No. 532,704. 10 Claims. (Cl. 154—14.)

4. The method of making an inner tube which comprises uniting side edges of pieces of elastic material containing parallel reinforcing strands running at opposite angles to such sides to make up a sheet having a V-shaped reinforcement, folding such sheet into tubular shape with the apices of the aforesaid angles at the belly of the tube and the remaining side edges of the sheet overlapping substantially at the tread of the tube, whereby the reinforcing strands in the above-mentioned sides of the sheets form a crossed reinforcement in the tread.

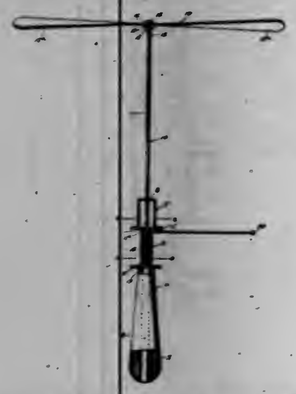


1,454,075. INTERNAL-COMBUSTION ENGINE. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 24, 1920. Serial No. 433,035. 2 Claims. (Cl. 123—197.)

1. In an internal combustion engine, the combination of a power cylinder, a primary piston located therein and a secondary piston, the said secondary piston slidable in the said primary piston, an air space between said pistons, heat absorption surfaces in the said primary piston for absorbing heat from the explosive gases in the power cylinder; a piston rod, a crank, a power shaft; connecting means between said secondary piston and said piston rod, crank and power shaft, whereby the force exerted against the said primary piston is transmitted to the said crank

in the form of power and to the air space in the form of heat, the movement of the crank being maintained thereby at the points of its stroke most favorable to power reception, by the expansion of the air between said pistons, substantially as described.

1,454,076. PLANER. LEWIS M. PYLE, Bryn Mawr, Pa., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 13, 1921. Serial No. 436,968. 14 Claims. (Cl. 90—34.)

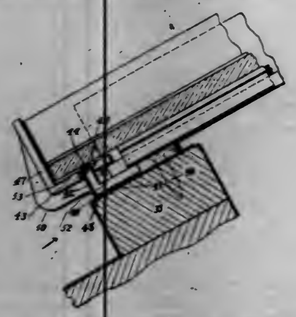


1. In combination with a metal working machine comprising a work support and a tool support, one of such supports being reciprocably mounted, a block secured to the reciprocable support, means operably secured to the block for reciprocating the support, means for adjusting the block along the support in the direction of its reciprocation, a sliding wedge for clamping the block in position, and means for operating the wedge.

1,454,077. TOY. JOHN G. REED, Los Angeles, Calif. Filed Oct. 28, 1921. Serial No. 511,088. 2 Claims. (Cl. 244—2.)

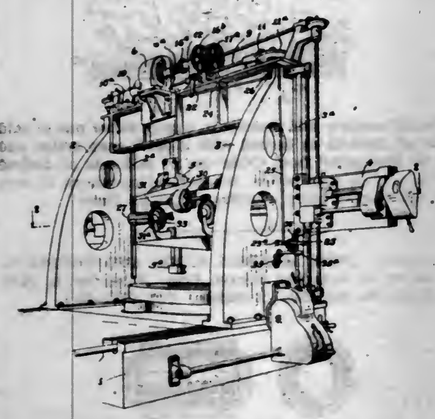
1. An aerial toy comprising two oppositely directly propeller blades, an elongated stem central thereto, said stem being central to the blades and centrally carrying them and terminating remote from the blades in a noncircular end, a handle, a spool rotatable on the handle,

an elongated bracket member constituting an axial bearing for the stem mounted on the spool, and the spool and stem having coacting noncircular connecting means for



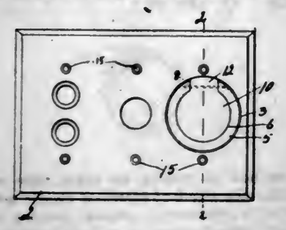
causing a rotation of the propeller and spool until the rotational speed of the propeller overcomes the frictional engagement of the propeller stem with the spool.

1,454,078. STORAGE-BATTERY ELECTROLYTE. EARL J. RUEB, Oklahoma, Okla., assignor to Mid-State Battery Manufacturing Co. Inc., Oklahoma, Okla., a Corporation of Oklahoma. Filed Jan. 28, 1921. Serial No. 440,745. 2 Claims. (Cl. 204—29.)



1. A storage battery electrolyte including aluminum-potassium sulphate as one of its ingredients.

1,454,079. GLAZED STRUCTURE. ROBERT N. SCHALKENBACH, deceased, late of Baltimore, Md., by Hulda W. Schalkenbach, administratrix, Baltimore, Md. Substitute for abandoned application Serial No. 760,880, filed Apr. 14, 1913. This application filed Nov. 14, 1921. Serial No. 515,102. 1 Claim. (Cl. 108—16.)

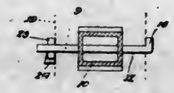


In a glazed structure, the combination of supporting T-beams placed with their side flanges down, cushioning means on said side flanges, members on said cushioning means having upward projections at the edges thereof adjacent to the web of the T-beams and projecting beyond the upper surface of the glass and having their opposite edges formed into gutters, panes of glass supported on said members, metallic strips placed upon the upper surface of the panes of glass along their edges and having an upward projection at the inner edge thereof forming a dam to prevent the passage of water therebeyond and bent downwardly to interlock with the upward projection of the member extending from beneath the glass, bolts secured in said T-beams, a spring cap resting upon the members placed on the upper surface of the glass, and having openings for the passage of said bolts, and nuts on said bolts beyond the top of the cap for securing the parts together and in place, substantially as and for the purposes set forth.

1,454,080. CLAMPING MECHANISM FOR METAL-WORKING MACHINES. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1920. Serial No. 389,425. 38 Claims. (Cl. 77—4.)

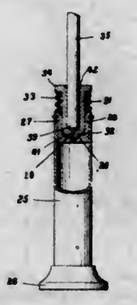
1. In a machine of the class described, the combination of a base, a work table mounted thereon, an upright adjacent the table, a cross rail mounted to slide vertically on the upright, means to move the rail vertically, clamping means on the rail for securing the rail to the upright, and a rotary electric motor on the rail for operating the clamping means.

1,454,081. RECEPTACLE PLATE FOR ELECTRICAL OUTLETS. ASA D. SANDS, Camden, N. J. Filed Nov. 29, 1920. Serial No. 426,999. 3 Claims. (Cl. 247—23.)



1. A receptacle plate for electrical outlets comprising a plate having an outlet opening and provided with a circumferential V-shaped groove, a door holding member having its edge rotatably mounted in said groove and a door hinged to said holding member.

1,454,082. METHOD OF UTILIZING DOMESTIC AND INDUSTRIAL GARBAGE AND OTHER REFUSE. GUSTAV SCHLÖSSER, Oberschoneweide, near Berlin, Germany. Filed Jan. 27, 1921. Serial No. 440,546. 1 Claim. (Cl. 106—24.)

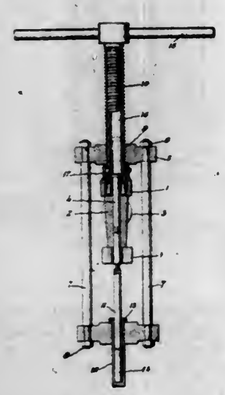


That method of treating city refuse which consists in removing the bulky portion of said refuse, grading the remainder into coarse combustible and fine relatively incombustible portions, mixing the fine portion with a suitable flux, briquetting the mixture and drying the briquettes, burning the coarse portion and utilizing the heat therefrom to melt the briquettes, running the molten briquettes in molds, and finally tempering the moulded pieces.

1,454,083. LATCH FOR RAILWAY-CAR COUPLINGS. WILLIAM F. SHAFFER and BLAKE CRUTCHFIELD, Jackson, Tenn. Filed Apr. 1, 1922. Serial No. 548,611. 8 Claims. (Cl. 85—3.)

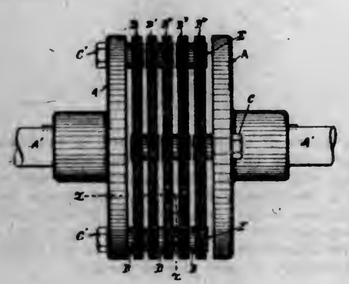
1. An automatic latch for drawhead key, said latch comprising an oscillatable member having pivoted connection with said key, the axis of oscillation lying in the length direction of the key, and said member having preponderance to one side of said axis.

1,454,084. VALVE-ACTUATING DEVICE FOR HYDROCARBON MOTORS. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed Apr. 21, 1917. Serial No. 163,754. 5 Claims. (Cl. 123—90.)



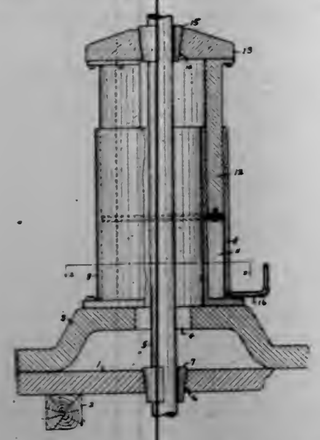
1. In an internal combustion engine, the combination with a valve mechanism, a tappet, a rod and connection therebetween comprising a cylinder, a hollow piston therein having a port connecting its interior and exterior, and a rod having one end mounted in said piston.

1,454,085. ELECTRIC INDICATOR FOR VIBRATIONS OF THE AIR. ELMER A. SPERRY, Brooklyn, N. Y. Filed Jan. 27, 1917. Serial No. 144,867. 13 Claims. (Cl. 250—27.)



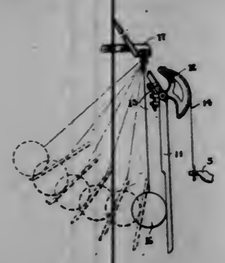
1. An apparatus for detecting wave motions in air comprising a sensitive fluid jet, a plurality of conductors, one conductor being nearer the base of the jet than the other conductor, having a temperature-resistance coefficient, an indicating means, and means operable by variations in the resistance of said conductor due to the heating thereof when the jet collapses for operating said indicating means.

1,454,086. SPINDLE-BOLT-REMOVING DEVICE. CHRISTIAN STAUGAARD, Detroit, Mich. Filed Dec. 15, 1921. Serial No. 522,584. 5 Claims. (Cl. 219—85.)



1. In a spindle bolt removing device of the class described, a suitable frame; a screw in threaded engagement with said frame and which screw is provided with an internal passage extending longitudinally thereof; and a push rod supported by said frame and the axis of which is in line with the axis of said screw.

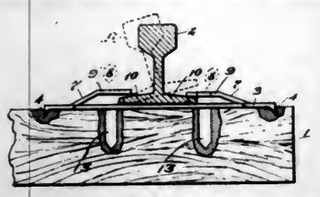
1,454,087. FLEXIBLE COUPLING. GEORGE H. THOMAS, Westfield, N. Y. Original application filed May 6, 1918, Serial No. 232,819. Divided and this application filed Dec. 31, 1921. Serial No. 526,353. 3 Claims. (Cl. 64—96.)



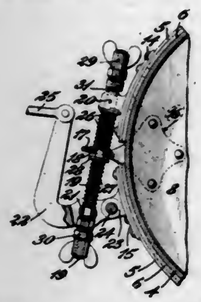
1. In a flexible coupling, a flexible element comprised of a plurality of flexible rings, in which adjacent rings are secured together at diametrically opposite points, the successive pairs of fastenings being in successive staggered relation, a coupling body at each side of said flexible element, said bodies being provided with openings therethrough at diametrically opposite points, posts in the outermost rings of said flexible element and entering said counter bored openings, spacer rings on said posts between said outermost rings and coupling bodies, and means to retain said posts in said openings.

1,454,088. PIPE-PULLING APPARATUS. HOMER C. THRIFT, Burkburnett, Tex. Filed Nov. 12, 1921. Serial No. 514,743. 5 Claims. (Cl. 254—31.)

1. A pipe pulling apparatus including a single cylinder formed with an annular chamber, an annular plunger working in said chamber, a head carried by the plunger and pipe engaging means carried by the head.



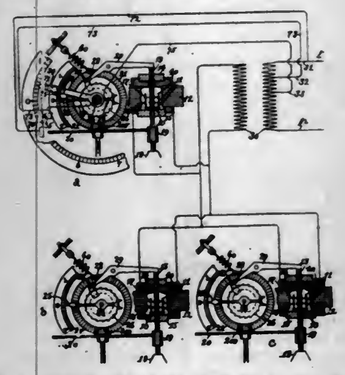
1,454,089. LOAD-COUNTERBALANCING MECHANISM. EDWARD F. ULRICH, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 5, 1920. Serial No. 371,244. 10 Claims. (Cl. 265—70.)



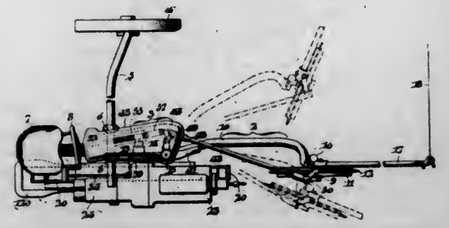
1. In a device of the class described, in combination, a pivoted member having a depending stem, a weight acting upon said stem to resist movement of said member from a predetermined position, and means for so positioning said weight longitudinally of said stem as to lengthen the lever arm upon which said weight acts to a degree substantially proportional to the degree of angular movement of said pivoted member.

1,454,090. RAIL-FASTENING PLATE. JOSEPH WESOLIK, Belleville, Ill., assignor of one-fourth to Ewall Leutscher, Belleville, Ill., and one-half to Ludwig Kribben, Clinton, Mass. Filed Sept. 11, 1922. Serial No. 587,363. 8 Claims. (Cl. 238—303.)

1. The combination with a flanged rail and a wooden tie, of a clamping plate adapted to be seated upon the tie, opposed rail flange embracing members directed upwardly and inwardly from said plate and headed locking members extending through the rail flange embracing members for clamping the plate to the rail so that the embracing members thereof will be sprung to apply yielding pressure to the rail flange and said locking members engaging the edges of the rail flange to prevent displacement thereof upon the plate.



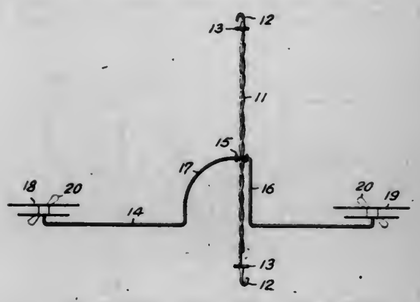
1,454,091. BRAKE MECHANISM. HERBERT VANDERBEEK, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed July 8, 1921. Serial No. 483,175. 8 Claims. (Cl. 188—77.)



1. A rotatable element having a braking surface, a split brake band adapted to frictionally engage said surface, an anchor for said band, means operatively connected to the ends of said band for expanding and contracting the same, a fixed member adjacent to said ends, and means associated with said fixed member and the end portions of said band for adjusting the clearance between one-half of said band and said rotating element without disturbing the adjustment of the other half of said band.

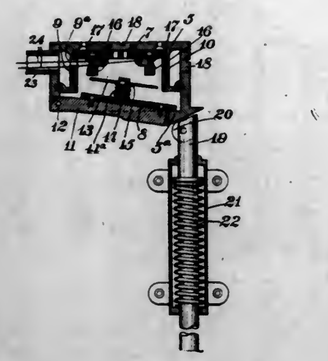
1,454,092. SYSTEM OF ELECTRICALLY TRANSMITTING SIGNALS. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Apr. 15, 1918. Serial No. 228,632. 9 Claims. (Cl. 177—337.)

2. In a telegraphing system, constantly rotating motors having rotors capable of axial motion, indicators driven frictionally therefrom, and means for stopping said indicators without stopping the rotation of said motors controlled by axial motion of the rotating members of the motors.



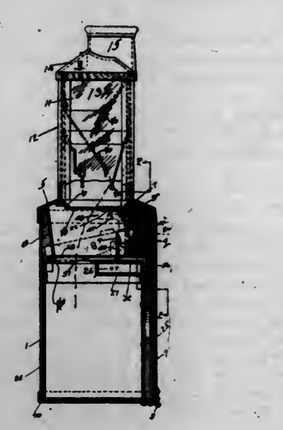
1,454,093. AGRICULTURAL TRACTOR. HERBERT I. WASHBURN, Magnolia, N. J. Filed Sept. 23, 1919. Serial No. 325,796. 19 Claims. (Cl. 97—49.)

1. In a syn-motor, the combination of a crawler unit of substantial ground-contact base length, and a deflector guide unit comprising a deflector arm element movable with reference to the contact base to compensate for inequalities of the ground and a deflector device angularly shiftable with reference to the ground contact base to forcibly deflect and steer the crawler while in motion.



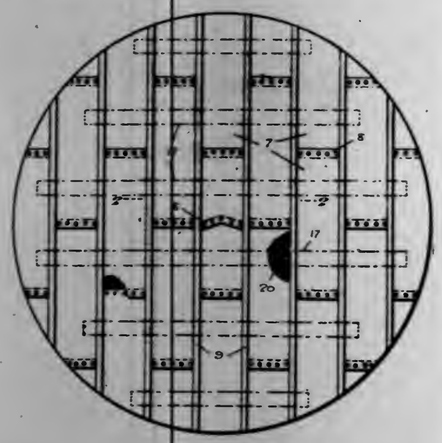
19. In a syn-motor, the combination of a crawler unit including a relatively narrow single endless tread element, an outrigger, an arm carried by the unit for sidewise movement and having its free terminal directed in advance of the unit to a distance sufficient to function in the manner stated, a rolling element pivotally carried by the free terminal of the arm, a power multiplying means acting upon the arm to shift the same to forcibly deflect the unit out of its path to a new path of travel and means for directing the rolling element to guide the unit along its altered path of travel.

1,454,094. TOY. EUGENE W. WESTON, Allandale, Ontario, Canada. Filed Jan. 19, 1920. Serial No. 352,473. 3 Claims. (Cl. 46—14.)



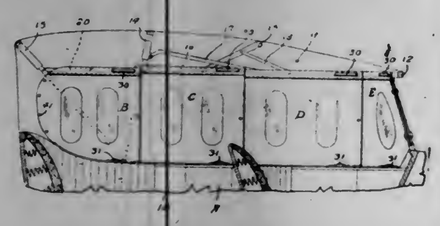
1. In a toy, a screw, an arm having an offset portion and a nut device receiving the screw therethrough and hingedly connected to the arm offset, whereby the screw may be inserted relatively to the arm.

1,454,095. ELEVATOR-DOOR LATCH. WILLIAM A. WILLIAMS, Columbus, Ohio. Filed Mar. 22, 1922. Serial No. 545,879. 4 Claims. (Cl. 187—31.)



3. A latch case for an electric elevator door comprising, in combination, a box-like structure, electrodes for an elevator operating circuit therein, a hinged cover carrying a spring held circuit closer for said circuit, and insulating linings for the interior of said box-like structure and said cover.

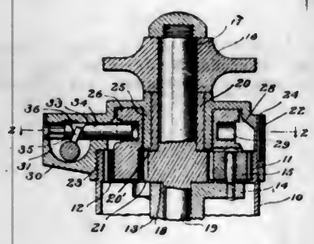
1,454,096. FARE BOX. CHARLES H. WOODS, Decatur, Ill. Filed May 31, 1919. Serial No. 301,065. 9 Claims. (Cl. 232—15.)



1. In a fare-box, in combination, a casing, a till or receiving receptacle having an opening in its top and a closure therefor, means to lock the till within said casing, levers arranged to alternately lock the till in receiving position and the closure against movement when the till is released and during movement thereof, whereby said closure assumes a closed and locked position on the till, a hand crank, and means operated thru the movement of said crank to engage and actuate said levers to release said till.

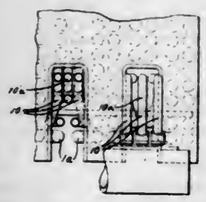
1,454,097. SHEET-METAL ROOF. Ross A. WORKMAN, Tulsa, Okla. Filed Apr. 17, 1922. Serial No. 553,456. 7 Claims. (Cl. 108—22.)

1. A sheet metal roof comprising sheets connected by seams, and expansion and contraction strips extending transversely under the seams, the sheets being anchored to said strips.



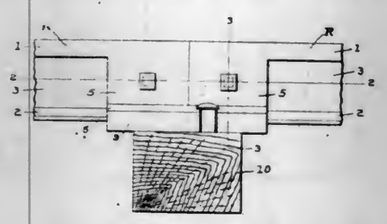
1,454,098. VEHICLE CURTAIN. CHARLES A. ZAHN, Merrill, Wis. Filed Aug. 26, 1920. Serial No. 406,110. 2 Claims. (Cl. 296—138.)

1. In a vehicle closure, the combination with a vehicle body and a vehicle top, of a curtain including a flexible body, flexible resilient rods carried by the body adjacent to the upper and lower ends thereof, a pair of studs carried by each of the metallic resilient rods adjacent to one end thereof, a single stud carried by the rods adjacent to the opposite ends thereof, sockets carried by the vehicle top and body for receiving said studs, and handles carried by the rods and arranged adjacent to the single studs, whereby the single studs will be drawn outwardly of the sockets prior to the other studs.



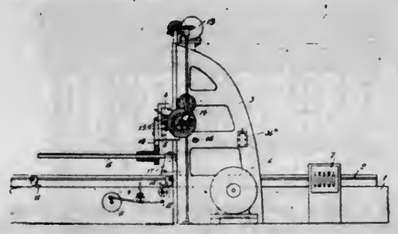
1,454,099. AUTOMOBILE LOCK. AMBROSE E. ZIRRICK, New York, N. Y. Filed May 3, 1922. Serial No. 558,097. 2 Claims. (Cl. 70—120.)

1. A steering gear lock comprising a housing, means for securing it to the upper extremity of a steering post, a sleeve-like journal carried by said housing, a cage or gear holding member rotatably mounted upon said sleeve-like journal and having portions protruding down between the planetary gears of the steering shaft, said sleeve-like journal rotatably receiving the steering shaft therethrough, a key lock carried by said housing, a plunger bolt actuated by said key lock, said cage or gear holding member provided with inwardly extending open-



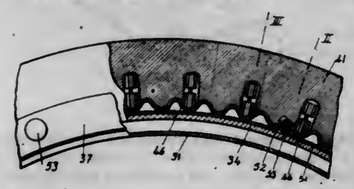
ings adapted to receive said plunger bolt therein and be held against movement thereby, and resilient means facilitating the movements of said plunger.

1,454,100. BOILER WITH SUPERHEATER. JOHN A. BARNES, West New Brighton, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 17, 1919. Serial No. 277,502. 3 Claims. (Cl. 122—478.)



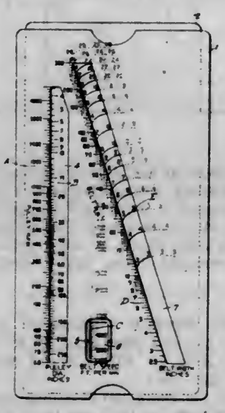
1. In a boiler, the combination of a header; a second header opposite the first, and shorter than it but having a series of spaced downward extensions making the overall length of the two headers substantially the same; water tubes connecting the second header and its extensions to the first header; and a superheater comprising tubular units located in the spaces between the water tubes connected to the extensions.

1,454,101. RAILWAY CONSTRUCTION. CYRILLE BELANGER and JOHN CARON, Quimby, Me. Filed Apr. 8, 1922. Serial No. 550,828. 2 Claims. (Cl. 238—248.)



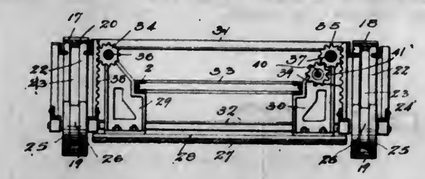
1. Rails having their ends provided with aligning pockets, plates having opposed beveled confronting edges received in the pockets, and means passing through the pockets and plates for contacting the plates to force the same away from each other and in contacting engagement with the respective upper and lower walls of the pockets.

1,454,102. BROACHING MECHANISM. HAROLD I. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 11, 1919. Serial No. 310,062. 13 Claims. (Cl. 90—33.)



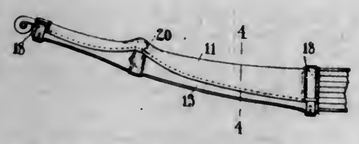
1. In a mechanism for broaching, the combination of a work holder, a holder for a broaching tool, an electric motor connected with one of the said holders for moving it relatively to the other, a manually operable switch for starting the motor in the broaching direction, means for automatically reversing the motor at the end of the broaching stroke to reverse the direction of relative movement, and means for automatically stopping the motor at the end of the return stroke.

1,454,103. SOLID TIRE FOR WHEELS. VALENTIN MARTI CABRETOSA, Barcelona, Spain. Filed Dec. 4, 1922. Serial No. 604,882. 3 Claims. (Cl. 152—1.)



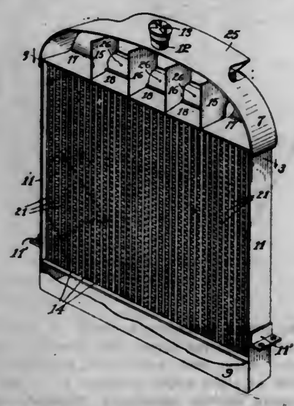
1. A solid india-rubber tire for vehicles, having a series of cavities in its interior, channels communicating said cavities with the atmosphere, and separate india-rubber members positioned in and partly filling said cavities.

1,454,104. CALCULATOR. FREDERICK W. CALDWELL, Schenectady, N. Y. Filed Aug. 11, 1921. Serial No. 491,612. 5 Claims. (Cl. 235—70.)



1. A belt calculator comprising a pair of members arranged to be relatively moved according to the log of belt speed, a plurality of curves logarithmically spaced according to belt width on one of said members and a scale on the other member logarithmically divided according to belt horsepower arranged to cooperate with said curves and means whereby said scale moves over said curves upon the relative movement of said members.

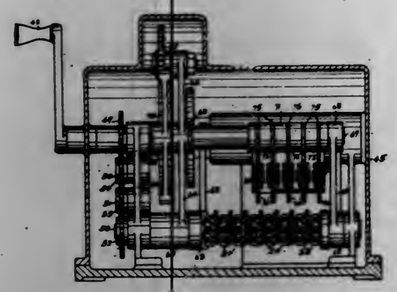
1,454,105. MOTOR VEHICLE. SAMUEL A. COFFEY and JOHN B. ERNSDORFF, Yakima, Wash. Filed May 27, 1921. Serial No. 472,991. 3 Claims. (Cl. 180—5.)



2. The combination in a motor vehicle with a main frame and side frames and traction devices in said side frames, of a sled fixed to the main frame and a transverse bolster thereon, a slide block at each end of said bolster, vertical guide bars in said side frames for said blocks, and means for changing the relative position of the side frames and sled.

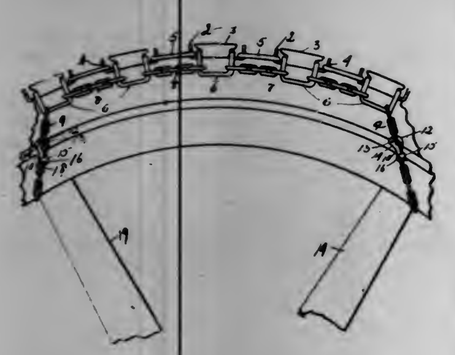
1,454,106. SPRING COVER FOR MOTOR CARS OR OTHER VEHICLES. WILLIAM FREDERICK COTTRELL, Bristol, England. Filed Mar. 2, 1921. Serial No. 449,057. 5 Claims. (Cl. 267—37.)

1. A cover for springs of motor cars and other vehicles comprising a covering member having longitudinal edges, means incorporated in the covering member for permitting variation of the transverse dimension of said member independently of stretching of said member, and means for fastening the longitudinal edges together.



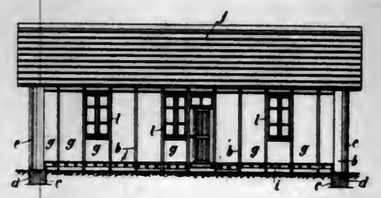
1,454,107. LIQUID-COOLING RADIATOR. EDWARD T. CURRAN, Detroit, Mich. Filed July 18, 1919. Serial No. 311,861. 10 Claims. (Cl. 257—130.)

1. In liquid cooling radiators, vertical tubes arranged in parallel and spaced relation, and corrugated members



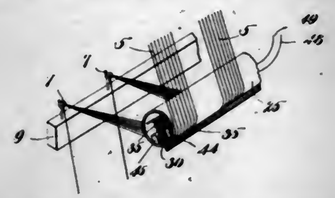
to engage in the spaces between the tubes with the corrugations arranged to cause the air currents passing through the spaces to converge in the rear of the radiator.

1,454,108. TRANSFER ADDING AND TOTALING MACHINE. THOMAS K. DIXON, ALEXANDER KLEIN, JESSE C. COX, and GEORGE R. GHENT, Houston, Tex., assignors to Dixon Development Company, Houston, Tex., a Corporation of Texas. Filed July 12, 1921. Serial No. 484,259. 20 Claims. (Cl. 235—1.)



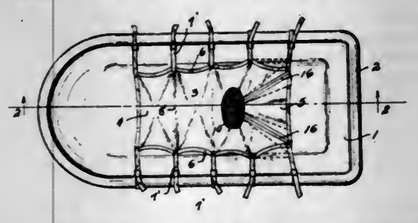
1. The combination with a total retaining device of an adding machine detachable from said device but adapted to be combined therewith, and mechanism included in said retaining device whereby the total sum indicated by said machine is transferred to said retaining device and said machine is restored to zero.

1,454,109. NONSLIP GUARD FOR AUTOMOBILE TIRES. GILES A. IOTT, Davenport, Iowa. Filed May 21, 1920. Serial No. 383,065. 2 Claims. (Cl. 152—14.)



1. A non-slip guard including a series of plates, each plate having four radiating arms, road engaging elements formed integral with said arms and projecting from their outer ends at right angles thereto, all of said road-engaging elements having oppositely disposed undercut recesses in their side edges and links connected to the road engaging elements and resting in said recesses.

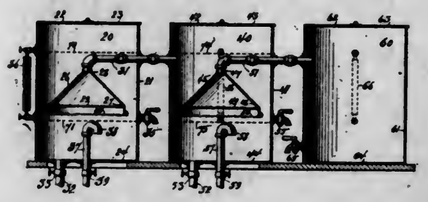
1,454,110. HOUSE CONSTRUCTION. EMILE FEUILLETTE, Boulogne-sur-Seine, France. Filed June 6, 1921. Serial No. 475,520. 7 Claims. (Cl. 20—4.)



1. In a house construction, vertical latticed struts, a reinforcement formed by said struts arranged parallel, and parallelopipedic blocks of compressed vegetal fibrous material located between the struts and having their fibers vertically arranged.

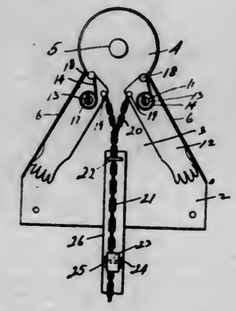
1,454,111. DETECTING MECHANISM. MILLARD F. FIELD, Winthrop, Mass. Filed Feb. 28, 1922. Serial No. 539,976. 4 Claims. (Cl. 117—28.)

1. Thread detecting and indicating mechanism, comprising a plurality of detectors, a tubular member carrying, enclosing, guarding and protecting the detectors, and spaced guides for the detectors.



1,454,112. BATH SUPPORT. REBECCA GRAVES, Spokane, Wash. Filed Dec. 15, 1922. Serial No. 607,223. 3 Claims. (Cl. 4—27.)

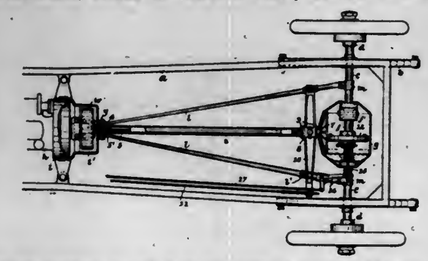
1. A bath support of flexible material having separately adjustable suspending means attached at opposite edges thereof and arranged in pairs, said support having a foot portion formed with a drain, and plackets extending from its center to its edge, pleats in said plackets, and means for closing or partially closing said plackets.



1,454,113. OIL FILTER. CLARENCE A. HAMILTON, Brooklyn, N. Y., and BENJAMIN F. NOYES, Bayonne, N. J. Filed Aug. 25, 1920. Serial No. 406,004. 1 Claim. (Cl. 210—44.)

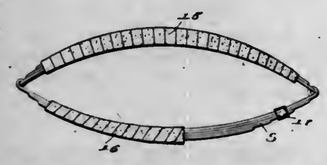
In a filter of the character described the combination of a plurality of tanks on the same level, a funnel shaped outlet fitting in the first tank positioned with its large inlet end below its apex, a screen and filter cloth at the large inlet end of the fitting, a cock connected to the tank to drain off fluid that has been separated from a portion of its impurities and heavy fluids previously held in suspension, drain piping connected to the bottom of the tank to drain off settlings and heavy fluids located adjacent to the bottom of the tank, a drain pipe connected to the bottom of the tank and extending up into the same, a second tank, piping leading from the outlet at the apex of the outlet fitting in the first tank to the second tank, a funnel shaped outlet fitting in the second tank positioned with its large inlet end below its apex, a screen and a filter cloth at the large inlet end of the second fitting, a

cock connected to second tank at the same level with the cock connected to the first tank, to drain off the fluid in said second tank that has separated therefrom a portion of its impurities and heavy fluids previously held in suspension, drain piping connected to the bottom of the tank to drain off settlings and heavy fluids located adjacent to the bottom of the tank, a drain pipe connected to the bottom of the second tank and extending up into the same, a third tank, piping extending from the outlet end of the fitting in the second tank to the third tank, the latter piping on a level with the piping between the first and second tank, and an outlet cock for the third tank.



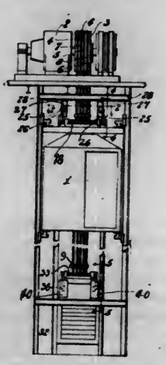
1,454,114. VEHICLE SIGNAL. ANTHONY HELLEBRAND, Philadelphia, Pa. Filed Dec. 3, 1921. Serial No. 519,595. 2 Claims. (Cl. 116—52.)

1. A vehicle signal consisting of a front plate including a body and head, portions of the side edges of said body converging toward the head, flanges carried by the angular edges of the body and having slots therethrough and a lamp hood forming a continuation of said flanges and connected with the head, the lower portion of said hood being open to permit the projection of light rays on to a portion of the outside of the casing.



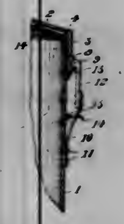
1,454,115. MOTOR-DRIVEN VEHICLE. SHERIDAN F. HOLDEN, Paterson, N. J. Filed Aug. 22, 1921. Serial No. 494,356. 3 Claims. (Cl. 180—73.)

2. In combination, with the driving axle, a carrier structure, means to support the carrier structure resiliently on the driving axle, a rotating pinion-including member and a rotary internal gear-including member journaled in said structure and having their pinion and gear in mesh with each other, means to transmit rotary motion from the



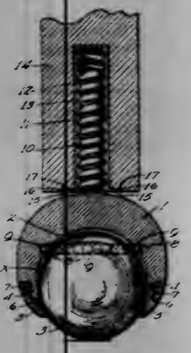
latter member to the axle including a power-transmitting member flexibly connected to said latter member, the first-named means having means affording a bearing for the power-transmitting member.

1,454,116. SPRING-LUBRICATING DEVICE. JAMES MADISON JACKSON, Parkersburg, W. Va. Filed July 20, 1922. Serial No. 576,326. 5 Claims. (Cl. 267—37.)



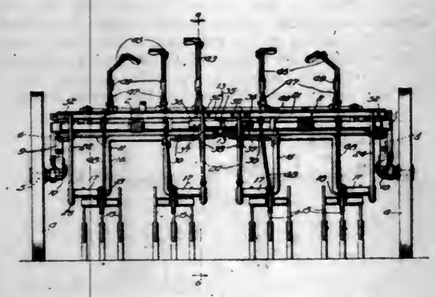
4. A spring lubricating device comprising flat strips of absorbent material and of soft or ductile metal approximately of the same width and fitted face to face, means for securing the flat strips together, the metal plate being provided with perforations for the passage of securing means, the secured strips being adapted to be wrapped around the vehicle spring or any portion thereof.

1,454,117. ELEVATOR. NAPOLFON P. JULIEN, Springfield, Mass. Filed Aug. 25, 1922. Serial No. 584,198. 7 Claims. (Cl. 187—1.)



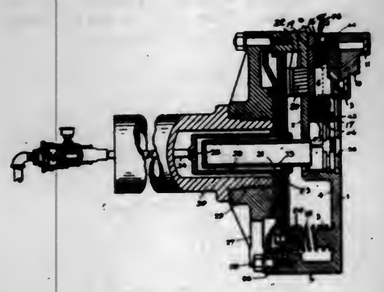
5. An apparatus for the purpose described and comprising in combination with the cables of an elevator mechanism, a gear secured to the ends of each of the cables, means carried by the car and counterweight respectively for rotating the gears and the cables, means for causing the cables to be automatically rotated in opposite directions and including abutments, operative means between the abutments and the means on the car for rotating the gears, and means for returning and maintaining the gear operating means in their initial positions.

1,454,118. COVER FOR BOILERS. PAUL KARSACK, Cleveland, Ohio. Filed Mar. 23, 1922. Serial No. 546,094. 1 Claim. (Cl. 220—55.)



In a device of the class described, a boiler, a cover therefor, a depending side flange carried by the cover and closing the upper end of the boiler, diametrically opposite lugs carried by said flange with a socket formed in the outer face of each lug, a spring strip secured at one end to the side wall of the boiler, a rigidlocking arm fixed to the other end of the spring strip and carrying an angle lug at the upper end adapted to be received in the lug recess to retain the cover in position on the boiler, and a U-shaped strap hinged to the boiler enclosing the spring strip and adapted to be moved into engagement with said spring strip to cause the lug carried by the locking arm to be received in the recess formed in the cover flange lug.

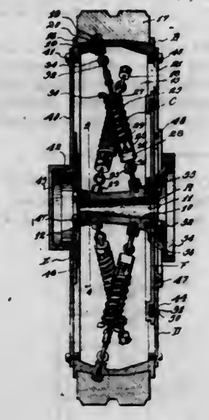
1,454,119. CASTER. HERMANN R. KNAACK, Chicago, Ill. Filed Mar. 31, 1921. Serial No. 457,388. 1 Claim. (Cl. 16—26.)



The combination with an interiorly threaded tubular socket having a smooth outer surface, a flange at its open end, and inwardly extending prongs adapted to be embedded in the leg of an article, of a ball carrying member having a threaded shank adapted to be removably received in said tubular member, said member having a cylindrical recess with a spherical end, a ball of the same diameter as the diameter of the cylindrical portion of said recess being rotatably disposed in said recess, said recess being formed with an annular ball receiving groove in its spherical-shaped end, said groove being semi-spherical in cross section and being disposed substantially midway between the bottom and the top of said recess, a plurality of small ball bearings carried by said groove and being adapted to prevent said ball from moving inwardly or laterally with respect to said recess, and a ball retaining ring threaded onto said ball carrying member and having a spherical-shaped opening of the same diameter as said ball.

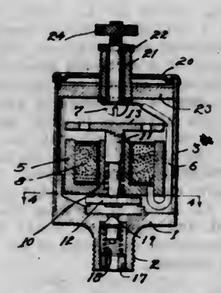
1,454,120. DOUBLE-ROW CULTIVATOR. ALVARO S. KROTZ, Janesville, Wis., assignor, by mesne assignments, to General Motors Corporation, a Corporation of Delaware. Filed May 9, 1918. Serial No. 233,523. 22 Claims. (Cl. 97—155.)

5. A cultivating machine comprising a pair of gang-arches, cultivator gangs connected to said gang-arches, means to support said gang-arches, an element mounted to rotate about a vertically disposed axis, links connecting the element with said gang-arches, so that partial rotation of said element will move the gang-arches toward or away from each other, means for locking said element in adjusted position, and means to shift said arches and element and links bodily to shift the gangs laterally.



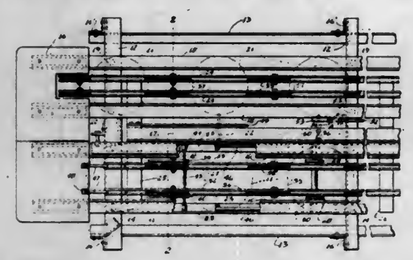
1,454,121. CHUCK. ALPHONSE JOSEPH LAVOIE, Montreal, Quebec, Canada. Filed Dec. 27, 1919. Serial No. 347,835. 2 Claims. (Cl. 279—121.)

1. A chuck comprising a body and a plurality of radially movable jaws, jaw bases slidable in said body in combination with a reciprocating member carrying jaw operating dogs having an inclined engagement with said jaw bases, said dogs having a radial slip-in engagement with said reciprocating member and a longitudinal sliding engagement with the chuck body guiding and maintaining the line of movement of said dogs parallel with the axis of said chuck.



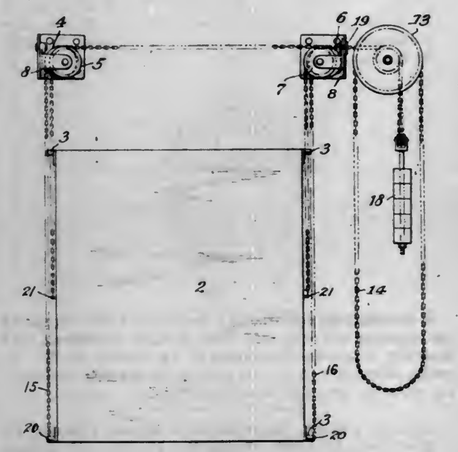
1,454,122. VEHICLE WHEEL. BYRON B. LORENZ, Cape Girardeau, Mo. Filed Jan. 4, 1922. Serial No. 527,092. 2 Claims. (Cl. 152—52.)

2. In a resilient wheel, a hub having a row of retaining sockets formed on each side of the circumferential center thereof, a felly surrounding the hub having a row of inclined retaining sockets formed on the opposite sides of the circumferential center thereof, oppositely inclined coil springs, eye bolts adjustably fitted within all of the sockets, spring retaining members extending through said springs and engaging the opposite terminals thereof,



and adjustable members carried by the free terminals of the spring retaining members and engaging said adjustable eye bolts.

1,454,123. ELECTRICALLY-OPERATED OIL CUP. RALPH R. MCCLURE, San Francisco, Calif., assignor, by direct and mesne assignments, to McClure Electric Oiling System, a Corporation of California. Filed Oct. 20, 1921. Serial No. 509,033. 5 Claims. (Cl. 184—67.)

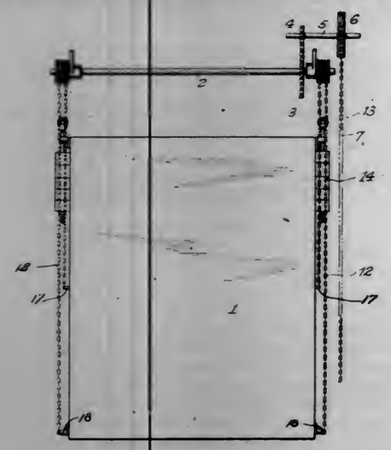


5. An oil cup comprising a base, a shell extending upwardly therefrom, said base provided with a tubular mounting nipple affording an oil outlet, a cup forming shell extending upwardly from the periphery of the base, said base provided with an upstanding flange, a magnet core frictionally held thereby with portions in spaced relation to said shell, affording an oil passage therebetween, said base provided on its interior with radial channels terminating in a sump surrounding said outlet and at their outer ends communicating with said oil passage, a magnet spool carried by said core, a valve stem operating therethrough, a piston on the lower end thereof for operating in said sump, an armature at the upper end of said piston, a spring for normally maintaining said armature spaced from said magnet and the piston raised from said sump, a supporting spider engaging the upper walls of said cup, a tubular stem threaded on its exterior and extending upwardly from the center thereof, a binding post within said stem and insulated therefrom, a connection between said magnet and binding post, and a cup cover adjustably threaded on said stem.

1,454,124. CAN-WASHING MACHINE. CHARLES F. MCEWAN, Oak Park, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Filed Mar. 16, 1922. Serial No. 544,371. 39 Claims. (Cl. 198—219.)

1. A can washing machine comprising a guidway along which cans are adapted to be moved; a carriage mounted to reciprocate along said guide-way; and a member carried by said carriage adapted to releasably engage cans to be moved along said guide-way and adapted to cause said carriage to move in the direction of travel of said cans.

1,454,125. PIER DOOR. LESLIE MCHARG, Freeport, N. Y. Filed Aug. 30, 1921. Serial No. 496,800. 3 Claims. (Cl. 20—19.)

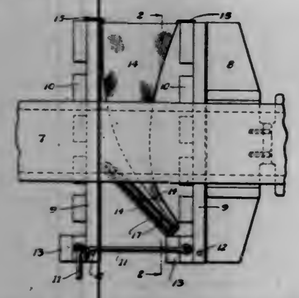


1. The combination with a pier shed door of a driving shaft for controlling the same supported at one side of the door, four pulleys on said shaft, two fixed and two loose, two idose pulleys over each upper corner of the door, cords passing over each pair of loose and the pair of fixed pulleys, and a weight carried by the same, the said cords being connected respectively to the bottom and the middle of the edges of the door.

1,454,126. PIER DOOR. LESLIE MCHARG, Freeport, N. Y. Filed Aug. 30, 1921. Serial No. 496,801. 2 Claims. (Cl. 20—19.)

1. The combination with a pier door, of a shaft with means for rotating the same for opening or closing the door, sleeves rotatably mounted in stationary bearings and affording the bearings in which the shaft turns, two sheaves fixed to the shaft, two sheaves fixed to the sleeves, chains running over said sheaves and connected at their

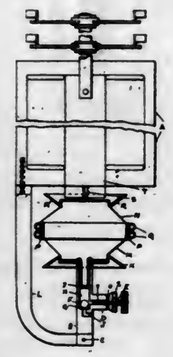
ends to the bottom and middle points of the sides of the door, idler sheaves carried by the chains, counterbalanc-



ing weights suspended from said idler sheaves and guides for said door by which it is shifted when rising from a vertical to a horizontal position.

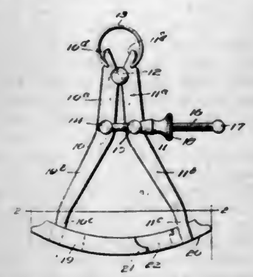
1,454,127. WATCH CHARM AND THE LIKE. JAMES MURDOCK MCLEAN and GEORGE THOMAS MUNN, New Waterford, Nova Scotia, Canada. Filed Jan. 22, 1920. Serial No. 353,372. 1 Claim. (Cl. 88—16.)

A thaumatrope comprising a frame and a disk supported for rotation therein, said disk bearing incomplete and mutually dependent fragments of an emblem on the opposite sides thereof, the fragments on one side intersecting those on the other side.



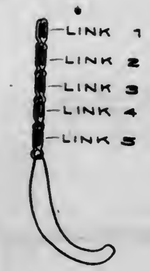
1,454,128. PRESS. KATHERYNE P. MALON, Chicago, Ill. Filed Jan. 23, 1922. Serial No. 531,280. 11 Claims. (Cl. 100—54.)

1. A press comprising adjoining pressure members; and a filter bag of flexible material inserted between said members, said bag being open at one end and a complete portion of the open end of said bag being folded upon itself and arranged between said pressure members so as to cause said complete folded end to press against the side of said bag upon the approach of said pressure members, substantially as described.



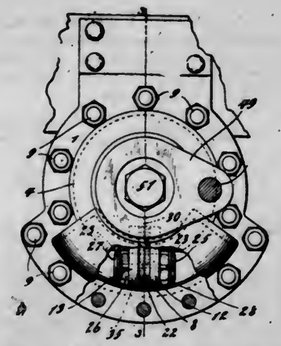
7. A filter bag for presses made with a normally open end and a stiffening plate arranged across one side of said bag adjacent the open end thereof, said bag being adapted and arranged to be folded against one side of said plate for sealing purposes, substantially as described.

1,454,129. BELLOWS MECHANISM FOR ELECTRIC RELAYS. OLIVER J. MARSHICK, Detroit, Mich. Filed May 3, 1918. Serial No. 232,407. 5 Claims. (Cl. 188—94.)



1. A retarding device for an electric relay, having in combination a fluid-tight bellows member adapted to be drawn to expanded position by the pull substantially lengthwise thereof of a connected external member, the relatively flexible walls of said bellows being adapted to compensate for possible variations in alignment of the parts by negligible differences in their degree of expansion on one side as contrasted with the other, a pipe connected with the opposite end of the bellows member from that externally connected with the expanding means, a normally closed valve in said pipe adapted to be unseated by the inrush of air when the bellows member is distended, and regulatable means connected with said pipe for permitting the escape of air from said bellows during its deflation.

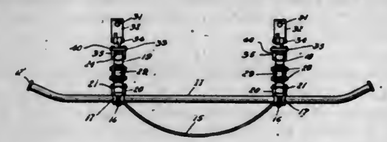
1,454,130. MEASURING INSTRUMENT. CLARENCE H. MERRITT, Heppner, Oreg. Filed Feb. 27, 1922. Serial No. 539,521. 4 Claims. (Cl. 33—148.)



1. In a measuring instrument as characterized, a pair of leg sections one pivoted to the other adjacent their upper ends, arms extending between said leg sections below the pivotal point thereof and overlapping one another at their inner ends and projecting from said legs at their outer ends, one of said arms having a graduated scale thereon and cooperative with the adjacent end of the other of said arms, and means for adjusting said leg sections.

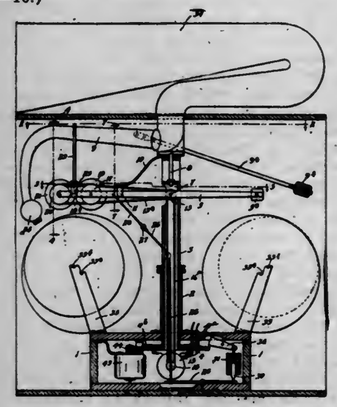
1,454,131. PUZZLE. EARL J. MILLER, Bethlehem, Pa. Filed Sept. 23, 1921. Serial No. 502,732. 2 Claims. (Cl. 46—41.)

1. An article of manufacture comprising a chain of the so-called safety type composed of two or more assembled links, and a flexible, endless cord engaging one of said links to form a puzzle, the solution of which consists in the disengagement of said cord from said chain without disassembling the chain or severing said cord.



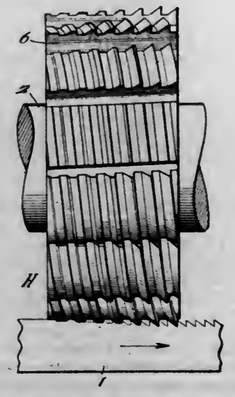
1,454,132. SHOCK ABSORBER. RICHARD S. M. MITCHELL, Bridgeport, Conn. Filed Jan. 10, 1920, Serial No. 350,534. Renewed Sept. 27, 1922. Serial No. 591,005. 20 Claims. (Cl. 188—89.)

1. A shock absorber for controlling the relative movement of two bodies, comprising two concentric members, connecting means between each of said members and each of said bodies so arranged that relative motion of the bodies produces a relative rotative movement of the concentric members, a cylinder of the form of a sector of an annulus borne by one of said concentric members, a piston in said cylinder attached to the other of said concentric members, and a fluid in said cylinder.



1,454,133. VEHICLE BUMPER. JAMES A. NOMICOS, Chicago, Ill. Filed July 28, 1922. Serial No. 578,083. 14 Claims. (Cl. 293—55.)

2. A bumper of the class described including oppositely disposed hollow supports comprising parts fixed together, caps closing the open ends of said supports, bumper bars carried by said supports, means carried by said supports for cushioning the resistance of said bumper bars, means for attaching said cushioning means to the chassis of a vehicle, and shock absorbing means



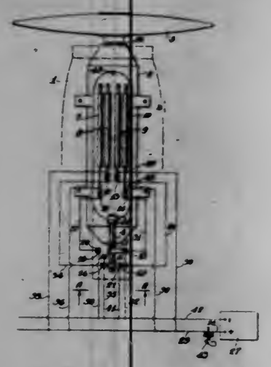
disposed between said cushioning means and said attaching means.

1,454,134. SOUND-REPRODUCING MACHINE. ALBERT G. NYQUIST, Minneapolis, Minn.; Hilda L. Nyquist administratrix of said Albert G. Nyquist, deceased. Filed Jan. 14, 1921. Serial No. 437,184. 28 Claims. (Cl. 274—10.)

1. A sound reproducing machine having in combination, means for supporting a plurality of disk records in vertical position substantially radially about a central point, and sound reproducing means movable into engagement with any one of said records for playing the same.

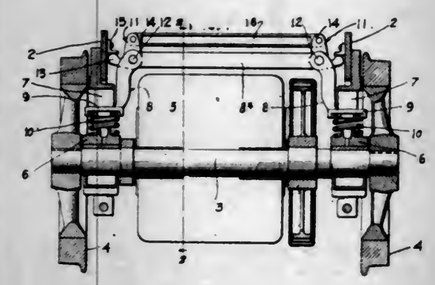
1,454,135. HOB. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1920. Serial No. 419,823. 3 Claims. (Cl. 29—103.)

2. A device of the class described having relieved cutting teeth the bodies whereof conform to a helix lead-



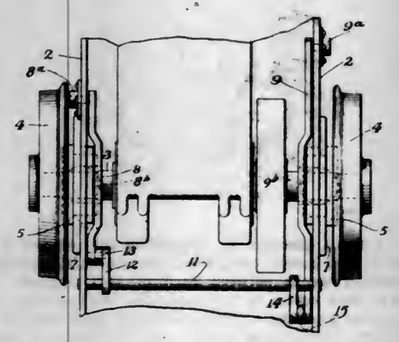
ing in one direction and the cutting faces whereof occur in a feed helix leading in the opposite direction, the teeth being staggered whereby one tooth cuts one side of any given tooth in the work, and the next one cuts the other side of it.

1,454,136. LEAD PENCIL. ABRAHAM POLLAK, New York, N. Y., assignor to Samuel Kanner, New York, N. Y. Filed Mar. 30, 1922. Serial No. 548,104. 12 Claims. (Cl. 120—18.)



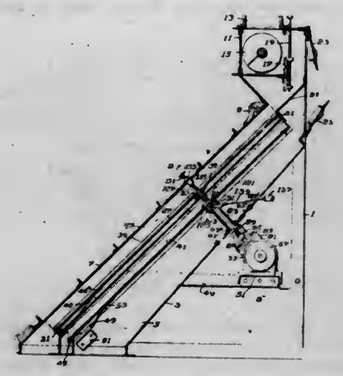
10. In a lead pencil, a longitudinal guiding tube, a lead-holding clutch member slidable therein and having a hole in its rear head end, means for arresting said clutch member on its extreme forward movement, a propeller rod freely passing through said hole and having a forward head within said clutch member to engage the lead when the rod is moved forwardly and said head end when the rod is moved rearwardly to retract said clutch member, a guiding head on the rear end of said rod, a spiral rod connected with said guiding-head, a nut engaging said spiral rod, exposed means for rotating said nut and thereby imparting longitudinal movement to said spiral rod and propeller rod, a friction clutch on and engaging said rod and normally maintaining said lead-holding member and the forward head on the propeller rod in engagement with each other and permitting said rod to slide forwardly through said member to eject the lead when said member is arrested, and a second friction clutch on said rod engaging said guiding tube and normally free on said rod and positioned to be engaged by said guiding head and moved against said first clutch when said rod has moved forwardly to its lead-ejecting position, thereby to prevent the first clutch from moving rearwardly with said rod until the rear end of the forward head on the rod again engages the inner end of said member.

1,454,137. SYNCHRONIZED MACHINE GUN FOR AIRPLANES. OSCAR A. ROSS, New York, N. Y. Filed Sept. 14, 1918. Serial No. 254,154. 3 Claims. (Cl. 89—28.)



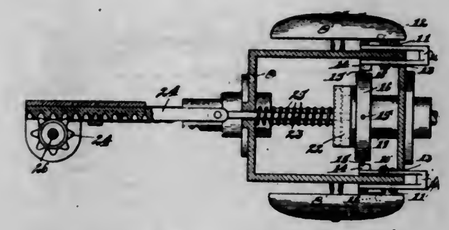
1. An airplane, a motor therefor, having a propeller driven thereby, a plurality of machine guns mounted on said airplane and adapted to fire between the blades of said propeller, means actuated by said motor for firing each one of said guns in a given sequence in synchronism with said propeller blades and a plurality of the guns during the time elapsing between the passing of a given point by one propeller blade and the passing of the same point by another propeller blade.

1,454,138. LOCOMOTIVE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1922, Serial No. 530,872. Renewed Mar. 19, 1923. 3 Claims. (Cl. 105—82.)



1. In a car, a frame, an axle, a rigid supporting member connected to opposite ends of said axle and movable vertically therewith respective to said frame, a pair of rocking members at opposite sides of the frame and interposed between said rigid member and said frame, and means operatively connecting said rocking members together.

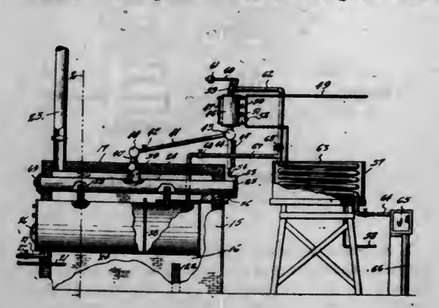
1,454,139. LOCOMOTIVE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1922, Serial No. 531,074. Renewed Mar. 19, 1923. 3 Claims. (Cl. 105—82.)



1. In a car, a frame, an axle movable in a substantially vertical plane respective to said frame, and an equalizing device comprising a pair of longitudinally extending bars each pivotally mounted on the frame adjacent opposite ends of said axle in supporting engagement therewith, and means operatively connecting said bars together, including a transversely disposed torsion member pivotally mounted on the frame.

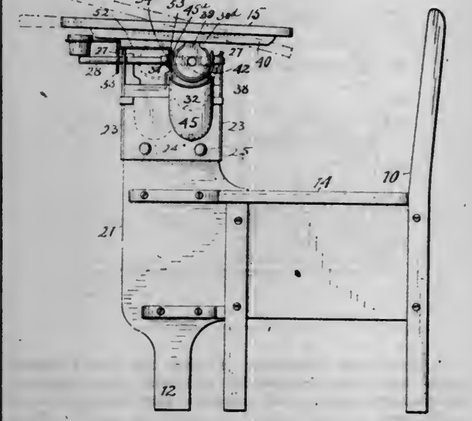
1,454,140. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed July 7, 1922. Serial No. 573,432. 17 Claims. (Cl. 83—56.)

1. A separator for grading materials, comprising, in combination, a screen, a support therefor beneath the screen, and means for vibrating said support and screen including an eccentric mechanism connected to said support and having minute eccentricity and rotatable at high speed, said screen being unattached to said support, that it may float and tremble on the support with independent vibrations.



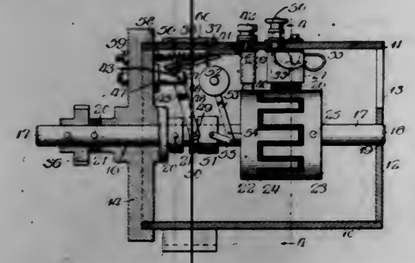
1,454,141. AUTOMOBILE ALARM SIGNAL. EDWARD THOMAS, East Chicago, Ind. Filed Sept. 23, 1918. Serial No. 255,311. 6 Claims. (Cl. 116—33.)

3. The combination with a shaft of an automobile, of a signal bell in operative relation therewith; a spring-actuated hammer arranged to sound said bell; an actuating and a clutch member mounted on said shaft, one of said members being fixed to said shaft and the other loose thereon; a spring normally holding said clutch and actuating members in operative engagement with each other; an actuating rod arranged to separate said members; a rack bar on said rod; a pinion meshing with said rack bar; an actuating shaft fixed to said pinion and arranged in operative relation with the automobile driver's seat; and means for locking said shaft in position to hold said actuating and clutch members separated, substantially as described.



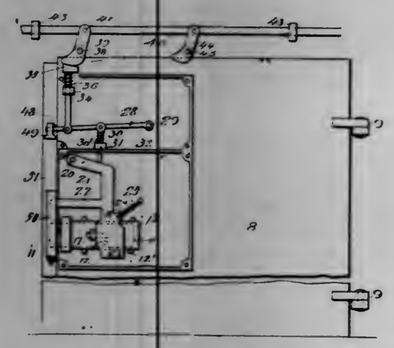
1,454,142. MEANS FOR CRACKING HYDROCARBONS. HARRY A. WIER and STUART A. WIER, Dallas, Tex. Filed Apr. 12, 1920. Serial No. 373,111. 7 Claims. (Cl. 196—3.)

1. In an apparatus for cracking hydrocarbons, a still housing having a combustion chamber in its bottom, an approximately horizontal main still disposed within the still housing above the combustion chamber with its sides disposed adjacent the side walls of the still housing, said main still terminating at a point spaced forwardly from the rear end wall of the still housing, providing an upstanding gas passage, an approximately horizontal secondary still arranged in the still housing above and



spaced from the main still with its ends projecting through the end walls of the still housing, upstanding pipes connected with the top of the main still and extending through the bottom of the secondary still into the same and terminating above the bottom of the secondary still, and a condenser connected with the upper secondary still.

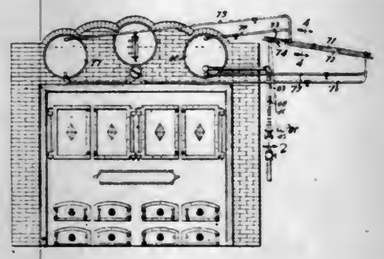
1,454,143. SEAT DESK. CHRISTOPHER WINKEL, Cleveland, Ohio, assignor to The Theodor Kundtz Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1921. Serial No. 448,150. 12 Claims. (Cl. 45—6.)



1. In an adjustable table, the combination of a standard, a horizontal shaft mounted on the upper end of said standard, a bracket supported at one end by said shaft and provided with a depending arm for engagement with the standard when the bracket is in horisontal position,—said bracket being capable of turning about the axis of said shaft and of moving in the direction of the axis of said shaft, table supporting means pivoted to said bracket on a transverse horizontal axis, a table fixed to said table supporting means, and means to secure said table supporting means to the bracket in any desired position relative thereto.

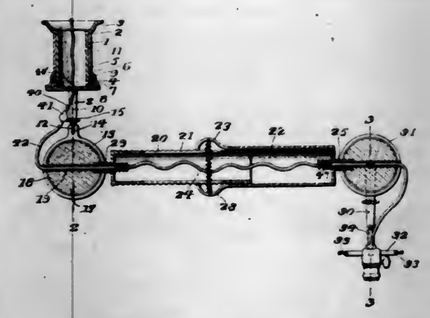
1,454,144. RECTIFIER OR CONVERTER. ERNEST A. ZADIG, Chicago, Ill. Filed Nov. 24, 1919. Serial No. 340,200. 4 Claims. (Cl. 175—364.)

1. A commutator, a commutator shaft, a cut out embodying separable contact terminals, a pivotally mounted element to which one of the said terminals is connected, yielding means tending normally to move the said element in one direction to separate the terminals, a collar slidable upon the shaft and operatively connected with the said element for rocking the latter when the collar is shifted on the shaft, and a governor pivotally connected with the said shaft and operatively connected with the said collar, said governor operating to shift said collar against the stress of the said yielding means to shift the contact terminal that is connected with the said element.



1,454,145. PRISON LOCK. VAN BUREN ALLEN, Brooklyn, N. Y., assignor of one-half to Willgott Klingberg and Wesley Earl Klingberg, both of New York, N. Y. Filed Feb. 3, 1921. Serial No. 442,030. 11 Claims. (Cl. 70—74.)

3. In a lock mechanism, a main bolt and auxiliary bolts, lock engaging seats for said bolts, means for simultaneously moving said auxiliary bolts into or out of said seats, and an extension on one of said auxiliary bolts whereby said main bolt is moved.

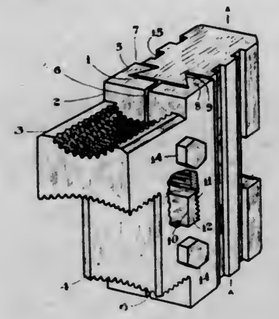


1,454,146. BOILER FEED-WATER REGULATOR. ROGER W. ANDREWS, Pittsburgh, Pa., assignor to Northern Equipment Company, Erie, Pa., a Corporation of Pennsylvania. Original application filed June 7, 1918, Serial No. 238,765. Divided and this application filed Aug. 25, 1921. Serial No. 495,323. 3 Claims. (Cl. 122—451.1.)

1. The combination of a boiler, two feed-water regulators and a feed-water valve, said valve comprising a plunger and a seat therefor, said plunger and seat being relatively movable rotationally and longitudinally, the first of said feed-water regulators being operatively connected with said boiler and with said valve and arranged to move said plunger and seat relatively longitudinally, and the second of said feed-water regulators being operatively connected with said boiler at a portion of said boiler remote from the point of connection of said first

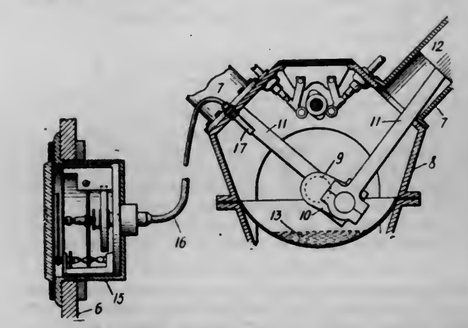
regulator, said second regulator being also operatively connected with said valve and adapted to move said plunger and seat relatively rotationally, said plunger and seat when in one relative position forming an opening through said valve, and said opening being varied as said plunger and seat are moved relatively either rotationally or longitudinally.

1,454,147. LIGHT SUPPORT. THEODORE GEORGE BERMAN, Antigo, Wis. Filed Sept. 8, 1920. Serial No. 408,899. 1 Claim. (Cl. 240—73.)



A light support including a pair of swivel members, a tube secured to and extending from one of the swivels and having its outer end open, said open end being formed with a pair of inwardly directed resilient fingers, and a tube secured to the other swivel and extending into the open end of the first tube for slidable adjustment therein, the said second tube being longitudinally slotted in opposite sides and formed with transverse corrugations with which the fingers engage, and a spring disposed transversely of the second tube and through the said slots and being secured to said fingers.

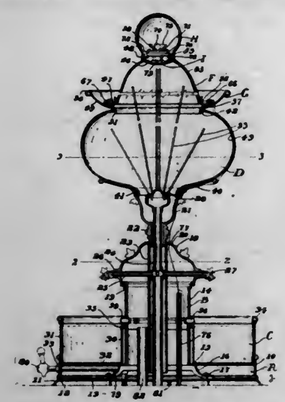
1,454,148. CHUCK JAW. DAVID LOGAN BISSET, Montreal, Quebec, Canada, assignor to P. Lyall & Sons Construction Company, Limited, Montreal, Quebec, Canada. Filed Nov. 22, 1920. Serial No. 425,889. 1 Claim. (Cl. 279—123.)



A chuck jaw comprising a gripping member having a longitudinally split back and a dovetail groove and a transverse key slot in said back and stepped grips projecting outwardly from said back, the outer one of said grips having recessed roughened surfaces and forming

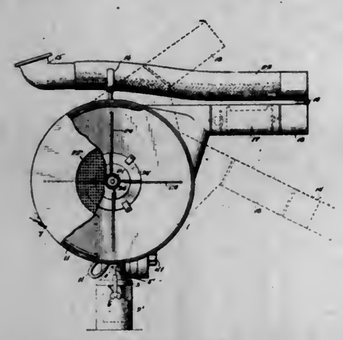
a reversible gripping member, a base having a tongue with transverse teeth across the outer face, a key in

said back slot having longitudinal teeth engaging the said transverse teeth and bolts through said back adapted to clamp the gripping member to said base.



1,454,149. TEMPERATURE-INDICATING SYSTEM AND APPARATUS FOR INTERNAL COMBUSTION ENGINES. HARRISON HURLBUT BOYCE, Jericho, N. Y. Filed July 14, 1917, Serial No. 180,580. Renewed Oct. 2, 1922. Serial No. 591,973. 2 Claims. (Cl. 73—52.)

1. In a temperature indicating means for internal combustion engines having cylinders opening into the crank case, which also constitutes an oil reservoir, the combination with the crank case of a temperature indicating instrument having a temperature responsive element exposed within the crank case above the normal level of the oil when quiescent but so as to be subjected to the splashing and dripping of the oil when agitated by the running of the engines.

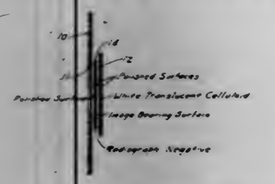


1,454,150. ORNAMENTAL FOUNTAIN. FREDERICK W. A. BROCKMILLER, St. Petersburg, Fla. Filed Mar. 14, 1921. Serial No. 452,225. 3 Claims. (Cl. 299—4.)

1. A fountain comprising a metallic base, a metallic pedestal carried by the base and arranged at the axial center thereof, an annular basin surrounding the pedestal and supported by the pedestal and base, the basin including an outer annular wall, an inner annular wall, and a connecting lower wall, the inner wall being provided with a reflecting surface, the lower wall being provided with an ornamental surface, transparent members carried by the upper end of the pedestal, an ornamental transparent member surmounting the first mentioned ornamental members, illuminating means disposed in the last mentioned transparent ornamental member, means for spraying water in the first mentioned transparent members, means for illuminating the first mentioned transparent members, means for conveying water from the transparent members through the pedestal to the base, means for

spraying water in the basin, and means for draining water from the basin and base.

1,454,151. ELECTRIC HAIR DRIER. RICHARD H. BROWN, New York, N. Y. Filed Feb. 24, 1921. Serial No. 447,377. 4 Claims. (Cl. 34—26.)

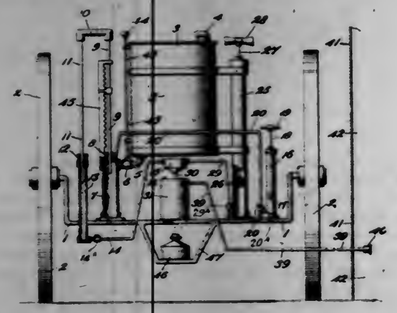


3. In an electric hair drier, a heating element adapted to be heated by the passage of an electric current, an electric motor adapted to drive air-driving means combined therewith for sending a current of air over the said element to be heated thereby when an electric current is passed through said element, controlling means including a switch mechanism and adapted to control the temperature of the air issuing from the said drier, said switch mechanism having a plurality of contacts and movable bearing means adapted to be actuated through a plurality of consecutive movements and occupy a plurality of different positions with respect to said contacts, the first position of said bearing means being adapted to cause a current to be sent only to said motor, the succeeding consecutive positions of said bearing means being adapted to cause electric current to be passed through said heating element also and also cause a lowering of the temperature of the air issuing from said drier by increasing the velocity of revolution of said motor in proportion to the amount of current supplied to said heating element.

1,454,152. DENTAL FILM MOUNT. ARTHUR W. BUCK, St. Louis, Mo. Filed Jan. 7, 1922. Serial No. 527,709. 2 Claims. (Cl. 40—159.)

1. A mount for radiographic films comprising a support of thin material having a central opening behind

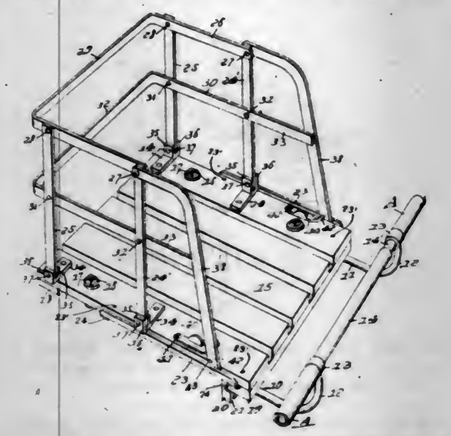
which the film is adapted to be disposed, a back larger than the central opening and attached to the back of the support along three of its margins, said back being formed



of a thin strip of translucent celluloid having both of its faces highly polished, said strip of celluloid being white in color.

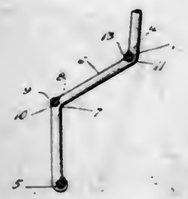
1,454,153. PROCESS OF PREPARING SUGAR. JOHN CARR, Esher, and ARTHUR BENJAMIN BRADLEY, Fulham Park, London, England. Filed Feb. 28, 1920. Serial No. 362,007. 1 Claim. (Cl. 127—17.)

The herein described method of preparing sugar suitable especially for use in the manufacture of chocolate, which consists in producing a sugar solution of between 55° to 65° Brix, cooking the solution at a temperature not substantially below 254° nor substantially above 262° Fahr., then passing the hot solution through a transforming apparatus and maintaining it therein at a temperature within 20° of the cooking temperature, and stirring and beating it until it crystallizes in the form of rounded, soft and easily crushed grains having dimensions of between one-twentieth and one-tenth of a millimeter and containing from about two to three per cent of moisture and not more than six per cent of invert sugar.



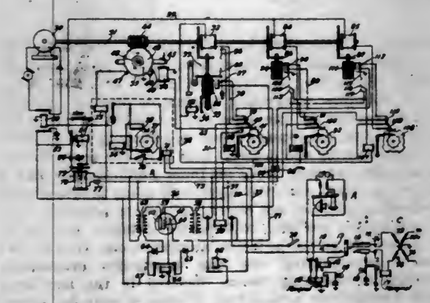
1,454,154. METHOD OF AND APPARATUS FOR FUMIGATING. KENNETH F. COOPER, Great Neck, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Jan. 25, 1921. Serial No. 439,784. 9 Claims. (Cl. 43—129.)

3. The process of fumigating with a volatile liquid fumigant which consists in mixing an inert gas with said fumigant; providing a heat storage reservoir; passing said mixed gas and fumigant through said reservoir to vaporize and superheat the same; and introducing said superheated mixed gas and vapor into the space to be fumigated, substantially as described.



1,454,155. WINDOW BRACKET. JOHN A. CROZIER, Knoxville, Iowa. Filed May 26, 1921. Serial No. 472,737. 4 Claims. (Cl. 304—24.)

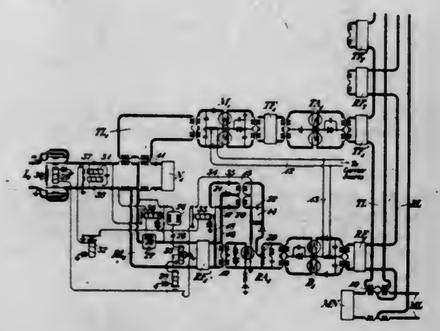
1. In a window bracket, a frame, a platform thereon, guides at the edges of the platform and spaced therefrom, a skeleton guard including standards pivotally connected to the platform, braces pivotally connected to the guard and having their ends extending downwardly and forwardly into the spaces between the guiding plates and the side edges of the platform, angularly projecting end



portions on the braces adapted to engage the under surface of the platform, and means for holding the braces in operative position.

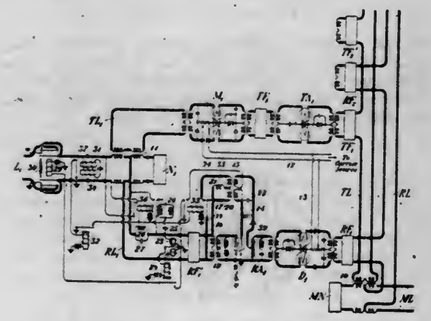
1,454,156. WIRE JOINT. GUY DINCOGNITO, Chicago, Ill. Filed Jan. 6, 1923. Serial No. 610,982. 6 Claims. (Cl. 245—2.)

1. A joint of the character described comprising a member having a bend therein, said member being reduced at the inner side of said bend to form an undercut notch, and another member disposed at an angle to said first member and mounted in said notch.



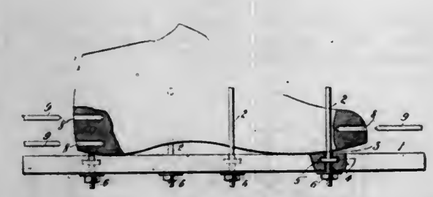
1,454,157. PHONOGRAPHIC RECORDING AND REPRODUCING SYSTEM. HENRY C. EGERTON, Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1918. Serial No. 245,757. 21 Claims. (Cl. 179—6.)

1. A recording system comprising a mechanical type record, a recorder operable to cut a record trace thereon,



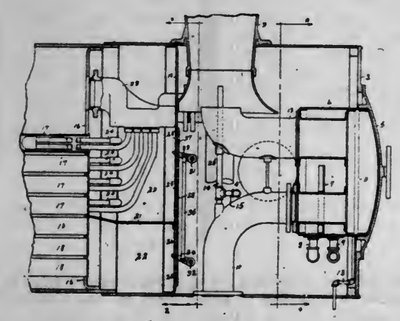
means to effect recording movement of both the record and the recorder, and automatic means controlling the means to effect recording movement in such a way that movement of neither the record nor the recorder takes place during appreciable pauses occurring in the delivery of the matter to be recorded.

1,454,158. MEANS FOR RINGING OVER MULTIPLEX TRANSMISSION CHANNELS. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 29, 1919. Serial No. 314,074. 4 Claims. (Cl. 179—4.)



1. In a signaling system, a source of telephone currents, a source of currents of frequencies without the telephone range, a transmission circuit for transmitting from one source frequencies lying within the telephonic range, and for transmitting from the other source frequencies lying without said range, an amplifier in said circuit for amplifying all frequencies transmitted over said circuit, and means associated with said amplifier to give said amplifier a characteristic such that it will amplify certain frequencies without the telephone range to a greater degree than frequencies within said range.

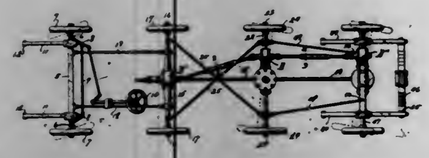
1,454,159. MEANS FOR RINGING OVER MULTIPLEX TRANSMISSION CHANNELS. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 30, 1920. Serial No. 400,045. 8 Claims. Cl. 179—4.)



1. In a signaling system, a transmission path, an amplifier and circuits therefor associated with said path, and means whereby the circuits of said amplifier may be controlled over said path to convert the amplifier into a generator of oscillations.

1,454,160. METHOD OF RE-FORMING LASTS. JEREMIAH FITZPATRICK, Brockton, and CHARLES H. FITZPATRICK, North Abington, Mass. Filed Aug. 11, 1921. Serial No. 491,615. 3 Claims. (Cl. 142—1.)

1. The method of reforming a lot of lasts in a last turning lathe having a model follower and a cutter, comprising the making of a model last from one of said lot, fixing said model last whereby it may be arranged to turn in said lathe on a determined axis, fixing the other lasts of the lot whereby each may be arranged to turn in said lathe on a determined axis the same as that to the model last, fixing the model last and successively each of the other lasts in the lathe to turn on their respective determined axes without displaceability in any direction, and whereby also the model last and last to be reformed will occupy like relative positions the one to the model follower and the other to the cutter, otherwise arranging whereby the model follower and cutter will engage respectively the model last and last to be reformed at like points on the respective lasts during the cuttings, and then cutting in the usual manner.



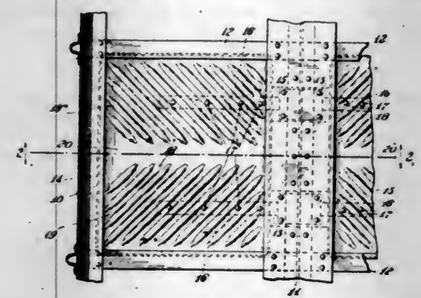
1,454,161. LOCOMOTIVE. MARTIN J. FURLONG, Houston, Tex. Filed May 3, 1920. Serial No. 378,632. 4 Claims. (Cl. 122—480.)

2. In a locomotive, a front tube sheet to support the front ends of the boiler tubes, a partition plate, spaced in front of the tube sheet, a transverse partition dividing said space into a super heater chamber above and a front end chamber beneath, said partition plate having outlets opposite the upper chamber and wider outlets opposite the lower chamber, a damper plate arranged adjacent said partition plate and provided with uniform draft openings, means actuated by steam pressure and provided to move said damper plate in one direction to bring the openings therein into registration with said outlets, said damper plate being arranged to be moved in the other direction by gravity when the steam pressure is released to close said outlets opposite the super heater chamber, a stop for limiting the movement of the damper

plate in said last mentioned direction, and manual means for adjusting said stop to extend the range of movement of said plate in said last mentioned direction, to also close the outlets opposite the front end chamber.

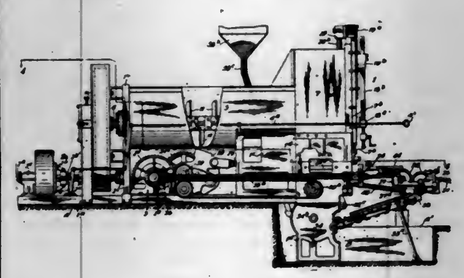
1,454,162. VEHICLE. MARTIN J. FUALONG, Houston, Tex. Filed Oct. 2, 1922. Serial No. 591,835. 11 Claims. (Cl. 180—22.)

1. A vehicle comprising a frame, a driving axle arranged beneath the frame intermediate the ends thereof and having the usual ground engaging wheels, a supporting and steering axle arranged beneath the axle forward of the driving axle and having the usual manually controlled steering wheels, a floating axle arranged below the frame rearwardly of the driving axle and having the usual ground engaging wheels, a member supported by the frame for rotation about a vertical axis, spaced members depending from said rotatable member at opposite sides of the axial center thereof and between which the floating axle is positioned, and means associated with the driving axle and the last named axle for imparting bodily swinging movement thereto during a turning movement of the vehicle.



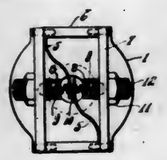
1,454,163. DIAPHRAGM. HAROLD CECIL GAINS, London, England. Filed Nov. 5, 1920. Serial No. 422,047. 1 Claim. (Cl. 181—52.)

The method of making a paper diaphragm consisting in arranging a plurality of paper discs in superposed relation, uniting them by a heated adhesive, causing the surplus moisture to evaporate, heating and pressing the united discs, cooling the same, repressing at a temperature of about 200° F., cooling the same while under pressure, and finally coating the same with varnish.



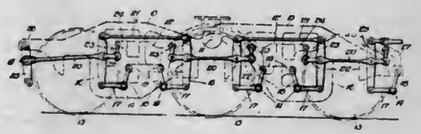
1,454,164. DUMP-CAR DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original applications filed Aug. 30, 1919, Serial No. 320,792 (now Patent No. 1,380,055, dated May 31, 1921), and Apr. 7, 1921, Serial No. 459,305. Divided and this application filed June 22, 1922. Serial No. 570,245. 6 Claims. (Cl. 105—280.)

1. A sheet metal door for a railway car of the dumping type having hinge members extending across the under side of the door and provided with a plurality of diagonally disposed corrugations which extend from the



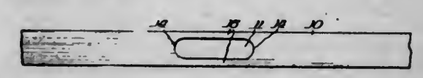
hinged edge of the door toward the lateral and opposite edges thereof, certain of said corrugations crossing said hinge.

1,454,165. BRICK MACHINE. HENRY W. B. GRAHAM, New London, Ohio, assignor to The Arnold-Creager Company, New London, Ohio, a Corporation of Ohio. Filed Feb. 15, 1919. Serial No. 277,286. 40 Claims. (Cl. 25—48.)



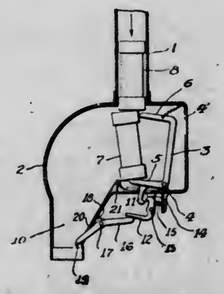
1. The combination with means for filling molds with material for making bricks, of mold return means, mechanism for inverting each mold and separating the mold and bricks, and means co-operating with said inverting and separating mechanism to turn the empty mold right side up and deliver it to said return means.

1,454,166. INSULATION-SMOOTHING DEVICE. JOHN ALLEN HEANY, New Haven, Conn., assignor, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Delaware. Filed Apr. 10, 1919. Serial No. 289,123. 3 Claims. (Cl. 173—244.)



2. An insulation smoothing device comprising: a framework, resilient wiping members carried by the framework, and pressure-exerting members carried by the framework in opposed relation to each other and arranged to engage the wiping members opposite their points of engagement with an interposed conductor.

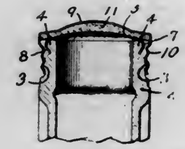
1,454,167. BRAKE MECHANISM. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 16, 1920. Serial No. 359,095. 6 Claims. (Cl. 188—213.)



3. In brake mechanism, brake levers, pull rods connected to said levers and having extensions, and pivotally mounted hangers connected to the extensions of said pull rods for maintaining the brake rigging in normal position and permitting free movement lengthwise of the truck.

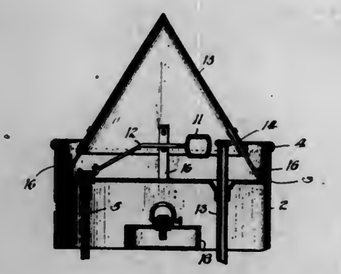
1,454,168. FORGED-STEEL FULCRUM. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed June 10, 1921. Serial No. 476,383. 2 Claims. (Cl. 188—231.)

2. A forged fulcrum comprising two spaced arms twisted at an angle with respect to the balance of the fulcrum and being bridged at one end, the bridging piece being perforated to form an open seat for a tension rod.



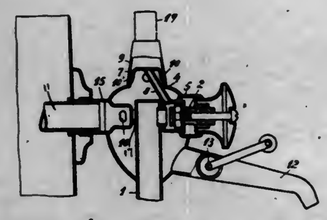
1,454,169. CARRIER-SPACING DEVICE FOR PNEUMATIC-DISPATCH SYSTEMS. WILLIAM J. HEPPERLE, Bloomfield, N. J. Filed June 11, 1921. Serial No. 476,870. 6 Claims. (Cl. 243—38.)

1. A carrier spacing device for conveyor systems comprising a movable member adapted to be moved by a traveling carrier into the path of a following carrier, means for locking the movable member in its interrupting position, and means operated by the first carrier in its continued travel for releasing the locking means to clear the path of the following carrier.



1,454,170. CLOSURE FOR CONTAINERS. FRANK S. HYATT, Brooklyn, N. Y. Filed Apr. 6, 1920. Serial No. 371,634. 6 Claims. (Cl. 221—61.)

1. A receptacle having a neck, a sifter top presenting a perforated body, said top being secured to said neck adjacent the outer end of the same, a removable imperforate cap having its inner face conforming to the entire

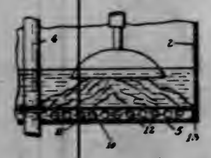


outer perforated surface of said top and means on the neck below the edge of the sifter top for drawing said cap into intimate contact with said outer face of the top.

1,454,171. WATER FOUNTAIN FOR CHICKENS. ROY E. JONES, Storrs, Conn. Filed Mar. 7, 1922. Serial No. 541,651. 3 Claims. (Cl. 119—73.)

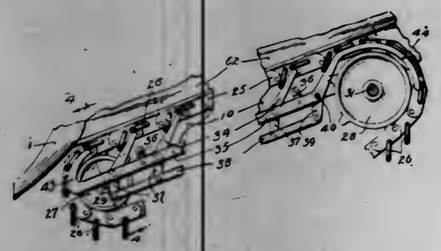
1. An appliance of the character described, comprising a shell, a pan within the shell, to contain water, the marginal portion of the pan resting upon the upper edge of the shell, a water-pipe extending into the pan, a valve for the water-pipe, a float-operated lever for actuating the valve, and a cone provided on its underside with straight legs the angle of which agrees approximately with that of the body of the cone and spaced apart, said legs resting on the bottom of the pan, the openings between said legs providing access by the chickens to the water contained within the cone.

1,454,172. MIXING VALVE. HUGO JUNKERS, Dessau, Germany. Filed July 1, 1921. Serial No. 481,999. 9 Claims. (Cl. 277—18.)



1. A mixing valve battery comprising in combination, a pressed sheet metal casing, a plurality of complete screw down valves outwardly projecting through the wall of said casing and separate pipe connections inserted in said casing and connected with said valves.

1,454,173. GAMING APPLIANCE. STEPHEN KEINER, Los Angeles, Calif. Filed Sept. 14, 1921. Serial No. 500,617. 5 Claims. (Cl. 46—61.)

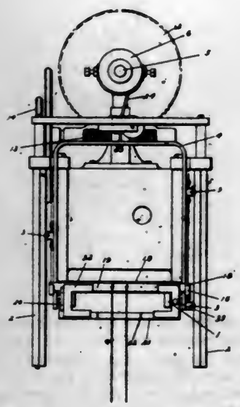


1. A gaming appliance comprising in combination an upper ball runway adapted to deliver balls onto a wheel; a wheel mounted below the upper ball runway and adapted and arranged to receive balls delivered from said runway and also adapted to be actuated by the balls discharged from said runway; a lower ball runway adapted and arranged to receive the balls from said wheel and to deliver the same to a spinning top; and a spinning top having compartments adapted and arranged to receive the balls discharged from said lower runway.

1,454,174. WASHING MACHINE. JOHN JEFFERSON KENYON, Detroit, Mich. Filed Feb. 16, 1922. Serial No. 536,933. 1 Claim. (Cl. 68—19.)

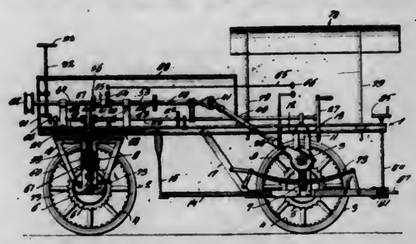
In a washing machine, the combination with a tub, of a ring resting on the bottom of the tub and having an inwardly extending top flange, a sleeve disposed in the centre of the ring and extending through the bottom of the tub, a plurality of arms extending between the sleeve and the ring, a circular perforated false bottom supported on the arms and the inwardly extending flange of the ring and a rod extending through said sleeve and carrying vacuum cups above said false bottom.

1,454,175. POTATO DIGGER. JOSEPH J. KOVAR and JOHN R. KOVAR, Owatonna, Minn.; said Joseph J. Kovar assignor to said John R. Kovar. Filed Jan. 5, 1920. Serial No. 349,190. 9 Claims. (Cl. 130—32.)



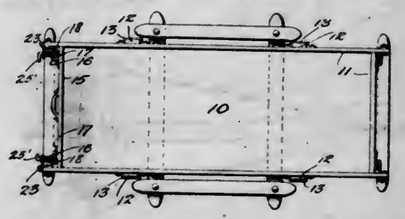
1. A conveyer adapted to receive potatoes and earth from the plow of a potato digger having in combination spaced link chains, rods extending between said chains and pivoted to the links thereof by eccentric pivots to depend freely therefrom, and means for oscillating said rods about said pivots during the travel of the chain comprising a row of rearwardly extending spaced cam fingers disposed at each side of the conveyer adjacent said channels.

1,454,176. TRACK-LAYING MACHINE. JOHN R. MCGIFFERT, Duluth, Minn., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Oct. 11, 1921. Serial No. 507,020. 15 Claims. (Cl. 104—5.)



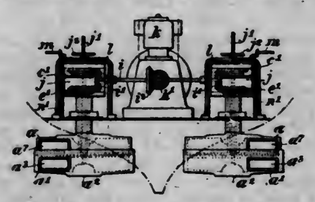
1. In a track laying apparatus, the combination of a car, parallel vertical frames mounted on opposite sides of said car, transverse braces connecting said frames at the level of the floor of said car, horizontal transverse braces connecting said frames above the level of said car floor, and angular braces extending from the upper ends of said frames, said last named braces being connected together centrally above said car, a trackway and movable carriage thereon, said trackway being mounted on said upper horizontal braces of said frames, an engine mounted on said frames and braces, and carriage-operating cables extending from said carriage to the ends of said trackway and over the point of connection of said angular braces, said cables being operable by said engine to actuate said carriage.

1,454,177. SPECTACLE-FRAME-COATING MACHINE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 11, 1920. Serial No. 388,127. 2 Claims. (Cl. 91—46.)



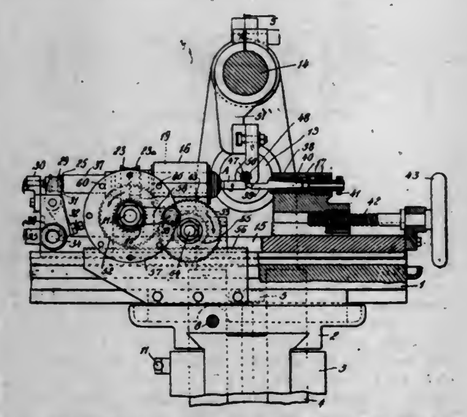
1. A device of the character described including a carriage having supporting arms and a plurality of interchangeable rack members having portions for interlocking engagement with the arms said rack members each having article receiving projections and additional article steadying recesses aligned with the projections to steady articles mounted thereon.

1,454,178. COMBINED TRACTOR AND TRUCK. JOHN J. MOORE, Batavia, N. Y. Filed May 7, 1920. Serial No. 379,606. 3 Claims. (Cl. 180—73.)



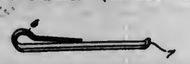
1. In a machine of the class described, a wheel supported structure, driving gears of different size fixed to each of said wheels, a drive shaft having a gear fixed thereto, a vertically movable jack-shaft carrying cogs to mesh with the gears on said wheels, a bevel gear carried by said jack-shaft, a connection between said drive and jack shafts whereby the latter is actuated by the former, said connection comprising a shaft composed of telescoping sections, one having a gear meshing with the gear on said drive shaft and the other a gear meshing with the gear on the jack-shaft, whereby the jack-shaft is actuated by the drive shaft and the jack-shaft permitted to move vertically relatively to said drive shaft.

1,454,179. WAGON BED. LYMAN L. MOOTHART, Junius, S. Dak. Filed May 25, 1922. Serial No. 563,593. 2 Claims. (Cl. 296—53.)



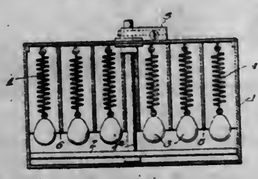
1. A wagon body having end gate cleats of which the members are carried respectively by the side walls of the body and the end gate and have an interlocking engagement for sliding movement parallel with the plane of the end gate, one of said cleat members having an outwardly directed channel or groove and the other having an inwardly directed rib or tongue, and the side wall cleat members being hingedly mounted for swinging movement out of the path of the rearward movement of the end gate, and a spring actuated latch or bolt carried by said side wall cleat member for engagement with a socket in the end gate.

1,454,180. PROPELLER FOR VESSELS. CHARLES MARIUS MOTTE, Paris, France. Filed Mar. 22, 1921. Serial No. 454,570. 1 Claim. (Cl. 115—16.)



Means for propelling and stopping vessels consisting in suspended and superposed turbine casings, upper and lower inlet orifices and a lateral outlet in said casings, means for suspending said casings and means for simultaneously turning same and mechanism for transmitting power for continuously rotating the turbine wheels.

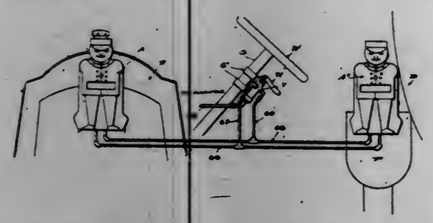
1,454,181. MECHANISM FOR MILLING BLANKS FOR CUTTERS. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 20, 1918, Serial No. 245,861. Renewed Oct. 6, 1921. Serial No. 505,927. 10 Claims. (Cl. 90—20.)



1. The combination of a horizontally movable frame, a plurality of blank-holding spindles longitudinally mounted on the frame, a plurality of milling cutters rotatable about a common axis and arranged to engage the respective blanks to cut grooves therein, and means for simultaneously turning the spindles and blanks as they move longitudinally with the frame, the said means comprising a rack fixed against movement with the frame and gearing carried by the frame and including a gear meshing with the rack.

1,454,182. LOOSE-LEAF BINDER. ANSON WILLIS MYER, Kingston, N. Y. Filed Mar. 16, 1921. Serial No. 452,727. 4 Claims. (Cl. 129—40.)

1. In a loose leaf binder, a one-piece substantially U-shaped resilient holder, one leg of the holder being slender and adapted to extend between the leaves of a book, and the other leg being relatively wide and adapted to extend between the sewed edges of the leaves and the back of the book.

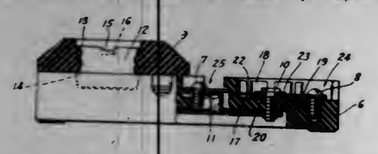


1,454,183. THEFT ALARM. JAMES H. MINER, Meridian, Miss. Filed June 15, 1921. Serial No. 477,794. 2 Claims. (Cl. 116—33.)

1. In an automatic theft alarm for motor vehicles an inclosing casing, a horizontally disposed sounding member

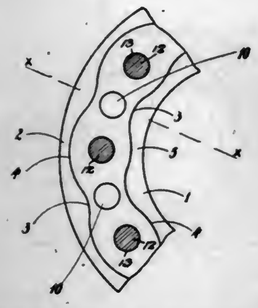
located therein, a knocker element located in proximity to said sounding member, and a helical spring connecting said knocker element to the casing, said knocker element being normally free to move vertically, relatively to the sounding member, and locking means for holding said knocker against such relative movement.

1,454,184. SIGNAL APPARATUS FOR MOTOR VEHICLES. ALEXANDER J. PERRON, Sparta, Wis. Filed Apr. 27, 1922. Serial No. 556,945. 9 Claims. (Cl. 116—39.)



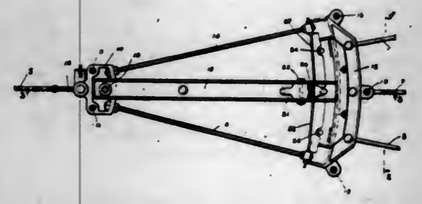
1. A signal unit comprising a supporting plate, a pair of cylinders mounted upon the forward face of said supporting plate, a piston for each cylinder, a pair of signalling arms, each arm having its one end pivotally connected to the supporting plate, a link connection between each arm and one of the pistons whereby upon the piston moving upwardly the arm will be swung to its signalling position, and a cover casing for the mechanism including the cylinders supported by said supporting plate, said cover casing being in the form of a figure, and having a transverse recess, and a signal member bearing the word "Stop" mounted upon the supporting plate and adapted to be brought into register with said recess in the cover upon both arms assuming their signalling position.

1,454,185. ELECTRICAL CUT-OUT. CLARENCE D. PLATT, Bridgeport, Conn. Filed Feb. 11, 1922. Serial No. 535,676. 11 Claims. (Cl. 200—133.)



1. A cut out comprising an insulating base, a screw shell rotatably carried thereby, a circuit terminal for said screw shell, a cover for said base to guard said terminal and the sides of said screw shell, and means for preventing said screw shell from rotating when said cover is in place.

1,454,186. ELECTRIC CUT-OUT AND THE LIKE. CLARENCE D. PLATT, Bridgeport, Conn. Filed Apr. 8, 1922. Serial No. 550,562. 9 Claims. (Cl. 200—133.)

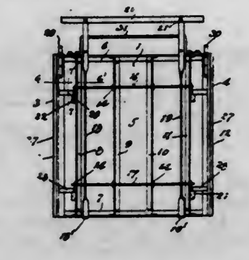


1. In a cut-out, an insulating base, a socket secured to said base, a center contact, circuit terminals carried by said base and connected to said socket and said center contact, a detachable cover and a screw shell carried thereby adapted to engage said socket.

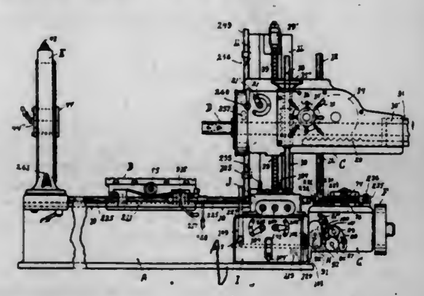
1,454,187. CYLINDER CONNECTION AND THE LIKE. PETER AUGUST POPPE and ERLING POPPE, Coventry, England. Filed Nov. 17, 1920. Serial No. 424,785. 4 Claims. (Cl. 285—130.)

1. A peripheral joint for hollow structures having one of its contacting faces provided with a pair of undulating facing strips and spaced securing members disposed between the facing strips; the undulating facing strips being narrow adjacent the holes for the securing members and extending to a greater width intermediate thereto.

1,454,188. SWITCH FOR OVERHEAD TRACKS. ROBERT F. RASMUSSEN, Oshkosh, Wis., assignor to C. A. Libbey Co., Oshkosh, Wis., a Corporation of Wisconsin. Filed Nov. 18, 1921. Serial No. 516,155. 7 Claims. (Cl. 104—103.)



1. The combination with a main track, a plurality of branch tracks and supporting means for said tracks, of a switch member, means pivotally connecting one end of the switch member to the supporting means for the main track, a switch track carried by said switch member, means flexibly joining the switch track at one end to the main track, whereby said switch member may be moved horizontally to bring the other end of the switch track into alignment with any of the branch tracks, and a latch mechanism for locking said switch track in its adjusted positions.

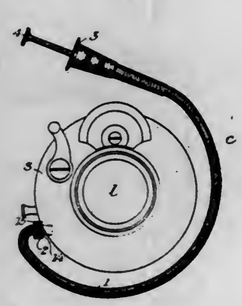


1,454,189. MOLDING FORM. HENRY RUSTAD, Winnipeg, Manitoba, Canada. Filed July 20, 1922. Serial No. 576,373. 5 Claims. (Cl. 25—128.)

4. A molding form comprising a suitably interiorly reinforced stationary plate having the ends thereof inwardly deflected to provide end wings, a suitable reinforced movable plate complementary to and opposing the stationary plate, said movable plate having end wings extending towards, but spaced from the wings of the stationary plate, upper and lower sets of vertically swingable arms pivotally connected to the inner side of the stationary plate, cross rods connecting the free ends of the arms of the sets, vertically extending spaced adjusting bars mounted on the rods, a handle connecting the upper ends of the bars, means connecting the

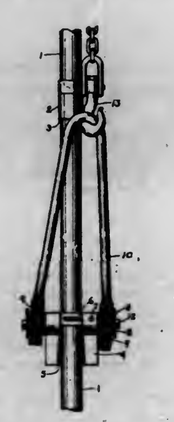
movable plate to the adjusting bars, similar end plates normally contacting with the inner faces of the wings and closing the openings therebetween, stop brackets permanently secured to the stationary plate and engageable with certain of the swinging arms and limiting the down swinging thereof, vertically swingable arms pivotally connecting the end plates to the stop brackets and handles permanently attached to the upper ends of the end plates.

1,454,190. HORIZONTAL BORING MILL. WILLIAM L. SCHELLENBACH, Wyoming, Ohio, assignor to Giddings & Lewis Manufacturing Company, Fond du Lac, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1919. Serial No. 293,330. 23 Claims. (Cl. 29—26.)



1. A feeding mechanism comprising a reversible feed train, a traverse train, and a controller lever to control the movements of both of said trains, said controller lever having a feeding position, a non-feeding position at each side of the feeding position covering a sufficient range of movement of the controller lever to enable said non-feeding position to be employed as a feed stop position, and a traverse position at the outside of each stop position of the lever.

1,454,191. BRUSH. FRED STEBLER, Riverside, Calif., assignor to Stebler Parker Co., Riverside, Calif., a Corporation of California. Filed Dec. 19, 1921. Serial No. 523,315. 9 Claims. (Cl. 146—14.)

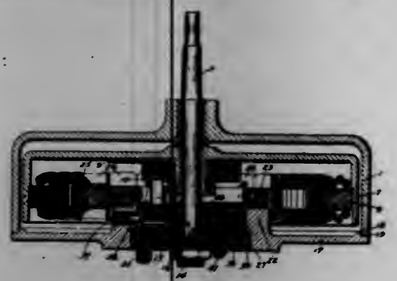


1. A brush comprising a core provided on its surface with a plurality of annular spiral grooves each independent and separate from the other and extending from one end of the core to the other, a plurality of flexible tuft mounting members, one positioned within and extending from one end to the other of each groove, means for anchoring the ends of each tuft mounting member to the core, and a plurality of brush tufts carried by each mounting member and projecting radially of the core surface.

1,454,192. FLEXIBLE-CABLE RELEASE AND METHOD OF ASSEMBLING SAME. CHARLES E. STURGIS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 29, 1921. Serial No. 488,477. 8 Claims. (Cl. 74—30.)

2. In a shutter release, the combination with an outer flexible tubular casing, and an inner flexible cable, both terminating in finger ferrules at one end, of a threaded shutter engaging member at the other end of one of the flexible members, said last named flexible member including a spring, a portion of said spring having convolutions of different spacing from the convolutions of the remainder of the spring to provide a thread adapted to engage and bind with the thread on the shutter engaging member, forming a tight connection therewith.

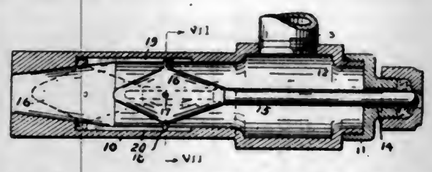
1,454,193. ELEVATOR. AVERY H. THOMAS, Houston, Tex. Filed Feb. 5, 1921. Serial No. 442,860. 4 Claims. (Cl. 294—91.)



1. In an elevator of the class described, an elevator block, straight laterally extending trunnions thereon and a bail having elongated openings in the lower ends thereof to receive said trunnions, said openings being of uniform width and rounded at the upper and lower ends to allow a rocking of said block therein for the purpose described.

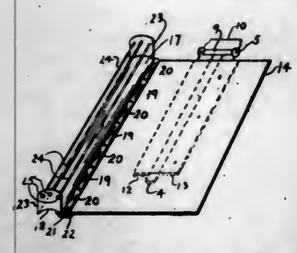
1,454,194. ELEVATOR. AVERY H. THOMAS, Houston, Tex., assignor to Houston Pump & Supply Company, Houston, Tex., a Corporation of Texas. Filed Aug. 29, 1921. Serial No. 496,742. 3 Claims. (Cl. 294—90.)

1. In an elevator, the combination of a pipe clamping block, a post thereon, a yoke slidable on said post, a ball on said yoke, a stop nut on said post above said yoke, a spring on said post between said yoke and said nut and means to hold said ball erect relative to said post.



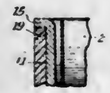
1,454,195. PHONOGRAPH MOTOR. EDWARD J. TOMLINSON, Newark, N. J., assignor to Splitdorf Electrical Company, Newark N. J. Filed May 20, 1920. Serial No. 382,794. 16 Claims. (Cl. 172—36.)

1. A phonograph motor comprising in combination, a stationary casing, a movable casing positioned within the stationary casing and carrying: an armature structure, a shaft for operating a sound record support body and a commutator; a flat cover plate with means for fastening the same to the stationary casing, said plate carrying a magnetic field structure for co-acting with said armature structure, a brush holder mounted in said flat cover plate with brushes to convey current to and from said commutator and a bearing in the cover plate for one end of said shaft.



1,454,196. DEVICE FOR PRODUCING AND UTILIZING COMBUSTIBLE MIXTURE. SAMUEL TROOD, Pittsburgh, Pa. Filed July 16, 1921. Serial No. 485,340. 3 Claims. (Cl. 158—118.)

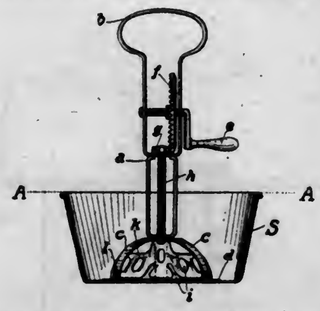
3. A device for producing and utilizing combustible mixture which includes a shell enclosing a chamber, means comprising a plug interposed in said chamber to form a constricted area therein, the said plug being in the form of a double truncated cone and forming venturi passages, the said plug being adjustably positioned in



said chamber for the purpose of varying the suction effect in the constricted area formed between the walls of said plug and the walls of the chamber, and means to introduce combustible mixture into said constricted area.

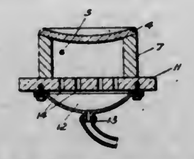
1,454,197. BOOKREST. WILLIAM JAMES WALSH, Hamilton, Ontario, Canada. Filed Oct. 13, 1921. Serial No. 507,461. 1 Claim. (Cl. 45—85.)

In a device of the class described, the combination with a flat book rest, of a relatively narrow plate hingedly connected to one marginal edge thereof, book securing means carried by said hinged plate, a projecting rigid stop arm rigidly carried by the hinged plate, said stop arm adapted to engage the back of the book rest and limit the oscillation of the hinged plate.



1,454,198. CAMERA. FRANK S. WARREN, Oakland, Calif., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 9, 1921. Serial No. 521,226. 3 Claims. (Cl. 95—11.)

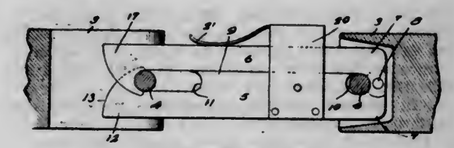
1. An article of manufacture adapted to constitute a part of the exterior casing of a camera and comprising a thin malleable sheet of metal, the edges of which are struck up at right angles to form continuous flanges extending outwardly, and a layer of flexible material secured adherently to the outer surface of said sheet and with its edges abutting the inner wall of the flanges, the thickness of the exposed edge of the flange being the same as the thickness of the sheet and the height of the flanges being substantially the same as the thickness of the flexible layer, whereby the flanges protect the edges of the layer.



1,454,199. AGITATOR. KUNZ WEIDLICH, Nuremberg, Germany, assignor to the Firm Bing-Werke, vorm. Gebr. Bing A.-G., Nuremberg, Germany. Filed Feb. 3, 1922. Serial No. 533,808. 3 Claims. (Cl. 259—134.)

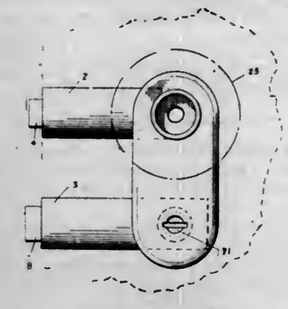
1. In a device of the kind described in combination, a stand, a plurality of feet spaced apart at the lower end of said stand, a shaft extending vertically in said stand down to the feet and a stirring vane in the form of a

vertically placed piece of sheet material freely supported at the lower end of said shaft with its bottom edge almost at a level with the lower ends of said feet.



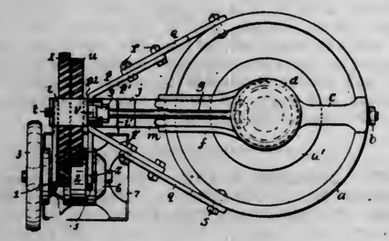
1,454,200. ANTÆUS GLASS. JOEL C. WELLS and EDGAR D. TILLYER, Southbridge, Mass.; said Tillyer assignor to said Wells. Filed May 13, 1922. Serial No. 560,614. 6 Claims. (Cl. 49—79.)

1. The process of producing protection lenses consisting in heating the lens uniformly and subsequently cooling one face of the lens while the other is in a plastic condition.



5. The process of producing a curved protection lens consisting in surfacing the faces of the lens in flat form, subjecting the blanks after surfacing to sufficient heat to drop the lens to desired curve without impairment of the polished surfaces thereof, and suddenly chilling one face of the blank to produce a surface tension in the finished blank, increasing the resisting properties thereof.

1,454,201. SELF-COUPLING FOR MINE CARS. JAMES WHEWELL and HARLEY I. YODER, Holsopple, Pa. Filed May 24, 1921. Serial No. 472,211. 1 Claim. (Cl. 213—209.)



A link coupler comprising a pair of substantially rectangular plates having inwardly directed overlapping ears pivotally connected and securing the plates together at one end, inwardly directed overlapping beaks at the other ends of the plates, one of said plates being recessed between its ends, the other plate having an elongated recess on its inner edge from its beak to a point approximately at its center and a substantially circular recess near its other end adjacent its ear, a rib separating said recesses adapted to engage the inner edge of the opposite plate within the recess of the latter, said recesses receiving the coupling pins on adjoining cars, a yoke secured to one of the plates, and a spring arm extending from one end of said yoke engaging the outer edge of the other plate to maintain the parts in a normally contacting position.

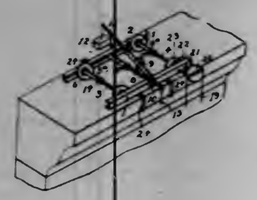
1,454,202. LOCK. JOHN O. WINKS, San Francisco, and EDWARD O. BENNETT, Gilroy, Calif., assignors to Bradley L. Benson, San Francisco, Calif. Filed Apr. 2, 1921. Serial No. 458,118. 8 Claims. (Cl. 70—16.)

3. A lock, comprising, in combination, a cylindrical member adapted to extend crosswise of a door, an escutcheon at each end thereof, said escutcheons being perforated in register with said cylindrical member, flanged cylindrical members adapted to extend through the perforations in said escutcheons and enter said first named cylindrical member and locking means therein adapted to engage the same.

1,454,203. DRIVING ATTACHMENT FOR ICE-CREAM FREEZERS AND THE LIKE. WILLIAM WIRTZ, Cristobal, Canal Zone, Panama. Filed Mar. 24, 1922. Serial No. 546,311. 7 Claims. (Cl. 74—7.)

1. In combination, with a fixed structure including a substantially cylindrical vessel and with a part to be driven arranged in said structure, a frame arranged beside and secured to said structure and having a lateral crotch receiving the vessel between, and bearing at a given elevation against said vessel at, its extremities and a lateral brace bearing against the vessel at another elevation and in a vertical plane bisecting the crotch, and means in the frame to drive said part.

1,454,204. PROCESS OF MANUFACTURING DIOXYPERYLENE AND PERYLENE. ALOIS ZINKE, Graz, Austria, assignor to Hans Pereira, Vienna, Austria. Filed Feb. 24, 1921. Serial No. 447,561. 5 Claims. (Cl. 260—168.)



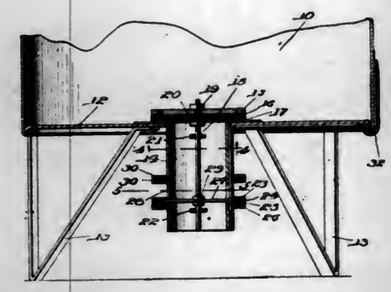
4. A process for manufacturing perylene consisting in reducing dioxyperylene by a metal in a current of hydrogen at a temperature above the distilling temperature of perylene.

1,454,205. PROCESS OF MANUFACTURING DIOXYPERYLENE. ALOIS ZINKE, Graz, Austria. Original application filed Feb. 24, 1921, Serial No. 447,561. Divided and this application filed June 14, 1922. Serial No. 568,289. 6 Claims. (Cl. 260—154.)

2. A process for treating alkyl derivatives of dioxybinaphthyls, consisting in mixing the same with aluminium chloride, heating the mixture to a temperature lower than the melting temperature of dioxyperylene under exclusion of water in any form and lixiviating the mass obtained with dilute hydrochloric acid whereby aluminium chloride and its products of decomposition are dissolved separating the solid residue from the liquid whereby dioxyperylene is obtained.

6. As a new product of manufacture a perylene derivative in which for two of the atoms of hydrogen in the perylene molecule the OH group is substituted.

1,454,206. COPING CARRIAGE. FREDERICK JOHN TURNER BELL, Ashton-under-Lyne, England. Filed June 8, 1921. Serial No. 475,988. 5 Claims. (Cl. 104—94.)



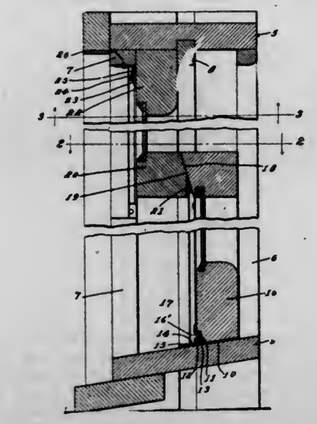
5. A coping carriage characterized by side members, collapsible members connecting the said side members, running wheels in fixed relation to such side members and moving transversely therewith when the side members are moved towards each other and means for securing the collapsed members in any desired position, and toothed and rope gearing between one of the carriage running wheels and the cradle swung from the coping carriage and bearing the operative, said cradle having fitted thereto vertical and horizontal runners to engage the front of the building, and means for turning each runner into or out of engagement with the said wall.

1,454,207. BELLOWS VALVE. GEORGE W. BEMIS, Worcester, Mass. Filed Oct. 4, 1920. Serial No. 414,561. 3 Claims. (Cl. 230—2.)

1. A valve structure comprising a thin rectangular and substantially flat metal valve plate having integral longitudinally extending stiffening ribs formed on its outer surface, a facing of softer material secured to said plate, a seat for said valve and means to retain said valve plate in operative relation to said valve seat, said valve plate having limited free swinging movement as a flat unit about an edge of said plate parallel to said stiffening ribs.

1,454,208. FILLING DEVICE. CHARLES N. BRACKETT, Memphis, Tenn. Filed Nov. 14, 1921. Serial No. 515,127. 1 Claim. (Cl. 226—36.)

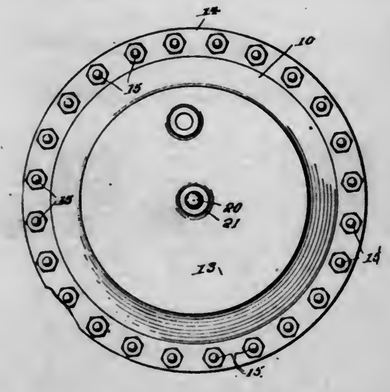
A filling device of the character described comprising a container having an opening centrally disposed in its bottom portion, a filling spout suspended from the walls of said opening and adapted to communicate with the interior of said container, a valve normally seated to cut off said communication and adapted to have its lower edge normally engaging the edges surrounding the opening, said valve including segments of different material arranged in superimposed positions, the heaviest of which being rust resisting and adapted to overlie the others, the intermediate material being rigid, the bottom material being pliable and adapted to provide a leak proof joint between the bottom of the container and the spout, a lifting rod having one of its ends inserted centrally through and beyond the valve and having said end threaded, nuts mounted on said threads and adapted to engage the upper and lower portion of said valve and to hold the same detachably secured to the rod spaced guide means secured to the interior of the filling spout and arranged transversely therein adjacent each end, said rod being adapted to slide centrally through said guide means, an annulus composed of the same material as the valve and adapted to loosely surround the filling spout adjacent its lower edge, a transverse element detachably secured to said rod and having its ends arranged in diametrically opposed elongated slots provided in the filling spout, said ends being adapted to support the annulus in desired positions, a second annulus rigidly secured around the filling spout and having its bottom edge engaging the top edge of said elongated slot and to limit the movement of the first mentioned annulus as and for the purpose specified.



1,454,209. SELF-TONING PHOTOGRAPHIC EMULSION. EDMUND R. BULLOCK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 13, 1922. Serial No. 529,079. 6 Claims. (Cl. 95—7.)

1. An emulsion containing a sensitive silver salt and a tellurium compound.

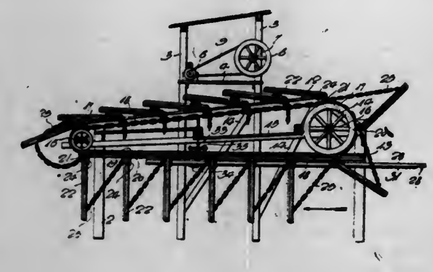
1,454,210. WEATHER STRIP. NOAH B. CANNADY, Eureka, Kans. Filed Oct. 6, 1921. Serial No. 505,802. 1 Claim. (Cl. 20—69.)



In a window construction comprising a sill, and a sash having a rabbeted lower rail, a plate secured to said sill and having an upwardly extending flange formed integral therewith, a plate secured to said sill cooperating with the first mentioned plate and having an upwardly extended flange terminating in a downwardly extended portion disposed in spaced relation therewith to provide

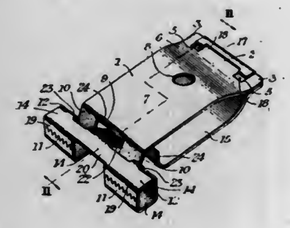
a pocket for the first mentioned flange and a plate secured to said sash rail and cooperating with said rabbet to

form a channel, said flanges adapted to be received in said channel and frictionally engage the walls thereof.



1,454,211. GAS-PRESSURE REGULATOR. WILLIAM P. CAPPS, Shreveport, La. Filed Oct. 16, 1922. Serial No. 594,928. 1 Claim. (Cl. 50—25.)

A device of the character described comprising a shell having a cover, a flexible diaphragm held taut between the shell and its cover, a stem slidable through the cover and secured to the diaphragm and passing therethrough, said shell having an outlet nipple and formed with a passage member leading from an inlet nipple, a valve located within the shell and including a casing communicating with said passage member and with the interior of the shell, a plug rotatable within the valve casing, an angle lever secured to the projecting end of said plug and a pivotal connection between said stem and the angle lever.



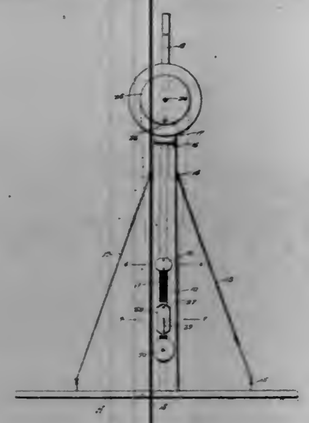
1,454,212. WATER MOTOR. JOHN W. CARLSON, Salt Lake City, Utah, assignor of one-half to Herbert S. Reed, Salt Lake City, Utah. Filed Aug. 11, 1921. Serial No. 491,500. 9 Claims. (Cl. 170—82.)

2. A water motor comprising, a frame, endless carriers moving longitudinally of the frame, paddle boards pivotally connected with said carriers, means for limiting swinging of the paddle boards in one drecton beyond a postion at right angles to the carriers when moved to an operative position, strips slidably carried by the frame

adjacent the lower tracks for supportng the paddle boards in an inoperative position when said strips are moved to an operative position and means for moving the strips into and out of position for engaging the paddle boards.

1,454,213. FILM CLIP. ALBERT K. CHAPMAN and GARSHOM A. RIGGS, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,067. 4 Claims. (Cl. 24—259.)

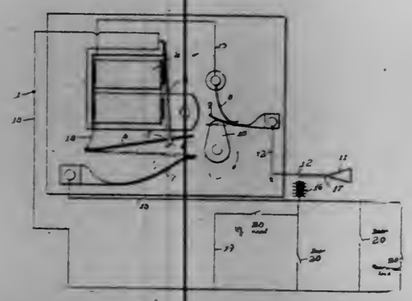
1. In a film clip comprising spring arms, plates formed on the ends of the arms, film engaging teeth extending from the plates, limiting stops spaced from the teeth also extending from the plates, said plates being spaced from a film held by the teeth.



1,454,214. FUSED SALT BATH FOR HEATING STEEL IN HARDENING. REGINALD SCOTT DEAN, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 11, 1921. Serial No. 468,755. 5 Claims. (Cl. 148—15.)

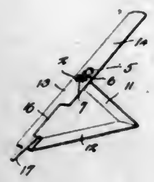
1. The method of maintaining a fused salt bath in a non-oxidizing condition for the heating of steel in hardening, which consists in adding a readily oxidizable material to the molten bath.

1,454,215. FILM DEVELOPER. FRANCISCO DIAZ, Winslow, Ariz. Filed Feb. 13, 1922. Serial No. 536,227. 4 Claims. (Cl. 95—93.)



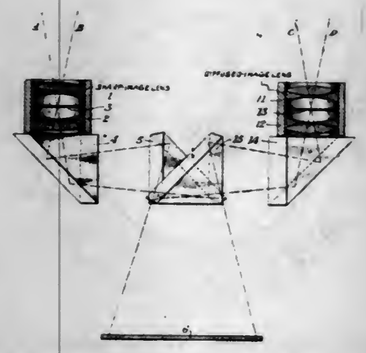
1. A device of the character described comprising an upstanding slotted support, a post slidable along said

slot, a sleeve member vertically adjustably mounted upon said post and carrying a spindle, a spool rotatable



on said spindle and having a handle, a block slidable along the lower end of said slot and carrying a spindle, and a flanged spool on said last named spindle.

1,454,216. ALARM FOR AUTOMOBILES. WEIR B. EBERLY, Mechanicsburg, Pa. Filed Nov. 26, 1919. Serial No. 340,789. 1 Claim. (Cl. 177—314.)



The combination with an automobile, of a housing secured to the dash and mounted under the hood of the engine, an electromagnet within the housing, a shiftable contact strip, an armature normally spaced from the magnet and engaging said contact strip to support one end thereof, a contact strip normally spaced from but in position to be engaged by the supported strip, an audible signal device, a source of electrical energy connected thereto electrically, contacts included in a circuit between the signal device and the electromagnet, a cam for holding the last named contacts normally together, one of said contacts being movable away from the other contact when the cam is shifted out of normal position, and a switch shiftable by the movement of a portion of the automobile for closing the circuit through the last named contacts while supported together, thereby to energize the electromagnet and release the shiftable contact strip for engagement with the contact strip thereunder to complete a circuit to the audible signal independently of subsequent movement of the switch, said cam being movable to engage the released shiftable contact and return it into engagement with the armature.

1,454,217. CAR SEAL. WILLIAM KERR EDGAR, Lawrence, Kans., assignor to The Edgar Steel Seal & Mfg. Co., Lawrence, Kans. Filed July 22, 1921. Serial No. 486,819. 5 Claims. (Cl. 292—315.)

1. A car seal comprising a strip bendable at prearranged points and having interlocking portions, a locking end on the strip bendable to hold the interlocking portions against separation, there being a recess in the seal having a portion normally concealed by said locking end when in holding position, and means bendable into engagement with the locking end while in holding position.

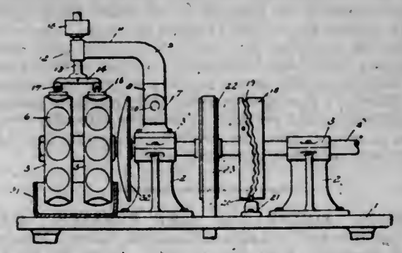
1,454,218. PHOTOGRAPHIC OPTICAL SYSTEM. WILLIAM F. FOLMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 23, 1920. Serial No. 398,450. 11 Claims. (Cl. 95—11.)

1. In an optical system for use in making artistic photographs, the combination with two lenses, one adapted to sharply define an object being photographed, the other being adapted to give a diffused image thereof, and means for superimposing images from the two lenses.

1,454,219. OZONE-GENERATING APPARATUS. RICHARD GOEDICKE, Berlin-Schoneberg, Germany. Filed Feb. 28, 1920. Serial No. 362,165. 3 Claims. (Cl. 204—32.)

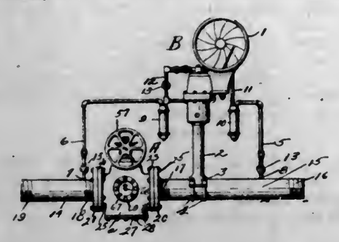
1. In an ozone generating apparatus, the combination, with concentric electrodes, of a tube enclosing them, fittings at the ends of said tube, means for supporting

the electrodes and the said tube in said fittings, means for making air pass through the channels formed by the



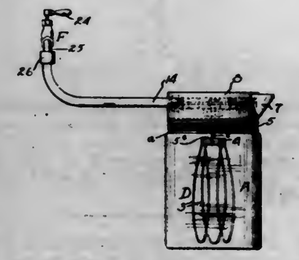
said electrodes, and means for making the air circulate through said channels.

1,454,220. COVER-RELEASING DEVICE. JAMES C. HALL, Worcester, Mass. Filed Aug. 29, 1921. Serial No. 496,411. 8 Claims. (Cl. 9—1.)



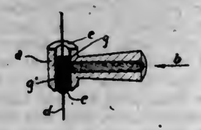
1. A boat cover releasing device comprising a rotatable member extending longitudinally of the boat along an edge of said cover and mounted in bearings, means to attach a cover thereto at a plurality of points, and means to move said member angularly in one direction to tighten said attached cover and in the opposite direction to release said attaching means from said member.

1,454,221. LENS-GRINDING MACHINE. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 18, 1922. Serial No. 555,383. 5 Claims. (Cl. 51—160.)



1. A machine of the class described including rotatable lens blocks, lap members supported above the blocks and having contact with the lenses on said blocks and means whereby to impart a variable reciprocating movement to the lens blocks as and for the purpose set forth.

1,454,222. VALVE COCK. PERCY L. PALMER, Redondo, and GEORGE W. DRAGGOO, El Segundo, Calif. Filed Dec. 24, 1920. Serial No. 432,929. 9 Claims. (Cl. 73—167.)

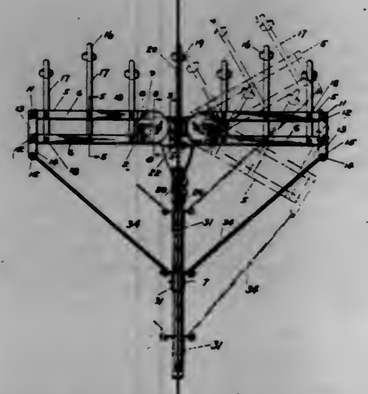


1. A valve body having valve ports for induction and eduction of a fluid, a plug member seated within said valve body, said plug member being provided with a transverse port extending therethrough in line with the valve ports for induction and eduction of a fluid, said plug being provided with an annular recess portion and an orifice plate adapted to be confined within said recessed portion; said plug likewise being provided with a transverse rectangular bore at right angles to said first named port.

1,454,223. MOTOR-DRIVEN MIXER AND THE LIKE. ROY W. POOR, Los Angeles, Calif., assignor of one-fourth to Joseph J. Mathe, Los Angeles, Calif. Filed July 7, 1921. Serial No. 482,994. 3 Claims. (Cl. 259—122.)

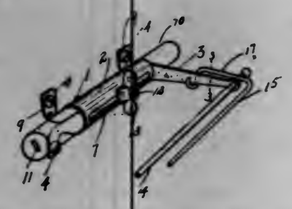
1. A device of the class described including a receptacle, and a detachable cover unit therefor, said cover unit comprising a chamber, a motor element mounted within the chamber, a beater element adapted to be arranged within the receptacle and operated by said motor element, and means extending through a part of said chamber and establishing communication between the interior of the receptacle and the outside.

1,454,224. METHOD AND MEANS FOR APPLYING A LIQUID TO WIRES, THREADS, AND THE LIKE. FRIEDRICH KARL SCHMIDT, Porz-on-the-Rhine, Germany, assignor to the Firm Meirowsky & Co., Actien-Gesellschaft, Porz-on-the-Rhine, Germany. Filed Jan. 29, 1923. Serial No. 615,733. 3 Claims. (Cl. 91—46.)



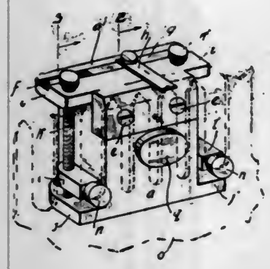
1. The method of applying liquids to wire- or thread-shaped bodies, consisting in conducting the respective

body through a vertically elongated body of a small quantity of liquid held fast by adhesion and maintained in equilibrium.



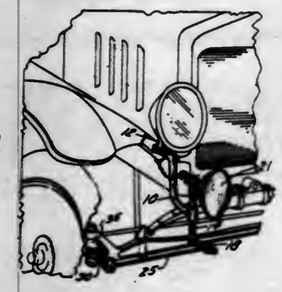
3. A device for applying liquids to wire- or thread-shaped bodies, comprising, in combination, a vertically elongated liquid carrier sleeve adapted to hold a vertically elongated body of a small quantity of liquid by adhesion and being adapted to allow of pulling the respective body through that liquid, and a branch attached to said sleeve and communicating with its liquid-holding space, for the purpose set forth.

1,454,225. ADJUSTABLE CULTIVATOR. JOHN B. SWAN, Denver, Colo., assignor of one-half to Louis Csemiczsky, Denver, Colo. Filed Mar. 5, 1921. Serial No. 449,986. 1 Claim. (Cl. 97—64.)



A cultivator of the class described comprising a head; plates pivotally connected with said head; means for regulating the position of said plates in relation to said head; frames pivotally connected to said plates and means for regulating the position of said frames in relation to said plates.

1,454,226. COMBINED SHADE ROLLER AND CURTAIN BRACKET. JOHN B. SWAN, Denver, Colo., assignor of one-half to Louis Csemiczsky, Denver, Colo. Filed Nov. 29, 1921. Serial No. 518,508. 1 Claim. (Cl. 156—24.)

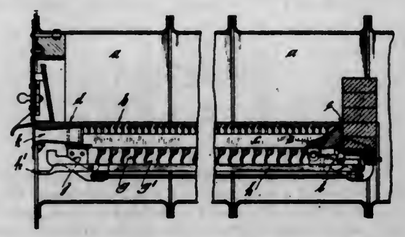


As a new article of manufacture, a combined shade roller and curtain pole supporting bracket formed from a single blank of rectangular sheet metal, ears formed on the corners of the blank, an arm formed upon one end of the blank and between the adjacent ears, said blank being rolled until the side edges contact to provide a tubular body, said arm being bent at right angles to the body for supporting a curtain pole, said ears being bent to attach to a window frame, and a tubular bearing slidably mounted in the body, and means for securing the bearing in adjusted positions.

1,454,227. COMBINED GAUGE AND SET FOR CROSS-CUT SAWS AND THE LIKE. LOUIS O. VADNAIS, Myrtle Creek, Oreg. Filed Mar. 25, 1920, Serial No. 368,729. Renewed Mar. 5, 1923. 5 Claims. (Cl. 76—46.)

1. In a saw-gauge, gauge-pins adapted for insertion in the spaces between the teeth of the saw to be gaged, projecting perpendicularly beyond the working face of the stock and independently adjustable across said working face, thereby to position the saw relatively to the desired graduation of the saw teeth.

1,454,228. AUTOMATICALLY-CONTROLLED SPOT-LIGHT. LOUIS A. BEAN, Denver, Colo., assignor to Clive L. Senter, Denver, Colo. Filed Apr. 25, 1922. Serial No. 556,503. 4 Claims. (Cl. 240—62.)



2. An automatically controlled spot-light comprising a lever adapted to be attached to the front wheel spindle of an automobile; an arm carrying at its one extremity a clamp for engaging the stem of the automobile head-light and at its other extremity a vertical sleeve; a tubing mounted in said sleeve so as to be vertically adjustable therein; a spot-light carrying shaft rotatably mounted in said tubing and provided at its lower extremity with a fixed lever and means for pivotally connecting said fixed lever with said first mentioned lever.

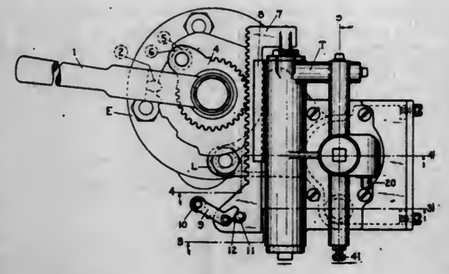
1,454,229. BOILER AND LIKE FURNACE. JAMES CROMPTON and WILLIAM GALLAGHER, Salford, Manchester, England. Filed Aug. 14, 1922. Serial No. 581,814. 4 Claims. (Cl. 126—163.)

1. Furnaces for boilers, and the like, comprising flat bars set on edge and arranged longitudinally of the furnace at a distance apart such as to produce a series of longitudinal channels, fire-bars transversely arranged

across and upon the said channel bars, closure members hinged below the channels and transversely arranged rel-

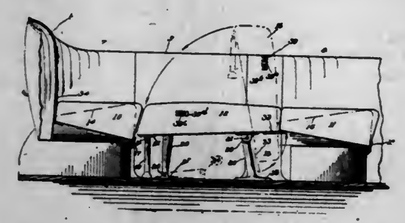
atively thereto, and a single sliding bar and complemental inclined planes whereby all the closure members can be simultaneously operated, substantially as described.

1,454,230. INDICATING DEVICE FOR AUTOMOBILE RADIATORS. RAYMOND R. FUDGE, Fort Worth, Tex. Filed Sept. 23, 1922. Serial No. 590,102. 2 Claims. (Cl. 73—52.)



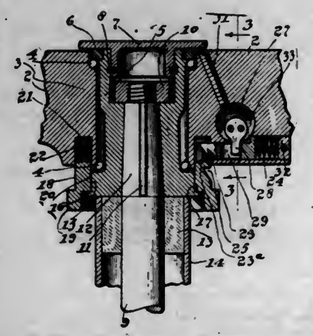
1. An auto radiator temperature indicator including a dial having an upper danger indicating area, a lower subnormal indicating area and an intermediate normal indicting area, a mercury tube carried by the dial and projecting therebelow, a perforated tubular stem surrounding the projecting end of the tube, a sleeve surrounding the stem and spaced therefrom to form a water space in conjunction therewith, a water collecting cup secured to the sleeve adjacent the top thereof, the sleeve having perforations to conduct the water entering the cup into the water space, and heat radiating fins carried by the sleeve and disposed below the cup.

1,454,231. BRAKE-CONTROLLING MECHANISM FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. MAURICE F. GEER, Irondequoit, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 27, 1919. Serial No. 347,683. 34 Claims. (Cl. 303—18.)



1. In an automatic train control system, operating mechanism for engineers' brake valves comprising a gear loosely mounted on the stem of the valve, means carried by said gear for releasing the latch of the valve and operating the handle to a brake applying position, and means adapted to be controlled electrically for rotating said gear.

33. Brake control apparatus for train control systems comprising, in combination with the usual engineer's brake valve of an air brake system, operating mechanism responsive to air pressure for shifting the brake valve to a brake applying position, a normally energized electro-pneumatic valve adapted when deenergized to render said operating mechanism effective, contacts operated by said electro-pneumatic valve and closed only while it is energized, a stick circuit including said contacts for ener-



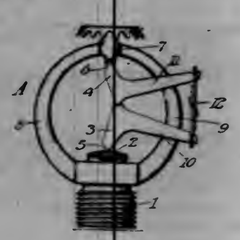
gizing said valve, automatic means for breaking the stick circuit, a pick-up circuit for said valve, and time controlled means initiated concurrently with the deenergization of said valve for closing its pick-up circuit after a predetermined interval of time.

1,454,232. AUTOMOBILE SEAT. CHARLES E. GILBERT, Chicago, Ill. Filed Aug. 27, 1921. Serial No. 496,141. 3 Claims. (Cl. 155—7.)

1. The combination with the front seat, the back seat, and a front seat-back for an automobile, of a floor supported leg pivoted to said front seat-back at a point removed from the lower end thereof a distance substantially equal to the distance at which the pivot is removed from the edge of the front seat.

1,454,233. LOCK FOR AUTOMOBILE STEERING WHEELS. RUDOLF R. GRAEBERT, Chicago, Ill., assignor, by mesne assignments, to Bernard Meyers, Chicago, Ill. Filed July 19, 1920. Serial No. 397,520. 11 Claims. (Cl. 70—129.)

11. The combination with an automobile steering wheel post, of a locking ring adapted to move by gravity for

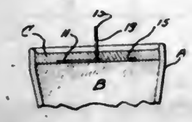


locking the wheel in its operative position, and an automatically locking means adapted to lock the wheel in its operative position.

1,454,234. AUTOMOBILE STEERING WHEEL. RUDOLPH R. GRAEBERT, Chicago, Ill., assignor to Charles G. Baunach, Chicago, Ill. Filed Sept. 22, 1922. Serial No. 589,908. 4 Claims. (Cl. 74—33.)

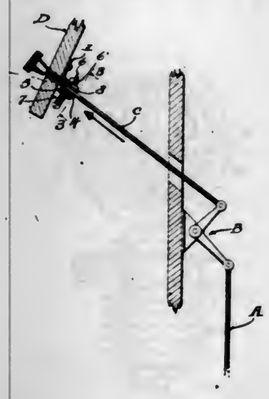
1. A tilting steering wheel comprising a rim and a pair of members secured thereto, a hub having a trunnion journaled in one of said members, and a retractable spring-pressed pin mounted in the other member adapted to serve both as a trunnion for cooperation with said first-named trunnion and a locking means for securing said hub to said members.

1,454,235. PROCESS OF MAKING AUTOMATIC SPRINKLERS. WILLIAM GRIMSHAW, Glen Ellyn, Ill. Filed Apr. 7, 1922. Serial No. 550,255. 2 Claims. (Cl. 29—157.)



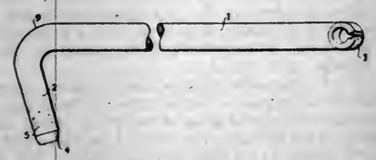
1. The process of subjecting automatic sprinklers to desired operating stresses, which consists in supporting the parts of the sprinkler in assembled relation, and subjecting the strut abutments at the outer ends of the arms of the sprinkler to a swaging action adapted to impart a permanent set thereto sufficient to develop a desired operating stress in the parts of the sprinkler, substantially as described.

1,454,236. MOISTENER FOR CIGARS. GEORGE H. GUNNELL, Morristown, N. J. Filed Aug. 29, 1921. Serial No. 496,401. 2 Claims. (Cl. 131—30.)



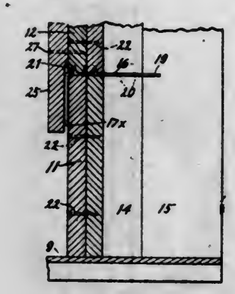
1. A cigar moistener comprising an open ended moisture container through which air is intended to circulate, and a shield in which said container is arranged to prevent direct contact of the cigars with the container.

1,454,237. COVER GRIP. JOHN A. HAGERSTROM, Cranford, N. J. Filed Apr. 17, 1922. Serial No. 554,239. 8 Claims. (Cl. 215—46.)



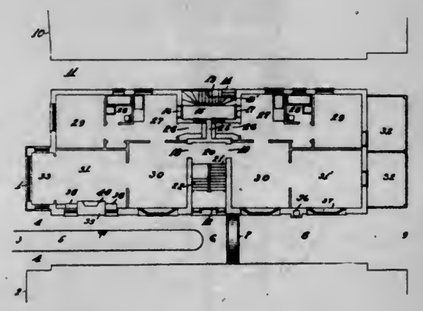
1. An article of the character described comprising in combination with a container and the covering-seal therefor, a base member arranged to reinforce the seal, and an element constituting a grip for the latter extending from said member.

1,454,238. FRICTION-GRIP CHOKE CONTROL. ADAM W. KAUFMAN, Milwaukee, Wis. Filed July 22, 1922. Serial No. 576,855. 3 Claims. (Cl. 74—39.)



2. In an automobile provided with an instrument board and an engine with a carburetor having an air valve; the combination of a reciprocative rod connected to the air valve and passing through the instrument board, an angle iron plate secured to the instrument board transversely of the rod, friction strips carried by the angle iron plate between which the rod passes, and a spring controlled plate for pressing the friction strips together.

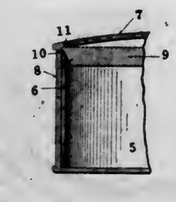
1,454,239. NAIL PULLER. GOZO KAWAMURA, New York, N. Y. Filed Jan. 13, 1922. Serial No. 528,899. 2 Claims. (Cl. 254—25.)



1. A nail puller including a shaft having, on each end, a lifting arm extending at a substantial angle to said shaft, said shaft and one of said arms lying in a plane at an angle to that in which said shaft and the other said arm lies, each of said arms having a nail extracting device.

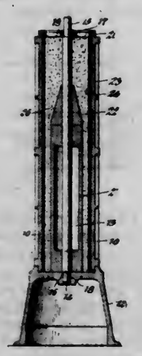
1,454,240. GRAIN-DOOR FASTENER. OSCAR A. KNEELAND, Minneapolis, Minn., assignor of one-half to Victor T. Neander, St. Paul, Minn. Filed Mar. 7, 1922. Serial No. 541,843. 6 Claims. (Cl. 20—30.)

1. The combination with a structure having a door opening, of a door closing the opening from inside the structure, said door composed of horizontal sections placed edge to edge one upon another and metallic anchors fastening the ends of the sections together and to the door posts, in a detachable manner, each of said anchors consisting of a flat bar adapted to rest across the top edge of one of the sections and having its inward end formed with a downwardly extending arm, its outward end formed with a lateral prong adapted to be driven into the part of the structure adjacent the door opening and its upper side provided with a prong adapted to engage in the next higher door section, and means preventing upward movement of the sections.



1,454,241. APARTMENT HOUSE. DOMINIK KOLLMER, Chicago, Ill. Filed Mar. 13, 1922. Serial No. 543,488. 5 Claims. (Cl. 20—1.1.)

1. In an apartment house, a front apartment, a rear apartment on each floor and two stairways located between said apartments, and entrances to the house located on opposite sides thereof, those on one side of the house communicating with one stairway and those on the other side communicating with the other stairway.

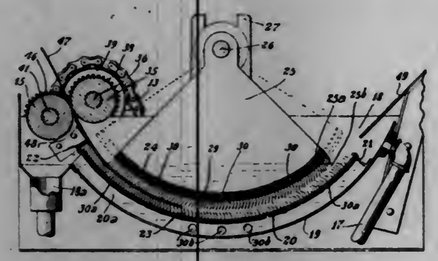


1,454,242. POWDER BOX. JOHN D. MCFARLAND, St. Louis, Mo. Filed Nov. 12, 1921. Serial No. 514,506. 6 Claims. (Cl. 229—43.)

1. In a device of the class described, the combination with a box body having an upwardly extending flange, of a lid having a downwardly extending flange telescoping with said first named flange, and a member forming with

one of said flanges a V-shaped groove into which the other of said flanges is adapted to be forced to form an impervious joint.

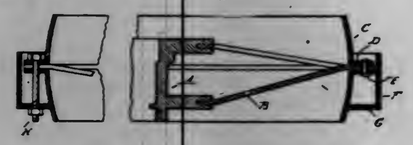
1,454,243. METHOD OF MAKING PATTERN-PRINTING ROLLS. JAMES W. MCINDOE, Lockport, N. Y. Filed Apr. 18, 1921. Serial No. 462,312. 1 Claim. (Cl. 18—58.)



The herein described method of making a printing roll having an intaglio pattern in its surface, which consists in applying an ornamental pattern sheet, such as lace or the like, to a flexible backing, rolling said backing into cylindrical form and placing it in a mold with the pattern on the inner face of the backing and the rear side of the backing bearing against the inner side of the mold, placing a spindle axially in the mold and pouring a molding composition into the space between said pattern sheet and said spindle, whereby the printing roll is molded upon the spindle and the pattern is reproduced upon the surface of the printing roll.

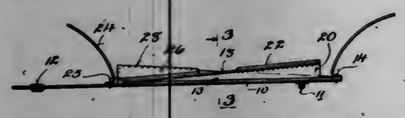
1,454,244. DIPPING DEVICE. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 28, 1921. Serial No. 480,958. 24 Claims. (Cl. 91—31.)

3. A dipping device comprising a liquid-container, a reciprocating work feeder therein, and means for preventing recession of the work.



17. A dipping device comprising a container, two sets of teeth adapted to engage opposite sides of the work within said container, means for yieldingly holding said sets of teeth together upon the work, means for moving one of said sets of teeth relative to the other to advance

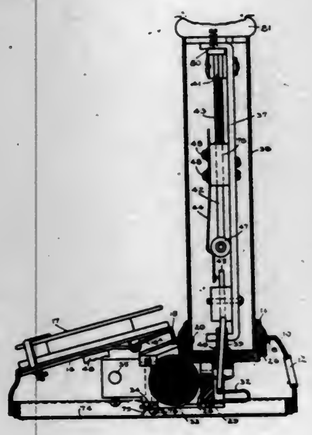
the work, and a pair of presser rollers adapted to receive the work as it passes from between said sets of teeth and to press excess liquid from the work.



22. A device of the character described comprising a reciprocating work-feeder and a work-recession-preventing structure composed of carding cloth.

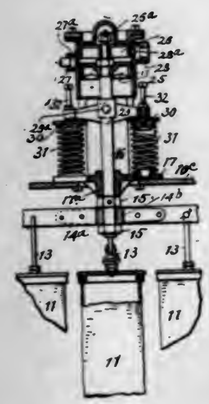
1,454,245. VEHICLE WHEEL. HARRY O. MAINZINGER, Detroit, Mich., assignor to Whitehead and Kales Co., Detroit, Mich., a Corporation of Michigan. Filed July 30, 1920. Serial No. 400,181. 11 Claims. (Cl. 301—39.)

8. In a vehicle wheel, the combination with a rim member having a circumferential traction projection, of a temporary tread member detachably engaged with said rim member and formed with an inwardly projecting annular flange seating upon the rim member and clamping members detachably engaging said seating flange with said traction projection, said clamping members having projections seated upon the rim and transmitting stresses from the tread member to the rim.



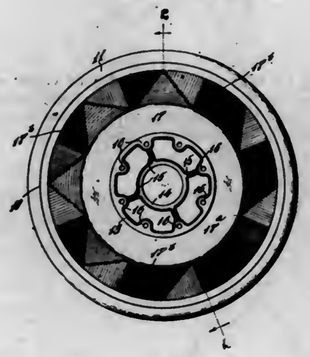
1,454,246. POCKETBOOK. ROBERT MALZAHN, West Bend, Wis. Filed May 2, 1922. Serial No. 557,829. 3 Claims. (Cl. 150—38.)

1. The combination of an elongated, flexible member, a rectangular flexible member having two adjacent sides secured to said first mentioned member, and a second rectangular member having a pair of adjacent sides secured to said first mentioned rectangular member along the free edges of said first mentioned rectangular member.



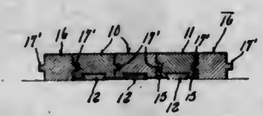
1,454,247. DESK STAND. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 12, 1920. Serial No. 365,211. 18 Claims. (Cl. 179—147.)

1. A desk stand having in combination, a base, a column, said base and column each being provided with an opening, a column socket for connecting said column to said base, a projection on said socket to engage the opening in said column and base, a bracket also provided



with an opening to receive said projection, a nut for securing said bracket to said base, and a cover for said base secured to said bracket.

1,454,248. FILTERING APPARATUS FOR AIR AND THE LIKE. STEPHEN J. MARX, Cleveland, Ohio, assignor to The Cleveland Air Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 16, 1919. Serial No. 311,195. 15 Claims. (Cl. 183—34.)

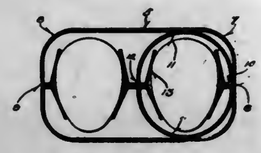


1. In a filtering apparatus for air and the like, a casing containing a plurality of filtering bags through which the medium to be filtered is adapted to pass, a pneumatic shaking mechanism comprising a cylinder and piston, a shaft connected to the piston and operatively connected to the ends of the bags in the casing whereby when air is admitted to the cylinder the piston and shaft will be moved in one direction, and a plurality of springs each positioned at one side of said shaft and acting to restore the piston and shaft to normal position when the air pressure is relieved.

1,454,249. CAST-METAL WHEEL. LEO MELANOWSKI, Cleveland, Ohio, assignor of one-third to Warren H. Cowdery and one-third to George B. Durell, both of Cleveland, Ohio. Filed Apr. 22, 1920. Serial No. 375,670. 5 Claims. (Cl. 301—64.)

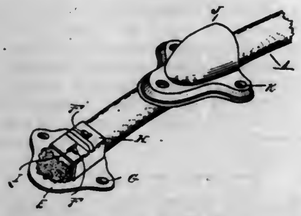
4. A cast metal wheel for automobiles comprising a hub portion, a peripheral tire receiving portion and a connecting web portion, the outer portion of said web being corrugated upon radial lines, the inner portion of said web being flat and lying in a plane transverse to the axis of the wheel body, the peripheral portion being wider than the hub portion.

1,454,250. PARQUET FLOORING. WILLIAM A. PARSONS, Milwaukee, Wis. Filed Nov. 17, 1921. Serial No. 515,750. 1 Claim. (Cl. 20—8.)



A parquet flooring comprising a plurality of blocks, each having a groove directed upwardly from its bottom surface, and a pigeon-tail fitting into said groove and holding said blocks together, said pigeon-tail extending below the bottom of said blocks.

1,454,251. FASTENER. JAMES F. POWELL, Flint, Mich., assignor of fifty-one per cent to Victor F. Brown, Ann Arbor, Mich. Filed Apr. 19, 1920, Serial No. 374,857. Renewed Oct. 6, 1922. Serial No. 592,846. 7 Claims. (Cl. 24—221.)

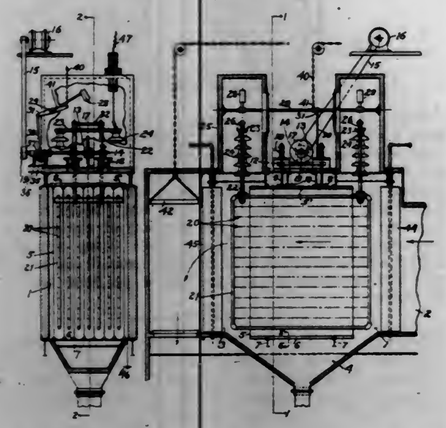


1. A fastener comprising an inturned flange, affording an opening, a turn button, a yieldable shank carried by said button adapted to enter the opening, said shank having a configuration such that when engaged by the flange the shank is shifted outwardly from the button, and means in said button exerting a constant pressure against said shank to retain said shank in engagement with said flange.

1,454,252. EGG CARTON. ALBERT RETZER, Milwaukee, Wis. Filed Jan. 17, 1922. Serial No. 529,889. 3 Claims. (Cl. 229—29.)

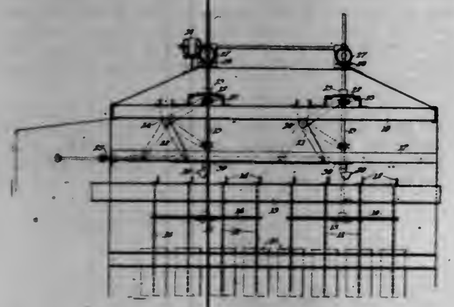
3. As an article of manufacture, an egg carton formed from a strip of material folded so that the intermediate portion of the strip forms the top, bottom and sides of the carton, the next adjacent portions of the strip extending in juxtaposed relation from side to side of the carton and having rows of openings cut therein for the reception of eggs, the free end portions of the strip beyond the egg receiving portions each being arcuately curved and disposed so as to extend around one row of eggs and terminate at the juxtaposed portions between the rows.

1,454,253. ANCHOR CONNECTION FOR FLEXIBLE CORDS. PAUL RISSMAN, Detroit, Mich., assignor to Detroit Insulated Wire Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 29, 1922. Serial No. 557,296. 4 Claims. (Cl. 24—265.)



1. An anchor for a flexible cord comprising a plate having prongs struck up therefrom adapted to pass through the flexible cord and to interlock with the core thereof, a clamping plate for embracing the cord above said plate slotted for the passage of said prongs, the latter being clinched to secure said plate, and an escutcheon for covering said clamping plate and base plate, and adapted to bear against said clamping plate to reinforce the same.

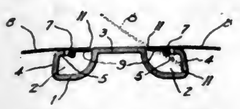
1,454,254. CLIP FOR FASTENING WIRE FENCE FABRICS TO POSTS, ETC. ROBERT LEE RONEY, East Orange, N. J. Filed July 10, 1922. Serial No. 573,796. 2 Claims. (Cl. 189—35.)



1. As an improved article of manufacture, the clip described composed of a one-piece metallic wire blank doubled upon itself adjacent the center of its length, the bight thus formed constituting a hook, and the wire having its free ends bent at an angle to their length to form independent hooks, said first-named hook and the last-named hooks being engageable with opposite side edges of a post, with the intermediate portions engaging a wire held against the flat face of the post.

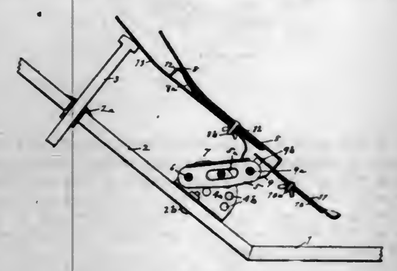
1,454,255. APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED PARTICLES FROM GASES. CHARLES H. WEISKOPF, Santa Monica, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 6, 1921. Serial No. 458,922. 14 Claims. (Cl. 183—7.)

1. In an electrical precipitator, the combination with an electrode system, of means for yieldingly supporting the same, means for shaking the electrode system comprising an unbalanced weight rotatably mounted on the said electrode system to cause vibration of the electrode system by rotation of said weight, bumper means arranged for impact of the electrode system thereon in the vibrating movement thereof, and means for rotating said unbalanced weight.



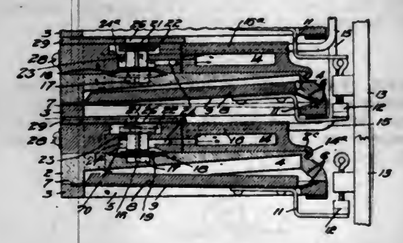
1,454,256. ROTARY MEANS FOR CLEANING ELECTRODES. HARRY A. WINTERMUTE, Branchville, N. J., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1921. Serial No. 465,521. 13 Claims. (Cl. 183—7.)

1. The combination with an electric precipitator having a flexible discharge electrode, of means for acting upon the discharge electrode to swing it into contact with the collecting electrode.



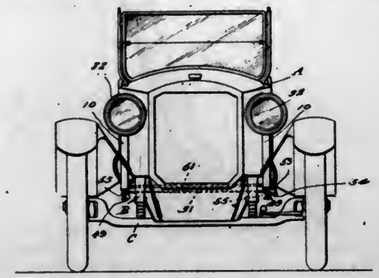
1,454,257. AUTOMOBILE-HOOD HINGE. EDWARD L. ACKERMAN, Detroit, Mich., assignor to Joseph N. Smith & Company, Detroit, Mich., a Corporation of Michigan. Filed May 9, 1921. Serial No. 468,081. 3 Claims. (Cl. 16—135.)

1. In an automobile hood, a supporting member having a central rib portion and a substantially U shaped channel portion on each side thereof, each channel portion having an inwardly turned flange on the outer side thereof, a pintle carried by each flange, a hood member pivot-



ally mounted on each pintle, the edge of either of the hood members when swung to the upper position engaging a side of the channel portion in a manner to prevent contact with the other portions of the hood.

1,454,258. AUTOMOBILE ACCELERATOR PEDAL. BENJAMIN D. ADAMS, Galesburg, Ill. Filed Mar. 30, 1922. Serial No. 548,115. 4 Claims. (Cl. 74—81.)



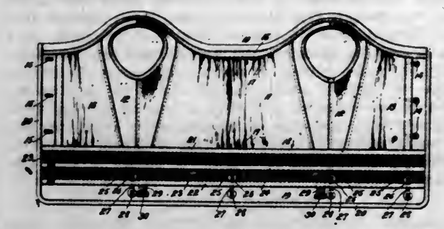
1. In a pedal, a foot plate tiltably mounted, a plate attached thereto underneath and adapted to be adjusted longitudinally with relation to the foot plate and to serve as an extension thereof, and, in combination therewith, a bridge plate between the foot plate and the extension plate, adapted to space said plates apart at their forward portions and to be adjusted longitudinally with relation to said plates, thereby increasing or decreasing said space.

1,454,259. PNEUMATIC ACTION FOR MUSICAL INSTRUMENTS. WILLIS E. AUSTIN, Minneapolis, Minn.; John S. Austin administrator of said Willis E. Austin, deceased. Filed Oct. 5, 1917. Serial No. 194,864. 5 Claims. (Cl. 84—53.)

1. In a pneumatic action for musical instruments, the combination, with a motor chamber having an open wall, of a movable member arranged to close the opening in said wall and provided with a flexible sheet bearing to bear against the wall of said chamber, said flexible sheet being free and unattached except to the movable member, an operating bar secured to said movable member, and means for alternately exhausting the air from said chamber, and permitting it to re-enter therein.

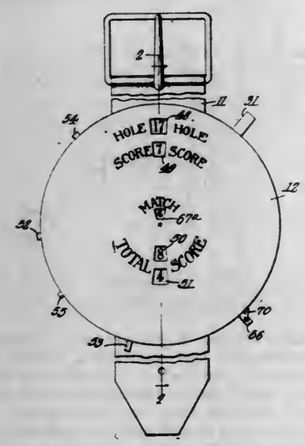
1,454,260. DIRIGIBLE HEADLIGHT. IRVIN ARTHURS, Belle Landing, Pa. Filed Jan. 14, 1922. Serial No. 529,334. 8 Claims. (Cl. 240—61.)

1. A dirigible headlight mounting comprising an upright casing secured at the side of the forward end of a vehicle, a pair of sleeve members rotatably mounted within said casing and arranged in spaced end to end relation, headlamps carried by the upper ends of said sleeve members, means for locking the sleeve members together whereby to effect simultaneous movement thereof, and means connected with the lower end of the lowermost sleeve member and connected with the steering arm connecting rod of the vehicle.



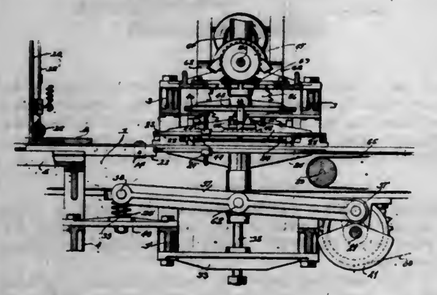
1,454,261. HOLDER AND METHOD OF TRANSFERRING STACKED SUNDAE CUPS FROM CUP-STACKING MACHINES INTO CARTONS. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Manufacturing Company, a Corporation of Illinois. Filed Sept. 25, 1922. Serial No. 590,266. 13 Claims. (Cl. 93—36.)

1. A stacked cup holder comprising a cylindrical tube having a longitudinal opening therein restricted at one end, and a conical flange at one end of said tube having an opening therein registering with the restricted end of the tube opening.



1,454,262. UNDERWAIST. OTTO BASTIANSEN, Brooklyn, N. Y., assignor to Wearite Children's Underwear Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,002. 1 Claim. (Cl. 2—98.)

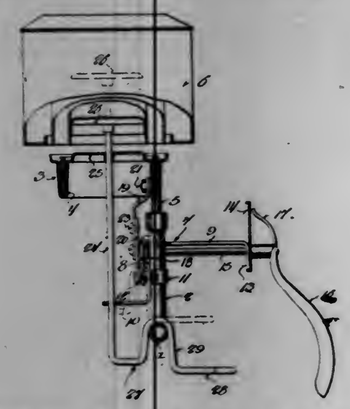
An underwaist of the character described comprising front, side and back sections and a waistband extending through the horizontal length of the garment and consisting of a band of knitted fabric capable of limited longitudinal yield and of material vertical yielding under strains, stay strips at the upper and lower edges and ends of said band and an intermediate stay strip secured to and extending lengthwise of said band, said underwaist having, also, button suspending tapes secured there-



to at suitable points along said intermediate stay strip and along said strip at the lower edge of said band.

1,454,263. GOLF-STROKE REGISTER. BERNHARD M. BESKOW, Miami, Fla. Filed July 8, 1921. Serial No. 483,229. 10 Claims. (Cl. 235—116.)

1. A golf stroke register comprising a suitable casing, a concentric series of nested rotary dials for indicating the counts of the various phases and plays of the game, manual means, including pawls, for turning said dials, and resetting means, including returning springs, levers and shields, whereby said dials may all be returned to zero.



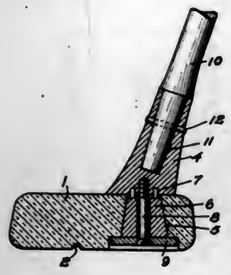
1,454,264. WOODWORKING MACHINE. CLEMENT F. BONIN, Denmark, Wis. Filed July 18, 1921. Serial No. 485,016. 1 Claim. (Cl. 147—38.)

A circular head cutting machine, comprising a pair of aligned normally spaced gripping discs, adapted to re-

ceive a blank, cam controlled means for imparting axial movement to the discs after a blank has been inserted therebetween, positively driven clutch mechanism for engagement with the associated discs, whereby they are rotated after they have been moving axially in a blank gripping operation, a circular dished saw associated with the discs, having its cutting edge above the normal plane of a blank carried by said discs, an annulus carried by the upper of said discs, a pair of yielding guide runners each attached intermediate its ends to said annulus, each of said runners being elongated and curved upwardly at its ends to permit the blanks to slide into place.

1,454,265. BURNER-DRUM-LIFTING MEANS. JOHN S. BRENNAN, Milwaukee, Wis. Filed May 18, 1920. Serial No. 382,387. 1 Claim. (Cl. 158—90.)

In a burner structure, a burner head, a supply pipe having a substantially horizontal and a vertical portion on which the head is supported, a burner drum normally seated on the burner head, a substantially vertical lifting rod connected with the drum, the lower end of the rod having an inverted U-shaped extension adapted to seat on said horizontal portion when the drum is in its lowered position, and a handle on the outer end of said extension engageable with said horizontal portion to support the drum when the latter is in its elevated position.

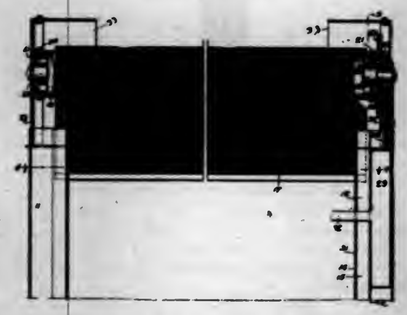


1,454,266. CARTRIDGE FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Filed May 7, 1919. Serial No. 295,377. 5 Claims. (Cl. 200—132.)

1. In a fuse, a casing, a cap, a terminal, means for preventing the outward movement of the terminal, and a pin extending through the casing and beside the terminal against which pin a portion of the terminal abuts to prevent inward movement of the terminal.

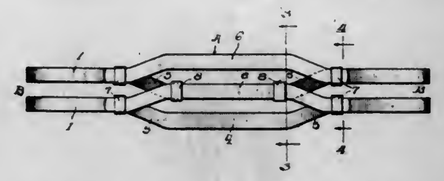
1,454,267. GOLF CLUB. HERBERT D. CHALLIS, Pittsburgh, and SAMUEL J. WILLIAMSON, Sewickley, Pa. Filed Apr. 12, 1921. Serial No. 460,686. 2 Claims. (Cl. 46—4.)

1. In a golf club structure, the combination of a head having a vertical upwardly tapered opening through it, a shank-receiving ferrule applicable to the upper surface of the head, a block of corresponding shape with the said tapered opening through the head adapted to be introduced into the tapered opening in the head and



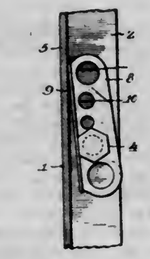
being introduced to interlock with said ferrule, and a bolt member adapted to unite ferrule with head and to secure said block in position in said opening.

1,454,268. METAL TIE AND FASTENER TO SECURE RAILS THEREON. JOHN T. CLARK, Provo, Utah. Filed May 31, 1922. Serial No. 564,714. 4 Claims. (Cl. 238—31.)



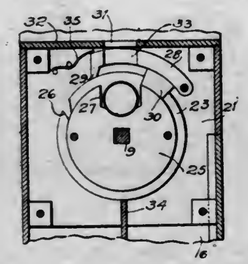
1. A railway tie and fastener comprising two detachable portions each having a channel-shaped end and a portion of the bottom struck downwardly to engage the roadbed; bolts to secure said portions together; and springs carried on said bolts to allow the bending of the tie at its junction.

1,454,269. FIREPLACE GUARD SCREEN. LOUIS F. EISELE, Philadelphia, Pa. Filed May 29, 1920. Serial No. 385,189. 3 Claims. (Cl. 126—202.)



1. A fireplace of the character described including a rotatably mounted roller; a screen adapted to be wound upon said roller; an upright structure providing a guideway for said screen and having a slot therein at a position leading from the side of said guideway; a counterbalance weight slidably fitting said guideway; a winding member rotatable in conjunction with said roller; and a flexible connection for said weight and adapted to be wound on said winding member, said weight having a handle projecting therefrom outwardly through said slot and parallel with said screen in the guideway; substantially as described.

1,454,270. AUTOMOBILE BUMPER. MELVIN B. ERICSON, Evanston, Ill., assignor, by mesne assignments, to Bifex Products Company, a Corporation of Delaware. Filed June 29, 1921. Serial No. 481,184. 7 Claims. (Cl. 293—55.)

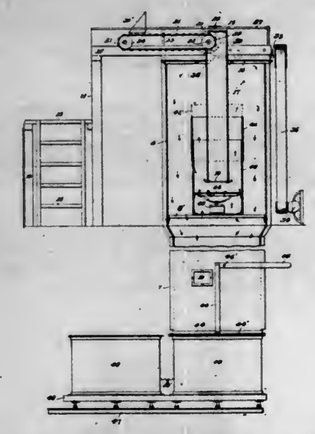


4. An automobile bumper having an impact member comprising parallel bars spaced apart vertically and each bar having a vertically offset portion intermediate its ends, and an auxiliary offset portion forming with said offset portion, a central impact section of increased width, the adjacent offset portions of each bar being secured together in flatwise overlapping contact.

1,454,271. BOLT-LOCKING DEVICE. HARRY C. EVELYN, Chicago, Ill. Filed Jan. 6, 1922. Serial No. 527,327. 2 Claims. (Cl. 151—44.)

1. An article of manufacture for the purpose described, comprising a plate having a plurality of holes of different sizes arranged lengthwise thereof, and adapted to fit bolts of corresponding sizes, and provided with a flange extending adjacent said holes, and positioned with respect thereto to form an abutment for the heads of said bolts.

1,454,272. COIN-CONTROLLED DISPENSING MACHINE. LEMUEL M. EZELL, Nashville, Tenn. Filed June 14, 1921. Serial No. 477,542. 3 Claims. (Cl. 194—63.)

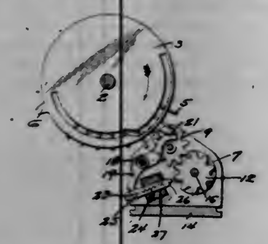


1. A coin-controlled dispensing machine including a housing having a coin slot, dispensing means including a rotatable operating shaft, a wheel rigidly mounted upon the shaft and beneath the coin slot and provided with an annually extending peripheral groove and a coin pocket in the bottom of the groove, the peripheral face being provided with notches upon opposite sides of the groove and in spaced relation to the coin pocket, and a spring-pressed pawl pivotally mounted adjacent said wheel and extending circumferentially thereof and having its free end portion provided with a tooth extension for fitting into said notches to lock the wheel against rotation in one direction, the pawl being further provided with a lug entering the peripheral groove of said wheel and engaging the bottom thereof and adapted to move into the coin pocket when empty and permit the tooth extension of the pawl to enter said notches.

1,454,273. AMUSEMENT DEVICE. JOHN A. FISHER, Sandusky, Ohio. Filed Mar. 16, 1922. Serial No. 544,135. 13 Claims. (Cl. 104—75.)

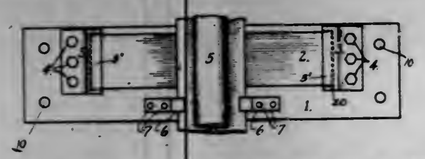
6. In an amusement device, the combination of a track, a passenger car adapted to travel along said track, means whereby the car is caused to rotate on its axis while traveling along the track, and means whereby the occupant of the car may augment and retard such rotation.

1,454,274. MACHINE FOR AND METHOD OF MAKING MICA BOARDS. LOUIS T. FREDERICK, Akron, Ohio. Filed Sept. 18, 1919. Serial No. 324,331. 9 Claims. (Cl. 154—1.)



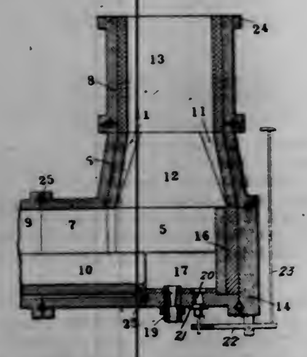
1. In a machine of the type described, the combination with a tower, of means for feeding flake material to the upper end thereof, means adapted to batter the flakes upon entering the tower, and means associated with the battering means to cause the flakes to travel in a directly reverse path, said last named means enclosing the battering means and being open at the upper and lower ends thereof.

1,454,275. CALCULATING MACHINE. CARL M. F. FRIDEN, Piedmont, Calif., assignor to Marchant Calculating Machine Company, Oakland, Calif., a Corporation of California. Filed June 8, 1920. Serial No. 387,439. 9 Claims. (Cl. 235—79.)



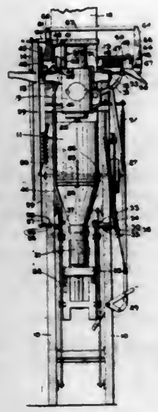
1. In a calculating machine, a plurality of rotatable counting wheels having adjustable teeth, registering

mechanism including a plurality of pairs of meshing toothed wheels, one of the wheels of each pair being arranged to be engaged and rotated by the adjustable teeth on said counting wheels, detents cooperating with the other toothed wheels of each pair, means actuated by the adjusted teeth on any counting wheel for moving the



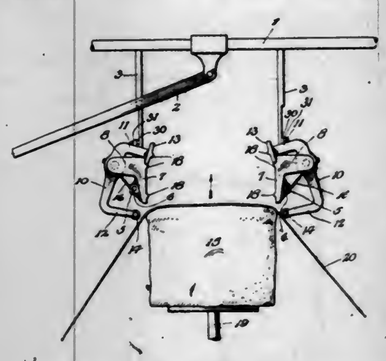
detent from engagement with the corresponding second toothed wheel during engagement of the adjusted teeth with the corresponding first toothed wheel and means for simultaneously moving all of the detents from engagement with said second toothed wheels.

1,454,276. RAILWAY-RAIL SUPPORT. ARTHUR R. FUGINA, Louisville, JAMES E. CLOUGH, La Grange, and WILSON H. STILWELL, Paris, Ky. Filed Nov. 14, 1921. Serial No. 515,092. 4 Claims. (Cl. 238—290.)



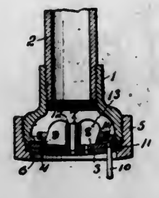
4. In a device of the character described, a base, retaining means secured to the said base at each end thereof, a number of arched springs, lying contiguous, extended between said retaining means and at their ends held in operative contact with the retaining means on said base.

1,454,277. ASH CONVEYER. ALEXANDER GIRTANNER, New York, N. Y. Filed July 6, 1920. Serial No. 394,213. 3 Claims. (Cl. 137—75.)



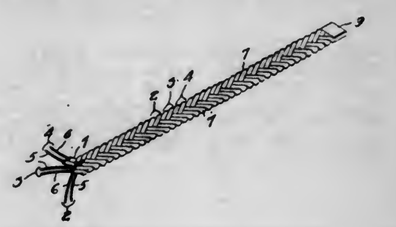
1. An elbow section for ash conveyers, the upwardly extending arm of which is provided with a removable lining consisting of two pairs of parts, the parts of each pair being interchangeable.

1,454,278. AUTOMATIC CONTROLLING MECHANISM FOR FLOUR-PACKING MACHINES. HENRY O'B. HARDING, Minneapolis, Minn., assignor to Washburn-Crosby Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 1, 1920. Serial No. 385,566. 16 Claims. (Cl. 226—25.)



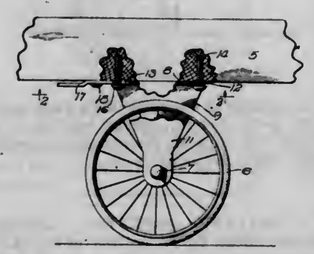
1. In a machine of the class described, the combination with means for feeding the material to be packed, of a support for the bag to be filled movable towards and away from said feeding means, driving mechanism, a control shaft, starting mechanism associated with said control shaft for initiating operation thereof when the bag support is moved towards the feeding means, mechanism operated by said control shaft for establishing driving relation between the driving mechanism and the feeding means, and means operable through instrumentality of the control shaft to disconnect it and the feeding means from said driving mechanism upon a predetermined extent of operation of the control shaft.

1,454,279. LOAF CATCHER FOR BREAD-WRAPPING MACHINES. JAMES R. HAYES, St. Joseph, Mich. Filed Dec. 1, 1921. Serial No. 519,186. 4 Claims. (Cl. 93—2.)



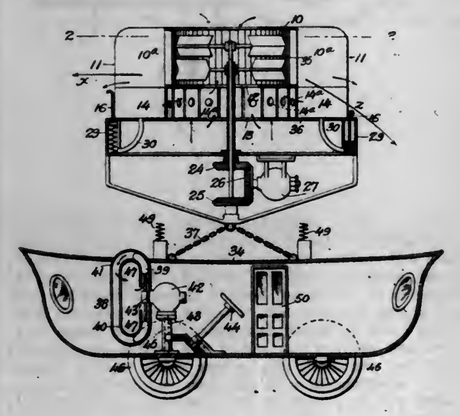
1. Means for the purpose set forth comprising relatively stationary plates to engage the opposite sides of a loaf, rocker arms carried by said plates, presser plates carried by the upper ends of said rocker arms and disposed normally in the path of the loaf, and loaf supports carried by the lower ends of the rocker arms and disposed normally out of the path of the loaf.

1,454,280. SPRAY NOZZLE. FRANK W. HENRIKSON, Mulberry, Kans. Filed Jan. 13, 1921. Serial No. 436,930. 8 Claims. (Cl. 299—144.)



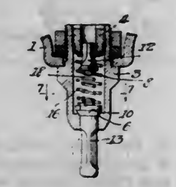
1. A spray nozzle comprising a tubular body, a perforate discharge plate at the discharge end of the body, a rotary member in said body at the inner side of and adjacent to said plate, and a valve intermediate of said rotary member and said perforate plate for closing the perforations of said plate and against which the rotary member revolves, said rotary member being adapted to be rotated by fluid passing through said body and said plate, substantially as set forth.

1,454,281. HAIR WAVER. HARRY G. HOFFMANN and GENEVIEVE B. HOFFMANN, Oakland, Calif. Filed June 16, 1920. Serial No. 389,274. 2 Claims. (Cl. 132—43.)



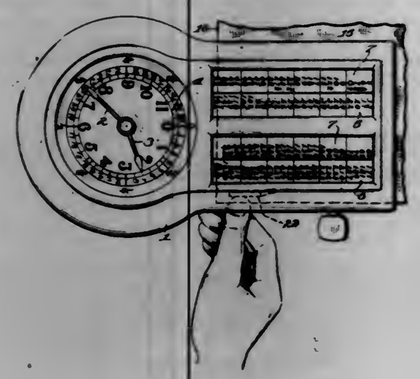
1. In a hair waver, a plurality of wires braided together and formed of a plurality of strands.

1,454,282. DETACHABLE WHEEL MOUNTING. HENRY E. HOLBROOK, Boston, Mass. Filed May 10, 1922. Serial No. 559,733. 1 Claim. (Cl. 280—36.)



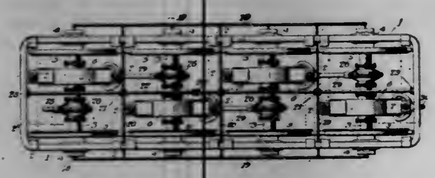
A wheel mounting comprising a wheel carrying member having a flat face provided with open ended slots extending inwardly different distances from opposite edges thereof, a frame structure, a plurality of headed screws projecting from said frame structure in position to be simultaneously engaged in said slots, said slots being so proportioned that the member may be slid in one direction with the forward slots in engagement with the screws until the rear edge thereof clears the other screw and may then be slid in the reverse direction, a shorter distance limited by the depth of the rear slot, whereby all of the screws are simultaneously engaged in their respective slots, and a locking device for preventing disengaging movement of said member relatively to the screws.

1,454,283. AERIAL NAVIGATING APPARATUS. MARCUS HOLLANDER, Brooklyn, N. Y. Filed Apr. 12, 1920. Serial No. 373,168. 14 Claims. (Cl. 244—19.)



1. In an aerial apparatus, the combination of a casing, divided into outer compartments and having central openings and fans between the openings and adapted to deliver currents of air through and over the compartments.

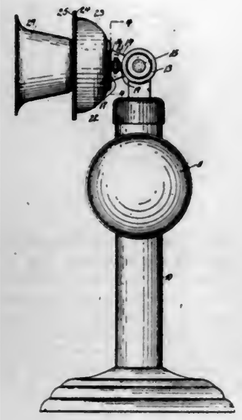
1,454,284. LIQUID DISPENSER. ALFRED E. HOLMES, Chicago, Ill., assignor to William H. Plunkett, Chicago, Ill. Filed Sept. 3, 1921. Serial No. 498,197. 2 Claims. (Cl. 221—100.)



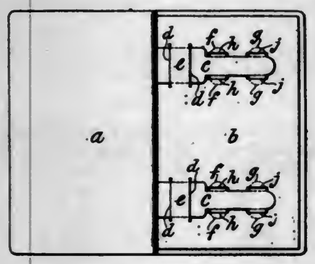
1. A liquid dispenser having a chambered casing having shouldered valve seats at the inner and outer ends, inlet and outlet valves adapted to abut said seats, a stem on the outlet valve having a cut-away portion adapted to permit the exit of fluid from the chamber and a spring interposed between the two valves, said spring being short enough to permit the inlet valve to be away from its seat when the outlet valve is in contact with its seat and long enough to hold the inlet valve in engagement with its seat prior to the time when the cut-away portion of the stem of the outlet valve reaches the outlet valve seat.

1,454,285. FABRIC MEASURING AND COST COMPUTING MACHINE. GREENE CARLTON HOSCH, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed May 3, 1920. Serial No. 378,350. 3 Claims. (Cl. 33—130.)

1. In a fabric measuring machine, the combination of a measuring roller, a presser roller to co-operate therewith and mounted to move toward or from the measuring roller, marking means for indicating the point where the fabric is to be cut off, holding means co-operating with the presser roller to hold the same away from the measuring roller to permit the insertion of the fabric to be measured between the rollers and having an actuating part for controlling the presser roller located substantially in alignment with the inner end of the measuring roller and in a vertical plane adjacent to the marking means.



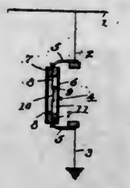
1,454,286. TURBINE LOCOMOTIVE. NELS JOHNSON, Chicago, Ill. Filed Mar. 15, 1922. Serial No. 544,053. 4 Claims. (Cl. 105—31.)



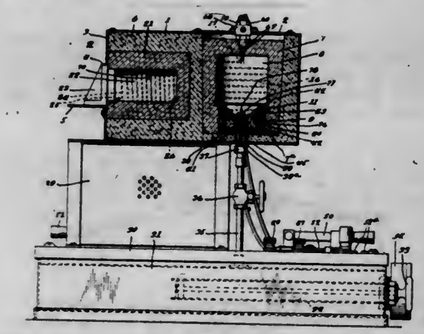
1. A locomotive of the class described comprising a frame, a plurality of horizontally disposed hollow drive shafts journaled in said frame, traction wheels rigid with said shafts, a turbine unit concentric with each shaft and having a rotor rigid thereon, and means for delivering steam to each of said turbine units through said hollow drive shafts.

1,454,287. TELEPHONE TOY. JOSIAH R. KIDNEY, East Hampton, Conn., assignor to The N. N. Hill Brass Co., East Hampton, Conn., a Corporation. Filed May 15, 1922. Serial No. 560,880. 2 Claims. (Cl. 46—46.)

1. A telephone toy comprising a post, an arm pivotally mounted in the top thereof, said arm formed with a recess and with a groove entering the outer end of the arm and intersecting said recess, a screw having its head entered into said recess and extending forward into said groove and beyond the said arm, a shell mounted on said arm, a disk closing the outer end of said shell, and a mouth-piece turned onto the end of said screw.



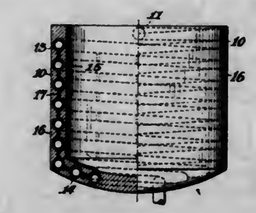
1,454,288. MEANS FOR SECURING BOOKS IN DETACHABLE COVERS. JAMES SAMUEL KING, London, England, assignor of one-half to Charles Knight & Company, Limited, London, England. Filed Aug. 23, 1921. Serial No. 494,501. 6 Claims. (Cl. 281—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The combination of a book having a permanent cover, a detachable cover therefor, straps secured to the detachable cover and loops on the permanent cover of the book through which the straps pass.

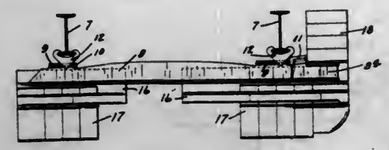
1,454,289. LIGHTNING ARRESTER. LAURENCE M. KLAUBER, San Diego, Calif., assignor of one-half to San Diego Consolidated Gas & Electric Company, San Diego, Calif., a Corporation of California. Filed Dec. 3, 1919. Serial No. 342,087. 6 Claims. (Cl. 175—30.)

5. A lightning arresting device consisting of a body, a pair of separated terminals carried by said body, a plurality of metallic links within said body, and a plurality of connections of insulating material operating as destructible dielectric resistances connecting said links in series to each other and to said terminals.

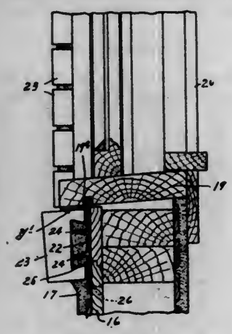


1,454,290. DENTAL CASTING APPARATUS. EDWARD J. KOCHMIT, Cleveland, Ohio. Filed Dec. 23, 1921. Serial No. 524,366. 3 Claims. (Cl. 22—73.)

1. A dental casting apparatus comprising a single casing, and larger and smaller electric furnaces enclosed in said casing, the larger furnace being provided with means to support a mold therein and with vacuum connections to said mold.



1,454,291. CAST-METAL CONTAINER. JOHN GEORGE LEHMAN, Bethlehem, Pa., assignor to Bethlehem Foundry & Machine Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Feb. 1, 1921. Serial No. 441,563. 8 Claims. (Cl. 126—370.)

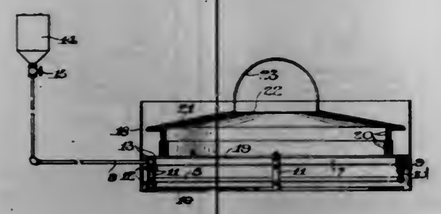


2. A cast metal vessel having within the thickness of its walls a spiral tube, in combination with means within the walls uniting the turns of the spiral and strengthening the vessel.

1,454,292. BEAM HANGER. MICHAEL LIPTAK, St. Paul, Minn., assignor to Liptak Fire Brick Arch Co., Minneapolis, Minn., a Corporation of Minnesota. Filed July 2, 1920. Serial No. 393,711. 4 Claims. (Cl. 110—99.)

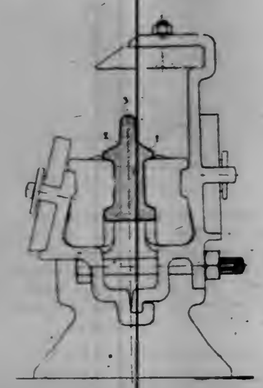
1. In a furnace arch, the combination with transverse beams and laterally spaced supplemental beams hung below said main beam, and beam hangers connecting said main and supplemental beam and permitting said supplemental beams to be rocked and hung either horizontally or longitudinally inclined, the said beam hangers having sliding interlocking engagement with said main and supplemental beams.

1,454,293. BRICK TRIM FOR WALLS. MICHAEL LIPTAK, St. Paul, Minn. Filed May 11, 1921. Serial No. 468,692. 2 Claims. (Cl. 72—20.)



1. The combination with a wooden wall having a wooden framed window opening, of masonry-faced metallic trimming strips applied around the outer portion of said framework and interlocking therewith and secured to said wall, said wall having a stucco outer covering imbedding portions of the metallic facing strips and united with the masonry facing thereof.

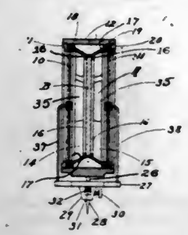
1,454,294. BRICK-FACED METALLIC TRIM. MICHAEL LIPTAK, St. Paul, Minn. Filed May 11, 1921. Serial No. 468,693. 2 Claims. (Cl. 72—20.)



1. As a new article of manufacture, a metallic base plate formed with an irregular face, cement-interlocked to said base plate, and bricks held in bond by said cement and by the latter indirectly secured to said base plate.

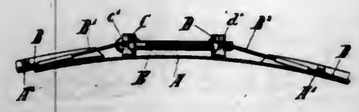
1,454,295. TIRE HEATER. WILLIAM A. MAAS and THOMAS J. MAAS, Waterford, Wis. Filed July 15, 1921 Serial No. 484,905. 2 Claims. (Cl. 263—5.)

1. A tire heater comprising a ring-shaped burner, a cylinder shell surrounding the burner, a member carried by the shell and supporting the tires above the burner, and a conical cover disposable within the shell and resting on the uppermost tire or tires and having a central opening.



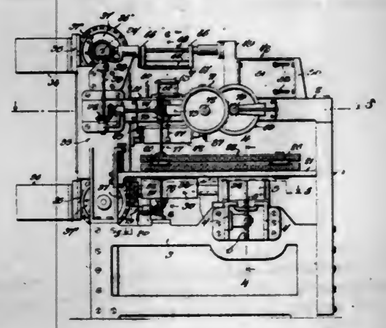
1,454,296. CONTACT RAIL FOR ELECTRIC TRACTION. HIPPOLYTE PARODI, Paris, France. Filed June 15, 1922. Serial No. 568,540. 4 Claims. (Cl. 191—30.)

2. A contact rail for electric traction, allowing currents of great intensities to be collected efficiently under all conditions, said contact rail comprising an upwardly extending rail body having a thin ridge formed at its upper end, against the apex of which ridge current collecting means travelling thereover are adapted to bear.



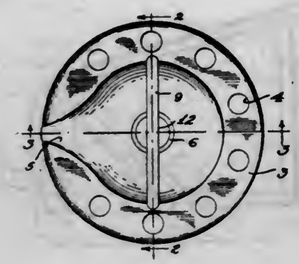
1,454,297. SOUND BOX FOR SOUND-REPRODUCING MACHINES. WALTER SPOFFORTH, St. Paul, Minn. Filed Oct. 17, 1919. Serial No. 331,433. 1 Claim. (Cl. 274—35.)

A sound box for sound reproducing machines, comprising, a cylindrical casing forming an enclosure having a sound transmission duct in its side, a pair of substantially parallel sound reproducing diaphragms in and combining with said casing to form a single sound chamber connected with said duct, a sound board in and of smaller diameter than the bore of said chamber and positioned actively between said diaphragms, a pair of spider frame supports for holding said board spaced from and between said diaphragms and distanced inwardly from the side of said casing so that free passage of air at the circumference of said board is permitted through the spider frames, nonvibrant rings fitted into said casing for seating the outer ends of said spider frames and diaphragms in said casing without readily conducting sound vibra-



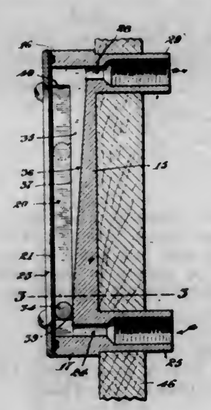
tions, means for clamping said frames, diaphragms and rings tightly in said casing and vibration creating means associated with said diaphragms.

1,454,298. STRETCHING DEVICE. KARL STAHL, Friedrichshafen, Germany, assignor to the Firm: Luftschiffbau Zeppelin Gesellschaft mit beschrankter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,608. 4 Claims. (Cl. 24—19.)



1. In a device of the kind described in combination, a split ring of substantially semi-circular section with ends overlapping one another, a tension means encircling said ring and a turn-buckle connecting the ends of said tension means.

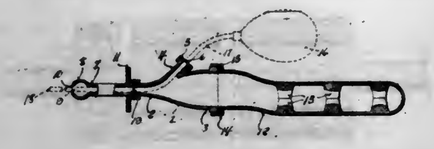
1,454,299. MACHINE FOR CASING IN BOOKS. CLIFTON O. STROM, Racine, Wis., assignor to Nelson Bros. & Strom Sales Co., Racine, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1920. Serial No. 433,409. 13 Claims. (Cl. 11—3.)



8. A book gluing and assembling machine comprising a saddle, means for converging fillers to the saddle, said means comprising spaced endless conveyor chains provided with gripping fingers adapted to engage the fillers, means for automatically feeding covers into alignment to receive the fillers, and means for conveying the fillers from the saddle to engage the covers.

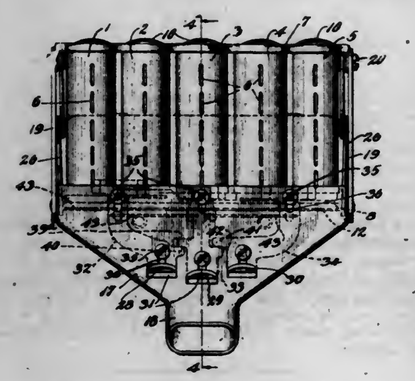
1,454,300. COMBINATION AGITATOR AND SAMPLER. LEE STURGES, Chicago, Ill., assignor to Solar-Sturges Manufacturing Co., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 525,052. 7 Claims. (Cl. 259—144.)

1. A device of the class described comprising a shallow concave utensil, an apertured integral flange thereon, a spout leading from the utensil to the edge of the flange, and a handle secured to the utensil.



1,454,301. FLUID METER. LESTER E. VAN HISE, Los Angeles, Calif., assignor of one-third to James V. Baldwin, one-third to Percy F. Howell, and one-third to George E. McCreery, all of Los Angeles, Calif. Filed Oct. 4, 1920. Serial No. 414,673. 9 Claims. (Cl. 73—167.)

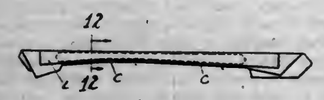
1. A device for indicating the flow of fluids, comprising a casing formed with a chamber and having a by-pass passage arranged alongside said chamber in open communication therewith throughout the length of the passage, an inlet conduit opening to the lower end of the chamber, an outlet conduit leading from the upper end of the passage, and a revolvable indicator element movable longitudinally of said chamber and rollable in the direction of its path of travel.



1,454,302. DEVICE FOR BOWEL TREATMENT. AGNES E. WEST, Watertown, Wis. Filed Aug. 7, 1922. Serial No. 580,130. 1 Claim. (Cl. 128—240.)

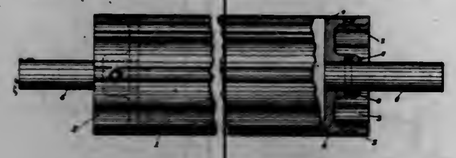
A bowel treatment apparatus comprising a hollow body portion having an enlarged rear end, a contracted front end, and an angularly extending portion; a flexible excreta receiving bag having a relatively large mouth portion detachably secured to said enlarged rear portion; a

rectal tube detachably secured to said contracted front end; and a vented cap removably closing said angularly extending portion.



1,454,303. MONEY-PAYING DEVICE. NELSON WHITE, Ithaca, N. Y. Filed Mar. 5, 1921. Serial No. 449,829. 22 Claims. (Cl. 133—4.)

1. A money paying device, including a coin magazine, ejecting means, and a bodily movable discharge chute for actuating the ejecting means and conveying the discharged coin away from the device.

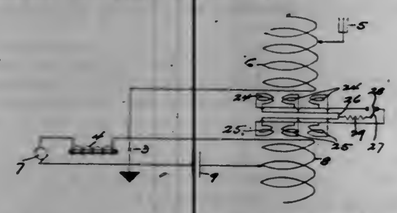


15. A money paying device including a coin magazine, ejecting means associated therewith, a discharge chute, and selective means mounted upon and carried by the discharge chute for the control of the ejecting means.

1,454,304. NECKTIE AND METHOD OF MAKING SAME. ARTHUR WILLIAMS, Dorchester, Mass. Filed Sept. 26, 1921. Serial No. 503,141. 4 Claims. (Cl. 2—11.)

4. A four-in-hand tie comprising a longitudinally folded element provided with a lining member of a width substantially equal to the width of the folded element, said lining member being positioned so as to be offset from one side of one of the folds of the folded element and stitched to said fold, said folded element having its longitudinal edges in coincidence with each other and stitched together beyond the edge of the lining.

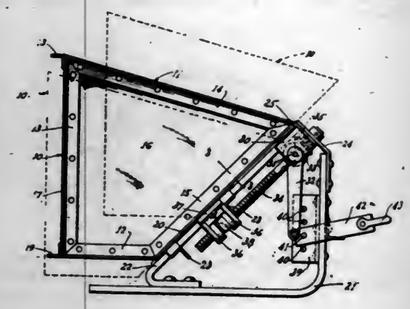
1,454,305. CORRUGATED ROLLER. FREDERICK D. WILSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Jan. 26, 1920. Serial No. 354,311. 5 Claims. (Cl. 64—17.)



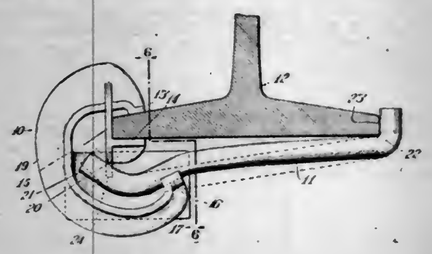
1. As a new article of manufacture, a hollow roller formed of sheet metal and having a surface of longitudinally disposed corrugations, a casting in each end of said roller, each casting having its periphery corrugated, and means to secure the castings in position.

1,454,306. BELLYBAND CONNECTION. LEONARD C. WOOD, Alden, Iowa. Filed Apr. 14, 1922. Serial No. 552,680. 1 Claim. (Cl. 54—1.)

In horse-harness, the combination with a belly-band, a breast-strap having a looped end and side straps, of a U-shaped rigid member enclosing and fastened to the middle of the belly-band, said member having rearwardly projecting spaced eyes with which the off and near side-straps may be respectively engaged, and the loop of said breast-strap being positioned on said member between its end-eyes.



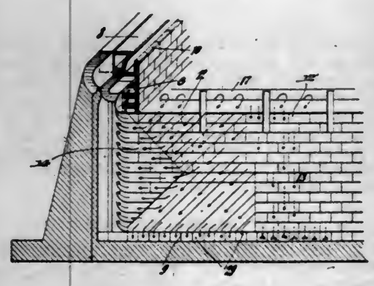
1,454,307. RADIOTELEGRAPHY. ADRIEN L. ANDERSON, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed Dec. 23, 1919. Serial No. 346,913. 7 Claims. (Cl. 250—19.)



1. In a radio telegraphy transmission system, a source of oscillations, a radiating circuit containing inductance connected to said source, a circuit containing resistance inductively coupled to said inductance, a non-radiating oscillatory circuit containing inductance shunted around said source, a circuit containing resistance inductively coupled to said last named inductance and means for opening and closing the resistance circuits.

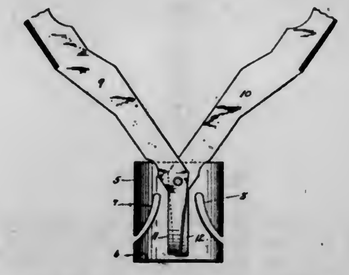
1,454,308. STONE SPREADER. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Oct. 12, 1921. Serial No. 507,202. 7 Claims. (Cl. 94—44.)

1. In a road material spreading device, a distributing hopper, and runners therefor located inward of the ends thereof, the end portions of the hopper beyond said runners being entirely unsupported with relation to the ground.



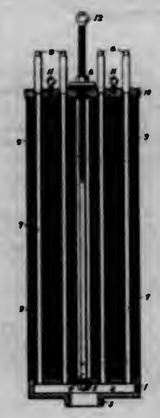
1,454,309. RAIL ANCHOR. LAURENCE J. BERKELEY, Youngstown, Ohio, assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 30, 1922. Serial No. 591,532. 18 Claims. (Cl. 238—329.)

1. A rail anchor comprising a rail base gripping member, and a spring member extending under the base of the rail between said rail and said gripping member and adapted to be stressed in its applied position to exert upward pressure against said gripping member.



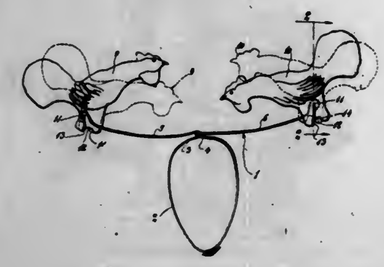
1,454,310. WALL CONSTRUCTION. JOHN FRANCIS BOORAEM, New York, N. Y. Filed Oct. 15, 1920. Serial No. 417,270. 4 Claims. (Cl. 72—0.5.)

1. A chamber comprising walls each containing a retaining portion and a facing therefor and said facing



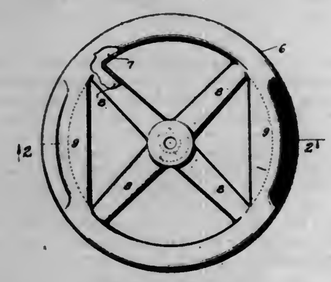
consisting of intermediate rows of sections of terra cotta, tile, or the like, formed with intercommunicating channels and having their side edges secured to one face of the retaining wall, and upper and lower rows of sections formed with channels communicating with the channels of the intermediate rows and with the space enclosed by the chamber.

1,454,311. SEEDING DEVICE FOR GRAPEFRUIT. CHARLES H. BOYLE, New Haven, Conn. Filed Feb. 21, 1923. Serial No. 620,373. 2 Claims. (Cl. 146—3.)



1. A seeding device for grapefruit, comprising a tubular cutter, lever-handles connected therewith, the said handles provided at their lower ends with segmental cutters adapted to be moved toward each other by the separation of the upper ends of the handles.

1,454,312. BLEACHING, DYEING, OR OTHER FLUID TREATMENT OF YARNS WOUND IN THE FORM OF CHEESES. JOHN BRANDWOOD and THOMAS BRANDWOOD, Bury, England. Filed Sept. 14, 1921. Serial No. 500,584. 1 Claim. (Cl. 8—17.)

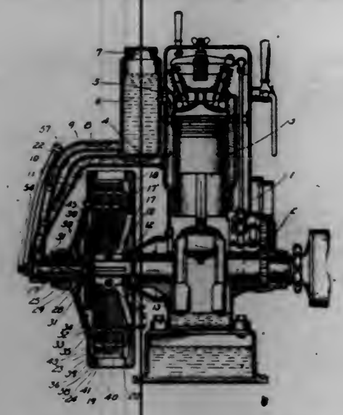


A container for yarn cheeses to be subjected to bleaching, dyeing or other treatment with fluids in a closed receptacle and at a pressure higher than atmospheric, said container comprising a bottom plate provided with an internal chamber, means for placing said bottom plate on a liquid tight seat around liquor opening communicating with the said internal chamber, a central rod vertical to the bottom plate and adapted at its upper end to receive a lifting handle or alternatively screwing down means to press the bottom plate on its seat, vertical perforated tubes adapted to receive cheeses of yarn and opening to the internal chamber of the bottom plate, and a top pressure plate sliding on the central rod and tubes, with means for applying pressure thereto to compress the cheeses between the top and bottom plates to a uniform density.

1,454,313. TOY. DAVID S. CLARKE, Denver, Colo. Filed Nov. 10, 1921. Serial No. 514,222. 3 Claims. (Cl. 46—40.)

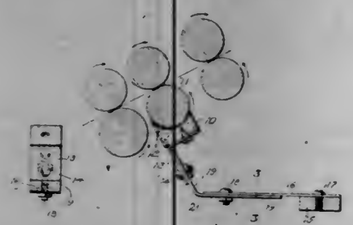
1. A device of the character described comprising a spring wire supporting member arranged so that the ends of said supporting member may be moved toward one another at will, transverse axial members integral with said supporting member and disposed at the ends thereof, a pair of figures or cardboard or the like pivotally disposed on said axial members, said figures having stops integral therewith, and means carried by said supporting member adjacent the opposite ends thereof for engaging with said stops to limit the pivotal movement of said figures on said axial members.

1,454,314. CONTROLLING-MEMBER ATTACHMENT. LAWRENCE J. COBUS, Milwaukee, Wis. Filed May 16, 1921. Serial No. 470,155. 3 Claims. (Cl. 237—12.3)



3. A controlling member including a tubular rim, a tubular shield member formed integral with said rim and having its ends communicating with the interior thereof and its intermediate portion spaced therefrom to provide a hand receiving recess.

1,454,315. RADIATOR. EVERETT B. CUSHMAN, Topeka, Kans., assignor, by mesne assignments, to O. D. Collis, Clinton, Iowa. Continuation of application Serial No. 340,601, filed Nov. 25, 1919. This application filed Mar. 8, 1920. Serial No. 364,043. 15 Claims. (Cl. 257—126.)



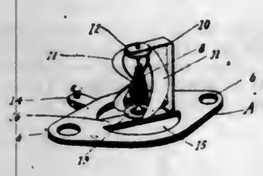
1. In combination with a flywheel, comprising a rim member, a radiator, located interiorly of the rim mem-

ber and attached to the wheel to rotate therewith, both the rim member and radiator having radial openings,

whereby air may enter the radiator and pass therethrough and through the rim member.

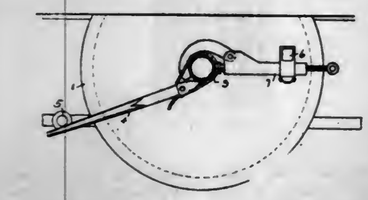
1,454,316. CLEARER FOR THE MIDDLE STEEL ROLLERS OF SPINNING FRAMES. DENNIS LEE DOVER, Anderson, S. C. Filed Mar. 20, 1922. Serial No. 545,132. 1 Claim. (Cl. 19—139.)

A device of the class described comprising a supporting head member having one face concaved transversely and the concaved face lined with a yieldable material, perforated arms depending from said head member to receive holding belts, bracket devices adapted to be attached to a stationary support and provided with a holding bolt, bars longitudinally slotted and each bent intermediate the ends at an angle to the remaining portion, the slot and the bent portion of the bar to adjustably engage the bolt of one of the arms and the slot of the remaining portion of the bar to adjustably engage the bolt of the bracket.



1,454,317. ANIMAL POKE. AMOS ERICKSON, Keota, Colo. Filed Jan. 27, 1923. Serial No. 615,361. 6 Claims. (Cl. 119—140.)

3. An animal poke including a yoke formed of side members converging toward their ends and having their end portions terminating in parallel spaced relation, levers pivoted between the sides of the yoke near the inner portions of said parallel ends, and bolts having spacing sleeves thereon and passing through the outer portions of said parallel ends for rigidly connecting the sides of the yoke in spaced relation, said levers extending outwardly and forwardly with their inner ends disposed behind said bolts whereby the latter forms stop for limiting forward swinging movement of the levers, means to yieldingly swing the levers forwardly into engagement with said bolts, U-shaped stirrups rigidly supported by said bolts with their bases disposed rearwardly of the pivots of the levers in the path of rearward movement of the latter, whereby said stirrups limit the rearward

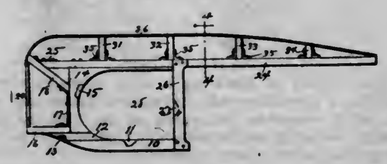


swinging movement of said levers, and rearwardly and inwardly projecting members on the levers having spurs at their inner ends arranged to engage the animal upon rearward swinging movement of the levers.

1,454,318. PREHEATING DEVICE. CARL O. ERICKSON, St. Paul, Minn. Filed Jan. 23, 1922. Serial No. 531,140. 2 Claims. (Cl. 219—38.)

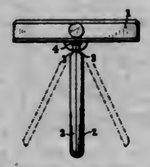
1. In combination with a carburetor outlet and manifold inlet, a perforated plate positioned between the same, an electric heating unit mounted upon said plate and projecting into the manifold inlet and rotatably mounted mixing blades arranged around and extending forwardly alongside said unit.

1,454,319. TONGS. AUGUSTUS M. HAMER, Goose Creek, Tex. Filed June 20, 1921. Serial No. 478,943. Renewed Mar. 31, 1923. 1 Claim. (Cl. 81—175.)



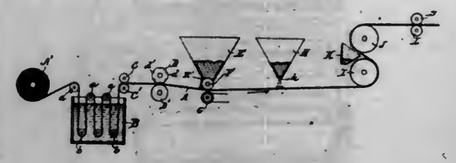
A tong including a handle formed with a square socket in one end, a jaw having a square shank which has a sliding bearing in said socket, a rod threaded through the other end of said handle and having a swiveling connection with said shank in said socket to adjust same lengthwise, a hook pivoted to the handle, and adapted to work in opposition to said jaw, and a detachable toothed arcuate jaw attachment carried by said hook and opposing the slidable jaw and means for securing said attachment jaw in position in said hook.

1,454,320. TIRE TOOL. THOMAS BRACEY JENKINS, Richmond, Ind., assignor to Jenkins Vulcan Spring Company, Richmond, Ind., a Corporation of Indiana. Filed Jan. 13, 1922. Serial No. 528,941. 1 Claim. (Cl. 81—121.)



As an article of manufacture, a tire tool consisting of a substantially rigid but resilient metal strip having a lateral bulge at an intermediate point, said bulge being provided with a nut receiving and turning portion.

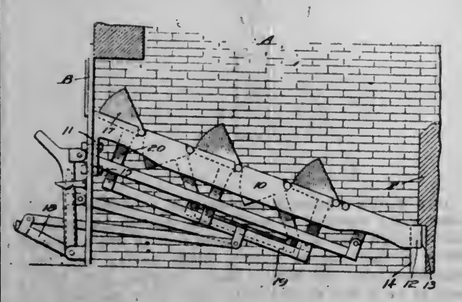
1,454,321. TOP FRAME AND DECK FOR AUTOMOBILES. FRANK J. KURTZ, Marshalltown, Iowa. Filed Mar. 27, 1922. Serial No. 547,126. 6 Claims. (Cl. 296—102.)



1. A top frame for automobiles, comprising side sills, side members rising therefrom, a lower bow connecting said sills and side members in recumbent position, an inclined bow connecting said side members above the lower bow, a hood bow overlying the side members and projecting forwardly therefrom, said hood bow being connected to the side members and inclined bow, standards connecting the sills to intermediate portions of the hood bow, transverse bows carried by the hood bow, and a deck superposed on the inclined bow, hood bow and transverse bows.

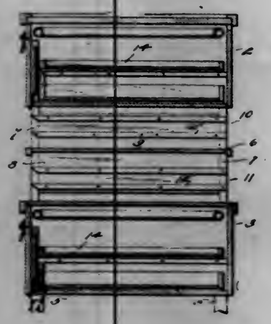
1,454,322. CONVERTIBLE WATCH. SAMUEL LOEB, New York, N. Y. Filed Sept. 18, 1922. Serial No. 588,770. 5 Claims. (Cl. 58—88.)

1. In a device of the class described, in combination, a bezel, and a two part hoop hinged to the bezel, the parts of the hoop being mounted to swing into contact throughout their adjacent faces when at substantially a right angle to the plane of the bezel, or away from each other into substantially the same plane.



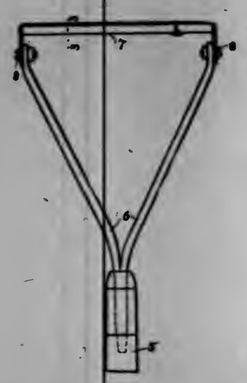
1,454,323. METHOD OF AND APPARATUS FOR MAKING FLEXIBLE ROOFING MATERIAL. HUGH MACINNES, Jersey City, N. J. Filed Nov. 21, 1921. Serial No. 516,566. 7 Claims. (Cl. 91—67.9.)

1. In the art of making flexible roofing material with a design in the exposed surface thereof, the process which consists in subjecting a web of fibrous material to pressure to produce definite areas in intaglio and other areas in relief on one surface of said web, covering the areas in intaglio with a coating material, and feeding granular material to the coated areas of the web whereby said granular material is united by adhesion to the coating material present in the intaglio surfaces of the web.



5. In an apparatus for making flexible roofing material with a design on the exposed surface thereof, the combination with means for saturating a web of fibrous material with a heated waterproofing material, of co-operating rolls one of which is a smooth faced roll and the other is a pattern roll operating to compress said fibrous material within definite areas and to produce thereon a pattern surface certain areas of which are in intaglio and other areas in relief, means for covering the areas in intaglio with a coating material, and means for feeding granular material to the coating material present in the intaglio areas of said pattern surface on the web.

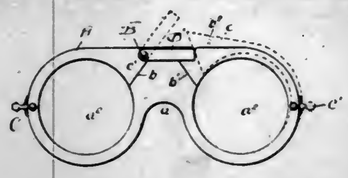
1,454,324. MECHANICAL STOKING GRATE SUPPORT. VASIL MACKAY, Washington, D. C. Filed Nov. 7, 1919. Serial No. 336,442. 3 Claims. (Cl. 110—39.)



3. In combination with a furnace having a fuel opening in the front wall thereof and a bridge wall formed with sockets, an inwardly extending lip formed at the lower edge of the fuel opening, downwardly inclined side beams having their upper ends in contact with the ends of the inwardly extending lip and secured to the front wall and their lower ends supported in the sockets of the bridge wall, grate bars pivotally supported by the side beams, the uppermost grate bar lying in close proximity to the inwardly extending lip, and means for operating the grate bars.

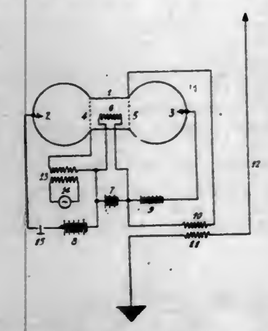
1,454,325. INCUBATOR. JOHN S. MACKENZIE, Delaware, Ohio. Filed Oct. 26, 1922. Serial No. 596,978. 3 Claims. (Cl. 119—35.)

1. An incubator comprising upper and lower incubation chambers, said chambers being vertically spaced to provide tray receiving chambers.



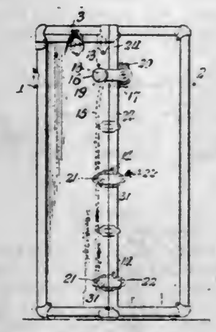
1,454,326. GARDEN WEEDER. OLE MADSON, Ferndale Township, Whatcom County, Wash. Filed Sept. 7, 1920. Serial No. 408,546. 1 Claim. (Cl. 97—69.)

In a garden weeder in combination, a handle, a bifurcated shank fastened in said handle, said shank having a hole through each of its bifurcated ends in line with each other, a thin, narrow cutting blade having one, only, sharpened edge and having short upturned ends with a hole in each end in line with each other pivotally and clampably mounted on said shank with bolts through said holes whereby said blade may be adjusted to a desired position of rotation around said bolt and clamped in said position.



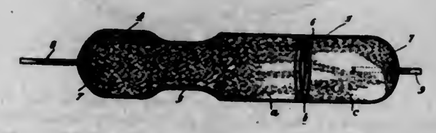
1,454,327. EYE PROTECTOR. ROBERT MALCOM, Chicago, Ill. Filed Apr. 5, 1922. Serial No. 549,794. 4 Claims. (Cl. 88—41.)

1. An eye protector formed of a single piece of material having a nose recess cut in the lower edge thereof and openings for the eyes, said frame having a circumferential channel in each eye opening and slits extending from each eye opening to the edge of the frame whereby said eye opening may be expanded to receive lenses in the



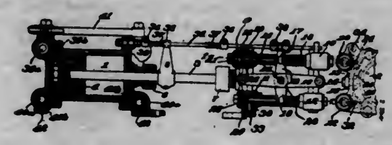
aforesaid channel, a locking member movably secured to said frame and extending across the slit portions thereof to hold same in closed position.

1,454,328. RECEIVING ARRANGEMENT FOR WIRELESS TELEGRAPHY. ALEXANDER MEISSNER, Berlin, Germany. Filed Sept. 3, 1921. Serial No. 498,415. 2 Claims. (Cl. 250—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. The method of operating a radio receiving circuit comprising a thermionic tube having two anodes and two grids, which comprises impressing on one grid the high frequency received oscillations, and impressing on the other grid audio frequency oscillations.

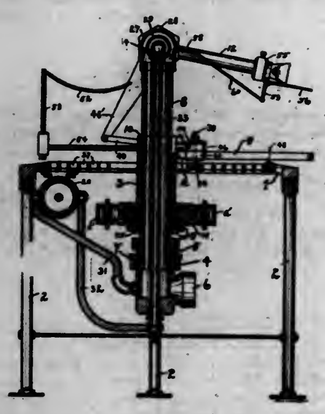
1,454,329. TRUNK LOCK. FRANK W. MEYER, Oshkosh, Wis., assignor to The Oshkosh Trunk Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Sept. 28, 1922. Serial No. 591,027. 9 Claims. (Cl. 70—115.)



1. The combination with a trunk having two hinged together sections, of locking means therefor, comprising a plurality of spaced locking devices carried by said sections and all located on the outside thereof, one of said locking devices consisting of a movable locking hasp on one section and a co-operating part therefor on the other section, the other of said locking devices having co-operating locking members on the respective trunk sections, and means carried by one of said sections and actuated by said hasp on being turned into and out of a position substantially parallel to the adjacent edges of said trunk sections for locking and unlocking said last named locking members.

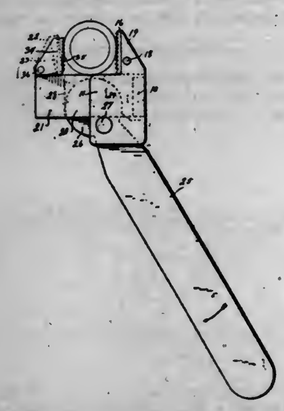
1,454,330. ABDOMINAL BAND. MAUDE MINER, Los Angeles, Calif. Filed Jan. 23, 1922. Serial No. 531,188. 4 Claims. (Cl. 128—169.)

1. In an abdominal band, a strip of fabric having wider end portions and a narrower intermediate portion, one of the wider portions having a transverse slit of a length equal to the width of the narrower portion.



1,454,331. VALVE MECHANISM. EDWARD C. NEWCOMB, Scituate, Mass., assignor to Standard Engineering Company, St. Louis, Mo. Filed Apr. 1, 1920. Serial No. 370,364. 5 Claims. (Cl. 121—124.)

1. In a valve mechanism for a steam engine, the combination of a steam cylinder, a steam piston reciprocating therein, inlet and exhaust valves for controlling the flow of steam to and from the cylinder, a rocker extending transversely to the cylinder, a member for actuating the rocker, means for moving the same by the piston in each reciprocating movement thereof, the inlet valves being located opposite to each other, one at each end of the cylinder, and the exhaust valves being located opposite to each other, one at each end of the cylinder, a spring associated with each valve to close the same after it has been opened, an inlet tappet carried by said rocker between said inlet valves, and an exhaust tappet carried by said rocker between said exhaust valves, said tappets cooperating when the rocker is actuated to open an inlet valve at one end of the cylinder and simultaneously open an exhaust valve at the opposite end of the cylinder.



1,454,332. IRRIGATING APPARATUS. JAMES A. NORTON, Odebolt, Iowa. Filed Nov. 3, 1921. Serial No. 512,478. 9 Claims. (Cl. 299—66.)

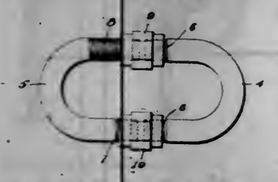
1. In an irrigating apparatus, an upright, revoluble pipe provided with a nozzle, a stationary platform traversed by the pipe and having a groove surrounding and disposed at varying distances from said pipe, a guide movable with and extending outwardly from the pipe, a shifting-block engaging the guide and having a roller normally engaging in the groove of the platform, mechanism connected with the nozzle and shifting-block to cause the roller to move in said groove for moving the shifting-block outwardly from the pipe and for causing upward and downward swinging movements of the nozzle simultaneous with the revoluble movements of said pipe, and means on the platform for disengaging the roller

from the groove to permit a sliding movement of the shifting-block toward said pipe and to permit a downward swinging movement of said nozzle.

1,454,333. WRENCH. VICTOR L. OCHOA, El Paso, Tex., assignor to Ochoa Tools and Machine Company, a Corporation of Delaware. Filed Mar. 15, 1922. Serial No. 543,939. 4 Claims. (Cl. 81—128.)

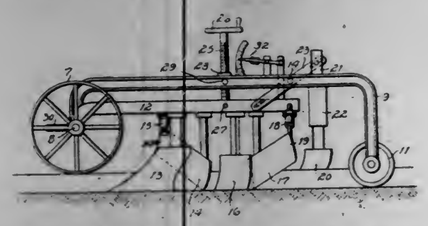
1. In a wrench, a handle having a circular head, a jaw pivoted to the head and having a slot and a guideway, a second jaw having a shank extending through the guideway and movable therein and having a slot closed at opposite ends and in which the circular head operates, and a removable wear piece disposed in one end of the slot and bearing against the adjacent end wall thereof and against which the circular head bears.

1,454,334. GARMENT HANGER. NORMAN C. PARKER, Chicago, Ill. Filed Jan. 11, 1921. Serial No. 436,403. 5 Claims. (Cl. 206—7.)



1. A garment hanger including a receptacle having unequal side portions, the longer side portion being reefed at a point between its free and connected ends to provide an outwardly opening pocket, the free ends of the side

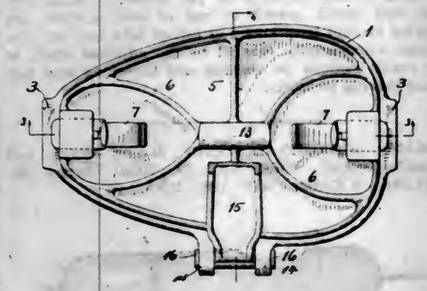
portions providing therebetween a lateral mouth through which garments may be introduced into and removed



from the receptacle, said free ends being adapted to be turned over to form a flap and the flap being adapted for insertion in said pocket to maintain the receptacle closed.

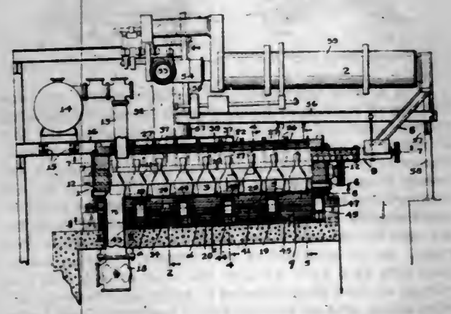
1,454,335. REPAIR LINK FOR CHAINS. EDWARD PRENDERGAST, St. Louis, Mo. Filed Mar. 7, 1921. Serial No. 450,303. 1 Claim. (Cl. 59—85.)

A repair link for chains formed of two independent U shaped sections, the ends of each section being screw threaded, sleeves mounted on the screw threaded ends for securing the sections together, one end of one section having its screw threads cut farther back than the threads on the remaining ends of the sections so that one of said sleeves may be fully seated on said section and clear the end of the opposing section so as to permit the turning of one section in the remaining sleeve whereby the link may be opened without the removal of either sleeve.



1,454,336. ROAD-DITCHING MACHINE. EDWARD PRENDERGAST, St. Louis, Mo. Filed Dec. 5, 1921. Serial No. 519,884. 5 Claims. (Cl. 37—98.)

1. A road ditcher comprising a frame, wheels for supporting said frame, a plow beam pivotally secured to said frame, a plow carried by said plow beam, side wall cutters carried by said plow beam, a scraping blade carried by said plow beam, a scraper carried by said frame, means for raising and lowering the plow beam to adjust the depth of cut, a connection between the plow beam and the scraper carried by the frame for operating said scraper in a direction opposite to the movement of the plow beam, and a gage for indicating the depth cut by the plow.

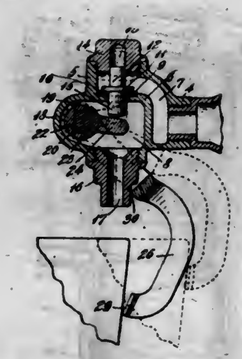


1,454,337. HAM BOILER. JOSEF REINARTZ, Mount Vernon, N. Y. Filed July 21, 1920. Serial No. 398,016. 4 Claims. (Cl. 100—57.)

1. A ham-boiler comprising a vessel adapted to receive the ham and provided with inner recesses at its opposite ends, a lid snugly fitting into said vessel, and gravity controlled slidable locking bolts provided on top of said lid so as to automatically engage said recesses, as the lid is being forced into said vessel, to thereby prevent outward movement of the said lid.

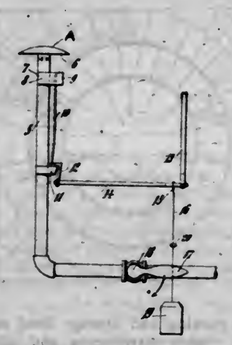
4. A ham-boiler comprising a vessel having a row of inner recesses at opposite ends, a lid snugly fitting into said vessel and having a central cam-like elevation, and inclined faces at its ends, movable locking bolts placed on said inclined faces so as to automatically engage said recesses as the lid is being forced into the vessel, a fulcrum provided on one side wall of the vessel, a separate hand-lever having means for engaging said fulcrum and adapted to be pressed down onto said cam-like elevation, and a loose partition fitting in said vessel adapted to be placed between two hams.

1,454,338. FURNACE-RETORT. CHARLES E. RICHARDSON, Newark, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed Aug. 2, 1919. Serial No. 314,887. 23 Claims. (Cl. 202—4.)



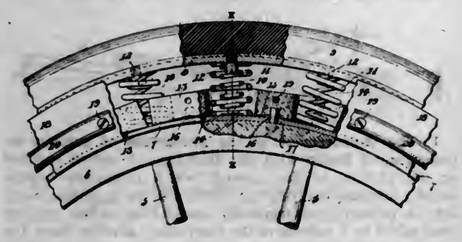
1. A furnace-retort having a longitudinally extending inner wall or retort shell, flat bottom saddles spaced from each other and arranged along the inner wall or retort shell and serving as supports therefor, a flat top saddle support for each saddle, and a layer of flat sheet copper and a layer of flat sheet asbestos between each saddle and its support.

1,454,339. METHOD OF TREATING CELLULOSE PULP TO REMOVE ODORS THEREFROM. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Nov. 28, 1921. Serial No. 518,440. 3 Claims. (Cl. 92—9.)



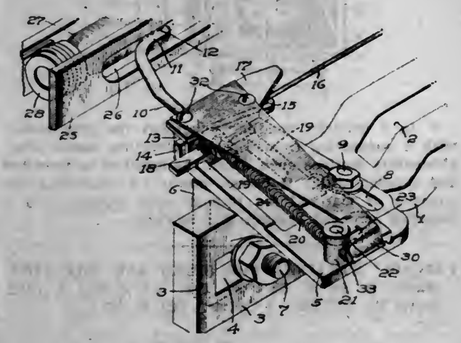
1. A process of removing malodors from sulphate pulp which comprises treating such pulp with an oxidizing agent sufficient to react with the malodorous comopunds therein contained without materially changing the color of the pulp.

1,454,340. SELF-CLOSING FAUCET. THEODORE H. SCHUTT, Cleveland, Ohio, assignor to The Russ Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1919. Serial No. 302,840. 1 Claim. (Cl. 251—116.)



A self-closing faucet, comprising a casing provided with pressure and discharge chambers, a valve controlling the flow of liquid from the pressure to the discharge chamber, a shaft rotatable in the casing and having a portion lying in the discharge chamber and operatively associated with said valve, a yoke member for engagement by the side wall of a receptacle, one arm of said yoke member being fixedly mounted on one end of said shaft, the other end of said shaft having rotatable bearing in the wall of said casing, and a trunnion fixed in the wall of said casing and affording bearing for the other arm of said yoke member.

1,454,341. SAFETY CONTROL FOR AUTOMATIC GAS APPLIANCES. GERHARDT F. SCHWARTZ, St. Louis, Mo. Filed Feb. 25, 1921. Serial No. 447,664. 4 Claims. (Cl. 67—116.)

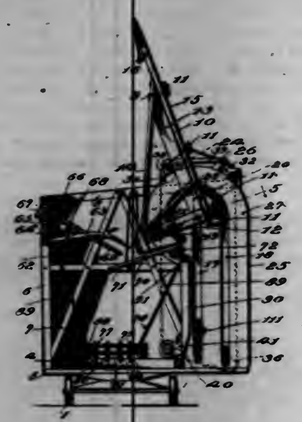


1. In combination with a burner having a supply pipe with a valve therein, a thermostat placed relatively to the burner and moving consequent upon the cold or heated condition of the burner, a releasable catch means placed to be tripped by said thermostat when cold, and a weight normally held elevated by said catch until tripped, and having initially slidable connection with said valve whereby to enable the weight to acquire momentum to operate the valve, said weight having means associated therewith for substantially causing the valve to move with the weight at an advanced stage of the movement of the weight.

1,454,342. RESILIENT WHEEL. WILLIAM H. SMITH, Bridgeport, Conn. Filed Jan. 26, 1922, Serial No. 531,960. Renewed Oct. 7, 1922. Serial No. 593,122. 5 Claims. (Cl. 152—8.)

1. In a resilient wheel, a rim adapted to be fastened upon a felly, a tread rim spaced from and surrounding said first named rim, a series of spring elements interposed between the rims and normally maintaining the same in concentric relation, said spring elements each including a pair of concentric radially arranged helical springs, a plurality of spacing blocks arranged upon the outer surface of the inner rim, said spacing blocks being provided with opposite semi-cylindrical cutouts in the ends thereof forming substantially cylindrical pockets which receive the inner ends of said spring elements, annular guide flanges closing the space between said rims and having their outer margins slidably engaging the side edges of the tread rim, means engaging the inner rim and carried by said blocks for preventing circumferential creeping of the blocks, and removable means for rigidly fastening said annular guide flanges against the side edges of the inner rim and said spacing blocks.

1,454,343. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 25, 1922. Serial No. 556,415. 10 Claims. (Cl. 139—85.)

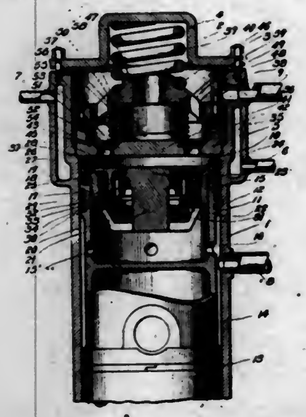


1. In a feeler mechanism for looms, the combination of a feeler mounted for movement toward and from the front of the loom and also in a direction longitudinally of the shuttle and normally held from the latter movement by the filling on a detecting beat until substantial exhaustion thereof, a feeler setting device for setting the feeler into holding engagement with the filling to prevent movement of the feeler longitudinally of the shuttle when a working supply of filling is in the shuttle on a detecting beat and then releasing the feeler for frontward movement, and means for effecting replenishment of filling when the feeler moves longitudinally of the shuttle.

1,454,344. SOLIDIFYING MOLTEN SULPHUR. ROBERT HOLDEN STEWART, Vancouver, British Columbia, Canada, assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed May 27, 1920. Serial No. 384,607. 7 Claims. (Cl. 18—58.)

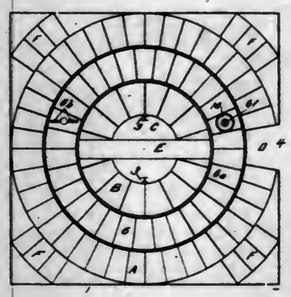
1. The improvement in the production of sulphur by underground fusion with the discharge of molten sulphur at the surface of the ground, which comprises continuously forming the sulphur while still in a molten state into a plurality of relatively small thin cakes, moving said cakes in a substantially continuous manner from the point of their formation to a discharge point, and allowing the cakes to at least partially solidify during said movement so as to permit their continuous discharge at said discharge point in substantially solid form.

1,454,345. MATERIAL HANDLING APPARATUS AND CONVEYER. JOHN A. STOBIE, Malta Bend, Mo. Filed Apr. 20, 1921. Serial No. 463,095. 8 Claims. (Cl. 214—91.)



1. In a material handling apparatus the combination with a supporting frame of load elevating means, complementary sections upon which the material is deposited and through which it passes, means for regulating the quantity of material fed through said sections, and a conveyer arranged beneath said sections.

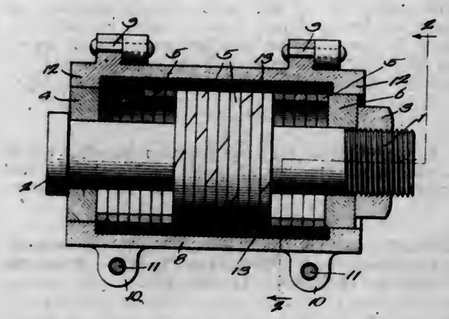
1,454,346. STRAINER FOR SINKS AND THE LIKE. HENRY R. STOLL, El Paso, Tex. Filed July 1, 1922. Serial No. 572,204. 3 Claims. (Cl. 4—35.)



1. In a device of the class described, a body, a strainer arranged within the body and comprising a perforated bowl, an arcuate blade supported for oscillation within the bowl to be moved over the inner surface of the bowl, and a cross bar extending substantially chordal to the blade and constituting means whereby oscillatory motion may be imparted to the said blade.

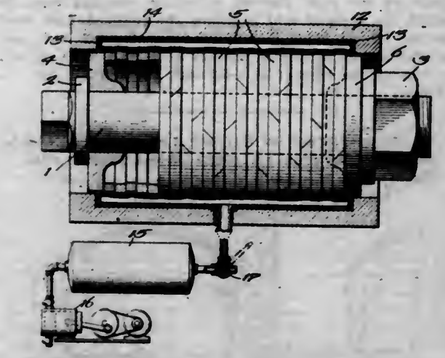
1,454,347. VALVE FOR COMPRESSORS. MARION W. STOMS, Kansas City, Mo., assignor of one-half to Leigh W. Morris, Kansas City, Mo. Filed Oct. 17, 1921. Serial No. 508,145. 7 Claims. (Cl. 230—34.)

1. In combination with a valve cage comprising a ring having a floor portion with an annular groove provided with oppositely inclined edges to form valve seats, and having openings through the floor of the groove, a complementary member carried by the ring and comprising a valve guide, a spring pressed valve reciprocally guided by the complementary member, the valve being capable of bodily moving off the valve seats to permit air to pass both edges thereof and a guiding sleeve integral with the valve having a sliding contact with the complementary member.



1,454,348. AUTOMOBILE GARAGE. RUPERT SWINNERTON, Minneapolis, Minn. Filed Mar. 31, 1920. Serial No. 370,121. 10 Claims. (Cl. 104—44.)

1. A vehicle parking and storage floor embodying an annular rotary vehicle distributing and collecting area, a surrounding adjacent annular floor area and a central floor area, the arrangement being such that vehicles may be distributed directly from said rotary area to storage position on the adjacent floor areas.

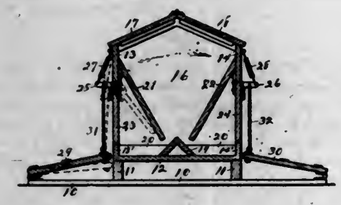


1,454,349. ASSEMBLING TOOL. CHARLES N. TEETOR, Hagerstown, Ind. Filed Nov. 3, 1921. Serial No. 512,497. 3 Claims. (Cl. 29—89.)

1. The combination with a tubular shell divided lengthwise into sections, said shell having an inner substantially cylindrical lining of resilient cushioning material and being formed with an annular shoulder at each end projecting beyond and co-axil with said lining; of a circular plate at each end of the shell and surrounded by and having the diameter of the adjacent annular shoulder; clamping means for closing the sections of said

shell upon said end plates; and means for clamping said end plates toward each other to hold contents of the shell when the shell sections are unclamped.

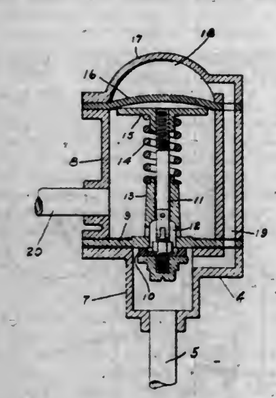
1,454,350. TOOL FOR COMPRESSING PISTON RINGS. RALPH R. TEETOR, Hagerstown, Ind. Filed Mar. 8, 1922. Serial No. 541,946. 6 Claims. (Cl. 29—89.)



1. In a tool for exerting closing pressure upon piston rings, the combination with a mounting for piston rings which is inclusive of mechanism for clamping the rings in assembly; and pressure exerting means having pressure exerting parts that are individually movable in the compressing operation and are adapted to be individual to the rings undergoing compression, these pressure exerting parts acting inwardly upon the rings respectively individual thereto and substantially throughout their circumferences.

1,454,351. METHOD OF AND FLUX FOR REFINING BRASS. HENRY THOMAS, Cleveland, Ohio. Filed Oct. 28, 1920. Serial No. 420,227. 2 Claims. (Cl. 75—1.)

1. In a method of refining brass scrap, the steps which consist in fusing such scrap with a flux consisting of two parts of glass, one part of borax and one part of fluorspar.

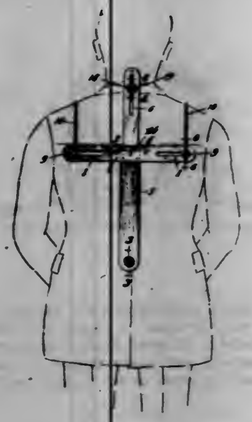


1,454,352. AUTOMATIC FEEDER. NELS F. THOMPSON, Fort Dodge, Iowa. Filed May 6, 1922. Serial No. 559,107. 1 Claim. (Cl. 119—55.)

An automatic feeder comprising a trough, a housing surmounting said trough, a door hinged on a horizontal axis in one wall of said housing and adapted to open inwardly, said trough and door being formed with overlapping beveled margins whereby movement of the door in one direction is limited, brackets mounted on the door

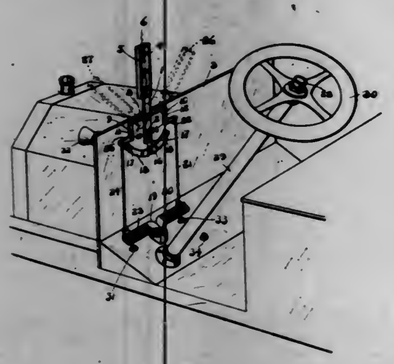
adjacent the hinged margin thereof, springs connecting said brackets and housing, a hinged platform at one side of said housing hangers flexibly connected to said platform at one end and hooks formed on said hangers and engaging said brackets at the opposite end.

1,454,353. PRESSURE RELIEF VALVE. HOMER A. THRUSH, Peru, Ind. Filed July 9, 1920. Serial No. 394,957. 5 Claims. (Cl. 137—53.)



1. A relief valve for heating systems comprising a housing, a hollow casing attached to said housing, a partition between said casing and housing having a port therethrough, a valve for normally closing said port, a flexible stem attached to said valve a diaphragm adapted to direct pressure against the upper end of said stem and unseat said valve when pressure is directed there against from the heating system, a by-pass extending from said housing to a point above said diaphragm, said by-pass being formed in the walls of said housing and casing and through said partition, and means for determining the degree of pressure required for unseating said valve.

1,454,354. MEASURING DEVICE. ROBERT H. VISGER, Chicago, Ill., assignor of three-fourths to Oscar H. Wallen, Chicago, Ill. Filed Feb. 27, 1922. Serial No. 539,684. 4 Claims. (Cl. 33—7.)

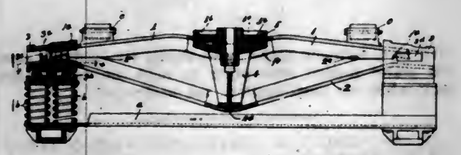


3. A measuring device comprising an elongated body portion, a cross arm fixedly secured to the body portion at a point substantially intermediate the ends thereof,

leveling means carried by the cross arm, vertically adjustable shoulder engaging arms carried by the cross

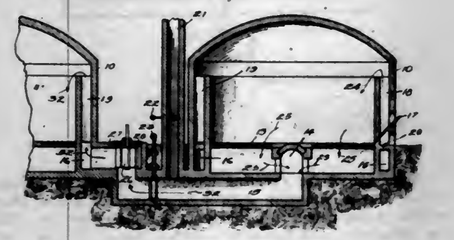
arm, said shoulder engaging arm adapted to be adjusted longitudinally of the cross arm, and measuring means carried by the body portion adjacent to the ends thereof.

1,454,355. DIRECTION INDICATOR. RICHARD F. A. VON BERNEWITZ, Cincinnati, Ohio. Filed Jan. 28, 1920. Serial No. 354,564. 1 Claim. (Cl. 116—51.)



A direction indicator for automobiles comprising an illuminated arm pivotally mounted and adjacent to its lower end for movement transversely of the vehicle, a sector located beneath the pivot and having arm-locating notches therein, a spring extension of the arm adapted to engage the notches of the sector when the arm is swung, a bell crank on each side of the arm having pivots aligned with the pivot of the arm with one branch of each bell crank extending upwardly, a link extending between the upwardly extending branches and connected with the arm above its pivot, the remaining branch of each bell crank extending away from the arm, a rod connected with the outwardly extending branch of each bell crank and depending therefrom and a foot pedal located beneath the arm, pivotally mounted between its ends, and connected at each end to one of the rods.

1,454,356. PROPELLER. EDWIN L. WALKER, Onaway, Mich. Filed Feb. 13, 1922. Serial No. 536,224. 10 Claims. (Cl. 170—161.)



1. A propeller of the class described including a body portion and a plurality of blades carried thereby, said blades being flexible both longitudinally and transversely.

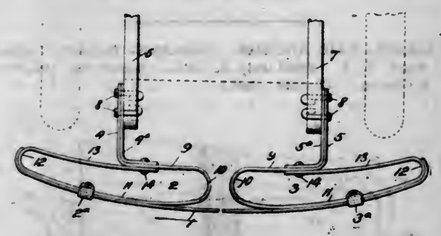
1,454,357. TRUCK BOLSTER. EDWARD C. WASHBURN, Englewood, N. J. Filed June 24, 1921. Serial No. 480,156. 19 Claims. (Cl. 105—186.)

1. A bolster comprising compression and tension channel members having their flanges in superposed engagement at the ends thereof, a hollow coupling head in which the ends of said members are disposed, said head having spaced holes through the top thereof, and cast metal columns extending through said head from the top to the bottom thereof and through the holes in the top thereof.

1,454,358. SYSTEM OF KILNS. LEROY WEEKS, Nevada, Iowa. Filed June 12, 1922. Serial No. 567,608. 1 Claim. (Cl. 25—135.)

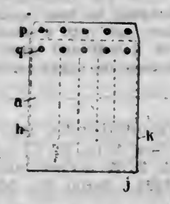
A battery of kilns each provided with heating chambers and passageways arranged between the heating chambers and connected together by a subterranean conduit, each of said conduits having an opening in the top wall thereof, a fan element arranged to be selectively and removably received in any one of the conduits between any pair of kilns, so that heated air from one kiln may be drawn into the next adjacent kiln, a bearing member for said fan element arranged to be seated in any of said openings, and when the kiln is at a predetermined heat the fan element and bearing member may be removed for the purposes stated.

1,454,359. TERMINAL FOR ELECTRICAL APPLIANCES. CARL HENRIK WERENSKIOLD, Brooklyn, N. Y. Filed Nov. 4, 1919. Serial No. 335,749. 2 Claims. (Cl. 173—259.)



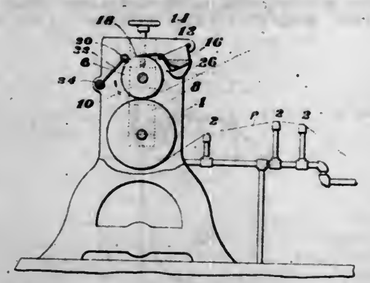
1. A binding post comprising a screw threaded pillar provided at a point between its ends with a transverse

wire receiving opening, a base member disposed on the pillar between the opening thereof and the end remote from the head and having oppositely disposed guides adapted for receiving a conducting wire, a nut screwed on the pillar at the opposite side of the opening from the base, the screw threaded opening of the nut terminating in an enlarged circular recess in the face of the nut adjacent to the base, the recessed portion of the nut being of a length substantially equal to the distance



between the opening and the base and having its inner surface spaced from the pillar by a distance considerably greater than the diameter of the opening, whereby the nut on being turned in one direction is adapted to form bends in portions of a wire extending through the opening of the pillar and through the guides and operates to clamp the wire between the lower rim of the nut and the base and between the inner edge of the recess of the nut and the lower edges of the opening.

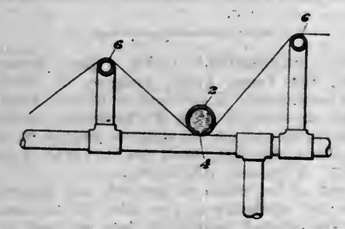
1,454,360. AUTOMOBILE BUMPER. FREDERICK A. WEENIG, Brooklyn, N. Y. Filed July 16, 1921. Serial No. 485,358. 6 Claims. (Cl. 293—55.)



4. An automobile bumper embodying an impact bar extending transversely across the front of the machine and supporting members for opposite ends of said bar including a pair of springs substantially elliptical in conformation fastened to said bumper bar, each spring being composed of a single strip of spring metal and having two oppositely disposed loops and a terminal leg abutting against its starting leg, and a slot and pin connection between said abutting legs.

1,454,361. ENVELOPE AND THE LIKE. ALFRED JOHN GRAHAM WESTBURY, London, and HERBERT HISCOCK, Coulsden, England. Filed Aug. 26, 1920. Serial No. 406,228. 2 Claims. (Cl. 229—73.)

1. An envelope composed of flexible material so as to be readily turned inside out and comprising a body portion closed along three sides, an address being shown on the exterior of one side and a further address being placed on the reverse of the envelope, edge portions adjacent the opening of the envelope having perforations extending along the same at the back and front sides of the envelope, a flap extending beyond the body portion of said envelope and furnished with perforations therethrough, and flexible closing means adapted to be threaded through the perforations in the flap, and the edge portions of the envelope to securely maintain the envelope in closed position.



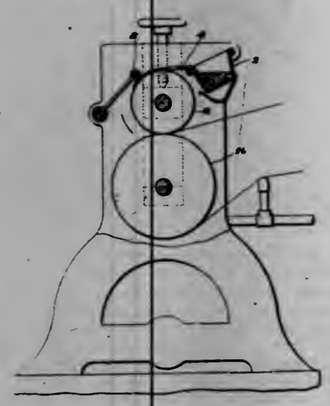
1,454,362. PAPER-TREATING MACHINE. LESTER P. WINCHENBAUGH, Hyde Park, and LAWRENCE GENTILE, Melrose, Mass., assignors to Lester P. Winchenbaugh Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 8, 1919. Serial No. 316,233. 11 Claims. (Cl. 91—38.)

8. A machine for applying coloring liquid to paper having, in combination, a pair of embossing rolls between which the paper is passed arranged to emboss the paper as it is passed between the rolls and means for applying coloring liquid to one of the rolls in excess of that required to form a surface film on the paper so that the coloring liquid may penetrate the paper.

9. A machine for applying coloring liquid to paper having, in combination, an embossing roll, means controlled by capillary action for depositing coloring liquid upon the elevations on the embossing roll, and means for causing the paper to contact with the roll so that the paper is embossed and the coloring liquid is applied thereto by the roll.

1,454,363. PROCESS OF APPLYING COLORING LIQUID TO PAPER. LESTER P. WINCHENBAUGH, Hyde Park, and LAWRENCE GENTILE, Melrose, Mass., assignors to Lester P. Winchenbaugh Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 8, 1919. Serial No. 316,234. 16 Claims. (Cl. 91—68.)

5. The process of making colored paper which comprises applying a solution of a dye in a volatile organic solvent of low viscosity containing a predetermined quantity of water to regulate the penetration thereof, to the paper in quantity sufficient to cause the same to penetrate to the paper.



6. The process of making colored paper which comprises applying successively to finished paper in a dry

condition transparent coloring liquids of different colors so that the colors are superposed at certain points.

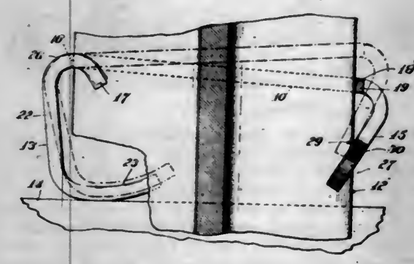
8. The process of coloring paper which comprises applying to finished paper in a dry condition a solution of a dye in a volatile organic solvent of low viscosity.

13. The process of making colored paper which comprises applying to the paper in a dry condition a quantity of a penetrative dry solution in excess of that required to form a surface film so that the solution penetrates the substance of the paper.

1,454,364. PROCESS OF APPLYING COLORING LIQUID TO PAPER. LESTER P. WINCHENBAUGH, Hyde Park, and LAWRENCE GENTILE, Melrose, Mass., assignors to Lester P. Winchenbaugh Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 8, 1919. Serial No. 316,235. 9 Claims. (Cl. 91—67.9.)

4. The process of making colored paper which comprises applying continuously to paper a penetrative solution of a dye in quantity regulated by capillary action and sufficient to cause the same to penetrate the paper and spread from the point of application.

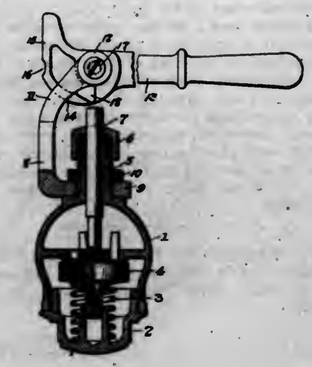
5. The process of making ornamental paper which comprises applying a highly penetrative coloring liquid to the paper and embossing the paper while it is wet with the coloring liquid.



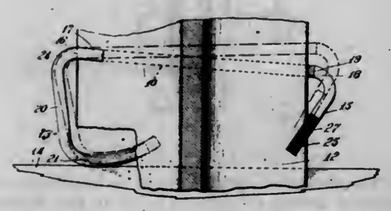
8. The process of making a colored paper which comprises applying to paper a solution of a dye in a volatile organic solvent of low viscosity in quantity regulated by capillary action and sufficient to cause the same to penetrate the paper and to spread from the point of application.

1,454,365. REVERSIBLE CUFF. SARA HUMPHREYS WINGO, San Diego, Calif., assignor, by direct and mesne assignments, of one-sixth to William Reife Humphreys, one-sixth to John K. Taubman, one-sixth to Mamie C. Wilson, and one-sixth to Stephen N. Wilson, all of Lexington, Mo. Filed Oct. 1, 1921. Serial No. 504,685. 6 Claims. (Cl. 2—79.)

1. A cuff of the character specified, and comprising a body portion consisting of two plies of the same size and pattern stitched together at their ends and at their lower longitudinal edges, and a third ply of less depth united at its ends and lower longitudinal edge to the outer face of one of said first named plies, said first named plies having aligned and connecting button holes adjacent their ends in their upper and lower portions, the third ply also having button holes adjacent its two ends so positioned as to register or aline with the button holes of the first named two plies, the upper longitudinal edge of the third ply free from the underlying or subjacent ply of the first named pair from end to end, whereby a pocket is formed adapted to be turned and overlying the other ply of the first named pair, the upper longitudinal edges of the first named plies adapted to be stitched to the lower end of a shirt sleeve.



1,454,366. RAIL ANCHOR. CHARLES F. YARDLEY, Larchmont, N. Y. Filed July 8, 1921. Serial No. 483,179. 9 Claims. (Cl. 238—330.)

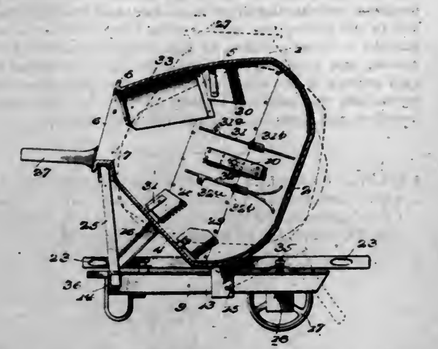


1. A one-piece rail anchor comprising a rail base embracing member formed at one end with a jaw for engaging one edge of a rail base, and with a tie-abutting portion, comprising a substantially straight post portion which converges with the edge of the rail base in a direction toward a tie and terminates in an angularly disposed flange adapted to bear against said tie, and formed at the other end with a shoulder for engaging the other edge of a rail and with a spring tongue adapted to bear against the upper surface of said base.

1,454,367. VALVE-OPERATING MECHANISM. FARNHAM YARDLEY, New York, N. Y., assignor to Jenkins Bros., New York, N. Y., a Corporation of New Jersey. Filed Oct. 8, 1921. Serial No. 506,518. 3 Claims. (Cl. 251—132.)

1. In a valve, a valve casing having a neck portion, a valve operating mechanism comprising a bracket arm having a perforated foot to engage the neck of the valve casing and a curved and forked outer end having perforated ears overlying the foot a nut on the neck of the valve casing to engage and lock the foot of the bracket to the valve casing, and a hand lever pivoted in said ears having a lateral cam surface adapted to engage and depress the valve stem, and a flat end surfce to hold the valve stem in adjusted position.

1,454,368. RAIL ANCHOR. CHARLES F. YARDLEY, Larchmont, N. Y. Original application filed July 8, 1921, Serial No. 483,179. Divided and this application filed July 15, 1922. Serial No. 575,252. 8 Claims. (Cl. 238—330.)



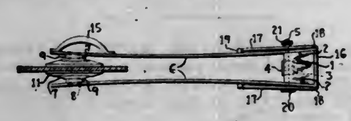
2. A rail anchor comprising a rail base engaging member formed at one end with a tie-abutment and terminating at the other end in a spring-tongue adapted to bear at its end only against the inclined upper surface of said rail base.

1,454,369. COMPOUND FOR THE SHARPENING OF TOOLS. AAGE NIELS JACK ZIRSEN, Montreal, Quebec, Canada. Filed Apr. 20, 1921. Serial No. 462,925. 4 Claims. (Cl. 76—24.)

1. A compound for use in sharpening files and the like which consists of fuming sulphuric acid, fuming nitric acid and pure nitric acid diluted with water.

1,454,370. CONCRETE MIXER. GEORGE WASHINGTON ADAMS, San Antonio, Tex. Filed July 6, 1922. Serial No. 573,082. 8 Claims. (Cl. 83—73.)

1. In a device of the character described, a receptacle mounted for oscillation about a fixed axis and being open at normally upper end thereof, and a mixing blade extending within the receptacle from an inner wall thereof and being inclined downwardly and inwardly in respect to the opening of the receptacle.



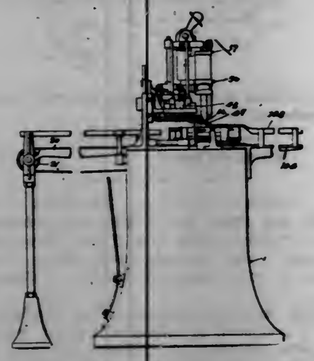
1,454,371. [WITHDRAWN.]

1,454,372. PHARMACEUTICAL PRODUCT. RUDOLF BERENDES and FRITZ LANGE, Elberfeld, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkussen, near Cologne-on-the-Rhine, Germany. Filed Dec. 2, 1921. Serial No. 519,553. 1 Claim. (Cl. 167—7.)

The herein described pharmaceutical product being chemically a compound of tannin with yeast, which is a greyish powder soluble with difficulty in water and to its greater part soluble in alkalies; and being a valuable remedy against chronical catarrhal affections of the intestines, substantially as described.

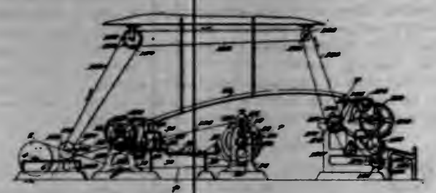
1,454,373. WINDOW-WASHING APPARATUS. JOHN C. G. BONNEY, Brooklyn, N. Y. Filed Apr. 5, 1921. Serial No. 458,822. 6 Claims. (Cl. 15—220.)

1. In a window cleaning device, a supporting block the opposite sides of which are inclined so as to converge toward each other, resilient arms secured at their inner end to the inclined sides of said block so that their free ends converge toward each other, pad-holders secured to the free ends of the arms, and means applied to the arms for increasing the tension of the arms so as to increase the pressure of the pads upon the window-panes.



1,454,374. AWNING FIXTURE. JOHN A. COCHRAN, Pasadena, Calif., assignor to Andrew Swanfeldt, Los Angeles, Calif. Filed June 20, 1921. Serial No. 479,166. 3 Claims. (Cl. 156—44.)

2. An awning fixture comprising a bracket formed of two members having base portions in the same plane for

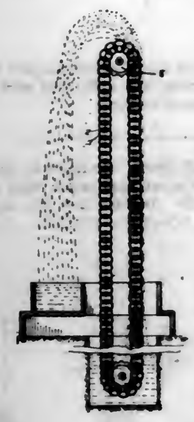


attachment to a wall or the like, and correspondingly right angularly formed vertical portions uniformly spaced apart, a pair of sheaves mounted between said vertical portions and having their axis disposed at right angles and in the same plane, said sheaves being held between the parallel vertical portions of said bracket members for receiving and confining cords adapted to be extended over said pulleys in the space of said bracket, and pins rigidly connecting the parallel vertical portions of said bracket members and forming bearings for said sheaves.

1,454,375. SANITARY CAN-CLOSING MACHINE. LAWRENCE DENNISON, Brookfield, Ill., assignor to General Can Company, Chicago, Ill. Filed June 7, 1919. Serial No. 302,491. 12 Claims. (Cl. 113—24.)

1. A can-closing machine comprising in combination a support, a rotatable seaming head, means for advancing said can to said seaming head, and means completely surrounding said can for holding said can during the seaming operation, said holding means being adjustable to accommodate cans of different diameter.

1,454,376. PAPER-TREATING MACHINE. LAWRENCE GENTILE, Melrose, Mass., assignor to Lester P. Winchenbaugh Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 2[illegible] 1918. Serial No. 251,384. 20 Claims. (Cl. 91—43.)



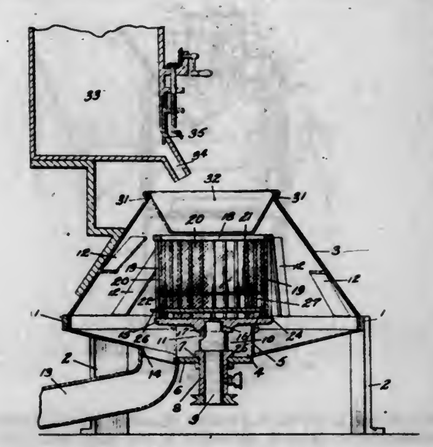
3. A machine for applying coloring liquid to paper, having, in combination, color holding devices comprising a color delivery device against which the paper runs in contact having one or more color delivery openings therein through which the coloring liquid is discharged on the paper at its point of contact with said device, and means for maintaining the coloring liquid at a substantially constant level in the color holding devices to maintain a substantially constant pressure of the coloring liquid on the paper at the color delivery openings.

5. A machine for applying coloring liquid to paper having, in combination, means for applying the coloring liquid to the paper in quantities sufficient to allow the liquid to impregnate the paper, and pressure devices engaging opposite sides of the paper for embossing the paper after it leaves the color delivery device.

8. A machine for applying coloring liquid to paper having, in combination, a color applying device, embossing rolls arranged to act on the paper after it leaves the color applying device, and a drying device arranged to dry the paper after it is acted upon by the embossing rolls.

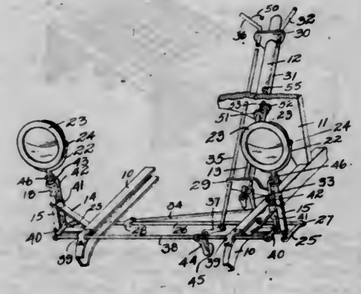
9. A machine for applying coloring liquid to paper having, in combination, color applying devices, drawing and embossing rolls for drawing the paper past the color applying devices and for embossing the paper during its engagement therewith, a drying device for receiving the paper from said drawing rolls, drawing rolls arranged to draw the paper past the drying device, and cutting mechanism to which the paper is delivered from the latter drawing rolls.

1,454,377. PROCESS OF ELEVATING LIQUIDS. JOHN CAMERON GRANT, Barnes, London, England. Filed Dec. 8, 1920. Serial No. 429,207. 2 Claims. (Cl. 103—72.)



2. The method of lifting a liquid or semi-liquid which consists in passing through the liquid an open structure, guided and supported so that a column of liquid may be lifted unimpeded on both the inner and outer sides of the open structure, lifting the structure rectilinearly sufficiently fast to form a column of liquid on both the inner and outer sides of the open structure, changing the rectilinear motion to a circular motion without obstructing the column of liquid on either the inner or outer side of the open structure, operating the structure sufficiently rapidly to develop centrifugal forces great enough to separate the liquid on both sides of the open structure from the structure and to project it beyond the confines of the open structure.

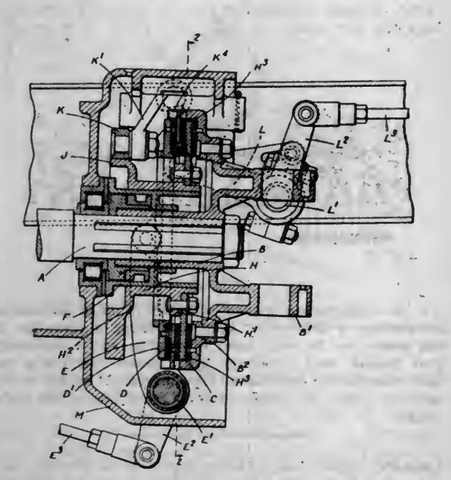
1,454,378. MACHINE FOR HOMOGENEOUSLY MIXING AND STRAINING EGG MELANGE. IPHUS HARVEY HALL, Toronto, Ontario, Canada. Filed Feb. 3, 1923. Serial No. 616,805. 17 Claims. (Cl. 259—96.)



1. A machine for homogeneously mixing and straining egg melange comprising a stationary conical receptacle having a receiving opening in the upper portion thereof through which shelled eggs are dropped and a discharge opening in the bottom portion thereof, and means located within the receptacle for breaking the yolk skins of the shelled eggs

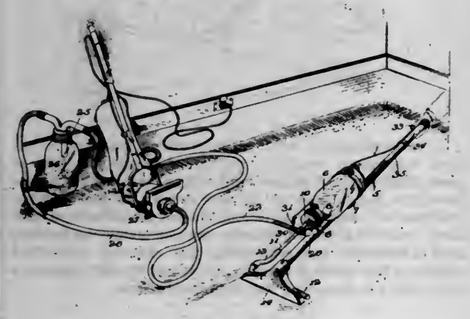
as each egg is dripped after passing through the receiving opening of the receptacle and for discharging the

broken yolks radially against the walls of the receptacle to commingle as they flow down the interior periphery of such receptacle to the discharge thereof.



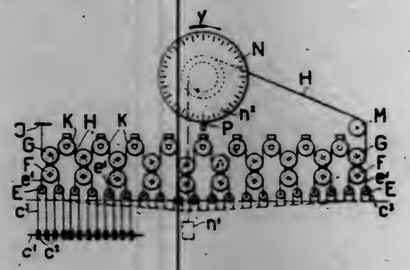
1,454,379. STEERABLE VEHICLE LIGHT. WILLIAM I. INGLEDUE, Melbourne, Iowa. Filed Mar. 3, 1922. Serial No. 540,791. 3 Claims. (Cl. 240—61.)

1. A steerable headlight mechanism for automobiles including headlights rotatably mounted on vertical axes, and tiltably mounted on horizontal axes, means for rotating the lights, and means for tilting the lights without interfering with the rotating means, said tilting means including supporting forks for the lights, said supporting forks having shanks, grooved collars slidably mounted thereon, links connecting said collars to the rear of the lights, whereby vertical sliding movement of the collars will impart tilting movement to the lights, and means controllable from the dash for imparting sliding movement to the collars.



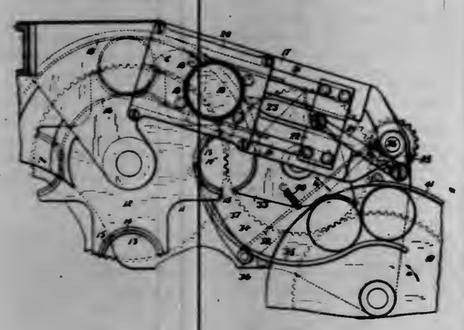
1,454,380. BRAKE FOR MOTOR ROAD VEHICLES. ARTHUR JOHN ROWLEDGE, Acton, England, assignor to D. Napier & Son Limited, London, England, a Company of Great Britain. Filed Oct. 18, 1921. Serial No. 508,465. 13 Claims. (Cl. 188—140.)

1. In brake actuating mechanism for a motor road vehicle the combination with a shaft through which the drive is transmitted from a source of power to the road wheels, a clutch member adapted to be rotated in either direction by this shaft, a second clutch member adapted to engage the first clutch member and mounted freely so that it can rotate in either direction, means for causing the clutch members to engage, a cam member rotatable



by the second clutch member and having two oppositely arranged operative parts, a lever which is acted on by the cam member and moved thereby when the cam member is rotated in either direction, and means actuated by this lever for applying the vehicle brakes as set forth.

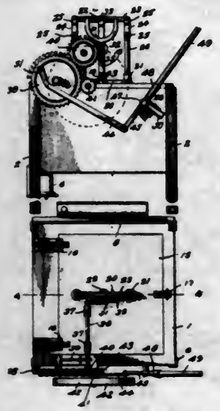
1,454,381. CLEANING APPARATUS. JAMES M. STEPP, Huntington, W. Va. Filed Dec. 30, 1921. Serial No. 526,015. 1 Claim. (Cl. 15—155.)



A cleaning apparatus for floor coverings comprising a pick-up head having a narrow elongated mouth, a handle for said head, a container for a liquid cleaning solution carried by said handle and having a discharge pipe, a spray pipe connected to said discharge pipe and carried by said head in spaced parallel relation to said narrow elongated mouth, the side of said mouth adjacent said spray pipe being spaced from the floor covering whereby the dirt and the liquid cleaning solution may readily enter the head.

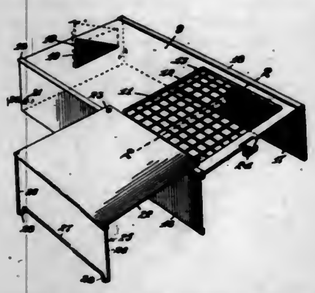
1,454,382. ADDING MACHINE PARTICULARLY FOR LEATHER-MEASURING MACHINES. HERMANN THUN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 6, 1920. Serial No. 428,799. 2 Claims. (Cl. 33—124.)

2. In combinating with a plurality of band movement integrators, a differential gear comprising a plurality of sun gears, one for each band integrator, and a planetary gear means, said planetary gear means comprising an indicating needle controlled in its movement by the movement of said sun gears, and a scale means for said needle.



1,454,383. CAN-CAP FEED. HENRY L. GUENTHER, Los Angeles, Calif. Filed Dec. 21, 1921. Serial No. 523,824. 8 Claims. (Cl. 113—29.)

1. In combination with a can seaming machine, a cap feed comprising positively operating means for successively feeding filled cans to a machine, and means for delivering a cap to each of the cans carried by said positive feed means, said cap delivering means including continuously operating driving means, can cap actuating means, and mechanism for connecting the can cap actuating means to the driving means, and means directly operated by a can for actuating the said mechanism.

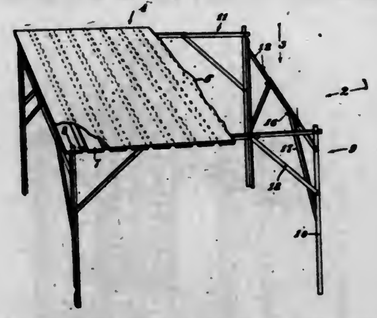


1,454,384. WASHING MACHINE. GEARY E. HAWK, Camden, N. J. Filed Apr. 26, 1919. Serial No. 292,824. 1 Claim. (Cl. 68—19.)

In a washing machine, a body, a cover hingedly secured at one edge to the body, clothes engaging members carried by the cover, a relatively large drive gear, a bearing for the gear carried by the body and disposed in alignment with the hinged edge of the cover, means for operating the gear, a drive shaft carried by the cover, means operatively connecting the drive shaft with the clothes engaging members, a relatively small pinion secured to the shaft, and meshing with the relatively large drive gear forwardly of the vertical diametric center

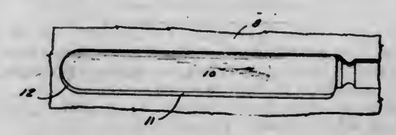
thereof and above the horizontal diametric center thereof, whereby upon opening movement of the cover, the pinion will rotate around said relatively large drive gear.

1,454,385. COMBINED STOVE AND GRILL. JOHN HIGHAM, Los Angeles, Calif. Filed Dec. 18, 1920. Serial No. 431,747. 5 Claims. (Cl. 126—29.)



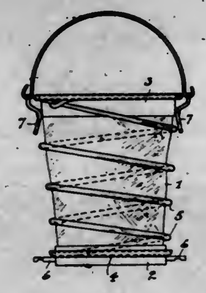
1. A combined foldable camp stove and grill comprising a top plate formed with a stove pipe opening and having a grill portion spaced from the stove pipe opening to provide an expanse of stove top surface between the grill and the stove pipe hole, a cover-shelf panel mounted to swing on the top plate and adapted to extend over the grill to cover same and to be swung to extend to one side of the stove to expose the grill and form a shelf, and a foldable leg member on the cover-shelf panel adapted to support the outer portion of the panel when it is in its extended position.

1,454,386. FOLDING TABLE. JOHN HIGHAM, Los Angeles, Calif. Filed Mar. 10, 1921. Serial No. 451,187. 2 Claims. (Cl. 45—116.)



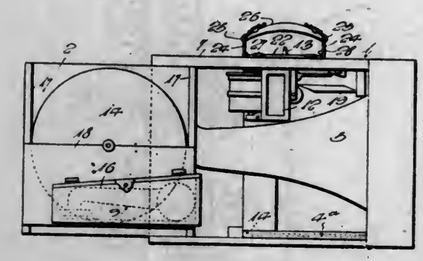
1. In a folding table, the combination of a foldable top and a foldable supporting frame; said frame comprising a plurality of vertical legs, longitudinal and transverse members pivotally secured to and joining said legs; said members each comprising a pair of crossed pivotally connected pieces whereby the members are adapted to be folded and when extended in alignment to have their portions overlapping beyond the point of their pivotal connection, and sway-braces pivoted to said legs, said pieces composing the transverse and longitudinal members as well as said sway-braces being provided with

openings all adapted to be brought into alignment; pins adapted to be inserted through said openings when



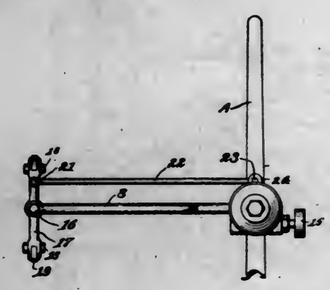
brought into alignment with one another, said pins serving to hold all parts in fixed position relative to one another.

1,454,387. PROCESS OF ALLOY KNIFE HARDENING OR TEMPERING. THOMAS B. LASHAR, Bridgeport, Conn., assignor to Associated Silver Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1919. Serial No. 277,820. 5 Claims. (Cl. 76—104.)



1. That process of shaping and hardening nickel silver alloy knife blades which consists in subjecting the alloy while at a natural temperature to a striking blow and confining the alloy in a cavity of a cross section substantially that desired for the finished blade.

1,454,388. FOLDING BUCKET OR THE LIKE. LARS WALDEMAR LAURÉN, Orebro, Sweden, assignor of one-half to Erik Emanuel Ericsson, Rosta, Orebro, Sweden. Filed Mar. 10, 1920. Serial No. 364,695. 2 Claims. (Cl. 150—49.)

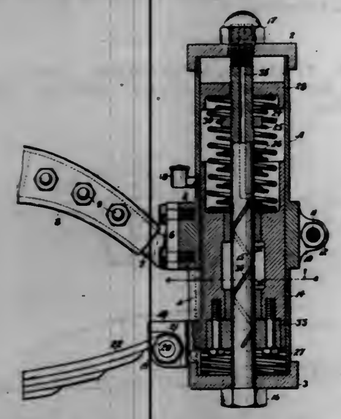


1. A folding bucket comprising a bottom, a top rim, a water-proof flexible body portion connected to the bottom and the rim, a coiled spring surrounding the body and having its respective ends bearing against the bottom and the top rim and normally holding the bucket extended, pins projecting from opposite points of the bottom, a bail and elements pivoted at opposite points exteriorly of the rim and having their upper ends shaped to accommodate the ends of the bail and their lower ends shaped to form hooks for engagement with the pins subsequent to the compressing of the spring whereby to hold the bucket in a folded position.

1,454,389. PORTABLE PHONOGRAPH. JOHN L. LIND, Siren, Wis. Filed Dec. 5, 1921. Serial No. 519,988. 4 Claims. (Cl. 274—2.)

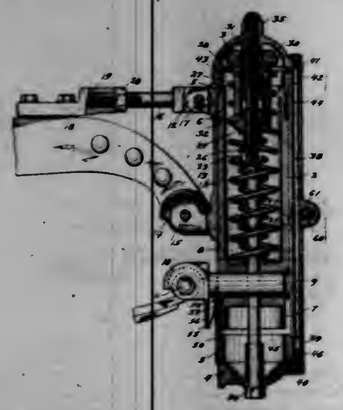
1. A portable graphophone comprising a casing having an outwardly swinging door occupying the major portion of one of its vertical sides, a horn within the casing spaced inwardly from said door, and means for mounting a record table upon the inner side of said door when it is not in use, whereby to position said record table between said door and horn when the former is closed.

1,454,390. GLARE SHIELD. WILLIAM E. LORANGER, Los Alamitos, Calif. Filed July 5, 1921. Serial No. 482,316. 3 Claims. (Cl. 296—97.)



1. In a glare shield, the combination of a light screen, a bracket adapted to be secured to a support, a rod pivotally connected at one end to the screen and at its other end to the bracket, an arm pivotally connected at one end to the light screen and at its other end to the bracket and provided at said other end with a segmental gear, a worm shaft journaled in the bracket and having a worm in mesh with the gear, and means to turn the shaft.

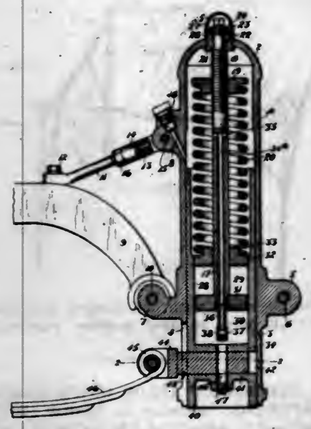
1,454,391. SHOCK ABSORBER. ZELMERE P. LOYD, Coalinga, Calif., assignor to Loyd Manufacturing Co., Oakland, Calif., a Corporation of California. Filed Jan. 14, 1920. Serial No. 351,328. 8 Claims. (Cl. 267—29.)



1. In a device of the character described, the combination with the main frame of a vehicle and the springs whereby the frame is supported, of a cylinder secured to the frame, a head member on each end of the cylinder, a piston in the cylinder, a spring in each end of the cylinder engaging the piston, a rod extending through the cylinder

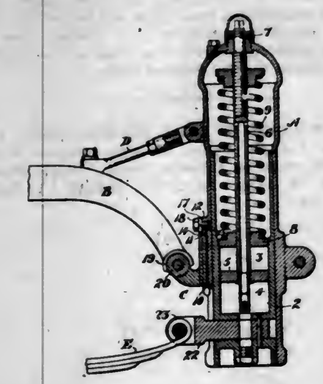
and secured by the head members, means permitting turning movement of the rod, means actuated by the turning

movement of the rod for increasing or decreasing the tension of the springs within the cylinder, and a connection between the vehicle spring and the piston.



1,454,392. SHOCK ABSORBER. ZELMERE P. LOYD, Coalinga, Calif., assignor to Loyd Manufacturing Co., Oakland, Calif., a Corporation of California. Filed May 12, 1920. Serial No. 380,758. 25 Claims. (Cl. 267—23.)

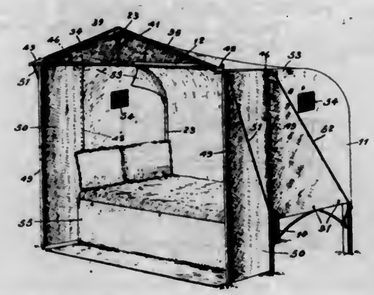
1. A shock absorber comprising a cylinder, a piston reciprocally mounted therein, a spring interposed between one end of the cylinder and the piston adapted to absorb a normal load, pneumatic cushioning means for each end of the piston adapted to absorb maximum loads, a rod disposed in the cylinder independent of the piston, and means actuated by turning movement of said rod for increasing or decreasing the tension of the spring.



1,454,393. SHOCK ABSORBER. ZELMERE P. LOYD and HENRY W. LARSSON, Oakland, Calif., assignors to Loyd Mfg. Co., Oakland, Calif., a Corporation of California. Filed May 11, 1921. Serial No. 468,506. 10 Claims. (Cl. 267—60.)

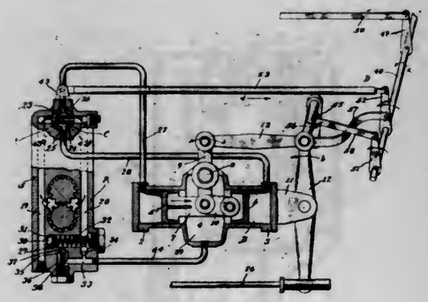
1. A shock absorber comprising a main cylinder, an inverted piston reciprocally mounted therein, a closed cylinder chamber formed in the piston, an auxiliary piston mounted in said chamber, means for maintaining a fixed relation between said piston and the main cylinder, a

spring interposed between the main piston and the main cylinder, and means for adjusting the tension of said spring.



1,454,394. ADJUSTABLE ATTACHING BRACKET. ZELMERE P. LOYD and HENRY W. LARSSON, Oak'and, Calif., assignors to Loyd Mfg. Co., Oakland, Calif., a Corporation of California. Filed Dec. 7, 1921. Serial No. 520,507. 4 Claims. (Cl. 267—65.)

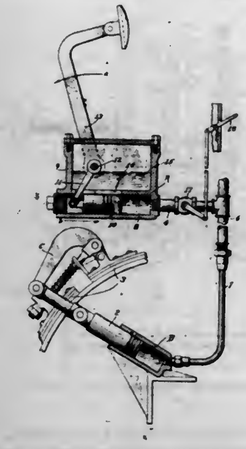
1. In a shock absorber of the character described a cylinder, a shouldered recess on one side of the cylinder, a plate turnably mounted with relation thereto, means for securing the plate to the shouldered recess and for locking the plate against turning movement, and a lug formed on said plate.



1,454,395. CANOPY FOR AUTOMOBILE BEDS. CHARLES D. MCDONALD, Los Angeles, Calif. Filed Jan. 5, 1922. Serial No. 527,249. 1 Claim. (Cl. 135—5.1.)

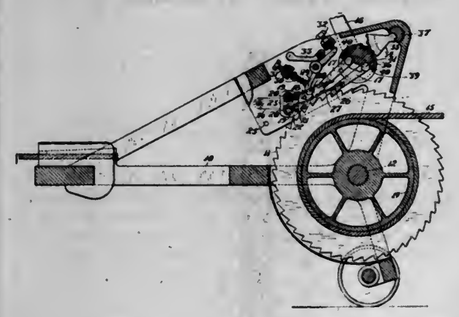
In combination with a canopy of the character described, of a truss support comprising gable members pivotally connected, a hook disposed on the inner end of one of said gable members, the inner end of the other of said gable members projecting beyond the pivot joint and overlapping said hook, a truss rope connecting the outer

ends of said gable members, means for adjusting the pitch of said truss support, and means for securing said truss support to said canopy.



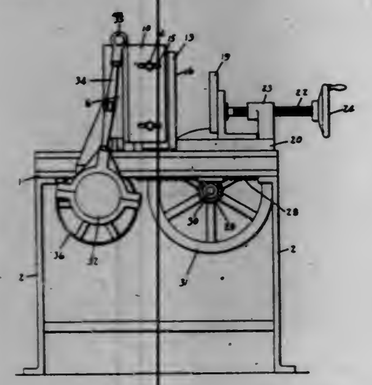
1,454,396. HYDRAULIC-RAM CONTROL. WILLIAM W. MACDONALD, San Francisco, Calif. Filed Sept. 7, 1920. Serial No. 408,533. 10 Claims. (Cl. 138—23.)

1. The combination with a hydraulic ram comprising a cylinder and a piston dividing the cylinder into two chambers, of a source of liquid supply, a pump having a suction and a discharge connection adapted to maintain the liquid in constant circulation, means for diverting the flow of the liquid to either cylinder chamber, said means also adapted to maintain a returned circulation through the pump, means preventing building up of pressure on the discharge side of the pump beyond a predetermined pressure, and means for maintaining a minimum predetermined pressure on the suction side of the pump.



1,454,397. HYDRAULIC BRAKE. WILLIAM W. MACDONALD, San Francisco, Calif. Filed Nov. 19, 1920. Serial No. 425,061. 5 Claims. (Cl. 138—23.)

1. In a device of the character described a hydraulic actuating ram, said ram comprising a cylinder, a liquid containing reservoir, a slot formed in the upper side of the cylinder in communication with the reservoir, a piston in the cylinder adapted to cover and uncover the

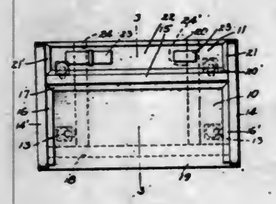


slot, and means projecting through the slot and engageable with the piston to impart a reciprocal movement thereto.

1,454,398. PAWL-AND-RATCHET POWER APPLIANCE. PHILIP MACKENZIE, San Francisco, Calif. Filed May 17, 1922. Serial No. 561,555. 5 Claims. (Cl. 74—54.)

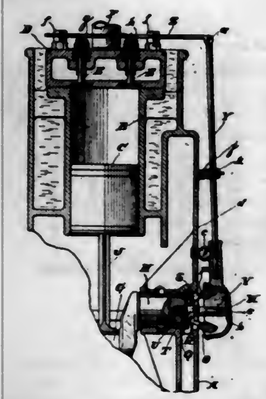
1. In a pawl and ratchet power appliance, a frame, a ratchet wheel journaled thereon, a pawl lever mounted for rocking movement on the frame, a pawl pivoted to the pawl lever on either side of the axis thereof and cooperating with the teeth on the ratchet wheel, means for retaining the pawls yieldingly in engagement with the teeth of the ratchet wheel for driving the wheel forwardly and means for optionally causing alternate disengagement and reengagement of the pawls to permit the ratchet wheel to be reversed when under load, said last mentioned means comprising yielding means to exert an outward pressure on each of said pawls, co-acting cam surfaces between the two pawls to control the outward movement of the inner pawl, a cam surface on the outer pawl and a co-acting adjustable cam to co-operate therewith for the purpose of controlling the outward movement of the outer pawl.

1,454,399. TRIMMER FOR BATTERY SEPARATORS. JOHN E. NORRIS, Indianapolis, Ind., assignor to Indianapolis Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 1, 1921. Serial No. 488,972. 6 Claims. (Cl. 164—48.)



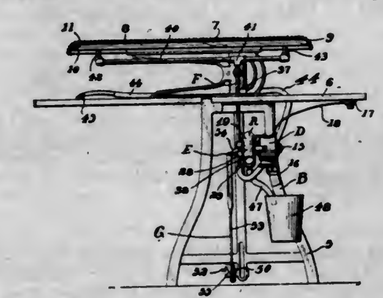
1. In a trimming device, means for securing together a plurality of separators, cutting elements for trimming the edges of the separators, means for advancing the separators towards the cutting elements, and means for imparting vertical movement to the cutting elements whereby the entire group of separators is brought into contact with the cutting elements at a single advancement of the separators, substantially as set forth.

1,454,400. PACKING FOR PUMPS. WALTER ALLEN O'BANNON, Tulsa, Okla. Filed Nov. 25, 1921. Serial No. 517,589. 3 Claims. (Cl. 103—158.)



1. In a pump of the character described, a movable reciprocating barrel having its lower end closed, a stationary plunger having an upper end portion disposed within said barrel and forming a close running fit therewith and having a portion beneath said upper end portion in spaced relation with the inner periphery of the barrel, an expansible packing surrounding the last named portion of the plunger, said packing being adapted to draw liquid through orifices in the lower end of the barrel upon downward movement of said barrel, and said liquid being ejected from said orifices under pressure upon upward movement of barrel, and means below said packing adapted to utilize the liquid pressure for compressing said packing during the last named movement of said barrel.

1,454,401. SCRUBBING STOOL. WILLIAM F. O'NEILL, Albany, N. Y. Filed Aug. 19, 1919. Serial No. 318,438 2 Claims. (Cl. 155—167.)

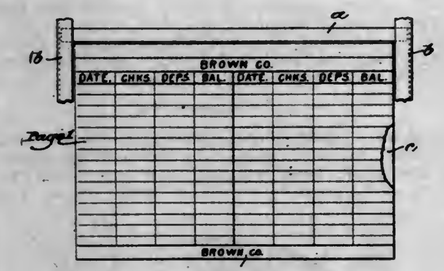


1. A scrubbing stool comprising a movable platform and a partition dividing said platform into a front space and rear space, said front space adapted to serve as a knee rest and said rear space adapted to serve as a support for the scrubbing materials, a frame work bordering said front space, a soft material held within said frame work to serve as a knee rest and a frame work bordering said rear space and a waterproof material held within said frame work.

1,454,402. CENTRIFUGAL UNLOADER FOR COMPRESSORS. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 29, 1922. Serial No. 564,459. 3 Claims. (Cl. 230—24.)

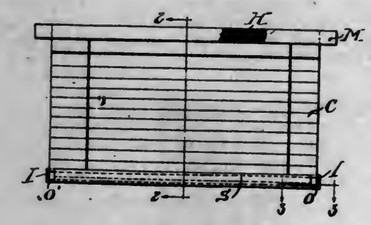
3. In a compressor, the combination of a cylinder, piston and crank shaft, an inlet valve for the cylinder, centrifugal weights pivotally mounted on one end of the crank shaft, a slidable member actuated axially and outwardly from the crank shaft as the weights fly outwardly, a pivoted lever extending from a point near the inlet valve to a point opposite the weights, a shield on said lever extending over the weights and adapted to be engaged by said slidable member, means connected to the lever and bearing on the inlet valve for holding the inlet valve open on starting, said means acting to release the valve when the compressor has attained sufficient speed to cause the weights and slidable member to rock the said pivoted lever, and a spring adjustable along the length of the pivoted lever and adapted to be compressed as the pivoted lever is rocked.

1,454,403. VACUUM ATTACHMENT FOR CLOTHES-PRESSING MACHINES. GLENN PEACOCK, Bartlesville, Okla. Filed Apr. 11, 1921. Serial No. 460,277. 2 Claims. (Cl. 68—9.



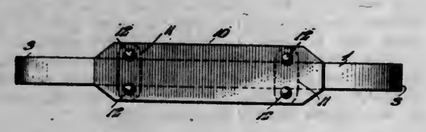
1. The combination with a pressing machine including a buck having a perforated press plate, a suction chamber arranged below the press plate, of a suction creating means including a fan casing, a suction fan wheel arranged in the casing, an electric motor for operating the fan wheel, a suction chamber communicating with the inlet of said fan casing, a three way valve forming a part of said suction chamber, oppositely disposed pipes communicating with the valve casing, a rotatable three way valve plug arranged in the casing, means connecting one of the pipes with the suction chamber of the buck, a crank arm connected to the valve plug, a lever pivotally mounted intermediate its ends, a foot pedal formed upon the lever, a rod connected with the lever and the crank arm, a condensation pipe carried by the fan casing, and a receptacle carried by the pressing machine for receiving said pipe.

1,454,404. UMBRELLA. HARRY F. POELL, Philadelphia, Pa. Filed July 2, 1919. Serial No. 308,207. 4 Claims. (Cl. 135—46.)



4. An umbrella including main ribs, brace ribs; a main rod having a tubular section and a rod section slidable relatively to each other and a recess adapted to receive a bolt, the rod section having a longitudinal groove and the tubular section having a rib extending into the groove, the rod section having a shoulder for abutment with the rib; means normally engaging the other end of the rib to hold it against slidable movement; a sleeve connected with the brace ribs and slidable on the main rod; a bolt adapted to engage with the recess in the main rod; a spring, for supporting the bolt, attached to the sleeve; a trigger pivoted to the bolt, fulcrumed on the sleeve and adapted to withdraw the bolt, the bolt being operative, when the sleeve is moved downward to actuate the rib holding means and permit the rod section and the tubular section to telescope, substantially as described.

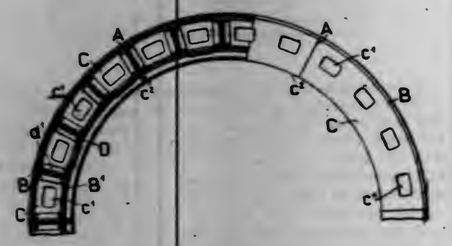
1,454,405. RECORD DEVICE. JAMES H. RAND, North Tonawanda, N. Y. Filed May 2, 1921. Serial No. 466,134. 8 Claims. (Cl. 129—16.7.)



1. In combination, a record sheet transversely folded to form a plurality of sections hinged together, each section comprising two pages of a series of pages included in the entire sheet, and a holder adapted removably to support the folded record sheet in different positions which will respectively display successive pages in front, the parts being so organized and arranged that in each successive position of the sheet in the holder all pages of the series preceding the page displayed at the front may be exposed to view by swinging the sections relatively to the holder without removing the record sheet from the holder.

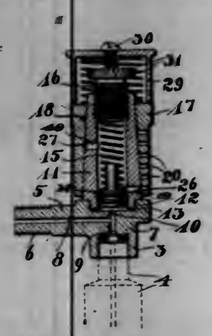
1,454,406. INDEX DEVICE. JAMES H. RAND, North Tonawanda, N. Y. Filed Feb. 11, 1922. Serial No. 535,717. 8 Claims. (Cl. 129—16.7.)

1. An index device comprising a card, a sheath extending over the margin of the card, the card being slidable in the sheath longitudinally of the margin, and a stop at the end of said margin to prevent accidental displacement of the card from the sheath.



1,454,407. BUMPER OR FENDER FOR AUTOS OR OTHER VEHICLES. WILLIAM H. RAPEPORT, Philadelphia, Pa. Filed Nov. 4, 1922. Serial No. 598,977. 1 Claim. (Cl. 293—55.)

A bumper or fender composed of front and rear members of resilient material, said members each being a single continuity, a rear bar of rigid material connected firmly with the inner terminals of said rear members, supporting devices for the bumper mounted on said rigid rear bar, a reinforcing and impact plate on the front member,



said plate having its upper and lower portions projecting respectively above and below said front member, straps on the latter, said straps having their upper and lower portions projecting respectively above and below said front member, and securing bolts passing through said upper and lower portions of said plate, and of said reinforcing and guard plate, said bolts having their shanks extending across the upper and lower edges of said front member and being seated directly on said edges.

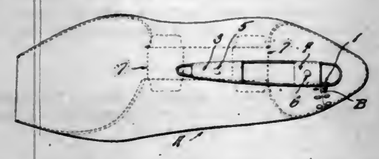
1,454,408. TUBBING FOR SHAFTS. FRITZ REICHARD, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 14, 1921. Serial No. 444,846. 4 Claims. (Cl. 61—41.)

1. A shaft tubbing formed in rings, each ring comprising a multiplicity of box-shaped girders, each girder comprising spaced external and internal boom walls and web walls connecting said boom walls at the top and bottom and coherent therewith along their whole length without interruptions.

1,454,409. PRESSURE-CONTROLLING DEVICE. HERMAN F. RICHTER, Los Angeles, Calif. Filed Mar. 1, 1921. Serial No. 448,888. 5 Claims. (Cl. 137—63.)

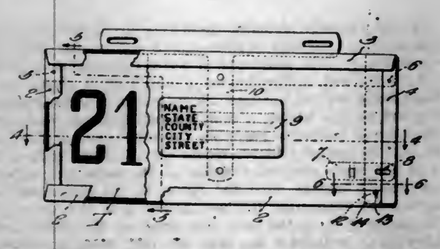
1. In a safety valve, a body, a cylinder on the body having discharge apertures at different points, a movable member in the cylinder disposed so as to reach the different apertures in the cylinder under different pressures, and a sleeve movable over the outside of the cylinder having an aperture to be disposed in alignment with any one of the apertures in the cylinder permitting discharge only at this point when the movable member in the cylinder reaches this point.

1,454,410. ARTIFICIAL COAL. LIGE ROBISON, Four States, W. Va. Filed Aug. 30, 1921. Serial No. 496,962. 3 Claims. (Cl. 44—15.)



1. A substitute fuel comprising pulverized paper, finely crushed coal, soda, wood alcohol, and coal oil.

1,454,411. MACHINE FOR REMOVING THE CORES AND STONES FROM FRUIT. FRANK ROBBINS, Clifton Hill, Victoria, Australia, assignor to George Edward Andrew, Richmond, Australia. Filed May 19, 1922. Serial No. 562,052. 4 Claims. (Cl. 146—6.)

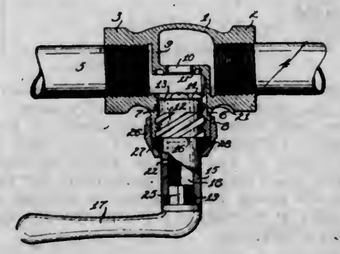


1. In a machine for removing cores and stones from fruit, devices for obtaining a central or approximately central cut in the fruit comprising a conveyor, fruit engaging means carried by the conveyor, adjustable cup members, stationary knives, and an auxiliary conveyor carrying spikes which engage the fruit and deliver it at a point where it is engaged by the said adjustable cup members to which there is imparted a rotary and lateral sliding movement to receive the fruit and by which the fruit is conveyed between the said stationary knives to make the central or approximately central cut therein.

1,454,412. SHOE FILLER. ROBERT A. ROBLEE, St. Louis, Mo., assignor to Brown Shoe Company, Incorporated, St. Louis, Mo., a Corporation of New York. Filed Feb. 14, 1921. Serial No. 444,677. 1 Claim. (Cl. 12—128.)

A shoe filler formed from a sheet of fibrous material having a cut-away portion at the front thereof and a cut-out portion at the rear thereof, means comprising a strip of material overlapping the abutting free ends of said sheet at the rear of said filler whereby said free ends are secured together, pairs of connecting members formed integral with said shoe filler at the upper portion thereof, the members of each pair of connecting members overlapping each other and being secured together to strengthen said upper portion of said shoe filler, and bracing members whereby the lower portion of said shoe filler is given additional rigidity.

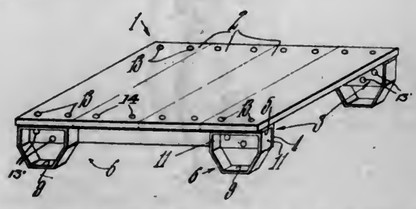
1,454,413. LICENSE-TAG HOLDER. RAYMOND ROSE, New Brighton, Pa. Filed June 29, 1922. Serial No. 571,748. 2 Claims. (Cl. 40—125.)



1. An automobile license tag holder comprising a backing plate having one end and one longitudinal edge bent to provide a pair of flanges adapted to engage two edges

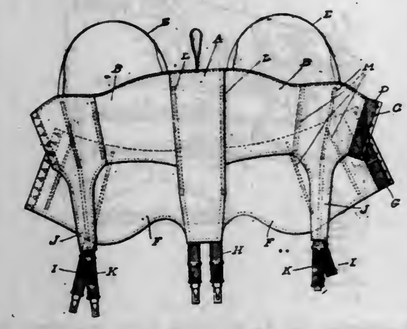
of a tag, and a retaining rim for connection with the remaining end and longitudinal edge of the plate, said rim comprising relatively long and short channel shaped sections, said sections being pivotally connected together at one end, the opposite end of the long section being pivotally connected to the plate at one corner of the latter, and locking means for connecting the free end of the short section with the plate for holding the tag in position against the latter.

1,454,414. PROGRESSIVE NITROCELLULOSE POWDER CONTAINING NITROGUANIDINE. JOHN M. SKILLING, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 15, 1922. Serial No. 568,597. 10 Claims. (Cl. 52—13.)



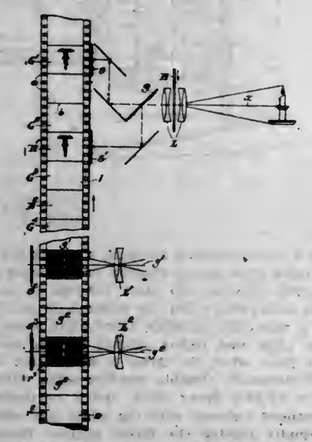
1. As a new propellant, a nitrocellulose powder containing nitroguanidine and having its surfaces impregnated with a deterrent material.

1,454,415. STOP AND WASTE VALVE. WILLIAM H. SMITH, East Cleveland, Ohio. Filed Apr. 23, 1920. Serial No. 375,937. 3 Claims. (Cl. 251—23.)



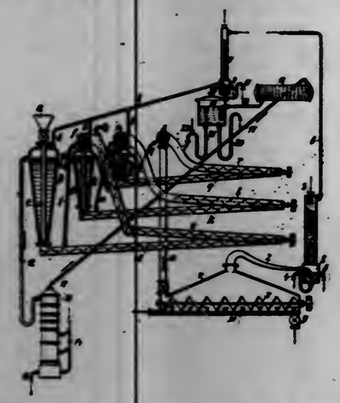
1. A valve comprising a casing, a partition wall in said casing having an aperture therein, a member movable toward and from said aperture to open and close the same, a reduced projection on said member extending exteriorly of said casing, a socket formed in said projection, an aperture adjacent the outer end of said socket communicating with the atmosphere, a second aperture adjacent the inner end of said socket communicating with a by-pass about said member when the valve is in the closed position and a packing ring clamped around said projection, both said apertures being exterior of said packing ring when said valve is in the open position.

1,454,416. PLATFORM. EDMUND TOMLINSON and RICHARD T. GIFFORD, Springfield, Mass., assignors to Edward N. White, J. Lewis Wyckoff, and James M. Eaton, trustees, all of Holyoke, Mass. Filed Aug. 17, 1921. Serial No. 493,052. 3 Claims. (Cl. 248—41.)



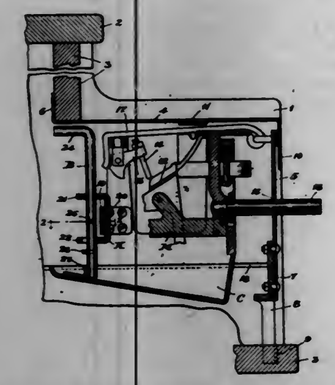
1. A transferable platform comprising in combination, a load support, longitudinal tie members adjacent each lateral edge of said load support each of which is provided with a horizontal portion secured to said load support and a depending flange portion, U shaped supporting legs for said platform mounted adjacent the tie members each of which has a horizontal foot portion and side portions connected at their upper ends by an integral top portion, a vertical web portion connecting the top and side portions of said leg adjacent the upper end thereof, and means for rigidly securing each leg to the adjacent tie member and load support.

1,454,417. WOMAN'S FITTED UNDERGARMENT. DE VER H. WARNER, Bridgeport, Conn., assignor to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 29, 1921. Serial No. 511,807. 5 Claims. (Cl. 2—73.)



4. A woman's fitted undergarment including a front panel extending from the bust over the abdomen, bust supporting members secured to the side edges of the upper portion of said panel and extending around the busts of the wearer, and hip supporting members connected to the side edges of the lower portion of said panel and extending around the hips of the wearer, said bust supporting members and said hip supporting members being unconnected except through said panel, and said panel having hose supporters secured to the bottom thereof and said bust supporting members being provided with extensions passing over the rear hips of the wearer and to which hose supporters are secured for the purpose described.

1,454,418. TRANSPARENCY AND METHOD OF MAKING THE SAME. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Oct. 22, 1915. Serial No. 57,346. 8 Claims. (Cl. 88—16.4.)

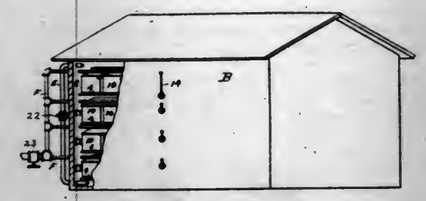


6. A transparency bearing a series of groups each of complementary geometrically like simultaneous photographs separated by a plurality of spaces for members of similar groups.

1,454,419. APPARATUS FOR CONTINUOUS EXTRACTION, PARTICULARLY OF OIL. MOSE WILDUSCHEWITSCH, Zurich, Switzerland. Filed Aug. 11, 1920. Serial No. 402,863. 1 Claim. (Cl. 87—6.)

An apparatus for the extraction of oil from fruits by means of a solvent, comprising a series of long tubes, means for forcing the extraction material through said tubes in counter current to the solvent, machines for repeated mechanical expression interposed between said tubes, a still for separating the oil from the solvent, and means for introducing the solvent into the series of tubes and thereby producing a closed circulation of the solvent.

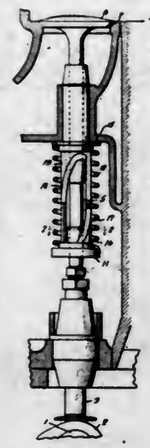
1,454,420. COIN-CONTROLLED MACHINE. ALEXANDER WITTENBERG, New York, N. Y., assignor to Autosales Corporation, a Corporation of New York. Filed June 8, 1918. Serial No. 238,825. 3 Claims. (Cl. 194—1.)



1. In a coin-controlled machine, a casing provided with a removable front panel adapted to be locked in place, a horizontally slidable top plate adapted to be locked in place by said panel when the latter is in position on the casing, a vertically shiftable front plate extending below said top plate and locked against vertical movement by said top plate when the latter is in position on the casing, a horizontally slidable coin-box below said top plate and back of said front plate, and a vertically movable bolt arranged between said top plate and said coin-box for normally locking the latter against forward movement, said bolt being locked against movement into releasing position by said top plate when the latter is in normal position.

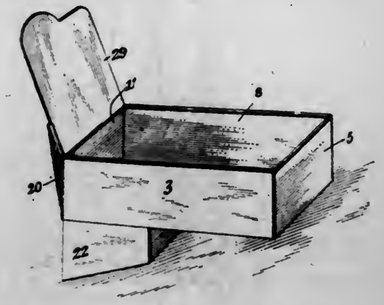
1,454,421. GREASEPROOFING COMPOSITION AND FIBROUS MATERIAL TREATED THEREBY. WILBUR L. WRIGHT, Fulton, N. Y. Filed May 10, 1920. Serial No. 380,365. 8 Claims. (Cl. 134—11.)

4. A greaseproofing composition consisting essentially of emulsified cocoanut oil and an adhesive solution.



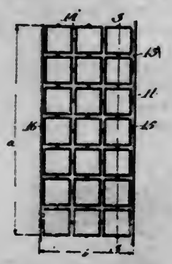
7. A fibrous material container for food products internally coated by a composition embodying a gelatinous material body and cocoanut oil.

1,454,422. PROCESS FOR MAKING EDIBLE MALT AND SPROUTS. KUMAKICHI ABE, Selma, Calif. Filed Feb. 18, 1922. Serial No. 537,493. 2 Claims. (Cl. 195—24.)



2. A process for growing bean sprouts consisting of planting the beans in moistened sand contained in a closed box, said closed box having means for draining excess moisture therefrom, said box being kept during the propagation of said sprouts within an enclosure heated with steam sprays to approximately 85° Fahrenheit, and said plants being subjected to washing sprays of cold water at intervals of approximately 155 minutes during said propagation.

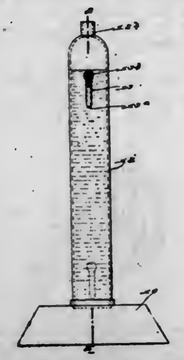
1,454,423. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. MARCUS O. ANTHONY, New York, N. Y., assignor to Continental Engineering Corporation, Omaha, Nebr., a Corporation of Nebraska. Filed Mar. 7, 1921. Serial No. 450,420. 1 Claim. (Cl. 123—90.)



In an internal combustion engine, the combination with a poppet valve, of a fixed thimble carried by the stem thereof near its free end and spaced from the valve guide, a pair of spaced washers surrounding the valve stem, one adjacent said thimble and the other adjacent said guide, there being a plurality of cam-prongs projecting from each washer toward the other, a one-way clutch between said thimble and the washer adjacent thereto, and a helical spring interposed between the washers and surrounding the prongs, the ends of the spring being nonrotatably secured to the respective washers and the direction of coiling the spring being such as to oppose the wedging effect of said prongs.

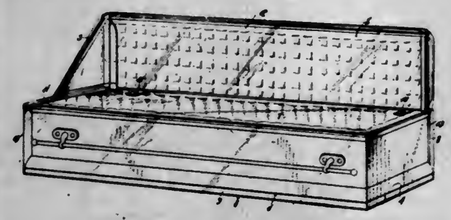
1,454,424. DISPLAY BOX. CHARLES BASHWINER, Jamaica, N. Y., assignor to Fort Orange Paper Company, Castleton, N. Y., a Corporation of New York. Filed Jan. 12, 1922. Serial No. 528,834. 2 Claims. (Cl. 206—44.)

1. A display box comprising a container having more than one ply of material in each of its sides and ends, a display member, a combined cover and support therefor, and a flexible connection between container and support, the connection being integral with one of the plies of material at the rear end of the box, and when the container is in display position extending from a position at a distance above the rear end of the box to the highest part of the support, a backing member also extending above the top edge of the box arranged to hold the display member in erect position, the said display member having a depending portion interposed between two of the plies of material at the rear end of the box.



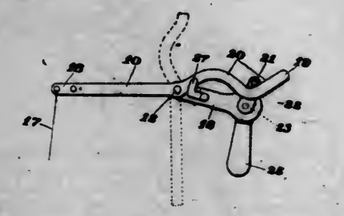
1,454,425. RADIATOR AND PROCESS OF PRODUCING SAME. IRA S. CHAPMAN, Venice, and CLYDE E. MORT, Rialto, Calif. Filed July 11, 1921. Serial No. 483,876. 2 Claims. (Cl. 204—8.)

1. A method of producing a cellular radiator comprising; assembling a multiplicity of metal tubes; casting a retaining material in the space between said tubes; electrically depositing metal to bind the ends of said tubes together into a single section; and thereafter removing the retaining material.



1,454,426. STORE-WINDOW ATTRACTION. HENRY B. CLEMENTS, Somerville, Mass. Filed Mar. 23, 1921. Serial No. 454,896. 1 Claim. (Cl. 46—41.)

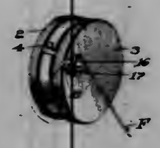
A window stand attraction comprising an upright, transparent tubular column containing liquid, means concealed with respect to said column for causing automatic and periodic variation in pressure upon the liquid therein, said means including provision for establishing communication with the atmosphere at definite intervals to prevent a cumulative effect of variation in pressure, and a



member immersed in the liquid of the column arranged to be responsive to such variations in pressure to cause the same to rise and descend in the column.

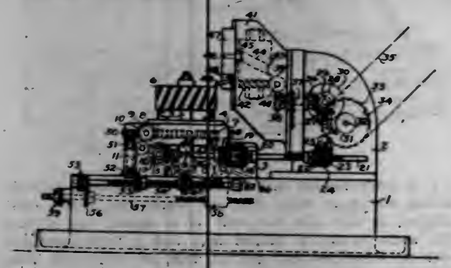
1,454,427. CASKET PROTECTOR. GEORGE A. CUNNING, Chicago, Ill. Filed Nov. 3, 1921. Serial No. 512,489. 3 Claims. (Cl. 27—19.)

1. A protector for caskets composed of a body portion having an upper wall, two end walls and a side wall adapted to slip over the body of a casket, one of said end walls having a hinged flap, and a cover provided with an elongated rear portion adapted to extend from the upper edge of a raised cover of the casket to the lower portion of the casket body, said cover protector also having a downwardly extending forward part forming between the same and the rear wall of the protector a pocket fitting the coffin closure, and detachable means for uniting the body protector and the cover protector together, both of said protectors being composed of transparent material.



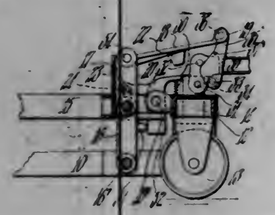
1,454,428. OUTLET-VALVE-OPERATING MECHANISM FOR FLUSHING TANKS. ANDREW F. CURTIN, Medford, Mass. Filed May 20, 1919. Serial No. 298,451. 3 Claims. (Cl. 4—5.)

3. An outlet valve operating mechanism for flushing tanks, comprising a valve operating lever, a pivot upon



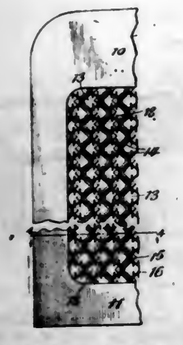
which it is supported, a pin for operating the lever and limiting its movement in one direction, a stop for limiting its movement in the opposite direction, means for preventing movement of the lever lengthwise of its pivot within the amplitude of movement permitted by the pin and stop, and permitting such movement beyond the limit of throw of the lever determined by the pin.

1,454,429. DENTAL FLOSS DISPENSER. FRANK G. DRESSER, Providence, R. I. Filed Nov. 25, 1922. Serial No. 603,239. 4 Claims. (Cl. 242—137.)



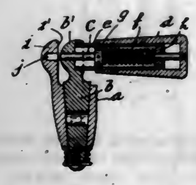
1. A dental floss dispenser comprising a closed case consisting of two telescoping parts having a bayonet joint connection with each other, a reel enclosed in said case and adapted to hold a supply of dental floss, said reel being centrally recessed, and a coiled spring carried by one of said casing parts and bearing on the bottom of said recess.

1,454,430. PROCESS FOR CUTTING GEAR WHEELS. HENRY J. EBERHARDT, Newark, N. J., assignor to Newark Gear Cutting Machine Co., Newark, N. J., a Corporation of New Jersey. Filed Jan. 2, 1920. Serial No. 348,958. 15 Claims. (Cl. 90—9.)



2. The method of cutting gear wheels, which consists in imparting continuous rotational motion to a gear blank and a continuous reciprocation to a rack element in a plane parallel to the axis of said blank and normal to the radius thereof and at a relative rate proportionate to the number of teeth to be cut in said gear blank.

1,454,431. ELEVATING TRUCK. FRANK L. EIDMANN, Holyoke, Mass., assignor to J. Lewis Wyckoff, Edward N. White, and George F. Jenks, trustees, all of Holyoke, Mass. Filed Aug. 4, 1919. Serial No. 315,288. 12 Claims. (Cl. 254—10.)

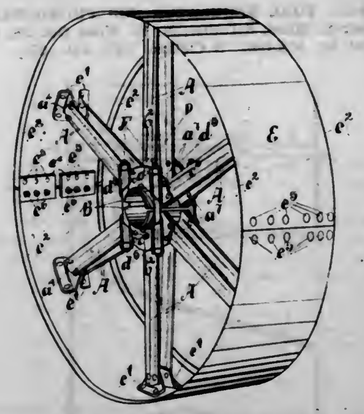


1. In an elevating truck, a support, an elevating platform, a handle pivoted on said support, a lever pivoted on said support at a point separate from the handle and having a cam surface, a member pivoted to the platform and having means for engagement with said lever, and a part on the handle having sliding engagement with said cam surface.

1,454,432. RADIATOR. JOHN M. FEDDERS, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Jan. 22, 1921. Serial No. 439,076. 4 Claim. (Cl. 257—130.)

1. A radiator comprising a plurality of water tubes and a plurality of air passages arranged between adjacent water tubes, each of said water tubes having its walls constructed of two corrugated strips of sheet metal which are spaced apart to form the water passage between them and are arranged parallel so that the inner convex side of each corrugation on one strip faces the inner concave side of a corrugation on the other strip, and a spacing strip of corrugated sheet metal arranged between said wall strips so that the outer summits of the wall strips engage with the summits of the corrugations of the spacing strip and form with the latter said air passages, and the slopes of the corrugations of said radiating strip being provided with longitudinal rows of wings which are removed from the metal of said strip and each wing being attached at one of its longitudinal edges to the respective spacing strip and projecting with its other longitudinal edge into the adjacent air passage, each of said wings being of V-form at its free end.

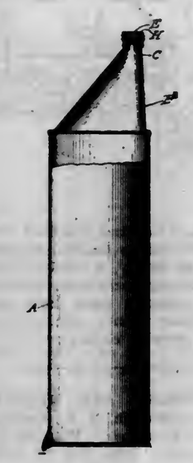
1,454,433. GAS-COCK LOCK. WILLIAM H. FRANKLIN, Jr., Merrimac, Mass. Filed Apr. 17, 1922. Serial No. 553,520. 3 Claims. (Cl. 251—165.)



1. A gas cock comprising a casing having a rotatable stem therein, an arm secured to, and extending from said stem at one side thereof, a handle reciprocably mounted on said arm, a locking rod reciprocally movable within said arm, said rod being attached at one end to said handle and being adapted to project beyond said stem at its opposite end, an abutment on said casing arranged to engage one side of said rod to lock the stem in closed position and a spring arranged within the handle to move the handle and rod to locking position.

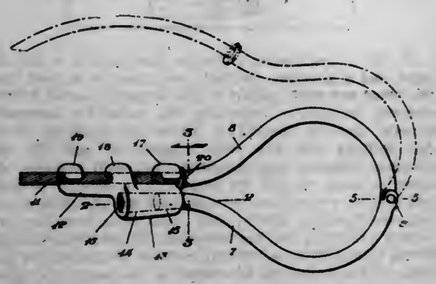
1,454,434. MEANS FOR SINKING CONCRETE PILES. ERNEST GILMORE GARDNER, Brooklyn, N. Y. Filed Dec. 5, 1919. Serial No. 342,636. 6 Claims. (Cl. 61—57.)

1. A pile shell which is of constant exterior diameter and which is of greater thickness at its upper end than at its lower end so that its interior diameter is less at its upper end than at its lower end.



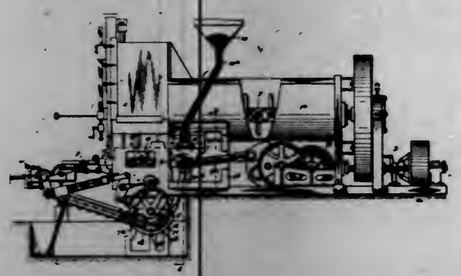
1,454,435. DIVIDED DRIVING PULLEY AND THE LIKE OF SHEET-METAL CONSTRUCTION. EDMUND GARSIDE, Darlington, England, assignor to John Henry Morgan, Sheffield, England, and to The Skerne Works Limited, Darlington, England, a Corporation of Great Britain and Ireland, and himself. Filed Oct. 22, 1920. Serial No. 418,818. 2 Claims. (Cl. 64—18.)

1. In a divided driving pulley of sheet metal construction in which the whole of the arms of one half thereof are formed from a single sheet of metal, the arrangement of a half bush formed of sheet metal and adapted to engage both the shaft and one of the arm elements, segmental plates riveted to the arms and boss elements of sheet metal riveted to said segmental plates and said half bush.



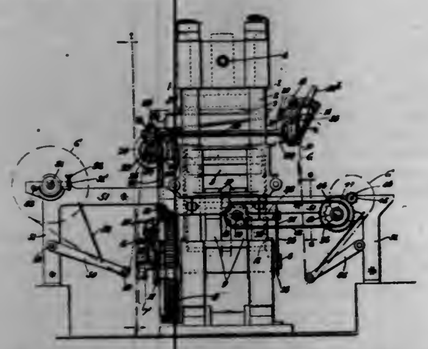
1,454,436. EASY-POUR OIL CAN. FREDERICK D. GATCHELL, New York, N. Y., assignor to Texas Company, a Corporation of Texas. Filed Mar. 28, 1919. Serial No. 285,840. 1 Claim. (Cl. 220—27.)

As an article of manufacture, an oil dispensing can for automobile use provided, after being filled, with a puncturable seal that is normally intact, whereby the can can be carried without leakage in an automobile in any random position, and that must be punctured before the contents are dispensed, comprising an alongated cylindrical body of such diameter that it can be conveniently grasped by the hand of the user in dispensing the contents, a tapered top of modified frusto-conical form, with its axis inclined relative to the axis of the body of the can and terminating in an eccentrically disposed pouring outlet of ring-like form whereby the can em-



bodies its own funnel of such shape as to facilitate the use of the can in restricted places, a puncturable seal of soft metal capping the the outlet and having a downwardly projecting annular flange exteriorly engaging the ring-like portion of the outlet and permanently fixed thereto, a sheet metal cylindrical neck portion, one end of which is fitted exteriorly over the flange of said seal and permanently secured thereto, and a removable top screw threaded upon the open end of said neck portion for protecting the seal while the can is being carried before the seal is punctured for dispensing purposes.

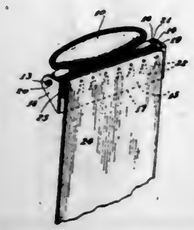
1,454,437. TWOLINE HITCH. JOHN C. GEILS, Bensenville, Ill. Filed Dec. 27, 1921. Serial No. 525,233. 11 Claims. (Cl. 24—123.)



1. A terminal coupling for a cable comprising a loop member composed of sections connected by a hinge joint so that the sections can be swung apart for placing them around a portion of an object, a cable assembled with said member and a member secured to one end of the loop member and having means for the engagement of the cable to hold the loop member closed.

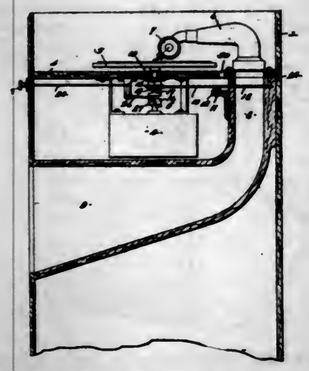
1,454,438. SAND-FEEDING MECHANISM. HENRY W. B. GRAHAM, New London, Ohio, assignor to The Arnold-Creager Company, New London, Ohio, a Corporation of Ohio. Filed Sept. 5, 1918, Serial No. 252,682. Renewed Sept. 14, 1921. Serial No. 500,719. 35 Claims. (Cl. 25—115.)

1. In mechanism of the class described, the combination with a brick machine and a sanding mechanism therefor, of a source of sand supply, a conduit leading into the chamber of said sanding mechanism, mechanism having a movable element engaging sand from said source of supply for discharging it into said conduit, and means for operating said movable element.



1,454,439. MEASURING AND FEEDING DEVICE. HARRY J. HAON, Newburgh, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 17, 1919. Serial No. 311,663. 24 Claims. (Cl. 101—3.)

10. In an embossing press, in combination, a die element and a pressing element, one movable to and from the other and with respect to the hereafter named driving element, means for imparting the to-and-fro movement to said movable element, a driven web-handling device for shifting the web with respect to said die and pressing elements and mounted upon said movable element to move to and fro therewith, a driving element, and driving connections between said driving element and said web-handling device, said connections including provisions providing for the movement of said web-handling device to and from the driving element as such device partakes of the to-and fro movement of the movable element.

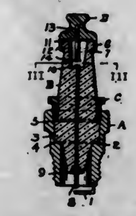


1,454,440. RUSTLESS BUCKLE. MICHAEL HAWIE, Bridgeport, Conn. Filed July 15, 1922. Serial No. 575,314. 2 Claims. (Cl. 24—184.)

1. A buckle comprising a sheet metal frame member and a lever member, said frame member including a back having forwardly projecting ears and a series of spaced apart inverted V-shaped cuts forming teeth, all of said teeth being struct outwardly from the back in a direction opposed to the direction of said ears, whereby the inner surface of said back between said ears is free of projections, the points of said teeth extending substantially in the same direction upwardly as the apices of the cuts and being spaced from the outer surface of the back to permit the insertion of a web having its edge inserted downwardly between the teeth and the outer surface of the back and abutted by the base of the teeth, the end portion of the web being grippingly engaged by said

teeth, and having portions exposed through the openings formed by the teeth at the inner side of the back, the web adapted to be folded downwardly upon the teeth to conceal them, the points thereof engaging the bight of the fold to increasingly grip the web upon downward pull thereon, the lever member being pivoted in the ears of the frame member and including an operating arm and a clamping arm arranged at an angle thereto and having a gripping edge adapted in the operation of the lever to engage a reach of the web instead between the frame and lever.

1,454,441. TONE REGULATOR FOR PHONOGRAPHS. HENRY K. HESS, Syracuse, N. Y. Filed Oct. 18, 1921. Serial No. 508,430. 3 Claims. (Cl. 181—27.)

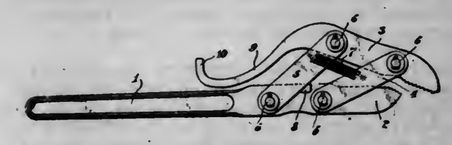


1. In a phonograph, the combination with a rotatable record support, a motor for actuating the support, and a sound conduit, of a tone regulator coacting with the sound conduit, and connections between the tone regulator and the motor whereby the tone regulator is actuated by the motor, substantially as and for the purpose described.

1,454,442. SPARK PLUG. FRANK A. HOWARD, Swissvale Borough, Pa. Filed Apr. 11, 1919, Serial No. 289,403. Renewed Feb. 17, 1922. Serial No. 537,356. 1 Claim. (Cl. 123—169.)

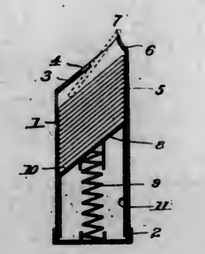
In a visible spark plug, the combination of a metallic bushing, a one-piece insulator integrally pressed of

vitreous transparent material and mounted in said bushing, the outer end of said insulator being provided with a concentric axial recess pressed in the end of said insulator to form a spark chamber, an electrode carried by said bushing, a second electrode embedded axially of said insulator and about which the molten material of said insulator is sealed in pressing the latter, one end of said axial electrode protruding from the inner end of said insulator to form with said first named electrode the



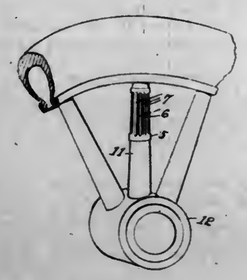
ignition spark gap, while the other end of said axial electrode protrudes into said axial recess in the outer end of said insulator, said recess being of materially greater diameter than said axial electrode, a cap mounted on the outer end of said insulator and closing said recess to complete the spark gap chamber, and a third electrode extending through said gap into said chamber and forming a second spark gap with the outer end of said axial electrode.

1,454,443. DEVICE FOR USE WITH SAFETY-RAZOR BLADES. ERNEST NORBERT KENNEDY, London, England. Filed Feb. 2, 1921. Serial No. 441,826. 3 Claims. (Cl. 30—10.)



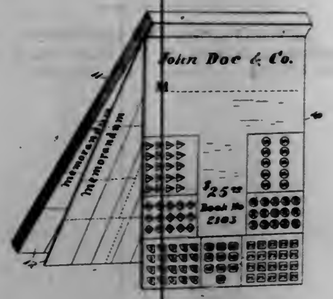
1. A device for use with safety razor blades comprising in combination, a blade holder formed from a single strip of metal bent to U shape in cross section and open along one longitudinal edge and slotted along the opposite longitudinal edge, a handle movably connected to one end of said blade holder and adapted to embrace one of the longitudinal edges thereof, and a U-shaped clamping member pivotally connected to the opposite end of the blade holder and adapted to press the sides of the blade holder together to grip by friction alone a double-edged safety-razor blade inserted between said sides, for the purposes set forth.

1,454,444. WRENCH. ANGELOS KOMNENUS, New York, N. Y., assignor of one-half to Eliza O'Day, Deal, N. J. Filed Feb. 23, 1922. Serial No. 538,663. 2 Claims. (Cl. 81—117.)



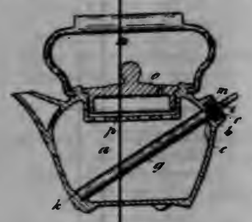
1. A pipe wrench comprising a handle and integral jaw, a co-operating jaw, non parallel links of unequal length connecting said jaws, a spring tending to pull the jaws together and a finger piece extending rearwardly along the handle from the co-operating jaw.

1,454,445. COIN RETAINER AND DISPENSER. ABRAHAM LIEBERMAN, Jamaica, N. Y. Filed Jan. 6, 1922. Serial No. 527,318. 3 Claims. (Cl. 133—6.)



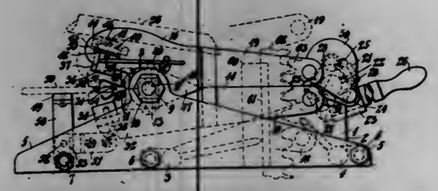
3. The combination with a tubular casing adapted to hold a stack of coins, of a plate extending partially across one end of the casing and having a notch in its free edge, there being a notch in the exposed portion of the same end of the casing opposite the notch in said plate, the portions of said exposed edge of the casing at either side of the notch therein extending to the plane of the outer surface of said plate for the purpose specified.

1,454,446. MATCH SCRATCHER. PETER MCCUAIG, Fort William, Ontario, Canada. Filed Nov. 7, 1919, Serial No. 336,500. Renewed Oct. 21, 1922. Serial No. 596,167. 1 Claim. (Cl. 44—48.)



As a new article of manufacture a match scratcher, comprising a pliable metallic sheet having a body portion substantially of rectangular shape arranged with perforated lugs extending oppositely from the sides at the ends of the body portion, a series of rows of corrugations extending longitudinally of the body portion, beads at opposite ends and intermediate the rows of and to extend above the corrugations to serve as guides, and fastening means to engage the lug perforations of a pair of opposite lugs to attach the scratcher to an object, for the purpose specified.

1,454,447. COUPON BOOK. ALLISTER MACKENSIE, Oakland, Calif. Filed Aug. 27, 1918. Serial No. 251,629. 8 Claims. (Cl. 283—50.)



1. In an accounting system means for separately and collectively recording a variable number of transactions of variable monetary value simultaneously and means for limiting the sum total of the variable values to a predetermined amount.

1,454,448. ELECTRIC KETTLE. CHARLES DE COURCY MATULICH, Henley Beach, South Australia, Australia. Filed Aug. 22, 1922. Serial No. 583,471. 5 Claims. (Cl. 219—44.)

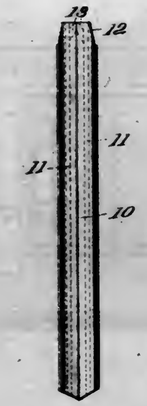
4. In an improved electric kettle a container manufactured of refractory material in combination with carbon elements which are a fixture in the container and are connected with electric current for boiling water.

1,454,449. BELT-FASTENING MACHINE. R. SHERMAN MOORE, Cincinnati, Ohio. Filed Apr. 18, 1922. Serial No. 554,506. 10 Claims. (Cl. 1—50.)

1. In a belt-fastening machine, a pair of jaws having faces of substantial longitudinal and transverse dimensions, means for positioning belt fasteners between said jaws, one jaw mounted to swing toward the other, operating means to swing said jaw, and a wedge for moving said jaw rectilinearly to variously space said jaws with both dimensions in parallel relation coincident with the maximum closing exertion of said operating means on said jaw.

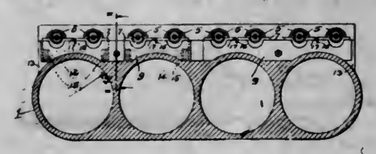
1,454,450. BELT FASTENER. R. SHERMAN MOORE, Cincinnati, Ohio. Filed July 10, 1922. Serial No. 573,843. 12 Claims. (Cl. 24—36.)

7. In a belt-fastener, a clip comprising a piece of material of cross-section such that one side presents a surface receding from an initially belt-contacting lesser area, bent to from two members joining in a bend and diverging from said bend and spurs extending toward each other from said members and laterally offset from each other, with said side of said material presented inwardly to wedge into the belt material.



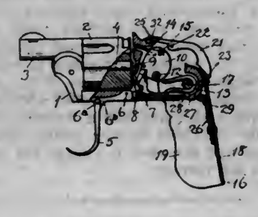
1,454,451. TOOL AND METHOD OF MAKING THE SAME. JOHN B. MOORE, Latrobe, Pa. Filed June 3, 1919. Serial No. 301,437. 18 Claims. (Cl. 76—108.)

1. A method of producing tools comprising providing a high speed tool body with a reduced end having transverse shoulders, inserting the shouldered portion into a socket of low grade material, rotating the engaged body and socket, applying pressure to the socket during the rotation of the parts to force the internal surface thereof into the spaces between said shoulders, and continuing the pressure until the socket is reduced to the approximate maximum transverse diameter of the tool body.



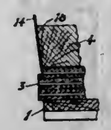
1,454,452. OIL TOOL. JOHN B. MOORE, Latrobe, Pa. Filed Oct. 27, 1920. Serial No. 419,873. 3 Claims. (Cl. 77—68.)

1. A tool of the character described comprising a high speed metal tool body having spaced apart internal bores extending longitudinally therethrough, and a shank of cheaper metal having a socket, one end of the tool body being inserted into and permanently united to said socket, said shank having a longitudinal chamber provided with



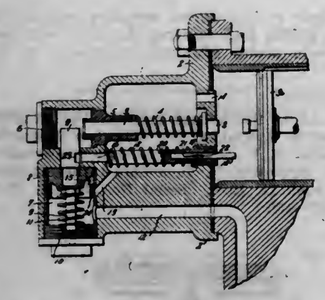
a centrally disposed outlet bore, the bores of the tool body having independent branches registering at their receiving ends with said outlet bore.

1,454,453. VALVE-TAPPET SILENCER. GEORGE W. MOSEY and CLARENCE K. MOSEY, Seattle, Wash. Filed May 10, 1921. Serial No. 468,456. 6 Claims. (Cl. 123—90.)



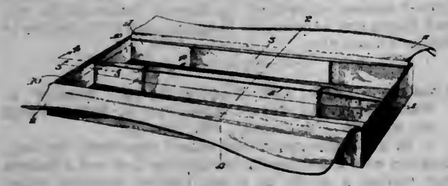
1. A valve tappet silencing device for internal combustion engines comprising means mounted behind the valve tappets in constant contact therewith and spring means for maintaining said contact.

1,454,454. FOLDING REVOLVER. HENRY ROSIER, Lowell, Mass. Filed Apr. 19, 1922. Serial No. 555,610. 1 Claim. (Cl. 42—59.)



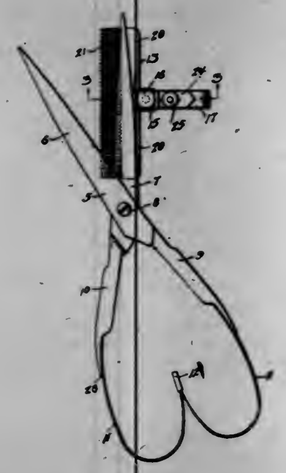
In a revolver, a cylinder, a substantially horizontal trigger lever underlying the cylinder and adapted to have a downward operative movement, said lever having a forward extension pivoted thereto and depending therefrom, in combination with a grip foldable to underlie said cylinder and trigger lever and adapted to prevent said downward operative movement, the frame of the revolver having a cam, and said grip having a spring engaging said cam and adapted to resist unfolding of the grip, the grip having a recess, and a catch lever fulcrumed to the frame and adapted to engage said recess to hold the grip in unfolded position.

1,454,455. APPARATUS FOR AND METHOD OF CUTTING SEPARATOR PLATES. MERLE S. SARGENT, Ashtabula, Ohio. Filed Aug. 2, 1921. Serial No. 489,231. 2 Claims. (Cl. 143—86.)



1. In a separator plate cutter, the combination of a table; a guide back; a clamp above the table, said clamp having a guide face; and a saw formed with a sharpened edge produced by bevelling at least one side of the blade as a whole, said edge being intersected by triangular notches leaving closely spaced sharp pointed teeth with knife-edge points acting on said guide face as a guide.

1,454,456. AIR-BRAKE TRIPLE VALVE. ANTONY SILVENS and LEONARD B. STEDMAN, Victoria, British Columbia, Canada. Filed Dec. 12, 1921. Serial No. 521,851. 6 Claims. (Cl. 303—42.)



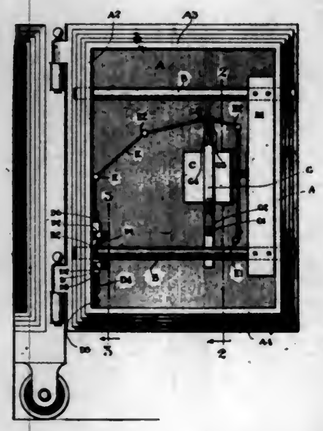
1. In an air brake triple valve, means operative by a reduction of pressure in the train line pipe as for an ordinary brake application for locking the graduating stem and preventing movement of the triple valve piston beyond what is necessary to effect such ordinary application.

1,454,457. GLOVE BOX. GEORGE O. SLINGERLAND, Mechanicsville, N. Y. Filed Feb. 16, 1922. Serial No. 537,135. 8 Claims. (Cl. 206—7.)

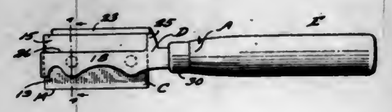
1. A substantially rectangular pasteboard box, rigid reinforcing strips secured to the sides of said box and extending the full length of the box, each reinforcing strip being provided with a tapered end.

1,454,458. HAIR-CUTTING DEVICE. ROBERT A. SMITH, Philadelphia, Pa. Filed Aug. 23, 1920. Serial No. 405,356. 7 Claims. (Cl. 30—13.)

1. A hair cutting device including cutting blades, a comb, a flexible loop carrying the comb, and means on one of said blades affording attachment of the loop thereto.



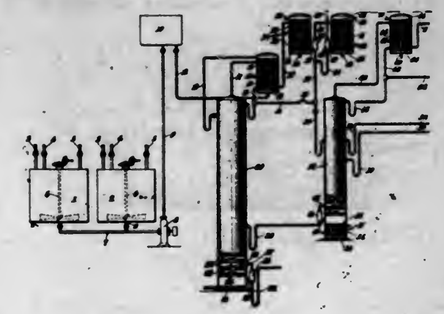
1,454,459. PRESSURE-RESPONSIVE DIAPHRAGM. FREDERICK W. STALKER and DURWOOD D. ROSENBURGH, Rochester, N. Y., assignors to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,291. 6 Claims. (Cl. 137—156.)



1. In a pressure responsive element, the combination of a flexible diaphragm having a peripheral flange, a second flexible diaphragm having a peripheral flange folded about and secured to the flange of said first diaphragm, and a supporting member between said diaphragms having a curved surface supporting the area of flexure of the second diaphragm adjacent its flange to control the radius of flexure at said area.

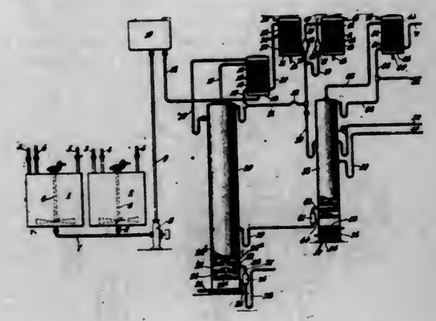
1,454,460. SAFE AND VAULT DOOR. ANDREW L. WEST, Knoxville, Tenn. Filed Nov. 3, 1921. Serial No. 512,475. 5 Claims. (Cl. 109—3.)

1. In an apparatus of the nature described, the combination with a door and a combination lock and a locking bolt having a notch, of a key member movable transversely to the length of said bolt and adapted to engage in said notch, constantly acting means tending to move said key member in the direction to make such engagement, a yoke and a brace yieldingly positioned adjacent the combination lock, and means extending from the brace to and into engagement with said key member for normally holding said member in position to avoid engagement with said bolt, said brace being adapted to be released by attempts to derange the locking mechanism, substantially as described.



1,454,461. HOLDER FOR SAFETY-RAZOR BLADES. FISHER WRESSELL, Alden, Iowa. Filed Apr. 7, 1921. Serial No. 459,285. 3 Claims. (Cl. 30—25.)

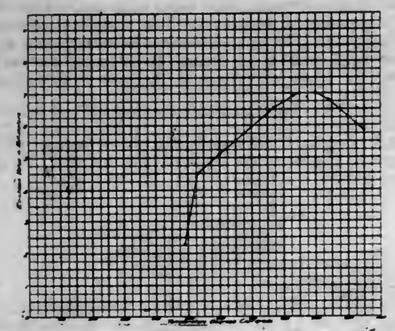
3. As a new article of manufacture, a holder for different types of safety razor blades comprising a pair of companion blade clamping members, means connecting the members together at one end, shanks formed on the opposite ends of said members, a handle for receiving the shanks adapted to hold the members in blade clamping position, one of said members being formed relatively wide and the other relatively narrow, said members having one of their longitudinal edges disposed in parallel alignment, the relatively wide member being extended laterally of the other member, a combined guide and stop flange formed on the laterally extending portion of the relatively wide member, the inner edge of the relatively narrow member being disposed in parallel relation to said flange and forming a shoulder, and a laterally extending lug formed on the relatively narrow portion adjacent to the shank thereof and arranged to engage the guide and top flange at one end thereof.



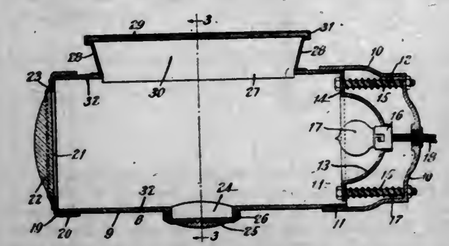
1,454,462. PROCESS OF PRODUCING HIGH-GRADE ESTERS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Sept. 20, 1919. Serial No. 325,106. 31 Claims. (Cl. 260—106.)

1. The process which comprises bringing a mixture containing an ester, water, and an alcohol into contact with a body of water, and thereby forming two layers of liquid containing respectively high and low percentages of the ester.

5. The process which comprises continuously forming an ester by feeding an alcohol, an organic acid, and a catalyst, so as to intermingle the same, heating the materials so intermingled by the injection of live steam, and continually removing the vapor of the ester formed.



1,454,463. PROCESS OF ESTERIFICATION. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Sept. 20, 1919. Serial No. 325,107. 15 Claims. (Cl. 260—106.)



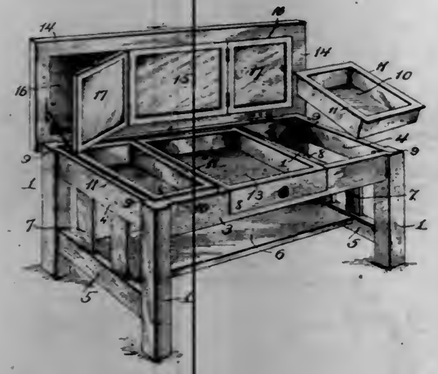
8. The process of making esters comprising introducing a mixture of alcohol, acid and catalyst into a column provided with alternating storage cups and gas and liquid contact cups, heating the column to assist esterification and to subject the bodies of liquid in the cups to the heated vapors produced, distilling off the ester formed at substantially the rate at which it is formed in the said column, introducing a portion of the distilled liquids into a heated separating column and distilling off therefrom a constant boiling mixture of alcohol, water and ester, and separating the ester from aqueous liquid and distilling the ester to separate it from its constant boiling mixture with alcohol and water.

1,454,464. CHROME-IRON SHEET OR ARTICLE AND PROCESS OF MAKING SAME. FREDERICK M. BECKET, New York, and CHARLES E. MCQUIGG, Flushing, N. Y., assignors to Electro Metallurgical Co., a Corporation of West Virginia. Filed Mar. 3, 1922. Serial No. 540,885. 10 Claims. (Cl. 148—13.)

1. Process of making chrome-iron sheets or articles of relatively high ductility, comprising mechanically reducing the metal to sheet by rolling, drawing or equivalent steps; and subsequently rapidly cooling the heated sheet through the temperature range 600°—400° C.

1,454,465. ILLUMINATING DEVICE FOR AUTOMOBILES. FREDERICK W. BECKER and JOSEPH LAGNER, Hyde Park, Mass. Filed Apr. 17, 1922. Serial No. 553,903. 3 Claims. (Cl. 240—7.)

1. In combination, a vehicle, a lamp supported on and behind said vehicle and comprising a casing provided with an opening in the under side thereof, the interior surface of said casing constituting a reflecting surface, a reflector mounted within said casing at one end thereof, a source of illumination mounted upon said reflector, a hood fast to the exterior of said casing and extending around said opening and adapted to direct rays of light reflected from the reflecting surface of said casing beneath said lamp to illuminate the vehicle license plate, a lens located at the rear of said casing and constituting a tail light for said vehicle and a lens located at the opposite end of said casing from said source of illumination and adapted to direct rays of light laterally of said vehicle to illuminate the rear thereof.

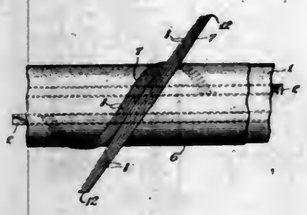


1,454,466. VEHICLE WHEEL. JOSEPH G. CALLO, New York, N. Y. Filed Oct. 18, 1922. Serial No. 595,240. 4 Claims. (Cl. 152—28.)

1. In a vehicle wheel, an inner driving element, an outer driving element in the form of an annulus of U-

shape in cross section partially enclosing said inner element, lugs projecting respectively inwardly and outwardly from said outer and inner elements, coiled compression springs located between the respective lugs, and automatic frictional braking devices carried by the inner element and adapted to engage the sides of said outer element to retard movement of the said elements upon one another.

1,454,467. COMBINATION FURNITURE. EVA M. CROOKS, Columbus, Ohio. Filed Aug. 29, 1921. Serial No. 496,334. 2 Claims. (Cl. 45—70.)

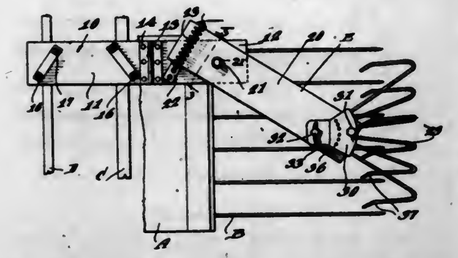


1. An article of combined furniture comprising a supporting frame, a drawer mounted centrally in the frame and slidable through the front of the same, trays removably supported in the frame at the sides of the drawer, the top of the drawers and the tops of the trays being flush with the top of the frame, a flat table top hinged to the rear side of the table, and hingedly connected mirrors carried by the under side of the table top, the table top being recessed on its under side whereby it may house the mirrors in extended relation with their exposed surfaces flush with the under surface of the table top and rest flat on the top of the frame and cover the drawer and the trays.

1,454,468. BELT LOOP. ALFRED D. CROSBY, Attleboro, Mass. Filed Nov. 17, 1922. Serial No. 601,573. 3 Claims. (Cl. 24—3.)

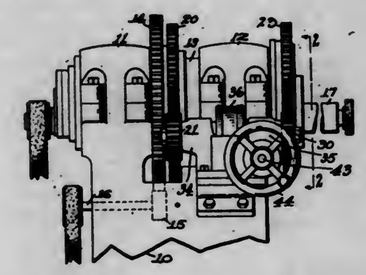
1. In a belt loop, flat arms, a loop connecting the arms, an outwardly inclined extension upon the free end of one arm, an attaching lug upon the free end of the other arm, and a yoke yieldingly supported by the second arm above the lugs in the path of the extension.

1,454,469. PNEUMATIC TIRE. FREDRICK S. DICKINSON, New York, N. Y., and JOHN SPRINGER, Atlantic Highlands, N. J.; said Springer assignor to said Dickinson. Filed Nov. 20, 1919. Serial No. 339,273. 6 Claims. (Cl. 152—13.)



5. An internal body fabric for the shoe or casing of pneumatic tires, comprising a plurality of cord lengths extending in successive position side by side and so shaped in cross-section that the successive lay of said lengths covers at all points the proportional surface area from the bead-edge to the tread portion in a path oblique to the annulus of the tire and compensates for the increasing progressive variable circumference throughout the path in which the cord lengths are laid.

1,454,470. NATURAL WATER-COOLING DEVICE. WILLIAM O. EWINGER, Burlington, Iowa. Filed Feb. 8, 1921. Serial No. 443,321. 1 Claim. (Cl. 257—122.)

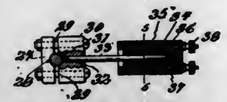


A water cooling device, comprising inner and outer substantially concentric vertical pipes spaced apart from each other and one of which is an inlet and the other an outlet pipe and both of which are embedded in the ground, an enlarged tubular casing embedded in the ground and inclosing the upper ends of the said inlet and outlet pipes and being comparatively short, and inlet and outlet feed pipes connected to said inner and outer vertical pipes within said enlarged casing, the latter being provided with a removable cover, and said inlet feed pipe being provided with a cut-off valve located within said enlarged casing.

1,454,471. BUNDLE-CARRYING ATTACHMENT FOR GRAIN HARVESTERS. PAUL GERLACH, Saskatoon, Saskatchewan, Canada. Filed Oct. 27, 1920. Serial No. 420,026. 11 Claims. (Cl. 56—474.)

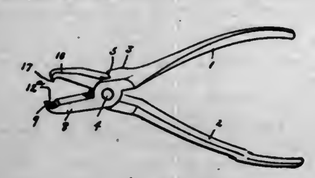
2. The combination with an ordinary self-binding harvester including a bundle carrier, of an attachment for the harvester comprising a pivotally mounted bar, means for yieldably maintaining said bar in position, a plurality of fingers carried by the outer end of said bar and radiating from a common center, said fingers having their outer portions curving outwardly and downwardly and positioned outwardly of the outer end of the bundle carrier for engaging the outermost bundles carried by the bundle carrier to prevent the accidental discharge of the bundles from the carrier, said first named fingers having their lower ends curved upwardly and rearwardly to form hooklike portions.

1,454,472. ECCENTRIC FEEDING MECHANISM. WALDO J. GUILD, Worcester, Mass., assignor to Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1921. Serial No. 458,887. 3 Claims. (Cl. 51—90.)



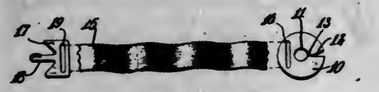
1. In an internal grinding machine, a wheel spindle, a bearing member in which said spindle is eccentrically mounted, a rotatable member in which said bearing member is eccentrically mounted, and means to adjust the eccentricity of said bearing member in said rotatable member, said means including a pair of internal gears having different numbers of teeth, connections from said gears to said rotatable member and to said bearing member respectively, a carrier in which said internal gears are eccentrically mounted, and means to angularly adjust said carrier.

1,454,473. COMPENSATING BALANCE SPRING FOR CHRONOMETERS AND WATCHES. CHARLES EDOUARD GUILLAUME, Sevres, France, assignor to Société des Fabriques de Spiraux Réunies, Petit-Saconnex, Switzerland. Filed Dec. 22, 1920. Serial No. 432,608. 8 Claims. (Cl. 75—1.)



1. A compensating balance spring for chronometers and watches which has a compensating capacity adapted to the range of temperatures principally available in practice and reduces sufficiently the secondary error within the said range of temperatures, when employed with a continuous balance, and is composed of an alloy of iron and nickel (the latter in the proportion of from 25 to 45 per cent) containing from 4 to 8 per cent of chromium.

1,454,474. POTENTIAL INDICATOR. OTTO E. HUEBNER, Richmond Hill, N. Y. Filed July 5, 1921. Serial No. 482,643. 3 Claims. (Cl. 175—183.)

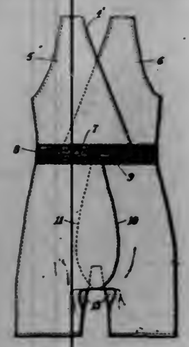


1. An electrical testing device including a two part clamp adapted to embrace a cable or the like, one member having an opening, a second element consisting of a cylindrical casing of insulating material, a conducting sleeve inserted in said casing, binding posts connected to said sleeve, a plug inserted in said sleeve, said plug being of insulating material having a recess, and rod seated in said recess adapted to enter the opening of the clamp, said rod and metallic sleeve constituting both sides of a condenser and the plug constituting the dielectric interposed therebetween.

1,454,475. OPTICAL PLIERS. JOHN E. HUGHES, Utica, N. Y. Filed June 30, 1920. Serial No. 392,963. 2 Claims. (Cl. 81—15.)

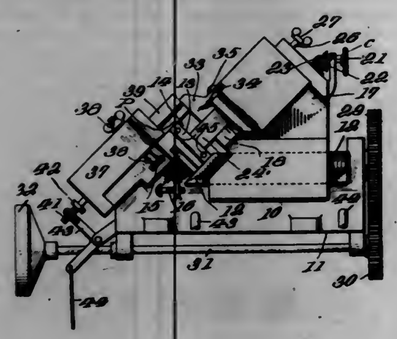
1. In a pair of optical pliers for eye glasses, a pair of lever arms having recesses, whereby to fit together, jaws formed by said lever arms, whereby to co-operate with each other, one of said jaws having a longitudinal open recess adapted to straddle the bow part of the bridge piece of said glasses, said jaw also having a semicircular recess to support other parts of said glasses, and the other jaw having a curved hook, whereby to engage and release the metallic part of said bridge piece.

1,454,476. GARTER. SEBASTIEN LACAVALERIE, New York, N. Y. Filed Jan. 9, 1922. Serial No. 528,126. 4 Claims. (Cl. 241—1.)



1. A garter comprising a clip formed of a thin plate provided with an aperture and having a slit leading into said aperture from one side of the plate, a band attached to said clip, and a hook attached to said band, said hook being adapted to engage in the said aperture to hold the garter in position.

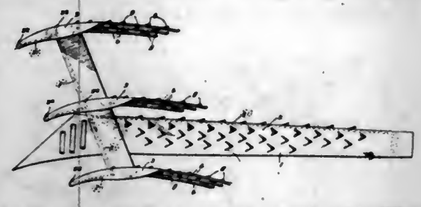
1,454,477. GARMENT. ALBERT E. LAMBERT, Albany, N. Y. Filed Oct. 15, 1921. Serial No. 507,949. 6 Claims. (Cl. 2—144.)



1. A garment of the character described, having a body portion with an integral front having an open-

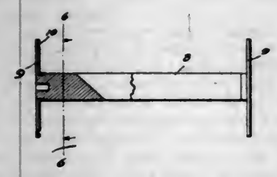
ing therein, said garment also having a back portion secured at the sides of the garment to said front and co-operating therewith to form the vest or body portion, said back portion having freely over-lapping flaps united to each other substantially at the waist-line and being in over-lapped relation only up to a point adjacent the upper portion of the garment and being extended above the over-lapped parts and spaced apart near the upper portion of the garment, forming a rear neck opening

in continuation of said front opening, the extended portions of said flaps being united with the front of the garment to form shoulder supports adapted to hold the flaps in closed over-lapping relation when the garment is in wearing position, a waist-band extending across the back of the garment and being united with said front and with the over-lapping portions of said flaps, and a nether garment having a rear portion united with said waist-band.



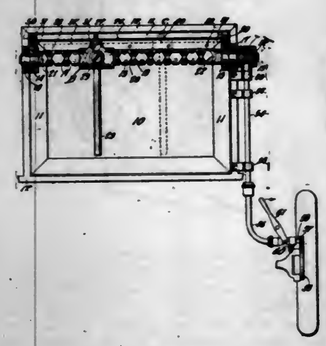
1,454,478. PRESS. HENRY C. LEWIS, Charleston, W. Va., assignor to Charleston Electrical Supply Company, a Corporation of West Virginia. Filed Feb. 20, 1922. Serial No. 538,141. 39 Claims. (Cl. 18—16.)

1. A press of the character described comprising a plurality of members one of which is normally fixed, the other members being movable with respect to the fixed member, whereby a quadrilateral opening is provided when the members are separated.



1,454,479. AIRPLANE. DAVID RUSH MCCULLOUGH, Oakland, Calif. Filed Jan. 19, 1922. Serial No. 530,415. 7 Claims. (Cl. 244—12.)

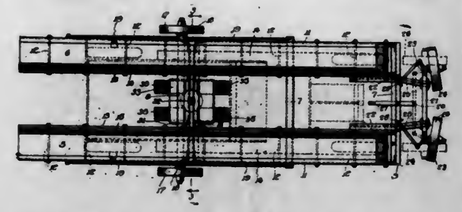
1. In an airplane, a lifting surface comprising a plurality of thin sheets of rigid material disposed in spaced relation to each other and a plurality of flaps deflected from each sheet substantially in the line of draught for



allowing the air to successively engage the different sheets.

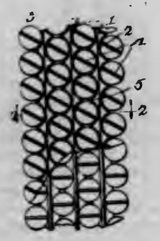
1,454,480. FILM SPOOL. CHARLES WRIGHT MACMILLAN, Passaic, N. J. Filed Apr. 2, 1921. Serial No. 458,033. 1 Claim. (Cl. 242—71.)

A film spool for cameras having flanged ends substantially constructed disc shape, the inner face of said discs being provided with a continuous depression arranged adjacent the outer edge thereof and the walls of said depressions being smooth and rectangular in cross section as and for the purpose specified.



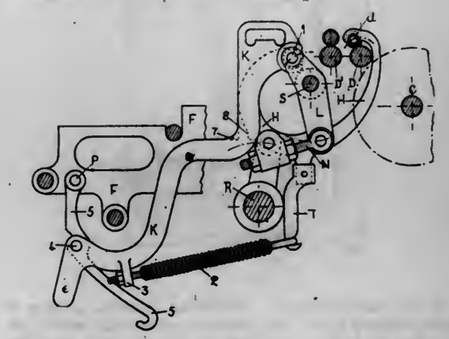
1,454,481. WINDOW CLEANER. JAMES FRANK MAYNE, Norwalk, Ohio. Filed Feb. 6, 1922. Serial No. 534,409. 6 Claims. (Cl. 15—252.)

1. The combination of a cleaner mounted for reciprocation on each side of a window, a reversely threaded shaft journaled on one side of said window, one of said cleaners carried by said shaft and adapted to engage said threads thereon, the other of said cleaners carried by a rod secured to the other side of said window, and both of said cleaners connected by an endless cable.



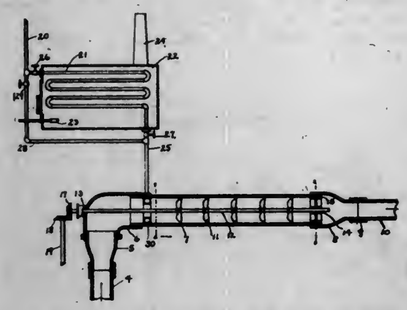
1,454,482. PORTABLE TURNTABLE. FRANK E. MINER, Chicago, Ill. Filed Aug. 12, 1922. Serial No. 581,397. 7 Claims. (Cl. 104—44.)

1. In a portable turntable, the combination of a platform adapted to receive a truck, rear wheels for said platform, means for pivotally supporting said platform in proximity to the center of gravity of a truck thereon so as to dispose said rear wheels clear of the ground, and



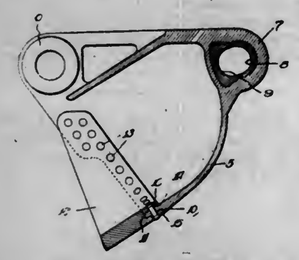
front wheels for said platform adapted to be disposed in substantial parallelism for transportation purposes and to be positioned to travel in an arc about said pivotal support as a center for turning purposes.

1,454,483. RADIATOR. ARTHUR B. MODINE, Racine, Wis. Filed Dec. 30, 1916. Serial No. 139,770. 9 Claims. (Cl. 257—130.)



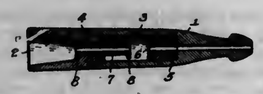
1. In a radiator construction of the kind described and in combination, a plurality of water tubes suitably spaced from each other to form bounding walls of air spaces therebetween, and a plurality of spaced radiating plates formed to provide a plurality of spirals and arranged with a spiral positioned between the tubes and in contact therewith substantially all along their length for agitating the air passing therebetween.

1,454,484. COMBING MACHINE. JOHN W. NASMITH, Manchester, England. Filed Jan. 16, 1922. Serial No. 529,528. 6 Claims. (Cl. 19—118.)



2. A combing-machine wherein a top-detaching roller is mounted to be moved to and fro on a lower roller relatively to the combing cylinder, said machine having a spring and lever connections between the said top roller and spring, characterized by the fact that the lever connections are constructed and arranged to cause the spring to be alternately relaxed and extended as the said top roller moves toward and from the combing cylinder.

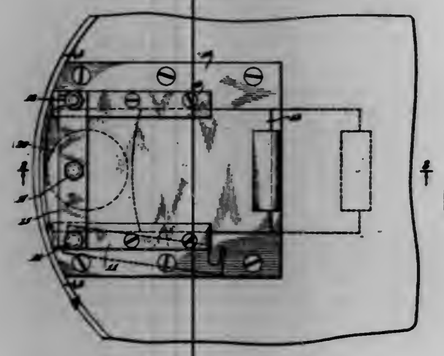
1,454,485. PROCESS OF AND APPARATUS FOR TREATING HYDROCARBON OILS. JOHN P. PERSCH, Houston, Tex., assignor of one-fifth to Brainard Tolles, Hohokus, N. J. Filed Feb. 10, 1921. Serial No. 443,953. 4 Claims. (Cl. 137—78.)



2. An apparatus for treating heavy oils to facilitate their passage through a long substantially horizontal pipe line comprising a section of the pipe line, tubes to supply gas to the section, means to heat the tubes, means to regulate the temperature of the supplied gas, and means to mix the gas and oil while in the pipe line and to force the mixture through the pipe line.

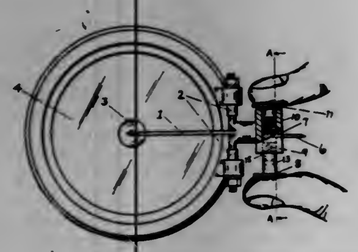
1,454,486. BUCKET LIP. JOHN W. PLANT, San Mateo, Calif., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 13, 1920. Serial No. 409,906. 2 Claims. (Cl. 37—141.)

1. A dredge bucket lip or cutting edge having two rearwardly extending flanges, one adapted to fit inside the body of the bucket, and the other on the outside thereof; said flanges being provided with aligned openings adapted to receive rivets passing through both flanges and the intervening portion of the bucket.



1,454,487. CIGARETTE HOLDER. AUGUST R. RIEGER, Chicago, Ill. Filed May 25, 1922. Serial No. 563,470. 4 Claims. (Cl. 131—10.)

1. A holder for cigarettes and the like, comprising a main shell formed with a longitudinal bore the forward

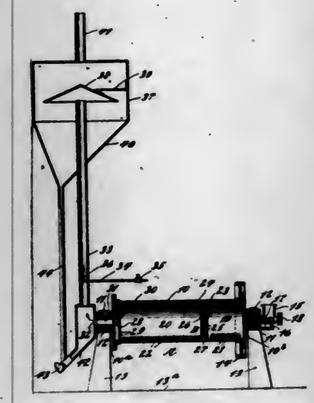


end of which is enlarged to receive a cigarette end, said bore being enlarged intermediate its length to provide a piston chamber, a piston head having movement in said piston chamber, and means intermediate of said piston head and the forward end of the longitudinal bore for receiving the impact of said piston and transferring the same to the end of a cigarette in said forward end of the holder.

1,454,488. BARREL SEAL. GEORGE R. ROWLAND, Elizabeth, N. J., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Aug. 26, 1921. Serial No. 495,464. 8 Claims. (Cl. 217—114.)

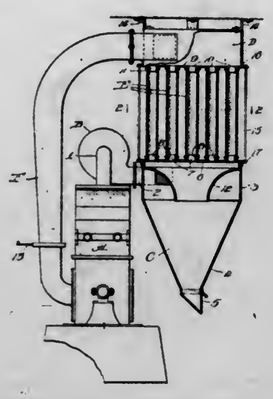
1. In a seal for a barrel, a frame secured at one end of the barrel, a pair of parallel spaced guideways secured to the frame, a slide supported within said guideways adjacent said frame and adapted to slide into and out of an engagement with the barrel opening, a bar pivoted to one guideway and adapted to be secured to the other guideway, and means engaging said bar and slide to secure the slide in tight position against the opening.

1,454,489. NEEDLE HOLDER FOR TALKING MACHINES. HERMANN FREDERICK SCHELLING, Grantwood, N. J. Filed May 10, 1920. Serial No. 380,018. 2 Claims. (Cl. 274—37.)



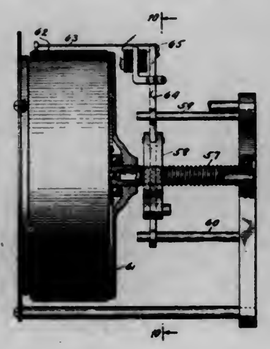
1. In a needle holding device, a compartment containing a spring, a pin co-operating with said spring and having a button, and a flattened portion, a set screw abutting said flattened portion and limiting the motion thereof, a flat jaw on one side of said compartment, a V-shaped jaw on said pin and finger gripping means co-operating with the button on said pin, whereby said jaws may be separated.

1,454,490. JARRING MACHINE. ALBERT B. SCHUYLER and ROSS B. SCHUYLER, Rochester, N. Y. Filed Apr. 21, 1919. Serial No. 291,619. 5 Claims. (Cl. 22—1.)



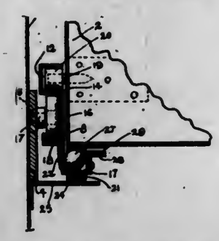
1. A jarring machine comprising a rapidly movable impact member, a blow receiving and work holding member movable in a line with the line of movement of the impact member and being independent in its movement from the impact member, another movably mounted work holding member arranged to cooperate with the blow receiving and work holding member, and resilient means for supporting both of said work holding members.

1,454,491. TUBE MILL. ELLIS C. SOPER, Chattanooga, Tenn. Filed Aug. 15, 1918. Serial No. 249,960. 3 Claims. (Cl. 83—9.)



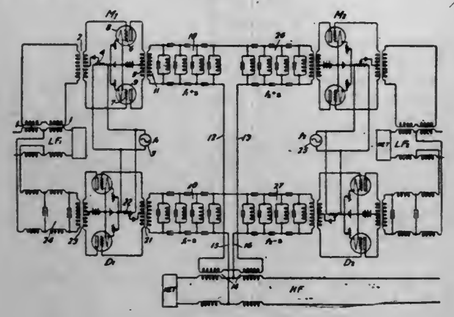
1. In combination, a pulverizing machine having a main discharge for the pulverized material, means for creating a flow of air through the machine and for evacuating the air and moisture therefrom to the atmosphere independently of the pulverized material and comprising a separating chamber in which dust is separated from the air, and means for delivering the separated dust to the main discharge from the mill.

1,454,492. DUST COLLECTING AND SEPARATING SYSTEM AND APPARATUS. EDMUND H. STROUD, Chicago, Ill. Filed June 16, 1919. Serial No. 304,447. 8 Claims. (Cl. 183—34.)



1. In a dust collecting and separating system, the combination of a unit for supplying a stream of air laden with dust or powdered material, of a collecting chamber for receiving the air from said unit and separating the bulk of the material therefrom, fabric filtering means communicating at one end with said chamber to receive and filter the residual material from the air passing from said chamber, and means for relieving the internal pressure on said fabric filtering means comprising a relief pipe communicating with the opposite end of said filtering means and with said supply unit and an adjustable valve for cutting off and regulating the flow of air through said relief pipe.

1,454,493. MILL. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., and WILLIAM WESTERMAN, Detroit, Mich. Original application filed Oct. 8, 1920, Serial No. 415,513. Divided and this application filed Dec. 24, 1921. Serial No. 524,621. 3 Claims. (Cl. 234—1.5.)

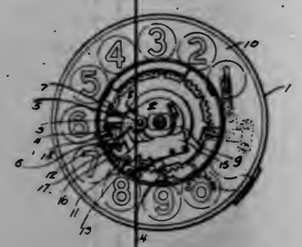


1. In mechanism of the class described, the combination of a rotatable drum, a drive shaft carrying said drum, a chart on said drum and rotatable therewith, a stylus cooperating with said chart, a nut on said drive shaft comprising two members pivotally attached to each other held against rotation on said shaft and adapted to travel longitudinally thereof as the shaft is rotated, a connection between said nut and stylus whereby the stylus is caused to travel with said nut transversely of said chart and an electromagnet mounted on the connection between said stylus and nut for bringing the stylus into operative relation with respect to said chart.

1,454,494. FILING-CASE DRAWER SUSPENSION. ARVINE N. THOMAS, Canton, Ohio. Filed Mar. 4, 1922. Serial No. 540,984. 4 Claims. (Cl. 45—77.)

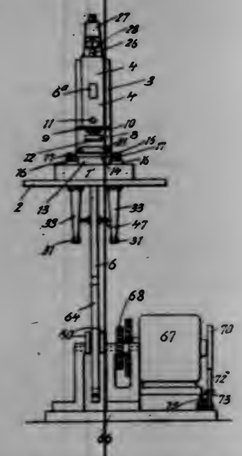
2. A filing cabinet having rollers journalled upon its inner side walls, suspension members including, upper, intermediate and lower channels, the intermediate channels receiving said rollers, a drawer slidably mounted between said suspension members, rollers carried upon the rear portion of the drawer and received in the upper channels, a partition sheet beneath the drawer and rollers located in the lower channels and engaging the drawer and partition sheet.

1,454,495. SYSTEM OF CURRENT-WAVE TRANSMISSION. HARALD J. VENNES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1919. Serial No. 299,748. 19 Claims. (Cl. 178—44.)



1. The method of two-way transmission of electric energy which comprises modulating at each of a pair of communicating stations a given high frequency wave in accordance with signals and deriving at the respective stations from the wave so modulated, wave components of a given character for transmission in one direction, and wave components of a different character for transmission in the opposite direction.

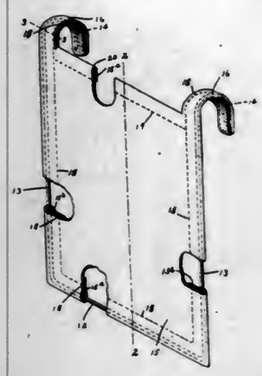
1,454,496. CALLING DEVICE. ALFRED VISCHER, Jr., Floral Park, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1920. Serial No. 432,189. 3 Claims. (Cl. 179—90.)



1. In a calling device, an electrical impulse transmitting mechanism, a rotatable finger wheel for operating said impulse transmitting mechanism, means to con-

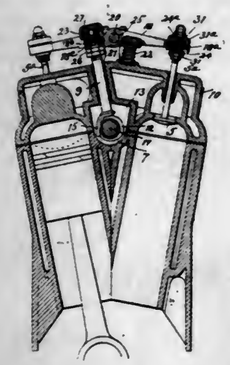
nect said wheel to said impulse transmitting mechanism when the wheel is moved forward from its normal position, and means to disengage said wheel from said im-

pulse mechanism upon the acceleration of said wheel during its return movement, said means preventing readvancement of said mechanism upon the forward movement of said wheel from any position other than normal.



1,454,497. POWER PRESS. SAMUEL THOMAS WALKUP, New York, N. Y. Filed May 20, 1919. Serial No. 298,491. 13 Claims. (Cl. 113—38.)

1. In a press, a punch, a lever for operating said punch, a die, a reciprocatory carriage for said die, means operatively connecting said punch operating lever to said die carriage whereby the former moves the latter into and out of position under the punch co-incidently with the respective advancing and receding movements of the punch, and means limiting the movement of the carriage to position the die under the punch.

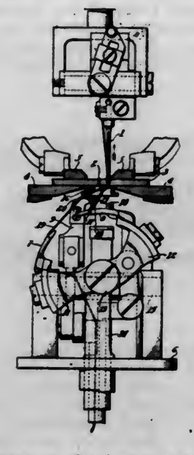


1,454,498. LIGHT SCREEN FOR WINDSHIELDS. RICHARD A. WHALL and EUGENE R. BISHOP, Athol, Mass. Filed Apr. 17, 1922. Serial No. 554,171. 1 Claim. (Cl. 296—97.)

A light screen adapted to be suspended and moved edgewise on the top member of a wind-shield frame and comprising a substantially U-shaped metal frame, the upright, parallel, members of which terminate in hooks, and a flexible body sheet having top, bottom and side flaps, the side flaps being folded about the upright members of the frame and secured to the body of the sheet with their upper ends extending beyond the upper edge of the body sheet and folded and secured about the hooks on the frame, the bottom flap of the body sheet being folded and secured about the bottom frame member and the upper

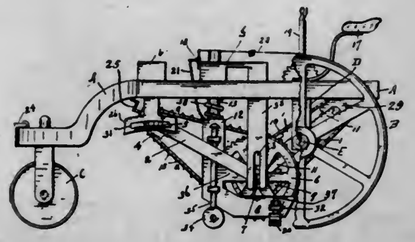
edge flap of the sheet extending between the side flaps and being folded and secured directly against the body of the sheet, as and for the purpose described.

1,454,499. MOTOR USING OIL, GASOLINE, OR GAS AS A FUEL. ERNEST L. WRENTMORE, West Farmington, Ohio; (Mrs.) Maude V. Wrentmore administratrix of said Ernest L. Wrentmore, deceased. Filed May 29, 1918. Serial No. 237,338. 4 Claims. (Cl. 123—90.)



1. In valve mechanism, the combination of a poppet valve, a spring actuated valve rocker having in one arm a hole through which the valve stem passes, two spring seats on the valve stem located respectively above and below the rocker arm, springs respectively interposed between these two spring seats and the rocker arm, a cam, and a sliding push rod which engages said cam and the other arm of the rocker and having a resilient connection with at least one side of the rocker.

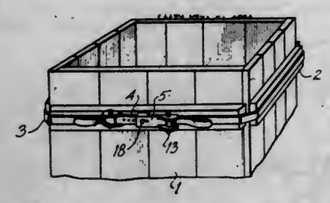
1,454,500. STITCH-FORMING MECHANISM FOR SEWING MACHINES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 18, 1922. Serial No. 537,382. 5 Claims. (Cl. 112—157).



1. In overseaming stitch-forming mechanism, the combination with needle and looper devices for concatenating

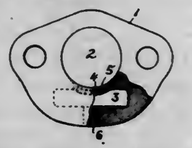
needle and looper threads to form a purl stitch, of means for bending toward the plane of the word the length of

looper-thread between the looper and the last stitch, thereby facilitating the setting of the purl close to the edge of the seam.



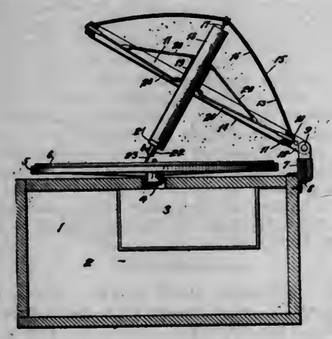
1,454,501. BEET TOPPER. CARL A. J. ANDERSEN, Salt Lake City, Utah. Filed Feb. 14, 1922. Serial No. 536,400. 4 Claims. (Cl. 55—107.)

1. A beet topper comprising a wheel supported frame; an axle journalled in and connected by clutches with two of said wheels; a sprocket gear on said axle; braces movable on said axle; sprocket wheels having shafts journalled in each end portion of said braces; a chain engaged by the said sprocket gear and operating said sprocket wheels; a sprocket gear on one of said shafts; a cross head on said frame having a depending staff and depending legs with slots therein; a shoe frame in which the last mentioned shaft is journalled; shoes yieldingly held in contact with the ground and integral with said shoe frame; another pair of braces one end of each of which is carried on said last mentioned shaft; a bearing member on said frame having slotted feet; a sprocket wheel with its shaft carried in said last mentioned slots; a peg chain operable over the last mentioned sprocket wheel and the last mentioned sprocket gear; and a topping knife fastened on said shoes and adjustable as to said peg chain.



4. In a beet topper, the combination with a driven axle; a sprocket gear thereon; a sprocket chain driven by said gear; a shaft parallel with said axle and journalled for rotation with free vertical movement; a sprocket gear on said shaft over which said sprocket chain is operated; another sprocket gear on said shaft and rotatable therewith; a cross head having a depending staff; a shoe frame yieldingly held at the lower end of said staff and in which the shaft of the last mentioned sprocket gear is journalled, shoes integral with said shoe frame and between which the last mentioned sprocket gear is operable; and a knife adjustable as to said shoes and secured thereon.

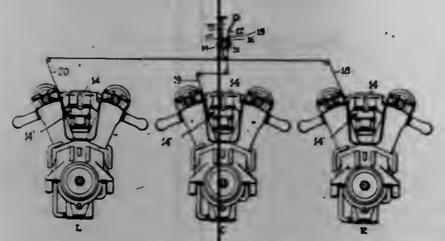
1,454,502. FORM CLAMP. GEORGE B. BOSCO, Chicago, Ill. Filed Dec. 3, 1921. Serial No. 519,692. 7 Claims. (Cl. 24—19.)



1. A form clamp comprising a flexible element adapted to embrace the form, a pair of members on said element formed for interfitting engagement, a detachable tool for drawing said members into interfitting engagement to permit the interlocking of said members, said tool comprising a body having a pair of jaws adapted for engagement with said members, and a screw mounted on said body and arranged for moving one of said jaws relatively of the other jaw.

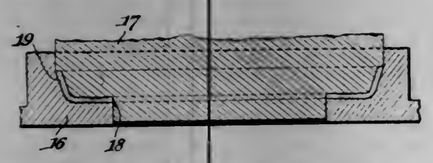
1,454,503. CARBURETOR ATTACHMENT. JOHN W. BROWN, Fort Wayne, Ind. Filed Dec. 24, 1920. Serial No. 432,891. 2 Claims. (Cl. 48—180.)

1. In an attachment for a hydrocarbon engine including a carburetor and intake pipe; a trap adapted to be positioned between the carburetor and intake pipe, said trap having a fuel opening extending therethrough from the carburetor to the intake pipe, there being also a cavity formed in the trap and a series of perforations leading from the cavity into said opening; and means for the admission of air into the cavity.



1,454,504. PHONOGRAPH. GEORGE B. BUSCH, New York, N. Y., assignor to Leslie Stevens, Glen Ridge, N. J. Filed Apr. 18, 1918. Serial No. 229,227. 1 Claim. (Cl. 181—31.)

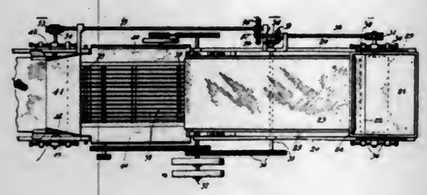
In a device of the class described, the combination with a diaphragm, of a supporting ring having a transversely



convex peripheral face and a second ring having its inner face transversely concave, the edge portion of the diaphragm being clamped between the convex face of the inner rim and the concave face of the outer rim.

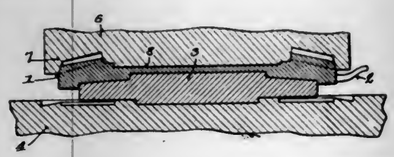
1,454,505. MULTIPLE CONTROL SYSTEM FOR MULTIMOTORED AIRCRAFT. JOHN A. CHRISTEN, Roosevelt, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 31, 1919. Serial No. 286,469. 5 Claims. (Cl. 74—39.)

1. A multiple control system for a plurality of motors including a speed regulating device for each motor, a control lever, a connection between the control lever and two of the speed regulating devices for adjusting both speed regulating devices simultaneously, a second control lever, and a connection between the second control lever and a third speed regulating device for adjusting said third regulating device independently of the remaining two, the arrangement of the control levers being such that, if desired, both levers may be grasped in one hand for operating the three speed regulating devices simultaneously.



1,454,506. PROCESS AND APPARATUS FOR FORMING CUP PISTON RINGS. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Sept. 1, 1920. Serial No. 407,495. 2 Claims. (Cl. 18—19.)

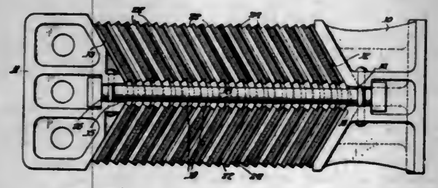
1. The process of forming a cup-shaped piston packing ring out of textile fabric or the like which comprises the following steps: First, forming a hollow cylinder of the fabric, the diameter of which equals the outer diameter of the cup ring to be formed; second, changing said cylinder by externally applied stresses into a ring, the cross-section of which is concave and arc-shaped, curving inwardly toward the center of the ring, the greatest diameter of said ring equalling the diameter of the original cylinder and the smallest diameter equalling the inner diameter of the flange of the cup ring to be formed; third, flattening the inner portion of the blank so formed to produce the inwardly extending flange of the completed packing ring and molding the remainder of the blank into an outwardly flaring lip.



1,454,507. FEEDING MECHANISM. JAMES CONTE, Desplaines, Ill. Filed Feb. 21, 1921. Serial No. 446,663. 3 Claims. (Cl. 198—30.)

1. In a machine of the kind specified, means for arranging articles handled in substantially parallel rows comprising a longitudinally movable apron, a frame superposed thereon consisting of a plurality of spaced bars arranged substantially parallel to each other, an inclined tray secured to said frame at the receiving end thereof and adapted to discharge the articles upon said apron in spaces between said bars, means for vibrating the receiving end of said frame, a cross-piece secured to said

bars adjacent the discharge ends thereof; said cross-piece provided with a plurality of vertical apertures adjacent one end, and a pivotal pin entering one of said apertures to pivot said frame whereby the discharge end of said frame may be adjusted transversely of said apron to regulate the direction of said rows of articles discharging from said apron.

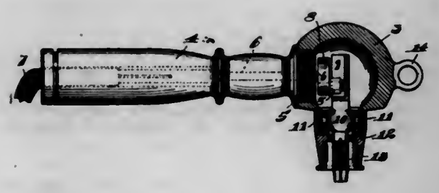


1,454,508. GEAR WHEEL AND METHOD OF MANUFACTURING THE SAME. JOHN ECKERT, Milwaukee, Wis. Filed May 24, 1920. Serial No. 383,840. 9 Claims. (Cl. 29—159.)

1. The method of forming gear wheels having laterally projecting teeth, consisting in heating blocks of metal, hammering them with a pattern die having an annular row of grooves into which the teeth may be upset, inverting the wheel thus formed and placing the same in a similarly contoured relatively stationary pattern die and hammering the other face of the wheel to force the teeth into final conformity with such die.

6. A gear wheel having upset teeth provided with directly hammered faces and having a rear hammered surface.

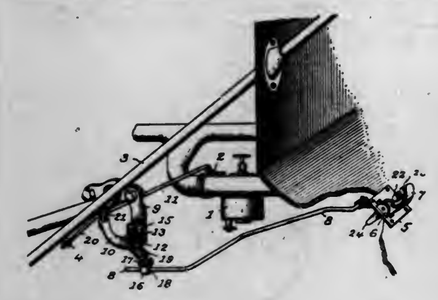
1,454,509. DRAFT RIGGING. GEORGE L. HARVEY, Chicago, Ill. Filed Jan. 7, 1922. Serial No. 527,571. 9 Claims. (Cl. 213—30.)



1. In a draft rigging, the combination of front and rear blocks and a series of plates held therebetween, said plates being of angular form and the edges thereof being laterally bent, the edges of successive plates being bent in opposite directions.

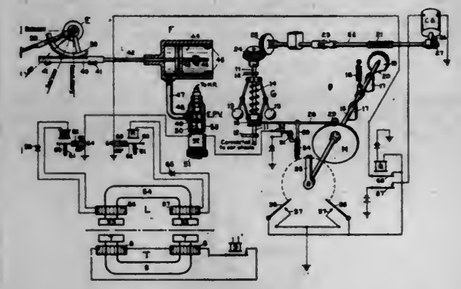
1,454,510. ORNAMENTAL BOTTLE TOP. HENRY L. HEITER, New York, N. Y. Filed Feb. 7, 1920. Serial No. 356,838. 3 Claims. (Cl. 215—41.)

1. A cap for bottles designed to cover the cork thereof, having a top portion and a depending flange, said top portion and flange being connected with an annular portion, the depending flange formed at intervals about its circumference with slits extending from the edge of the flange to the annular portion.



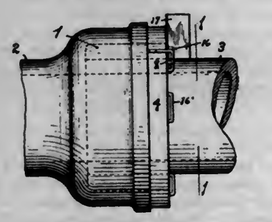
1,454,511. MASSAGE VIBRATOR. LOUIS HERMANN, Chicago, Ill. Filed Aug. 2, 1919. Serial No. 314,802. 2 Claims. (Cl. 128—48.)

1. A massage vibrator comprising a hollow head; a substantially straight oscillatory lever mounted in said head and protruding laterally from one side thereof, the protruding end of said lever being provided with means for mounting a contact member thereon; an operating shaft mounted to project into said head in operative relation with the inner end of said lever; and a crank pin on the inner end of said shaft, there being a longitudinal groove in said lever engaging said crank pin, said groove extending from the inner end of said lever to a point adjacent its fulcrum, substantially as described.



1,454,512. ACCELERATOR FOR AUTOMOBILE ENGINES. JOHN T. HOLMQUIST, Chicago, Ill. Filed Mar. 15, 1922. Serial No. 543,854. 4 Claims. (Cl. 74—39.)

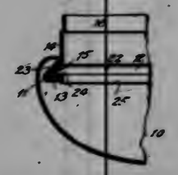
1. In an accelerator mechanism of the type described, the combination of an intermediate bell crank, a hanger bracket formed with upper and lower pivot ears adapted to fit opposite sides of the bell crank, a pivot pin extending through said ears and bell crank and having an upper



extension forming a supporting post and a coiled spring encircling said post and having end extensions engaging the bell crank and the bracket respectively.

1,454,513. AUTOMATIC TRAIN-CONTROL SYSTEM. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed May 31, 1919. Serial No. 300,976. 42 Claims. (Cl. 246—63.)

10. Speed control apparatus for railway vehicles comprising a permissive speed device biased to an initial condition and changeable to an ultimate condition, brake control means including a speed responsive device and governed by the permissive speed device, and means dependent upon the change of said permissive speed device to its ultimate condition for governing its operation.



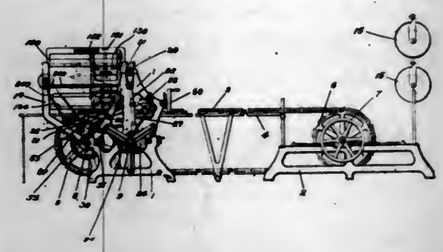
1,454,514. RUNNER. CHARLES A. HOWELL, Ann Arbor, Mich. Filed Apr. 22, 1922. Serial No. 555,939. 5 Claims. (Cl. 22—118.)

2. A flexible runner adapted to be convolutely wound around a pipe end and in contact with the end of a bell into which said pipe end is inserted, an adjustable fastener pivoted at one end of the runner and adapted to

engage the next wrap on the outside of said end to hold the runner in position against the end of said bell, and a clip attached to the runner to hold a spout against said inserted pipe end and against the side of the runner away from the bell.

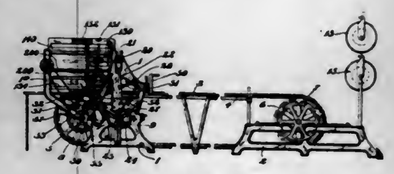
1,454,515. VANITY BAG AND THE LIKE. NATHAN KASDAN, New York, N. Y. Filed Jan. 16, 1922. Serial No. 529,565. 5 Claims. (Cl. 150—46.)

1. A hand-bag of the character described comprising a flexible holding-portion or bag proper and a metal frame at the mouth thereof and adapted to receive a cover, said frame comprising an outer annular band initially having a base flange and a substantially vertical flange over which the peripheral mouth portions of the bag are folded inwardly and extend upon said base flange, and a superposed annular band flanged at its lower portion to seat within said vertical flange and against the bag-fabric therein, said vertical flange being in the finished article bent inwardly toward and clamping the bag-fabric against the lower portion of said superposed band.



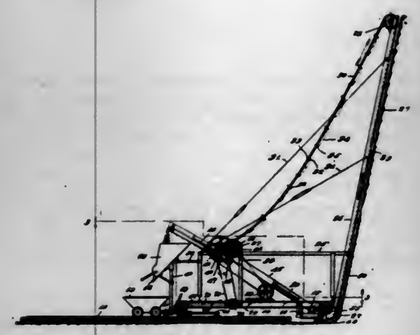
1,454,516. SPARK PLUG. WILLIAM E. LEE, St. Louis, Mo., assignor of one-half to Lendall C. Crosby, St. Louis, Mo. Filed Jan. 28, 1920. Serial No. 354,654. 1 Claim. (Cl. 123—169.)

A spark plug having an outer electrode comprising a shell, an L-shaped stem having a vertical arm screwed into said shell and a horizontal arm extending from said vertical arm, a socket screwed onto said horizontal arm, a terminal in the form of a ball closely confined in said socket but free to turn in response to vibrations of said arm and socket, said socket being provided with scraping edges maintained in engagement with the closely confined ball, and an inner electrode comprising a rod having a socket at one end, a terminal ball closely confined in the last mentioned socket but free to turn therein, the last mentioned socket having scraping edges maintained in engagement with the last mentioned ball.



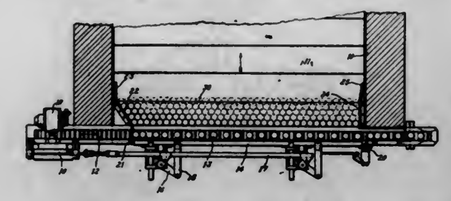
1,454,517. METHOD OF MAKING WIREBOUND BOXES. HENRY J. KOCH, Chicago, Ill., assignor to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Original application filed Nov. 11, 1918, Serial No. 262,027. Divided and this application filed Jan. 27, 1922. Serial No. 532,323. 22 Claims. (Cl. 140—93.)

1. The method of making box parts having wire secured thereto supplied with interengageable fastening means for connection with another box part, which consists in applying wire to a box part and in supplying the



wire end with fastening means during the wire-applying operation.

1,454,518. WIREBOUND-BOX MACHINE. HENRY J. KOCH, Chicago, Ill., assignor to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Filed Nov. 11, 1918. Serial No. 262,027. 70 Claims. (Cl. 140—93.)



1. A machine for use in box manufacture comprising, in combination, wire-attaching mechanism to secure wire on a box part, work positioning means, fastener-supplying mechanism, means for presenting the wired box part thereto, and means for operating said mechanism to provide wire on said box part with fastening means.

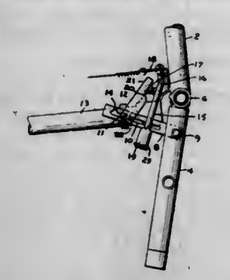
1,454,519. SHALE PLANER. JOSEPH M. POWELL, Brooklyn, Ind., assignor to Eagle Iron Works, Des Moines, Iowa, a Corporation of Iowa. Filed June 22, 1921. Serial No. 479,483. 13 Claims. (Cl. 262—28.)

1. A shale planer, comprising a pivot car, a track on which said pivot car is mounted, means for feeding said pivot car forward along said track, a frame pivotally mounted on said pivot car, means in addition to said pivot car for supporting said frame and permitting it to swing about its pivotal mounting on the pivot car, and a perpendicularly extending shale-cutting mechanism carried by said frame.

1,454,520. LEER FEEDER. BENJAMIN H. PURCELL, Terre Haute, Ind., assignor to Automatic Machinery Company, Terre Haute, Ind., a Corporation of Indiana. Filed Aug. 4, 1920. Serial No. 401,225. 6 Claims. (Cl. 198—31.)

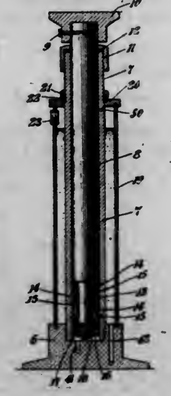
1. In a leer feeder, the combination with a leer having a receiving entrance unobstructed throughout a multiplicity of article diameters and a longitudinally movable carrier therein, a feed carrier supporting and movable beneath the ware and arranged to deliver the ware in a stream transversely of the leer carrier, the pieces of ware being irregularly spaced on said feed carrier, intermittently acting means for transversely projecting accumulated ware from the feed carrier substantially in the line of movement of the leer carrier into the leer receiving entrance and into engagement with the ware immediately preceding it in the entrance of the leer to force said ware forward, of a dam projecting across the feed carrier in position to interrupt the flow of articles upon said feed carrier arranged at a substantial distance in advance of the far side of the leer carrier, and a laterally divergent guide extending from said dam forwardly and outwardly toward the far side of the leer carrier to permit the articles of ware in the leer entrance to shift about on one another, to properly space themselves as they are crowded forward by those introduced in the entrance from the feed carrier.

1,454,521. PROCESS OF MAKING ETHYL ALCOHOL FROM GALACTOSE. EARL C. SHERRARD, Madison, Wis., dedicated, by mesne assignments, to the people of the United States. Filed Apr. 22, 1922. Serial No. 556,129. 3 Claims. (Cl. 195—20.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. The process of making ethyl alcohol which comprises subjecting galactan-containing material to acid hydrolysis, forming a solution of the product, adjusting the acidity of this solution to not more than fifty degrees, seeding with yeast, producing fermentation and maintaining the acidity of the liquid at not to exceed fifty degrees during said fermentation.

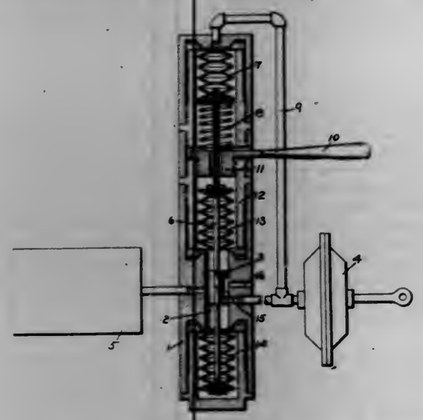
1,454,522. BELT BUCKLE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed May 8, 1922. Serial No. 559,177. 4 Claims. (Cl. 24—191.)



2. A belt buckle comprising a front plate having side flanges, and a pivotally mounted clamping member, yieldingly supported from said side flanges and having belt anchoring means connected thereto.

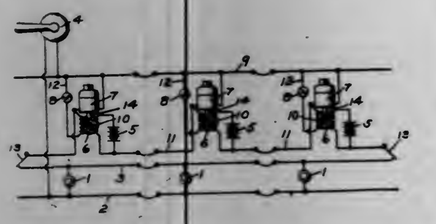
1,454,523. AUTOMATIC LOCKING DEVICE FOR WALL-BED FOOTPIECES. NEIL SINCLAIR, Oakland, Calif., assignor to Rip Van Winkle Wall Bed Co., Oakland, Calif., a Corporation of California. Filed Apr. 29, 1922. Serial No. 557,365. 2 Claims. (Cl. 5—18.)

2. In combination with a bed adapted to be moved into and out of position for use, of a foot piece mounted on said bed to automatically swing into bed supporting and out of the way positions, a member pivoted to the foot piece having sliding connection with said bed, a member fixed to the bed and into and out of locking engagement with which said pivoted member is moved, a lever having pivot connections with the bed arranged to move said pivoted member out of locking engagement with said locking member and a swinging member acting to engage and rock said lever when the bed is moved out of position of use.



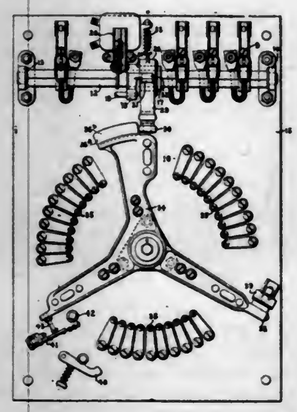
1,454,524. JACK. FREDERICK R. SUNDERMAN, Newburgh, N. Y., assignor to Sunderman Corporation, Newburgh, N. Y., a Corporation of New York. Filed Mar. 26, 1920. Serial No. 368,833. 3 Claims. (Cl. 138—9.)

1. A jack having in combination a base, two concentric cylinders removably secured to the base whereby the base substantially closes the lower end of the space between the two cylinders, a closure member removably secured at the other end of said cylinders forming one element necessary for tightly closing the other end of the space between the two cylinders whereby the space between the two cylinders serves as a fluid reservoir, and also serving as a brace between the two cylinders, a jack element concentric to the inner cylinder and in sliding engagement therewith, said base having a fluid duct leading from the bottom of the space between the two cylinders to said sliding jack element, two valves controlling said duct, a pump cylinder carried on the base at one side of said



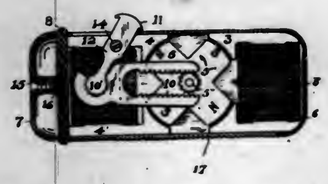
first cylinder, the pump cylinder being connected with said duct between the valves and a pump piston in said pump cylinder for forcing fluid from the space between said first two cylinders to raise the jack element, a member screw-threaded onto one of the two concentric cylinders and a packing held between said last member and said closure member for packing the upper end of said reservoir whereby the threaded member may be turned to compress the packing.

1,454,525. AUTOMOTIVE BRAKE VALVE. HOWARD A. THOMPSON, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 31, 1922. Serial No. 564,681. 5 Claims. (Cl. 303—54.)



1. A brake valve device comprising a casing having a valve chamber, a vale therein, a spring, a multiple fin diaphragm subject to the pressure of said spring for operating said valve, and manually operated means for varying the force of the spring.

1,454,526. ELECTRIC-BATTERY-CONTROL DEVICE. WALTER V. TURNER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1917. Serial No. 199,008. 1 Claim. (Cl. 171—97.)

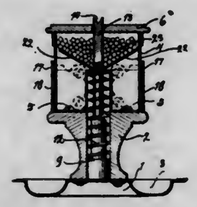


The combination with an electrically controlled train system having a supply line and a return line, of a transmission line from which current is supplied to the supply line, an auxiliary return wire, a plurality of sources of current, a switch device adapted to connect each source of current across the transmission line and the auxiliary return wire, and having an off position and a magnet device associated with each switch device and operated upon energization of the transmission line by one source of current for locking the other switch devices in off position.

1,454,527. CONTROLLER FOR ELECTRIC MOTORS. HENRY N. WADE, Shorewood, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 18, 1920. Serial No. 424,821. 4 Claims. (Cl. 200—7.)

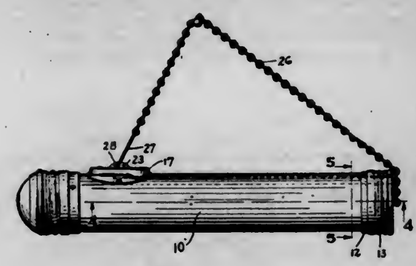
1. In a motor controller, the combination with associated mechanisms to control respectively the line connections and the circuit resistance of a motor, of an operating member for certain of said mechanisms and an operative connection providing for operation of both of said elements upon unidirectional movement of said operating member throughout a given range and also providing for reverse movement of said member through and beyond such range without affecting certain of said mechanisms.

1,454,528. MAGNETO-ELECTRIC SHOCKING MACHINE. WILLIAM P. WIEMANN, Pittsburgh, Pa., assignor to The Wiemann Company, Pittsburgh, Pa. Filed Sept. 28, 1921. Serial No. 503,830. 6 Claims. (Cl. 174—89.)



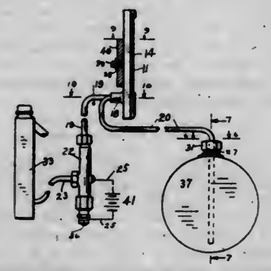
1. A machine for the purpose set forth comprising a casing adapted to be held by the hand and having means therein for generating alternating current, an oscillatory lever actuated by the thumb of the hand holding the casing for operating said generating means during the operation of the lever, a circuit making and breaking element engaging with said generating means and actuated on the operation of the latter, said casing including a body and a cap, the latter insulated from the former and in circuit with said element, said body and cap providing terminals.

1,454,529. MATCH BOX. WILLY ZEBRA, New York, N. Y. Filed Dec. 6, 1920. Serial No. 428,479. 1 Claim. (Cl. 206—21.)



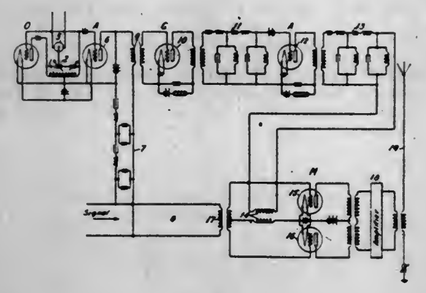
In a device of the class described, the combination with an ornamental, substantially rectangular sheet metal base having an ash receiving channel in its upper surface, a pedestal on said base, a rectangular hollow casing mounted on said pedestal, having opposed central vertical slots in its upper portion, its exterior carrying abrading

surfaces, converging downwardly inclined longitudinal partitions fixed in said casing, and spaced at their lower edges, a cover having a slot in register with the mentioned space, a plunger movable through the space and slot, said plunger having a groove in its upper edge, a guide



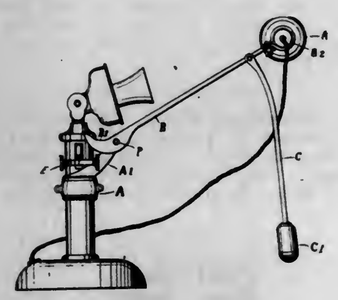
for said plunger, a spring for normally raising said plunger, and rigid handles formed at each end of said plunger, said handles extending through the slots in said casing and acting as limit stops for the movement of the plunger.

1,454,530. HANDLAMP. ARTHUR A. ARNOLD, Hartford, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn. Filed Apr. 2, 1921. Serial No. 457,896. 14 Claims. (Cl. 240—8.5.)



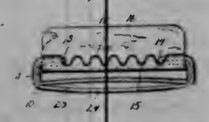
1. An electric hand lamp having a bottom closure and a contact device in combination with a chain secured to the said closure and detachably secured to the said contact device.

1,454,531. INSTRUMENT FOR MEASURING THE HEIGHT OF LIQUIDS. WALTER C. BARNES, Chicago, Ill., and WILLIAM O. BARNES, Leominster, Mass. Filed June 10, 1921. Serial No. 476,446. 6 Claims. (Cl. 73—54.)



1. In an indicator for liquid level in a container, the combination with a fluid pressure gauge, of an electrolytic cell for decomposing liquid therein by electrolysis, a conduit connecting the cell with the gauge for continuously supplying a fluid pressure thereto, a liquid container, and an outlet conduit connecting said first mentioned conduit with the liquid container below the normal liquid level therein.

1,454,532. METHOD OF AND MEANS FOR SECRET SIGNALING. WILLIAM E. BEATTY, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1917. Serial No. 183,875. 34 Claims. (Cl. 250—6.)

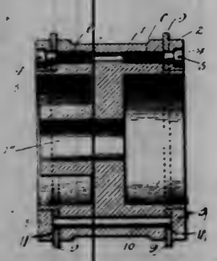


9. The method of signaling which comprises transmitting a voice modulated wave and continuously varying the carrier frequency thereof.

1,454,533. SUPPORT FOR TELEPHONE RECEIVERS. MANLEY A. BOWEN, Fresno, Calif. Filed July 13, 1921. Serial No. 484,402. 1 Claim. (Cl. 179—149.)

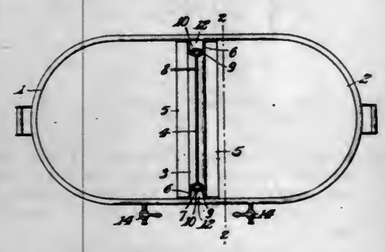
In combination with a desk telephone having an upright support, a transmitter, a receiver, and a hook adapted to hold the receiver and to disconnect the electrical circuit when the receiver is depressed, of a member adapted to be clamped to the support, an arm pivoted to the clamped member, said arm having at one end an extension adapted to depress the telephone hook when the arm is raised approximately vertically and to release the hook when the arm is moved to extend outwardly from the support, means on said arm for holding the receiver, and a rigid support weighted at one end and pivoted to the arm at the other end, and adapted to automatically swing to a vertical position as the arm is moved, stop means on said clamp, and means on said arm adapted to cooperate with said stop means when the arm is raised vertically to a position at which the weighted support counterbalances the telephone receiver.

1,454,534. BUCKLE. CHARLES E. BRADSHAW, Waterbury, Conn. Filed Oct. 4, 1922. Serial No. 592,331. 2 Claims. (Cl. 24—184.



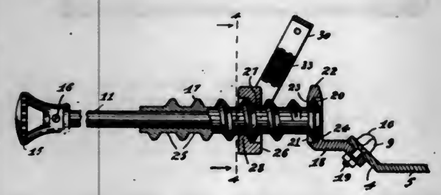
1. A buckle, comprising a frame formed from wire having an upper and a lower bar, a lever pivotally connected with the upper bar, and the lower bar divided longitudinally to form a loop to receive one end of a web.

1,454,535. SHOCK ABSORBER. BENJAMIN F. BURNS, Kokomo, Ind., assignor of one-third to John W. Harbaugh, Kokomo, Ind. Filed Feb. 4, 1922. Serial No. 534,119. 2 Claims. (Cl. 267—20.)



1. The combination with the frame and axle of a vehicle, of a shock absorber construction comprising a pair of arms extending transversely of the axle and beyond opposite edges thereof, levers having bifurcated ends pivoted to said arms and having connection at their opposite ends with said frame, means for holding the arms in fixed position on the axle, a housing integral with each lever and extending above and below the lever at the juncture of the bifurcated and main portions of the lever, said housing being slotted for the passage of said arms, and a pair of shock absorbing springs in each housing one above and one below each arm adapted to support the frame and assimilate shock imparted to the axle.

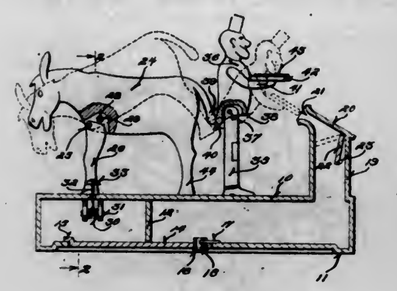
1,454,536. SPROCKET WHEEL. CHARLES R. CARLETON, Brooklyn, N. Y. Original application filed Oct. 13, 1919, Serial No. 330,177. Divided and this application filed May 1, 1920, Serial No. 378,333. Renewed Apr. 7, 1922. Serial No. 550,510. 1 Claim. (Cl. 74—31.)



A sprocket wheel, comprising a body having reduced ends, a pin extending axially through the body with its ends projecting beyond the reduced ends of the body, a pair of teeth carrying rings removably positioned on the reduced ends of the body and having openings therein receiving the ends of the pin to maintain the teeth of the rings in alignment, securing rings on the reduced ends of the body covering the openings and the ends of the pin and located against the first-mentioned rings, and screws projected through the pairs of rings at the respective ends of the body and screwed into the body removably clamping the parts together.

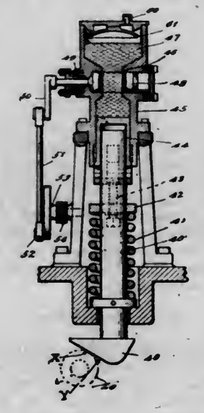
1,454,537. WASHBOILER. JOHN R. M. CHALFANT and BESSE PHILLIPS CHALFANT, Morgantown, W. Va. Filed Dec. 30, 1921. Serial No. 526,021. 5 Claims. (Cl. 220—22.)

1. A wash boiler comprising a boiler body a panel adapted to form a division wall whereby the interior of said body is divided into two compartments, and a seat for said panel permanently mounted on the bottom and sides of said body midway between the ends of the latter, said seat being formed of sheet metal and being bent to form opposite foot and leg portions and an intermediate retrorsal loop, the latter affording a guide channel in which the lateral edges of said panel are receivable.



1,454,538. FIREPLACE-DAMPER CONTROLLER. ERNEST F. DONLEY, Cleveland, Ohio, assignor to The Donley Brothers Company, Cleveland, Ohio, a Corporation. Filed July 21, 1921. Serial No. 486,518. 4 Claims. (Cl. 126—288.)

1. In a damper controller, an upright plate bracketed out from a damper frame and having a circular aperture therein, upper and lower beveled flanges flush respectively with the front and rear faces of said plate and projecting into said aperture, a worm encircled by a terminal flange-collar adapted to enter said aperture when tilted and to form both a rotatable and thrust bearing therein when the worm is normal to the said plate, an actuating spindle for said worm, and means connected with said worm for operating a damper.

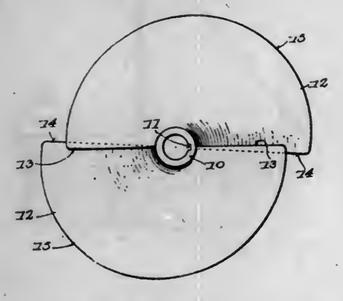


1,454,539. MULE BANK. NICHOLAS S. EBERHARDT and ARTHUR E. HACKETT, Milwaukee, Wis. Filed May 2, 1922. Serial No. 557,895. 1 Claim. (Cl. 46—36.)

The combination of a base, a container carried thereby having a slot therein, a pair of legs secured to said base, a body member pivoted to said legs, said body member being cut away to receive said legs and provided with a shoulder to limit the forward movement of said body member with respect to said legs, means rigid with said body member for carrying a coin, a second pair of legs a donkey body pivoted thereto, the tail of said donkey being adapted to contact normally with a portion of said first mentioned body for maintaining said body in erect position, and means for altering the position of said

donkey and permitting the forward movement of said first mentioned body and the deposition of a coin in said slot.

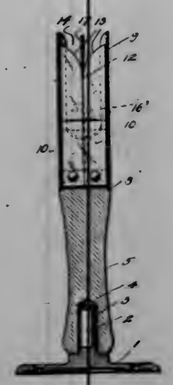
1,454,540. BOTTLE CAPPER. EDWARD F. EDGECOMBE, Jr., Indianapolis, Ind., assignor to Meier-Gaynor Mfg. Co., Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 30, 1920. Serial No. 420,618. 6 Claims. (Cl. 226—84.)



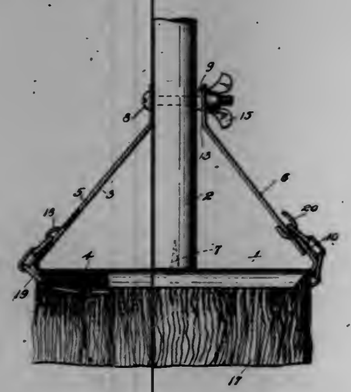
1. A package capping machine, comprising means for carrying the packages successively through capping position and supporting the same relatively stationary, cap-engaging means, an abutment having variable opposition positions for said cap-engaging means, and means in timed relationship with the package-carrying means for holding said abutment in any of its variable positions in opposition to the cap-engaging means.

1,454,541. GARMENT. ELIZA E. FALVEY, Fond du Lac, Wis. Filed July 24, 1920. Serial No. 398,756. 2 Claims. (Cl. 2—80.)

1. A garment of the class described formed from a single sheet of material of rectangular form, folded transversely to divide the same into a back and front portion, said doubled portion being folded longitudinally to form robe sections, one end of said rectangular sheet being folded to provide a hood portion and sleeve portions, two pair of eyelets secured to the bottom edge of said sheet and an eyelet secured on each edge adjacent the other end of said sheet and brought into register when the sheet is folded to form fastening means for the garment.

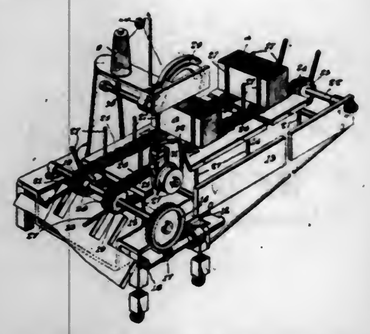


1,454,542. SCREW PROPELLER. ANGELO GRILLI, Milwaukee, Wis. Filed Oct. 27, 1921. Serial No. 510,910. 2 Claims. (Cl. 170—156.)



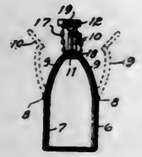
1. A screw propeller having a hub and a pair of symmetrically arranged spiral surfaces carried thereby, each of said surfaces, extending through substantially one hundred and eighty degrees about said hub, and each gradually increasing in width from one end to a point in advance of the other end and then decreasing in width from said point to the other end.

1,454,543. TWINE CUTTER. ERWIN R. JONES, Columbus, Ohio. Filed May 2, 1922. Serial No. 557,913. 6 Claims. (Cl. 30—14.)



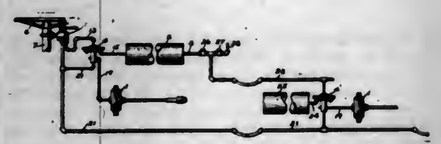
1. A twine cutter, a handle, a pair of blades associated with the handle, and a tubular guard for the blades engaged with the handle and blades for holding the blades against accidental disengagement from the handle.

1,454,544. MOP. JOHN L. JOYCE, Columbus, Ohio. Filed Nov. 14, 1921. Serial No. 514,847. 2 Claims. (Cl. 15—150.)



1. A mop holder comprising a staff, a holding frame carried by the lower end of said staff, said frame including a transversely extending base member grooved to accommodate a flexible fabric mop element, a chain connected with said frame contiguous to one end of said base member, the opposite end of said base member being upwardly bent toward said staff, a lever arm pivotally mounted upon the upwardly bent end of said base member and forming a continuation thereof, a hook carried by said lever arm and with which said chain is adapted to be engaged after being flexed about the upwardly bent end of said base member, and a detachable connection between the upper end of said lever arm and staff.

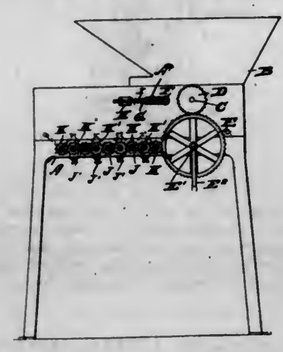
1,454,545. METHOD AND MACHINE FOR BANDING ARTICLES IN TRANSIT. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed May 8, 1922. Serial No. 559,146. 12 Claims. (Cl. 93—93.)



1. The method of facilitating the production of flat articles in the form of packages for shipment, consisting in placing the articles in groups upon a carrier and successively tying the groups with string while in motion on the carrier.

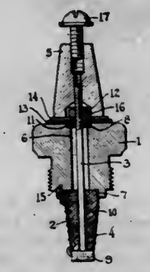
1,454,546. BURGLARPROOF GRIP. JOHN R. LANDIS, St. Louis, Mo., assignor of one-half to Frank H. Strott, St. Louis, Mo. Filed Nov. 7, 1921. Serial No. 513,269. 2 Claims. (Cl. 190—61.)

1. A burglar proof grip comprising a leather casing having a steel lining, a wrist band, and a flexible connection secured to the wrist band and adapted to pass through a portion of the grip and be secured at its free end to the wrist band.



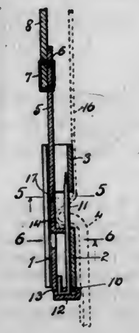
1,454,547. FLUID-PRESSURE BRAKE. GEORGE S. LANE, San Francisco, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1921. Serial No. 465,936. 13 Claims. (Cl. 303—26.)

3. In a fluid pressure brake, the combination with a brake cylinder, of a brake controlling valve device comprising means for controlling the supply of fluid to the brake cylinder and a flexible disk having its marginal portion unconfined and operated by fluid under pressure for actuating said means.



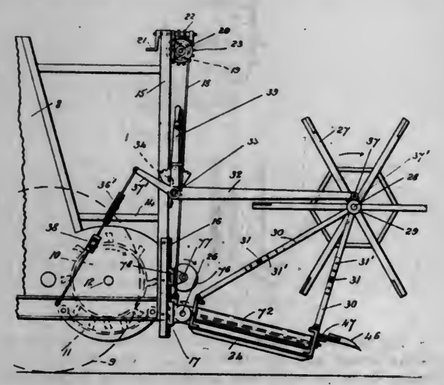
10. In a fluid pressure brake, the combination with a brake cylinder, of a pipe normally charged with fluid under pressure, a reservoir, a resilient disk subject to the opposing pressures of said pipe and the reservoir and adapted to be marginally flexed to permit the flow of fluid from said pipe to the reservoir, and means operated by the central flexing of the disk for establishing communication from the reservoir to the brake cylinder.

1,454,548. MACHINE FOR PULVERIZING AND CLEANING SOIL. CLARENCE D. LENNON, Detroit, Mich. Filed Sept. 18, 1922. Serial No. 588,787. 4 Claims. (Cl. 83—11.)



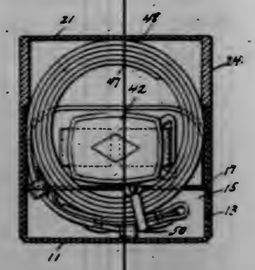
1. In a soil pulverizing machine, a hopper, a rotatable shaft provided with a plurality of teeth adapted to pulverize material in said hopper, means for rotating said shaft, a rotatable idler shaft fitted with teeth adapted to co-operate with the teeth of the first named shaft, said idler shaft being supported in suitable slotted ways, whereby it may be adjusted laterally in relation to the first named shaft, and yieldable means for maintaining said idler shaft in its adjusted relation to said rotatable shaft.

1,454,549. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 24, 1917. Serial No. 198,197. 4 Claims. (Cl. 123—145.)



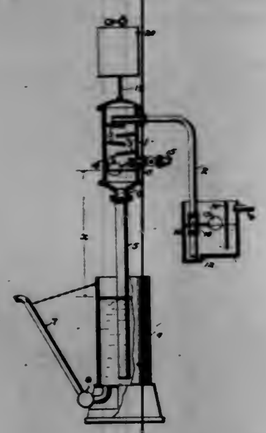
1. An ignition plug for heavy oil engines comprising a plug body having a single bore and being counterbored to provide a socket, a hollow insulating and heat absorbing support seated in said socket and comprising a plurality of superposed annular laminæ, a terminally threaded bolt of lesser diameter than said bore extending through said plug body and said support and having a head located beyond the latter and of a diameter not less than that of the adjacent portion of the same said support serving to space said bolt from the interior of said plug body, means co-operating with the threaded end of said bolt for clamping said laminæ firmly against said plug body and an ignition element coiled about said support and terminally secured to said plug body and said bolt for connection with a source of current.

1,454,550. GARMENT SUPPORTER. JOHN C. MABRY, Kansas City, Mo. Filed June 17, 1922. Serial No. 568,991. 11 Claims. (Cl. 24—158.)



1. In a garment supporter, two members, one having means for attachment to wearing apparel, said members being longitudinally slidable one on the other, one of the members having a housing, and a longitudinally disposed pin attached to and movable with the other member and adapted to have its free end enter said housing, the pin carrying member being movable to and from a position in which the free end of the pin will be spaced apart from said housing, substantially as set forth.

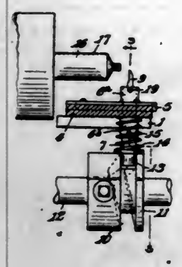
1,454,551. HEADER. IRA J. MARRIAGE, Wichita, Kans. Filed June 30, 1921. Serial No. 481,568. 8 Claims. (Cl. 56—125.)



3. The combination, with the casing of a threshing machine, and vertical guides secured at the front end thereof; of slides engaging with the said guides, a header frame connected to the said slides and having cutting mechanism at its front part, adjusting mechanism for sliding the said slides simultaneously, an endless conveyer mounted in the header frame and adjustable vertically with it and operating to discharge the cut heads into the said casing, a feed roller supported by the said casing and arranged over the rear portion of the said conveyer, and means for adjusting the position of the said feed roller vertically and independently of the vertical adjustment of the said conveyer.

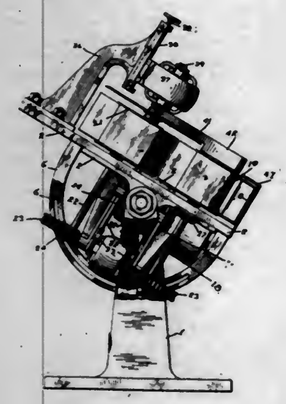
1,454,552. DISPLAY DEVICE. BONNER D. MASON, Attleboro, Mass., assignor to The Mason Box Company, a Corporation of Massachusetts. Filed Jan. 31, 1922. Serial No. 533,086. 2 Claims. (Cl. 206—46.)

1. In an advertising display, a base, a back, end walls, a front wall comprising a fixed lower section and a dependable flap flexibly connected to the top of the fixed section, a belt coil on the base intermediate the four walls and facing the front wall, flexible fingers on the flap, a belt clasp engaged by the fingers centrally of the coil and a cover slidably engaging the walls and supporting the flap.



1,454,553. HEAT TREATMENT OF LIQUID. WILHELM MAUSS, Johannesburg, Transvaal, South Africa, assignor to Continuous Centrifugals Limited, Johannesburg, Transvaal Province, Union of South Africa. Filed Mar. 23, 1921. Serial No. 454,956. 2 Claims. (Cl. 236—1.)

1. The process of heat treating liquid which consists in passing steam and the liquid into a closed vessel and causing them to come into physical contact within said vessel, passing the treated liquid from the vessel through a barometric pipe, and controlling the admission of steam to the vessel according to the height of the liquid column in said pipe.

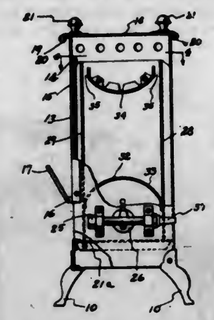


1,454,554. THREAD-CHASING MECHANISM. ARTHUR R. MITCHELL, Bridgeport, Ohio. Filed Dec. 7, 1921. Serial No. 520,538. 4 Claims. (Cl. 82—5.)

1. In a device for threading the necks of collapsible tubes, the combination with a rotary mandrel for carrying a tube, of a supporting stand, guide members carried by said stand, a slide arranged for travel on said guide members, a tool holder having vertical movement through said slide, a rotatable cam having a peripheral groove in which the lower end of said holder is received and by which the latter and said slide are reciprocated in a

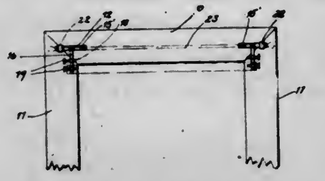
direction parallel to the axis of said mandrel, resilient means normally holding said tool holder depressed, and means coacting with said cam whereby said tool holder is maintained elevated against said resilient means during a portion of the reciprocating movement.

1,454,555. ASPARAGUS CUTTER. NIELS NIELSEN, Pittsburg, Calif. Filed July 18, 1922. Serial No. 575,906. 8 Claims. (Cl. 146—82.)



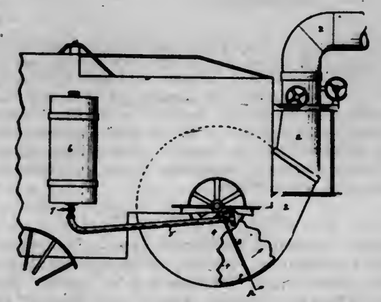
1. An asparagus cutter comprising a pair of parallel conveyors having oppositely disposed flexible pockets arranged to engage and carry bunches of asparagus stalks therebetween and discharge the same; and a cutting element arranged within the path of said bunches and arranged to sever the ends thereof.

1,454,556. HEATER. GUSTAV NIETZ, Richmond Hill, N. Y. Filed Apr. 18, 1922. Serial No. 555,136. 2 Claims. (Cl. 126—85.)



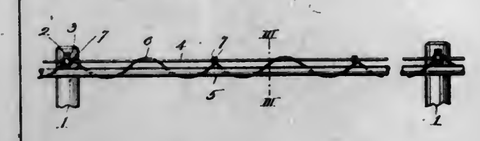
1. A device of the class described comprising an outer body, a detachable front wall on said body, a hinged door pivoted at the lower end of said front wall, a bottom secured in said body, a fuel distributor pipe mounted thereon, a cover member secured to the upper end of said

body, a heat distributor seated on said bottom and having openings at its lower end and means mounted within said



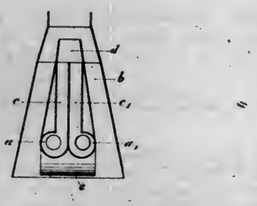
distributor for concentrating the heat waves and means for distributing the same at the upper portion of said body.

1,454,557. COMBINATION CURTAIN AND SHADE HOLDER. OSWALD NIETZEL, Elizabeth, N. J. Filed Sept. 9, 1921. Serial No. 499,427. 1 Claim. (Cl. 156—24.)



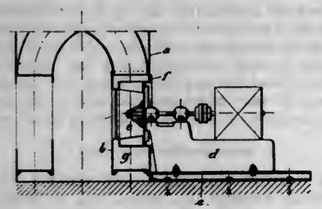
A combined curtain and shade holder comprising a base plate adapted to be secured to a window sash, said plate bearing recesses on its underside, a pole support adapted to engage interchangeably in any of said recesses, a plate member adapted to slidably and interchangeably engage in any of said recesses, said plate member having on its underside similar recesses, shade support slidably engaging in the recesses of said plate member, a resilient plate member secured to the underside of said plate member with its ends respectively overlying the recesses in said plate member and yieldably engaging the underside of said shade support to retain the latter in said recesses.

1,454,558. STRAW SALTING AND FERTILIZING. WILLIAM G. PATON, Toronto, Ontario, Canada. Filed Jan. 16, 1922. Serial No. 529,764. 3 Claims. (Cl. 99—2.)



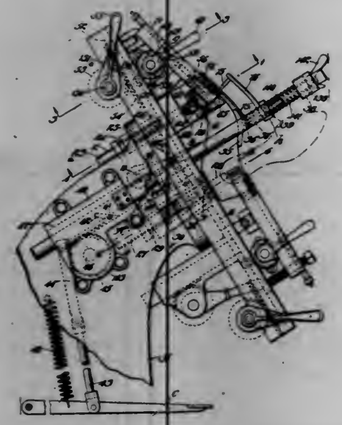
3. In a straw salter and fertilizer in combination with a threshing machine equipped with a pneumatic straw stacker a gravity supply tank having suitable pipe connection for conveying liquid to the inside of the fan at a point below the stacker fan shaft and to the rear of the vertical centre line of said fan housing being approximately at a point forming an angle of about 45 degrees with the centre of the fan shafting and the vertical centre line of same.

1,454,559. CABLE HANGER. WILLIAM J. PEACH, Kansas City, Mo. Filed Mar. 17, 1919. Serial No. 283,225. 2 Claims. (Cl. 248—33.)



1. The combination with a span wire and a cable of a hanger in the form of a continuous unchanging spiral of large diameter relative to and fitting around and suspended at an intermediate point from the span wire, and terminating at its extremities in oppositely-projecting downwardly-opening hooks fitting down over and upon the span wire eccentrically of the axis of the spiral; the hanger being so constructed that it may be screwed into position while simultaneously embracing both the span wire and the cable.

1,454,560. CHIMNEY DRAFT DEVICE WITH TWO FANS. EMILE PRAT, Paris, France, assignor to Société des Cheminées Louis Prat à Tirage Induit, Paris, France. Filed Apr. 27, 1921. Serial No. 464,950. 9 Claims. (Cl. 110—162.)



1. In combination, a chimney and a draft device associated with said chimney, said draft device comprising a plurality of fans having separate inlets arranged side by side.

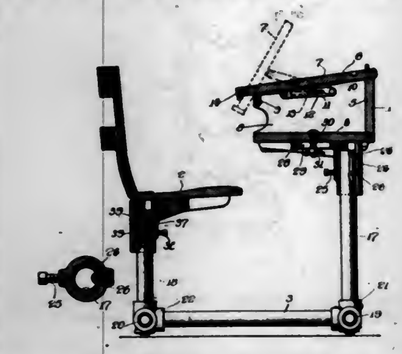
1,454,561. CHIMNEY DRAFT DEVICE. GEORGES JULES PRAT, Paris, France. Filed Apr. 27, 1921. Serial No. 464,947. 8 Claims. (Cl. 110—162.)

1. In combination, a chimney, a discharge spiral secured in said chimney, a fan rotor arranged in said spiral, and means wholly supporting said rotor independently of said chimney.

1,454,562. ASSEMBLING AND LASTING MACHINE. JAMES H. REED, Swampscott, Mass., assignor to Hamel Shoe Machinery Company, Bridgeport, Conn., a Corporation of Massachusetts. Filed Aug. 16, 1919. Serial No. 317,930. 17 Claims. (Cl. 12—14.)

1. In a machine of the character described, a longitudinally elastic lasting member, supporting means therefor and a yielding centre gripper acting through said elastic lasting member to press the lasting member forcibly against the shoe along a predetermined line during the lasting operation.

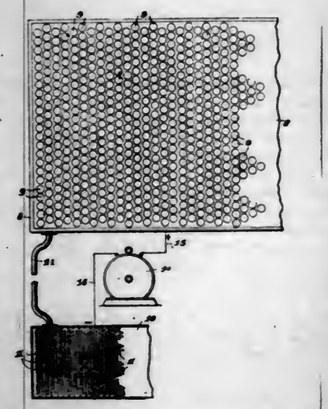
1,454,563. TRANSPARENT SIGN. FERDINAND C. ROBERTS, Detroit, Mich. Filed Sept. 25, 1922. Serial No. 590,482. 2 Claims. (Cl. 40—136.)



1. A sign comprising a sheet of translucent material having a design formed in relief upon the front face, the portion in relief differing in color from its surrounding portion by reflected light, the sheet having a design in relief on its rear face, the portion in relief being translucent and the surrounding portion being opaque whereby the design in relief upon the rear face is visible from the front when illuminated from the rear.

1,454,564. PROCESS OF PRODUCING ZIRCONIUM DIOXIDE. OTTO RUFF, Breslau, Germany. Filed Nov. 18, 1922. Serial No. 601,879. 2 Claims. (Cl. 23—13.)

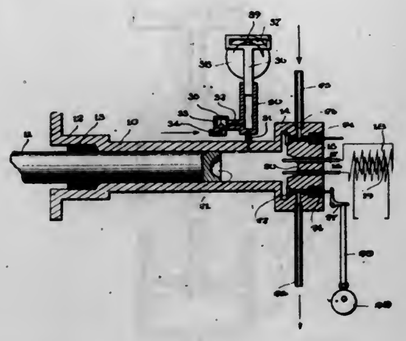
1. A process of treating zirconium ores, which comprises strongly heating the ore with a carbonate of an alkali metal, the mixture containing for each molecular equivalent of zirconium oxid about .75 to 2 molecular equivalents of said carbonate, and for each molecular equivalent of alumina and silica, about 1 to 1.5 molecular equivalents of said carbonate, and thereafter dissolving the water-insoluble zirconium compounds in an acid.



1,454,565. COMBINED DESK AND SEAT. AUGUSTINE C. SANFORD, Chicago, Ill. Filed Aug. 7, 1920. Serial No. 401,879. 4 Claims. (Cl. 155—124.)

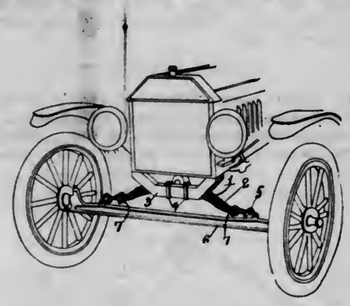
1. The combination of a tubular upwardly extending supporting member and a desk box having a socket mounted on said member, and means for fastening the socket and supporting member in vertical adjustment, said socket member being provided with a longitudinally extending recess formed in its inner face and extending only part way through same and the supporting member being provided with lateral projections adapted to fit in said recess, whereby relative rotation is prevented while

relative vertical adjustment is permitted, said projections on said supporting member comprising adjustable screws passing through the wall of said tubular and adjustable member from inside the same, and a set screw to hold the desk box in vertical adjustment.



1,454,566. ELECTRICAL DISPLAY DEVICE. CHARLES E. SMITH, Johnstown, Pa. Filed Sept. 8, 1921. Serial No. 499,125. 3 Claims. (Cl. 177—350.)

3. An electrical display device including a multiplicity of incandescent lamps and a stationary table equipped with a similar number of contacts, said table and contacts forming a substantially flat surface, an electrical circuit including said lamps and contacts, a flexible conductor engageable with any one or all of said contacts to close the circuits and light the lamp or lamps corresponding to the contacts engaged, and scribing means for applying the conductor to the contacts.

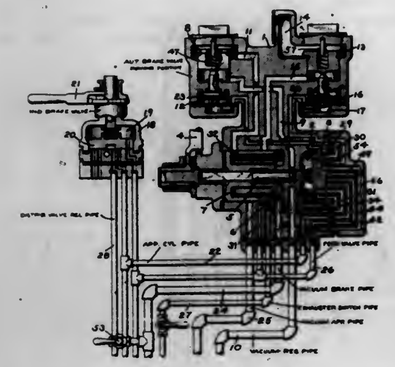


1,454,567. METHOD AND APPARATUS FOR PRODUCING A CHEMICAL UNION BETWEEN HYDROCARBON GASES AND HYDROCARBON OILS. HIRAM BRUCE SNYDER, Fullerton, Calif. Filed Dec. 27, 1921. Serial No. 524,973. 10 Claims. (Cl. 204—31.)

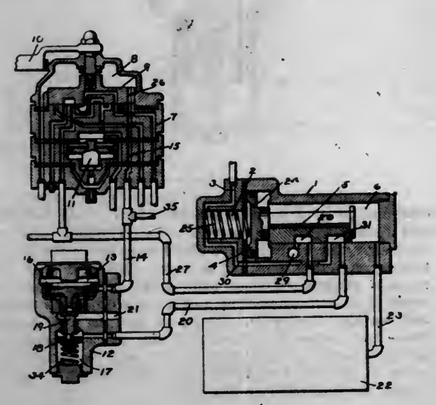
1. The method of uniting gases of the methane series with hydro-carbon oils which consists in subjecting a volume of methane gas to a high degree of compression, then introducing a quantity of hydro-carbon oil into said

compressed gas, and then passing an electrical arc through said gas and oil while in its co mingled and compressed state.

1,454,568. VEHICLE SPRING. HOWARD TAYLOR, Philadelphia, Pa., assignor to Taylor Spring & Equipment Company, Philadelphia, Pa. Filed Feb. 11, 1921. Serial No. 444,202. 2 Claims. (Cl. 267—53.)



1. The combination with the axle and body of a vehicle, of a bowed spring having its terminals connected to the axle and having its middle portion connected to the body, inverted U-shape clips attached to said spring intermediate its center portion and terminals, and rollers detachably and rotatably mounted between the depending ends of said clips, whereby the strain on the terminal ends will be relieved when said ends are suddenly flexed upward.

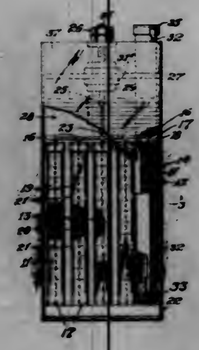


1,454,569. BRAKE-VALVE DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1921. Serial No. 463,700. 9 Claims. (Cl. 303—4.)

1. In a vacuum brake, the combination with a vacuum brake pipe, of a source of compressed fluid, a valve device operated by fluid under pressure from said source for supplying fluid to the vacuum brake pipe, and manually operated means for controlling the fluid pressure on said valve device.

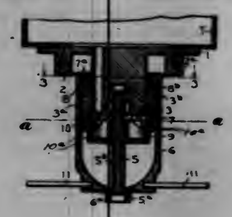
5. In a vacuum brake, the combination with a vacuum brake pipe and a vacuum application pipe, of a valve device for supplying fluid to said pipes and a manually operated valve for establishing communication for supplying fluid from said valve device to the vacuum brake pipe in one position and to the vacuum application pipe in another position.

1,454,570. AUTOMATIC TRAIN-CONTROL DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 5, 1922. Serial No. 566,026. 3 Claims. (Cl. 303—21.)



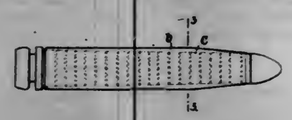
1. In a train speed control apparatus, the combination with an application valve device comprising a piston and valve, of a release valve device comprising a valve for controlling the venting of fluid from said piston, a release piston for operating said valve, and a brake valve device having means for controlling the fluid pressure on said release piston.

1,454,571. STORAGE BATTERY. WILLIAM H. THORPE, Mount Vernon, N. Y. Filed Aug. 22, 1921. Serial No. 494,221. 4 Claims. (Cl. 204—29.)



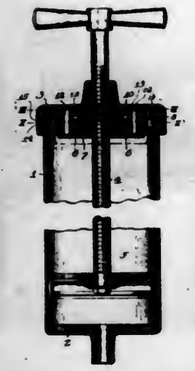
1. In a storage battery, a container, a container cover, a terminal, electrolyte, and means for preventing the electrolyte from creeping up said terminal comprising a cup-like element associated with said terminal, gasket means between said element and said container cover

whereby a sealed chamber is formed, an acid resisting grease sealed in said chamber and means encircling said



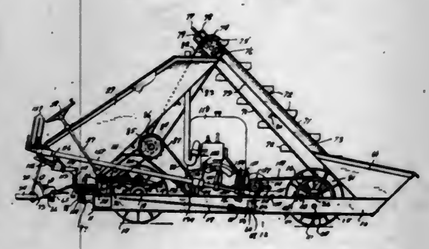
terminal for clamping said cup-like element against said gasket and container cover to maintain said chamber sealed.

1,454,572. LIQUID MEASURING AND DISPENSING DEVICE. ARTHUR B. WALTERS, Kansas City, Mo. Filed June 16, 1921. Serial No. 478,045. 5 Claims. (Cl. 221—114.)



1. In a liquid measuring and dispensing apparatus the combination of a member attached to a liquid container and having a fluid passage, a vessel slidably connected with said member to receive liquid from said passage, and having an outlet opening, a valve connected with said member adapted to close said outlet opening when the vessel is in lowered position and a cup within said member and movable therewith adapted to seal the said passage when the vessel is raised and the valve opened, and means whereby air is admitted into said vessel when the valve is opened, and air is shut off when the valve is closed, substantially as described.

1,454,573. WOUND PACKAGE. SAMUEL A. BARBOUR Paterson, N. J. Filed July 3, 1922. Serial No 572,513. 2 Claims. (Cl. 242—161.)

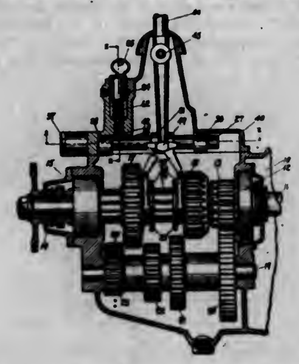


1. A wound package including an elongated core and a traverse-wound mass of windings of a hard, smooth, flat and uniformly thick filament thereon, said mass having a thickness so little in respect to that of the core as to be but a relatively thin shell thereon.

1,454,574. GREASE GUN. CHARLES E. BOWN, Dayton, Ohio. Filed May 1, 1920. Serial No. 378,209. 16 Claims. (Cl. 221—79.)

1. In combination with a cylinder, a piston in the cylinder and a screw-threaded member for operating the piston, of screw-threaded means for engaging the screw-thread of the operating member adapted to be moved out of engagement therewith to release the same, means for detachably connecting the inner end of the operating member with the piston, and means within the cylinder for moving said connecting means out of engagement with said operating member to release the operating member from the piston.

1,454,575. CHIP DISTRIBUTOR. DAVID C. BOYD, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Feb. 6, 1922. Serial No. 534,481. 24 Claims. (Cl. 94—44.)

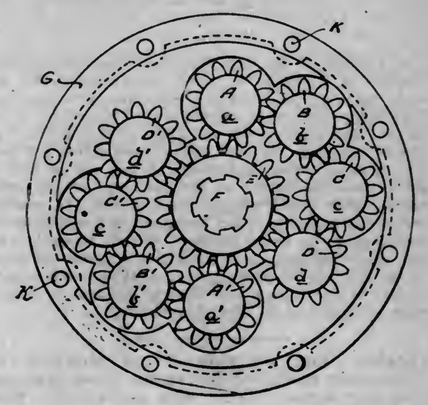


1. A motor operated distributing machine having forward steering wheels and rear driving wheels, a downwardly discharging distributing hopper mounted upon the machine forward of the steering wheels, and means disposed at the forward end of the machine controlling the motor, the steering wheels and the distribution from said hopper.

1,454,576. TRANSMISSION-LOCK MECHANISM FOR AUTOMOBILES. EVERETT G. CLEMENTS, Washington, D. C., assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 23, 1919. Serial No. 325,674. 10 Claims. (Cl. 74—39.)

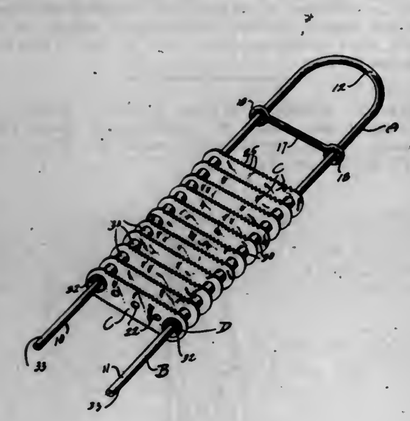
10. In a device of the character described, a pair of slidable shifting fork members having spaced notches therein, a pair of detents extending in opposite directions

from a common pivotal center intermediate said members, means limiting the relative angular movement of



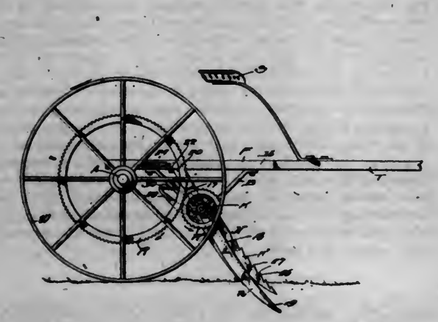
said detents, and means for shifting said pivotal center whereby either one or the other of said members may be shifted or both of said members may be locked.

1,454,577. ATTACHMENT FOR SEAT COVERS. JAMES P. EYSTER, Indianapolis, Ind., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 25, 1916. Serial No. 80,380. 2 Claims. (Cl. 155—180.)



1. In combination, a seat-frame, a cover for encasing said frame, hooks secured to the inner surface near the lower edge of said cover for detachably securing the latter to the lower edge of the seat frame and integral necks on said hooks adapted to project through the cover for securing said hooks to said cover.

1,454,578. DIFFERENTIAL GEARING. MAXIMILIAN J. L. TOWLER, Detroit, Mich. Filed Apr. 19, 1919. Serial No. 291,223. 6 Claims. (Cl. 74—99.)

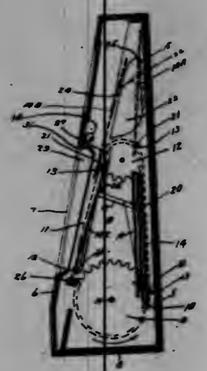


1. In a differential gearing, a driving member, driven members, gearing connecting said members, comprising gears supported in the driving member by journaled portions, the diameters of which have such a relation to the diameters of the pitch circles of the last mentioned gears that a preponderance of the power delivered to the driving member will be transferred to the driven member offering the greater resistance to rotation.

1,454,579. GRATER. THOMAS FITZ PATRICK, Cuyahoga Falls, Ohio. Filed July 3, 1922. Serial No. 572,574. 4 Claims. (Cl. 146—15.)

1. A greater comprising a one piece U-shaped frame including side rod like portions, blades apertured at their ends to receive the side rod like portions of said frame, and means to maintain said blades in uniform spaced relation upon said frame.

1,454,580. GRASS-DIGGING IMPLEMENT. WALTER LEVI FOSS, Windom, Minn. Filed June 1, 1920. Serial No. 385,553. 7 Claims. (Cl. 55—9.)



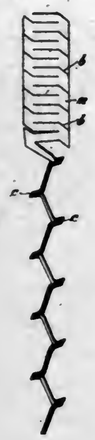
1. An implement of the character described comprising, a frame, wheels supporting the frame, a crank shaft operable by said wheels, digging units supported on the

shaft for effecting a loosening of the soil, and ejecting units operable by said shaft and working within and guided by said digging units for removing rhizomes from the loosened soil.

1,454,581. PROCESS OF TREATING VEGETABLE FIBER. HOWARD CHARLES FUELLER, Jacksonville, Fla. Filed July 12, 1919, Serial No. 310,431. Renewed Nov. 29, 1922. 4 Claims. (Cl. 92—15.)

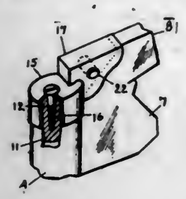
1. A process of treating vegetable fiber, as for instance Spanish moss, which consists in the chemical removal of the plant juices from the fiber, the dyeing of the fiber, and the treatment of the fiber with a solution for stiffening and glossing the same, the chemical removal of the plant juices consisting in subjecting the fiber to acid and alkaline baths.

1,454,582. SIGN-DISPLAYING DEVICE. WILBUR A. GARRITT and JAMES H. ENGEBRIGTSON, Sioux City, Iowa. Filed July 19, 1920. Serial No. 397,251. 1 Claim. (Cl. 40—79.)



A display device consisting of a suitable frame, two pairs of wheels positioned one pair above the other, endless chains interconnecting the pairs, a rod interconnecting the chains, rearwardly inclined rails carried by the frame, display cards normally positioned one in front of another and provided with lateral projections slidably engageable with the rails to normally support the cards, a support for the rearmost card, hooks on the backs of the cards engageable by the rod, whereby the cards are successively carried upwardly and forwardly and then permitted to gravitate, a front support to stop gravitation of the cards for display, and permit disengagement of the rod from the hooks and means for preventing rearward tilting of the cards when displayed, the front support and said means being so positioned and related that each gravitating card will engage and force the preceding cards from said front support and permit its projections to slidably engage the rails.

1,454,583. PROCESS OF PRODUCING MAGNESIUM NITRATE. VICTOR MORITZ GOLDSCHMIDT, Christiania, Norway, assignor to A/S De Norske Saltverker, Bergen, Norway. Filed Nov. 11, 1920. Serial No. 423,392. 2 Claims. (Cl. 23—13.)

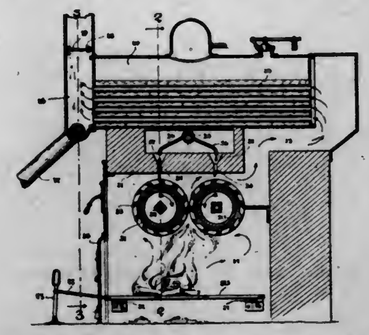


1. A process of producing magnesium nitrate which comprises treating olivine and serpentine with nitric acid of 25–40 per cent at a temperature of 50–90° C., whereby the silicic acid is precipitated in an easily filterable state.

1,454,584. BARBED WIRE AND THE LIKE. RICHARD GÖSSER, deceased, by Adolf Gösser, administrator, Munich, Germany, assignor, by mesne assignments, to the Firm "Stachelband" G. m. b. H., Munchen-Pasing, Germany. Filed Sept. 7, 1920. Serial No. 408,754. 2 Claims. (Cl. 256—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

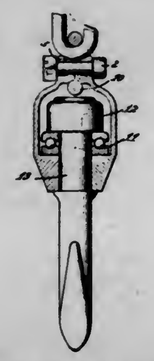
1. A fence strand consisting of a metallic band provided at either side with a series of slits extending inwardly at an acute angle, and intermediate slits, the inner extensions of the said slits overlapping each other.

1,454,585. STORM SHIELD. CHARLES F. GREEN, Toledo, Ohio, assignor to The Willys-Overland Co., Toledo, Ohio, a Corporation of Ohio. Filed June 5, 1916. Serial No. 101,663. 3 Claims. (Cl. 296—93.)



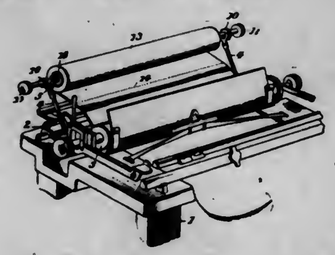
1. A device of the class described comprising the combination of a supporting frame; open-sided frames pivotally supported in said supporting frame with their open sides facing each other; transparent shield sections carried by said open-sided frames and disposed so that the edges of said shields at the open sides of said frame will overlap; a clip member connecting the free end of each of said open-sided frames to the free edge of the transparent shield carried thereby, each of said clip members comprising a tubular socket embracing and secured to the free end of the frame member; and an integral, laterally projecting rectangular socket, embracing the corner of the free edge of said transparent shield; and a buffer carried by one of each pair of co-acting clips in position to be contacted by the other of said clips.

1,454,586. FURNACE FOR STEAM BOILERS FOR BURNING RESIDUAL MOLASSES. HUGH ALEXANDER GRIFFIN, Lindsay, Calif. Filed Dec. 6, 1921. Serial No. 520,379. 6 Claims. (Cl. 110—22.)



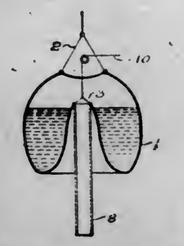
4. In a molasses burning furnace having a fire box, molasses feeding means including rotatable cylinders in

the upper portion of the fire box having peripheral pockets in which the molasses is exposed to the action of



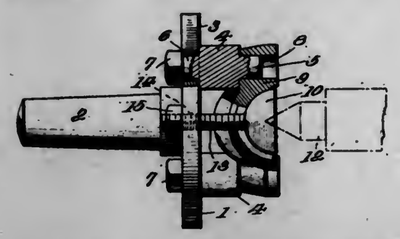
the heat of the fire box before it is finally dropped into the fire.

1,454,587. COUPLING. WALTER A. GUNN, Lisbon, Ohio, assignor to Wright Manufacturing Company, Lisbon, Ohio. Filed Oct. 25, 1922. Serial No. 596,762. 1 Claim. (Cl. 59—95.)



In a basket coupling for chain hoists and the like, opposed similar members having registering openings in one end for the reception of a hooked shank and registering openings in the other end for receiving a chain link, means for holding the members together firmly, and means for connecting the members to the chain link comprising a bolt extending through the members and link.

1,454,588. TYPEWRITER ATTACHMENT. HARRY B. KANEEN, Papineau, Ill. Filed Jan. 19, 1921. Serial No. 438,467. 7 Claims. (Cl. 197—133.)



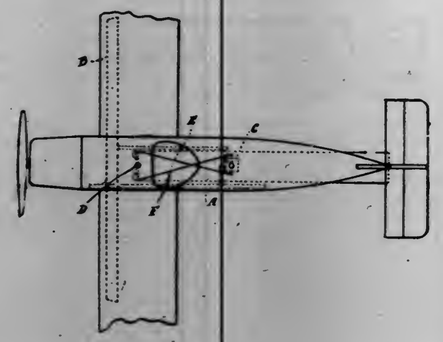
1. An attachment for use with typewriters or similar carriages, comprising a supporting means, a shaft rotatably mounted in said supporting means, a paper roll on said shaft, and means for removably locking said roll on said shaft.

1,454,589. BALLAST BAG FOR AIR VESSELS. FRANZ FRIEDRICH KRUCKENBERG, Heidelberg, Germany, assignor to Luftfahrzeugbau Schütte-Lanz, Mannheim-Rheinau, Germany. Filed Aug. 16, 1922. Serial No. 582,135. 4 Claims. (Cl. 244—1.)

1. In a ballast receptacle for airships, a bag provided with a bottom discharge opening and means located interiorly of the bag connected to the bottom thereof for vertically elevating and lowering the said bottom, thereby regulating the quantity of ballast discharged through said discharge opening.

1,454,590. ATTACHMENT FOR LATHES OR SIMILAR MACHINES. RALPH K. LUSE, Oxford, Iowa. Filed May 31, 1921. Serial No. 473,735. 8 Claims. (Cl. 82—40.)

1. A device of the kind described comprising a head adapted to be attached to a revolving member of a machine, positioning pins adjustably mounted within said head for supporting a bearing cap and means for holding said bearing cap in position upon said pins.



1,454,591. METHOD OF TREATING GASES. ADRIAAN NAGELVOORT, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 1, 1921. Serial No. 448,864. 9 Claims. (Cl. 23—10.)

1. The process of treating gases for use in the synthesis of ammonia which comprises passing the gases to be synthesized into contact with a cyanamid of a base forming element to remove impurities therefrom preparatory to synthesizing ammonia from said gases.

1,454,592. WIRELESS DIRECTION-FINDING MEANS FOR AND METHOD OF PILOTING AIRCRAFT. HAROLD ROBERT CORBY VAN DE VELDE and JOHN MEGARRY FURNIVAL, Bromley, England, assignors to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Jan. 7, 1921. Serial No. 435,718. 6 Claims. (Cl. 250—11.)

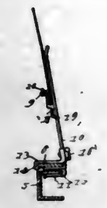
3. The combination with an aircraft, of a loop aerial around the wings perpendicular to the fuselage, a sec-

ond loop aerial parallel to the fuselage, a radiogoniometer associated with said aerials having a movable coil con-

nected to the rudder of the aircraft and a detector associated with the search coil.

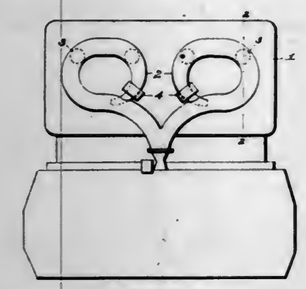
1,454,593. METHOD OF PURIFYING MINERAL OILS. EDWARD E. ARNOLD, Coventry, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 24, 1921. Serial No. 447,568. 11 Claims. (Cl. 196—26.)

1. In a process for purifying mineral oil, the step which comprises treating a mass of said oil with liquid anhydrous ammonia in the presence of an alkalinous metal oxygen bearing compound which serves as an oxidizing agent thus causing the sulfur present in said oil to combine with said ammonia under oxidizing conditions to form an ammonia-sulfur-oxygen compound.



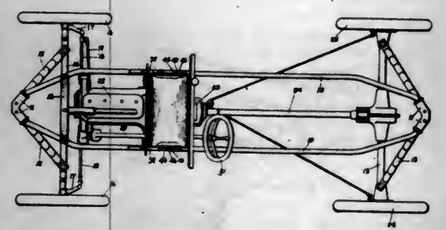
1,454,594. ADJUSTABLE COUPLING FOR MAGNETO DRIVES. GLENN D. ANGLE, Dayton, Ohio. Filed Aug. 1, 1921. Serial No. 489,101. 1 Claim. (Cl. 74—28.)

In a device of the class described, the combination of a sleeve having an abutment flange, a threaded portion, and a smooth cylindrical surface between and flange and threaded portion a driving gear loosely mounted on said smooth surface for partial rotative movement, a nut on said threaded portion to retain the driving ear in position, and means for adjusting the driving gear axially around the sleeve embodying a lug extending laterally from the gear, arms extending tangentially from the sleeve and lying on opposite sides of said lug, and adjusting screws passing through said arms and bearing at their extremities against said lug.



1,454,595. HOOD SUPPORT. ARTHUR E. ASHLEY, Boise, Idaho. Filed June 3, 1922. Serial No. 565,674. 4 Claims. (Cl. 180—69.)

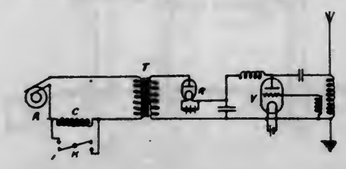
1. In a hood support, a body portion having an extension forming a clip operative to embrace the side frame of an automobile and to engage molding thereon, a clamping element slidable on the said body above the clip and adapted to engage and partially embrace the molding,



means for holding the clamping member in different positions of adjustment, and a hood engaging member carried by the body.

1,454,596. INTAKE MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. GUY M. BALL, Spokane, Wash. Filed Apr. 18, 1921. Serial No. 462,192. 8 Claims. (Cl. 123—52.)

1. In an intake manifold for use in internal combustion engines, a means for minimizing pulsation of the explosive gases passing therethrough, said means comprising an extended portion of said manifold of reduced diameter projecting into the interior of said manifold at a point between the carburetor jet and any cylinder supplied by said manifold.



1,454,597. MOTOR VEHICLE. EDWARD HALE BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Sept. 12, 1917, Serial No. 190,966. Divided and this application filed Jan. 6, 1919. Serial No. 269,805. 19 Claims. (Cl. 180—54.)

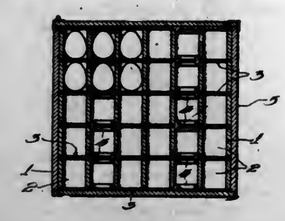
1. In a motor vehicle, the combination of a vehicle frame comprising a pair of longitudinally extending side bars, a dash board and an instrument board carried by

said frame, a body carried by said frame and a fuel tank within said body and between said dash board and said instrument board and supported by said frame independently of said body.

1,454,598. WIRELESS TRANSMITTER. WILLIAM THEODORE DITCHAM, Twickenham, England, assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1920. Serial No. 431,582. 3 Claims. (Cl. 250—10.)

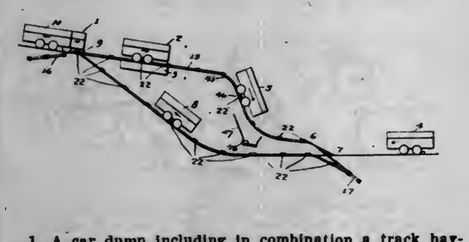
1. In a wireless transmitter, the combination of an oscillating valve, a circuit containing a source of alternating current supply for said valve, a rectifier interposed between said source of supply and said valve, an impedance connected in said circuit, and means for short circuiting said impedance.

1,454,599. PROCESS OF AMMONIA SYNTHESIS AND CATALYST THEREFOR. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 28, 1921. Serial No. 456,401. 26 Claims. (Cl. 23—21.)



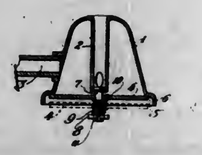
16. The process of producing ammonia which comprises synthesizing said ammonia from its elements through the intermediacy of a catalyst which includes a mixture of alkalinous metal cyanids which have been treated to effect their conversion into active catalytic material.

1,454,600. GEAR-SHIFT LEVER AND DUST CAP. COLVIN L. JOHNSON, St. Louis, Mo., assignor to Johnson Automobile Lock Co., a Corporation of Illinois. Filed June 12, 1922. Serial No. 567,841. 8 Claims. (Cl. 74—39.)



1. The combination with a support, of a gear shift lever supported thereon, a hood on said support, a sleeve locked on said lever, a cap resting on said hood and projecting into said sleeve, and means in said sleeve for resiliently holding said cap against said hood.

1,454,601. SHIPPING CONTAINER FOR EGGS AND OTHER FRAGILE ARTICLES. LEOPOLD OXHANDLER, Chicago, Ill. Filed June 11, 1921. Serial No. 476,778. 7 Claims. (Cl. 217—26.)

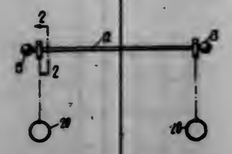


1. In combination, a plurality of slabs superposed upon each other and having a plurality of registering holes extending through the same, comparatively thin flats lying between said slabs and interlocked with the same.

1,454,602. CAR HANDLING AND DUMPING SYSTEM. RICHARD PEALE, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed Sept. 12, 1919. Serial No. 323,264. 31 Claims. (Cl. 214—62.)

1. A car dump including in combination a track having relatively flat and steep parts, the flat part leading into the relatively steep part where the car is dumped and means controlled by the car for controlling the speed of the car as it enters the steep part and is dumped.

1,454,603. BUBBLING DRINKING FOUNTAIN. JAMES E. PLEW, Chicago, Ill. Filed Apr. 18, 1921. Serial No. 462,148. 15 Claims. (Cl. 299—9.)



1. In a device of the character described, a receiving chamber having an inlet and two outlets, one of the outlets being a constantly-opening drinking outlet, and an inwardly-closing check valve controlling the other outlet.

1,454,604. PROCESS OF MAKING GLYCOL. WOATH H. RODEBUSH, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 28, 1919. Serial No. 307,432. 7 Claims. (Cl. 260—156.5.)

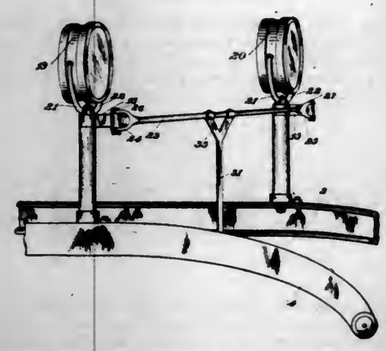
7. The process which comprises making glycol by subjecting glycol diacetate and alcohol to a catalyst of an acid character with the application of heat.

1,454,605. CURTAIN-ROD BRACKET. LOUIS G. STANAD, Chicago, Ill. Filed July 7, 1921. Serial No. 482,990. 3 Claims. (Cl. 156—22.)

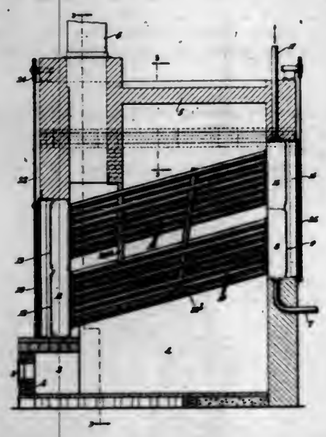
2. A bracket of the character described, comprising an arm, a member of U-shaped cross section secured to said arm, a companion member normally abutting at its upper end with said first named member and defining therewith an aperture for the reception of a curtain supporting element, resilient means interposed between said members to maintain the same closed, a rod secured to said companion member and below said aperture, a holding member secured to the free end of said rod, a companion member secured to said second named holding member, and means for maintaining said second pair of members in closed position.

1,454,606. PAPER-MAKING MACHINE. JOHN D. TOMPKINS, Valatie, N. Y. Filed Apr. 6, 1921. Serial No. 459,032. 12 Claims. (Cl. 92—49.)

1. A paper making machine comprising an upper couch roll carrying a felt apron, a lower couch roll carrying a forming wire, said upper couch roll being located in advance of and out of contact with said lower couch roll and being adapted to press the felt apron into contact with the paper web carried by the forming wire.



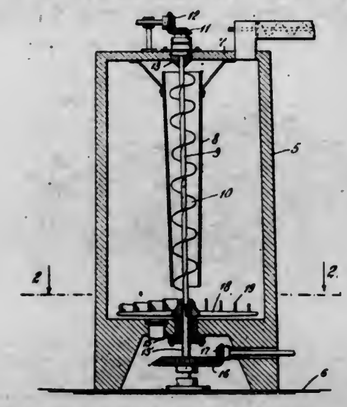
1,454,607. COLLAR ATTACHMENT. ANDRÉ VARAUD, La-Capite-Vesenaz, near Geneva, Switzerland. Filed Mar. 31, 1921, Serial No. 457,454. Renewed Oct. 14, 1922. Serial No. 594,659. 2 Claims. (Cl. 24—73.)



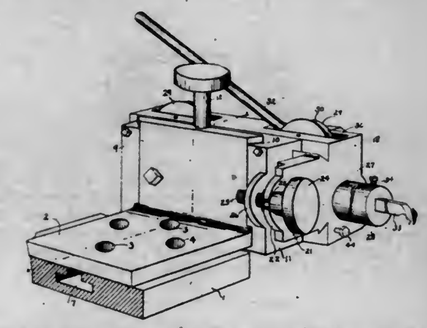
1. A collar attachment comprising buttons, shanks connected to and extending from the said buttons and bent at their upper ends so as to extend toward the said buttons in a loop or bow which lies across the said shanks and acts to yieldingly maintain the buttons in position in a collar.

1,454,608. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. BERTRAM WAITE, Galt, Ontario, Canada. Filed Sept. 26, 1921. Serial No. 503,292. 2 Claims. (Cl. 240—62.)

1. The combination with the chassis of a motor vehicle, of a pair of standards mounted thereon, each said standard comprising a bolt substantially mounted to the channel beam of the chassis, a sleeve over the said bolt, a bushing supporting the lower terminal of the said sleeve and substantially mounted on the said channel beam, a lever arm extending from the upper terminal of the said sleeve, a yoke supported on the said lever arm, the said yoke supporting a headlight, a transverse rod having bifurcated brackets on the outer terminals thereof engageable with the outer terminals of the said lever arms and means embodying a vertical member bifurcated at its ends co-operating between the said transverse rod and the king pins of a steering gear for the purpose as set forth.



1,454,609. APPARATUS FOR USE IN THE MANUFACTURE OF ALDEHYDES. ERNEST J. WINTER, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 24, 1918. Serial No. 268,196. 12 Claims. (Cl. 260—173.)

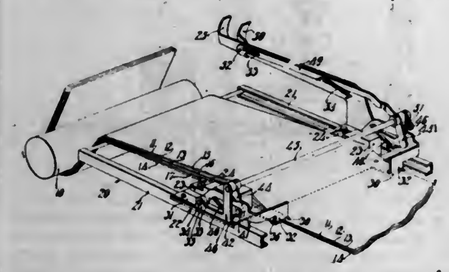


10. In combination, a set of inclined tubes provided on the interior thereof with catalytic material, chambers connected to the ends of the tubes, a second set of inclined tubes in advance of the first set, chambers connected to the ends of the second set, connecting passages between the chambers at the same ends of the tubes, and means to heat the tubes.

1,454,610. BLEACHING PULP AND APPARATUS THEREFOR. ROBERT B. WOLF, New York, N. Y. Filed Nov. 22, 1922. Serial No. 602,511. 16 Claims. (Cl. 8—2.)

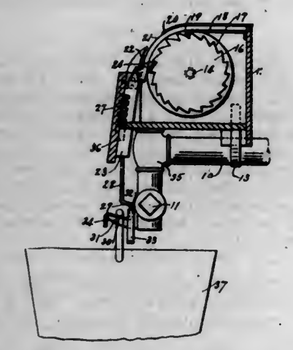
1. In an apparatus for bleaching paper pulp, the combination of a tank and means to elevate the pulp in the tank and to discharge it at the top thereof, the space between the elevating means and the wall of said tank being greater in cross section at the bottom, whereby wedging action of the pulp as it moves downwardly in the space surrounding the elevating means is prevented.

1,454,611. COMBINATION DRILL AND TOOL HOLDER. THOMAS W. ADAIR, Humble, Tex. Filed June 30, 1921. Serial No. 481,490. 8 Claims. (Cl. 82—24.)



1. In a tool holder for lathes, a bracket, a block, means to adjust said block vertically relative to said bracket, comprising a screw fitting in the meeting faces of said bracket and holder and having threaded engagement with said block, means to prevent movement of said screw relative to said bracket, a holder having lateral screw adjustment relative to said block and means to clamp a tool holding bar in said holder.

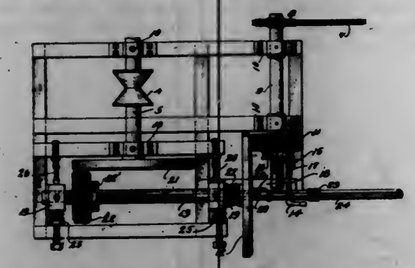
1,454,612. CARBURIZING MATERIAL AND PROCESS OF MAKING SAME. LOUIS ABBY, East Chicago, Ind., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1921. Serial No. 444,145. 2 Claims. (Cl. 148—30.)



2. A carburizing material consisting of dried and shrunken briquettes composed of charcoal and an energizer with a binder.

1,454,613. TYPEWRITING MACHINE. J FRANK ALLARD, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 8, 1921. Serial No. 476,067. 3 Claims. (Cl. 197—126.)

1. In a continuous billing typewriting machine, the combination with a traveling carriage having a rearward extension, of a carbon-paper carriage mounted upon said extension, clamping means carried by said carbon-paper carriage for gripping piles of work-sheets therebetween at the extreme rear of the carbon-paper carriage, said means comprising lower jaws fixed to said carbon-paper carriage, one at each side thereof, and upper jaws pivotally mounted independently of each other for co-operation with said lower jaws, means for swinging each of said upper jaws independently of the other to effective position against the irrespective lower jaw to grip the work-sheets, and means common to the swinging jaws for swinging both jaws away from effective positions.

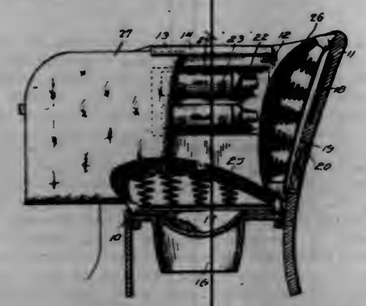


1,454,614. COUNTER AND REGISTER. HEINRICH ALTHAUS and JOHAN FANGMANN, Dyersville, Iowa. Filed Sept. 23, 1921. Serial No. 502,829. 1 Claim. (Cl. 234—94.)

A device of the character described comprising a casing adapted to be attached to the top of a discharge nozzle of gasoline tanks, means for securing said casing to said nozzle, rotating indicating means in said housing, a ratchet wheel integral with said indicating means, a substantially vertical rod, a grooved sliding member to which the upper end of said rod is secured, a forked upper end on said member, a finger pivotally secured between the forks at the upper end of said sliding member and adapted to engage the teeth of said ratchet wheel, means for limiting the movement of said finger in one direction, a coiled spring in the groove of said sliding member, a nose on said nozzle, the lower end of said rod being bent to engage the upper edge of said nose and the front edge of the same against action of said spring when a bucket of predetermined capacity is hung on said nose, a depending yoke through which said nose passes attached to said rod, means for preventing the rotation of said ratchet wheel in one direction, the removal of the filled bucket allowing an expension of said spring to operate said finger for rotating said ratchet wheel, and indicating means to visibly indicate the number of fluid units discharged from said nozzle.

1,454,615. FRICTIONAL GEARING. DANIEL APPLEGATE, Port Clinton, Ohio. Filed Mar. 24, 1922. Serial No. 546,249. 7 Claims. (Cl. 74—26.)

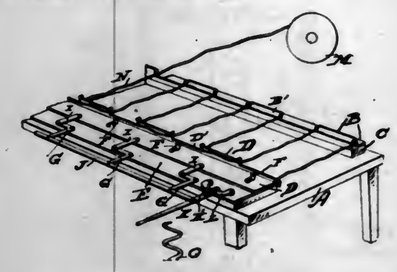
5. In variable speed mechanism of the class described, the combination of a driving shaft, a driven shaft, a counter shaft, friction driving elements upon said shafts, and means for shifting the counter shaft longitudinally and laterally out of operative relation to the driving and driven shafts.



1,454,616. PROCESS FOR RESOLVING EMULSIONS. EUGENE E. AYERS, Jr., Chester, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 10, 1921. Serial No. 443,762. 12 Claims. (Cl. 196—26.)

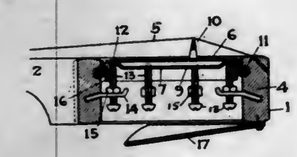
12. The process of separating the constituents of a petroleum emulsion which consists in dissolving sodium resinate in a substance adapted to produce therewith a reagent that is soluble in petroleum, adding the reagent to the emulsion, and separating the constituents by subsidence.

1,454,617. PROCESS FOR THE PREVENTION OF THE FORMATION OF EMULSIONS. EUGENE E. AYERS, Jr., Chester, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 2[illegible] 1921. Serial No. 447,567. 14 Claims. (Cl. 196—26.)



10. The process of preventing the formation of water-in-oil emulsions which consists in the addition to the oil of a reagent composed of sodium resinate dissolved in a substance in which the oil and the sodium resinate are mutually soluble.

1,454,618. TOILET ATTACHMENT FOR AUTOMOBILES. NORTHROP BANKS, Lamar, Mo. Filed Aug. 30. 1921. Serial No. 496,[illegible]2. 1 Claim. (Cl. 296—24.)



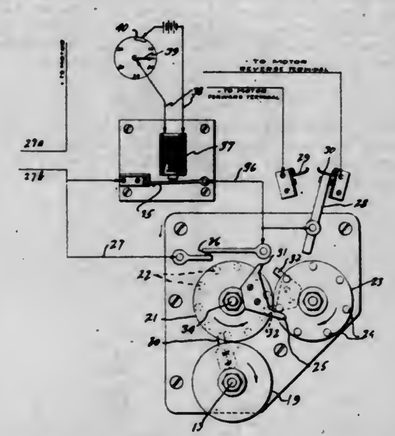
A vehicle seat comprising a base portion, a back portion and end portions, the end portions having inwardly directed guide ribs at their upper edges and recesses in their confronting faces, cushion elements slidably engaging the guide ribs, and a seat cushion element bearing at its ends against the end cushion elements and holding them from lateral displacement.

1,454,619. PROCESS OF WEAVING WIRE FABRICS. JOHN S. BARNES, Ann Arbor, Mich., assignor to Wire Products Corporation, Ann Arbor, Mich., a Corporation of Michigan. Filed Dec. 14, 1921. Serial No. 522,212. 5 Claims. (Cl. 139—9.)

1. The process of forming wire fabric consisting in securing one end of a continuous strand in a supporting frame and lacing the same to form return bends, interlacing woof strands across the return bends alternately and securing each end of each woof strand to the marginal return bend of the fabric.

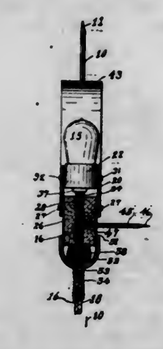
1,454,620. BANJO. JOHN A. BOLANDER, Berkeley, Calif. Filed Dec. 3, 1917, Serial No. 205,017. Renewed Sept. 29, 1922. Serial No. 591,431. 4 Claims. (Cl. 84—270.)

1. A banjo, comprising, in combination, a rim having an internal circular groove, a head having its surrounding edge secured in said groove, a bridge mounted upon the outer surface of said head, a sound concentrator beneath said head and a sound opening through said sound concentrator located directly beneath said bridge.



1,454,621. TRACKING DEVICE. REINHOLD BUKOW, Astoria, Long Island, N. Y., assignor to Hardman, Peck & Co., a Corporation of New York. Filed Dec. 30, 1921. Serial No. 525,900. 9 Claims. (Cl. 84—138.)

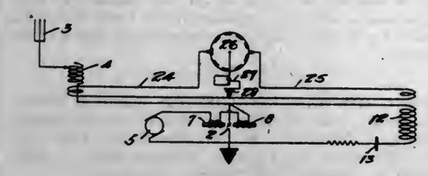
1. A tracking mechanism including in combination a pair of tracking-control fingers co-operating with fixed ports and with opposite sides of the sheet and automatic means for adjusting said fingers toward or away from each other.



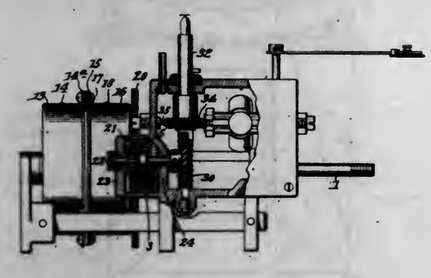
1,454,622. CHANGEABLE-SIGN DEVICE. HENRY W. CAIRNS, Detroit, Mich. Filed June 15, 1920. Serial No. 389,089. 2 Claims. (Cl. 40—53.)

1. In a changeable sign, the combination with a pair of rollers and a web mounted thereon carrying a plurality of signs, of a frame provided with an opening across which said web travels, said opening being proportioned for the display of said signs individually, a motor having a driving connection with one of said rollers, a normally open switch controlling the motor circuit, a shunt around said switch, a second normally open switch in the shunt circuit, means for closing said second switch for short

periods at regular time intervals, to initially energize the motor, and mechanism driven by the motor initially effecting closing of the first-mentioned switch and opening the same and holding it open upon a travel of the web sufficient to display a different sign through said opening.



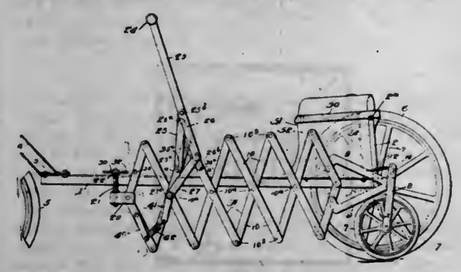
1,454,623. ELECTRIC TESTING DEVICE. REGINALD H. CARTER, Cleveland, Ohio, assignor to George V. Carter, Cleveland, Ohio. Filed Feb. 2, 1920. Serial No. 355,864. 12 Claims. (Cl. 175—183.)



3. A testing device comprising a metallic holder, a lamp supported therein, two pointed leads in contact with one terminal of the lamp and insulated from said holder, and a third pointed lead in electrical contact with the holder and the other terminal of said lamp.

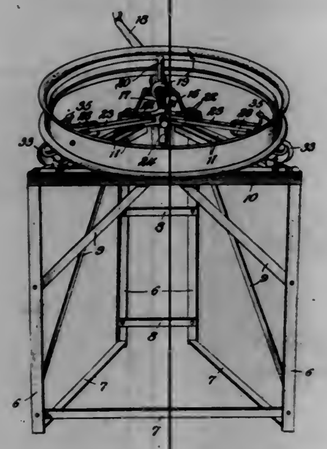
1,454,624. RADIOTELEGRAPHY SIGNALING SYSTEM. CORWIN C. CHAPMAN, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed Apr. 27, 1920. Serial No. 376,942. 4 Claims. (Cl. 250—19.)

1. A radio telegraphy signalling system, comprising a source of continuous radio oscillation, a radiating circuit connected to said source, an oscillatory absorbing circuit also connected to said source, an energy absorbing element, and means for coupling said element alternately to one or the other circuit at audio frequency.



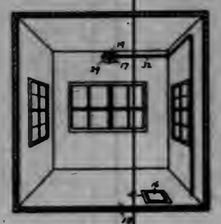
1,454,625. GEAR TRAIN FOR PHONOGRAPH MOTORS. GEORGE T. CHERRINGTON, Waukegan, Ill. Filed Apr. 9, 1920. Serial No. 372,566. 4 Claims. (Cl. 185—37.)

4. A drive for phonographs comprising the combination with a winding shaft, of a pinion adjacent one end thereof, a spring shaft, a gear mounted on said spring shaft in mesh with the pinion, a plurality of springs, a gear rotated by the unwinding of said springs, a frame, an intermediate shaft, a pinion mounted thereon, journal bearings in said frame each side of and adjacent to said pinion, a shouldered hub secured to said intermediate shaft by a pin, the ends of which project outwardly, a fiber gear mounted on said hub abutting said shoulder, there being a slot in said gear which fits the projecting end of the pin, a turn table shaft, a worm mounted thereon in mesh with the fiber gear, a governor, means to cause the rotation of the turn table shaft to rotate the governor, and means to prevent the backward rotation of the spring shaft.



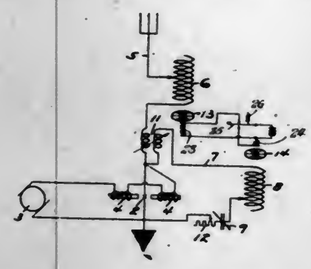
1,454,626. OCCUPANT-PROPELLED VEHICLE. CONRAD DAHL, Chicago, Ill., assignor to Donald M. Carter, trustee, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,442. 6 Claims. (Cl. 208—38.)

1. In an occupant-propelled vehicle, in combination with a frame and supporting wheels, a ground-engaging member; a lazy-tongs structure by which said ground-engaging member is carried for rearward thrust in the pro-



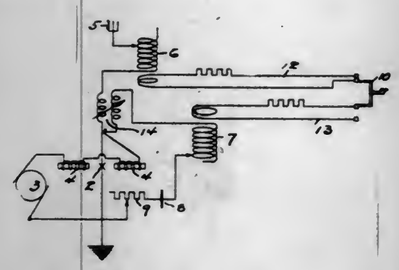
pelling stroke; an operating handle-lever member for extending the lazy-tongs; divergent links by which said handle-lever member is supported on two consecutive lazy-tong members, and a link connecting the lower end of the handle-lever member with an intersectional pivot of the lazy-tongs.

1,454,627. RIM-HANDLING DEVICE. DAVID A. DAVIES, Cleveland, Ohio, assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation. Filed Feb. 12, 1921. Serial No. 444,527. Renewed Sept. 27, 1922. Serial No. 590,998. 6 Claims. (Cl. 157—1.)



1. In a rim handling device, the combination with a stand having a plurality of slotted guides at the top, of a fixed rim-engaging member mounted on the stand, a pair of rim-engaging members movable on said guides and provided with a depending element slidable in the guides, a shaft mounted in said fixed member and having a crank whereby it may be turned, said shaft being screw-threaded beyond the fixed member, and located above the horizontal plane of the guides, and a casting connecting the two movable rim-engaging members with the screw-threads of said shaft and provided with a depending element slidably mounted in a guide.

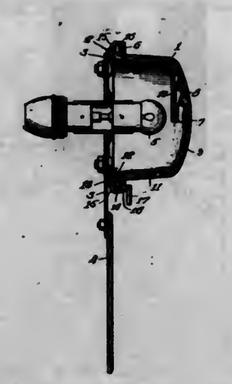
1,454,628. TESTING APPARATUS FOR DETERMINING NONALIGNMENT OF VEHICLE WHEELS. JOHN F. DUBY, Boston, Mass., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Jan. 19, 1920. Serial No. 352,410. 2 Claims. (Cl. 33—180.)



1. A testing apparatus of the character stated, comprising a track-forming base adapted to support and permit the movement of a wheeled vehicle thereon, said base including a fixed portion, an opening, a pan-shaped casing in said opening having a depressed bottom, and a movable platform in said opening forming a base portion, which is movable by the rolling thereon of a wheel out of alinement, the casing and platform being provided with anti-frictional means supporting the platform, and permitting horizontal movements thereof in opposite directions, yielding means normally holding the platform in a predetermined position in said casing, and an indicator movable by horizontal movements of the platform.

1,454,629. RADIOTELEGRAPHY SIGNALING SYSTEM. HAROLD F. ELLIOTT, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed June 6, 1921. Serial No. 475,192. 17 Claims. (Cl. 250—19.)

1. A radio telegraphy transmission system including an oscillatory circuit, an inductance coil in said circuit, a plurality of sector circuits inductively connected to said inductance coil, means for discharging the charging current induced in said sector circuits and means for opening and closing the sector circuits.

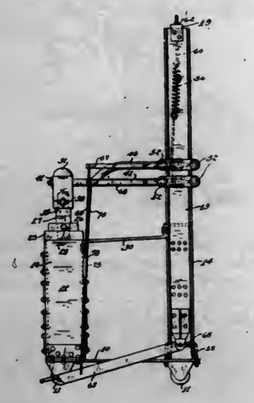


1,454,630. RADIOTELEGRAPHY. HAROLD F. ELLIOTT, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed June 6, 1921. Serial No. 475,513. 12 Claims. (Cl. 250—19.)

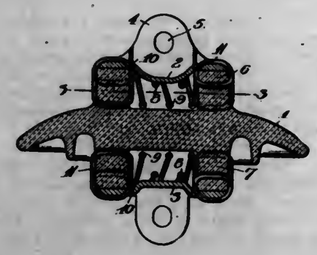
1. A radio telegraphy signaling system, comprising a source of oscillations, an antenna circuit connected to the source, and an oscillatory circuit shunted around the source and coupled to the antenna circuit.

1,454,631. TAIL LIGHT. GILBERT S. ELLITHORPE, Chicago, Ill., assignor, by direct and mesne assignments, to The Bac-Lite Corporation, a Corporation of Illinois. Filed May 10, 1920. Serial No. 380,241. 3 Claims. (Cl. 240—11.)

1. A vehicle tail light lens of horizontally zoned character including an upper rearwardly facing danger signal part having a red light transmitting characteristic expressive of danger, and a lower similarly facing illuminating part visually and functionally distinct therefrom and having another light transmitting characteristic adapted for illumination of the roadway.



1,454,632. ARTIFICIAL TOOTH. LEON M. FARNUM, Lansdowne, Pa., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 22, 1919. Serial No. 339,818. 1 Claim. (Cl. 32—9.)

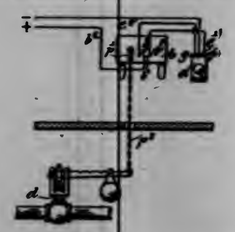


An artificial tooth having a pin-receiving cavity, arranged to receive a pin inserted therein, and an anchor baked in the body of said tooth, and comprising a base wall, forming the buccal wall of said cavity, side walls extended lingually and arranged to embrace the end portion of said pin in spaced relation therewith, and terminating lingually in a flange extended laterally therefrom, and embedded in the body of said tooth.

1,454,633. PORTABLE POWER HAMMER. HENRY A. FISHER, Cleveland, Ohio, assignor of one-half to Sydney H. Foxall, Cleveland, Ohio. Filed Mar. 10, 1921. Serial No. 451,327. 7 Claims. (Cl. 78—33.)

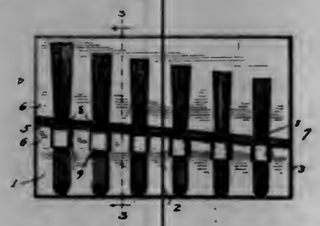
1. In a forging machine, the combination with a base, of a pair of separated frames rigidly connected therewith, one of said frames comprising a pair of upright members that are connected together in abutting engagement on one side of the frame, and near one end thereof, said members being separated near the other end of the frame, a hammer pivotally supported between the separated portions of said members, and a foot treadle connected with the hammer in such manner that a downward movement of the treadle causes a downward movement of the hammer.

1,454,634. INSULATOR. WALTER T. GODDARD, Hamilton, Ontario, Canada, assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Jan. 25, 1919. Serial No. 273,145. 8 Claims. (Cl. 173—318.)



7. An insulating unit comprising an element formed of frangible insulating material, a rigid metallic element connected thereto, and means for connecting said elements at a plurality of points and for equalizing the strains imparted from one of said elements to the other, said means involving a continuous flexible sinuous member alternately engaging the said connected elements at a succession of points on each of said elements.

1,454,635. THERMOSTATIC ELECTRIC CONTROL FOR HEATING SYSTEMS. EDWARD E. GOLD, New York, N. Y., assignor to Gold Car Heating & Lighting Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 6, 1922. Serial No. 549,968. 4 Claims. (Cl. 236—74.)



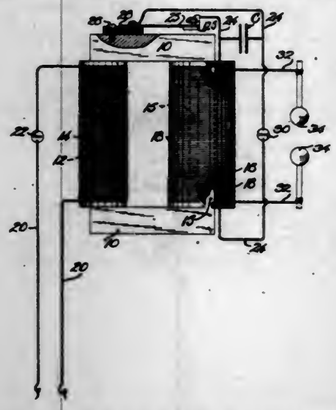
1. Apparatus for the thermostatic electric control of heating systems including, in combination, an expansible vessel adapted to be moved bodily, an electric motor, devices the movement of which is initiated by the expansible vessel to control the circuit of the motor, a controlled element in the heating system operatively connected to the motor, an adjustable seat for the thermostat formed with threads, a rotatable element

having cooperating threads for engagement with the threads on said seat, means to hold the seat against rota-

tion while permitting axial movement thereof and a manually operated indicator arm operatively connected to the second named element to effect rotation thereof.

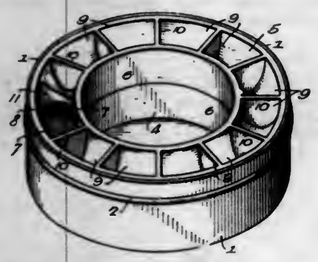
1,454,636. HAIRPIN CONTAINER. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1918. Serial No. 244,829. 1 Claim. (Cl. 206—66.)

A hair pin container comprising a box portion and a double retaining wall provided with a series of spaced slotted apertures therein forming spring gripping fingers to hold hair pin bundles in position, said retaining wall extending diagonally across the box portion whereby a plurality of bundles of hair pins of different sizes or lengths may be held in alignment.



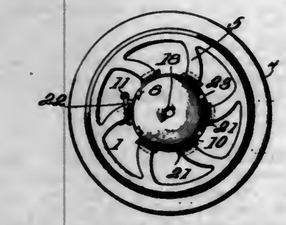
1,454,637. THREAD TENSION DEVICE. HENRY H. GOVE, Biddeford, Me., assignor of one-half to Howard R. Whitehead, Saco, Me.; Charlotte M. Gove administratrix of said Henry H. Gove, deceased. Filed May 27, 1919. Serial No. 300,093. 5 Claims. (Cl. 242—153.)

1. A thread tension device comprising a part having a curved surface, a plate having a part extending substantially parallel with said surface, a pivot supporting said plate for movement to carry said part into and out of engagement with said surface, a rod projecting from said plate at an angle thereto, and a weight adjustable on said rod, said weight acting to swing said plate toward said rod.



1,454,638. TRANSFORMER. LANSON T. GRADY, Victor, Colo. Filed Jan. 31, 1921. Serial No. 441,141. 5 Claims. (Cl. 175—35.)

4. A transformer having a core forming a closed magnetic circuit, a primary winding on a portion of said core, a secondary winding on another portion of said core, said secondary winding having an interrupter in

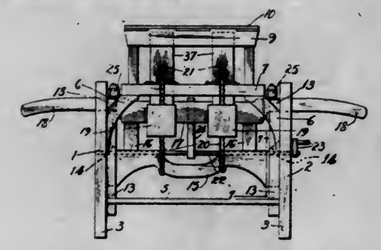


circuit therewith, a switch in series with said interrupter, and a second secondary winding on said core.

1,454,639. COMPARTMENT BOX. THOMAS K. P. HAINES, Philadelphia, Pa. Filed May 20, 1922. Serial No. 562,389. 2 Claims. (Cl. 223—53.)

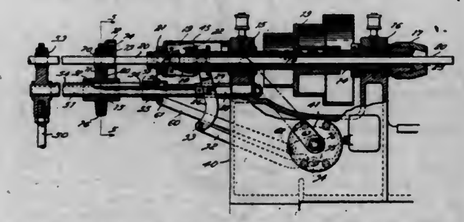
1. The combination in a compartment box, of a circular body portion; a lid therefor; two trays located in the body portion, each tray being in the form of a ring, providing an open center for the box, each tray having a series of radial partitions forming compartments, each compartment having a rounded bottom, the upper tray having an opening through which access may be had to the compartments of the lower tray.

1,454,640. MINE-CAR WHEEL. FRANK W. HENRIKSON, Mulberry, Kans. Filed Apr. 11, 1922. Serial No. 551,484. 4 Claims. (Cl. 295—44.)



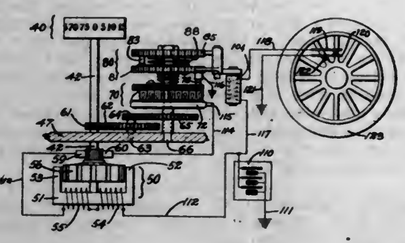
2. A mine car wheel comprising a hub, a rim and spaced spokes, each of said spokes having a locking slot therein and a hub cap having circumferentially spaced lugs adapted to engage in said slots on angular movement of said cap on said hub.

1,454,641. HAIRDRESSING DEVICE. LINZY HICKS, Omaha, Nebr. Filed Feb. 28, 1922. Serial No. 539,864. 4 Claims. (Cl. 132—43.)



1. A hair dressing device comprising a strip of relatively thin sheet material, and an elastic casing surrounding the strip and engaging the same in a manner to leave an air cushion between portions of the casing and the strip along the length of the strip.

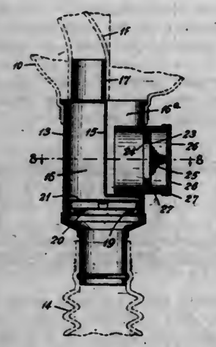
1,454,642. CONCRETE-BLOCK-MOLDING MACHINE. CARL HENRIK HOGLUND, Duluth, Minn. Filed Mar. 12, 1921. Serial No. 451,757. 1 Claim. (Cl. 25—41.)



In a concrete block molding machine, a stationary frame comprising standards formed with aligned slots, a movable frame arranged therewithin, pairs of cleats carried by said stationary frame, sliding shoes carried by said movable frame and disposed between said cleats, handles for said movable frame adapted, in one position of the same, for disposition in the aligned slots of the said standards, counter-balance weights connecting said stationary and movable frames whereby movement of the latter is facilitated, an anchor block arranged in said sationary frame for supporting said movable frame in raised position, a movable plate carried by said stationary frame, and a mold box having individually removable sides carried by said movable frame and being wholly disposed below said removable plate in the lowered position of said frame.

1,454,643. FEEDING AND CHUCKING MECHANISM FOR MACHINE TOOLS. EARL J. HORNBERGER, Cleveland Heights, Ohio, assignor to Bardons & Oliver, Cleveland, Ohio, a Copartnership consisting of George C. Bardons and John G. Oliver. Filed Jan. 12, 1922. Serial No. 528,614. 12 Claims. (Cl. 29—59.)

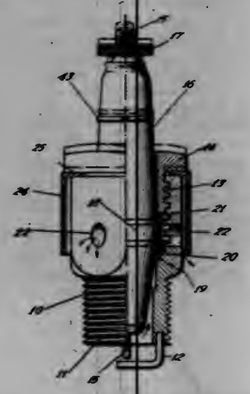
1. In a device of the character described, the combination with a frame, of work advancing means and chuck operating means carried thereby, a rock shaft mounted on the frame, two arms carried by said shaft, a link operatively connecting each arm with one of said means, the points of connection between the arms and links being so positioned that when the rock shaft is oscillated, one of said links passes through dead center position, while the other is moved beyond dead center position, said points of connection having angular velocity imparted thereto when the rock shaft is oscillated.



1,454,644. ELECTRIC SPEEDOMETER. CHARLES F. KETTERING, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Aug. 28, 1918. Serial No. 251,756. 10 Claims. (Cl. 172—293.)

1. In a synchronizing system for electric motors, the combination with a motor; of a rheostat in the motor circuit including as elements, a resistor and a wiper; means actuated by the operation of the motor tending to move the resistor relatively to the wiper, a spring which is wound up by the movement of the motor; and means controlled by the movable part with which the motor is to be synchronized for releasing the spring whereby the wiper will be moved under the action of the spring relatively to the resistor in order to counteract the effect of the first named means, thereby tending to increase the amount of current delivered to the motor.

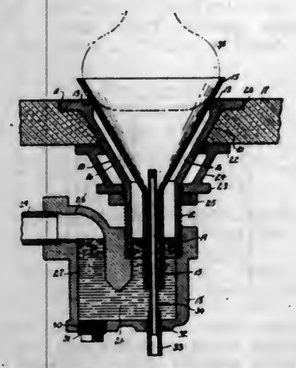
1,454,645. BREATHING APPARATUS. FREDERICK W. KOEHLER, Pittsburgh, Pa., assignor to American Atmos Corporation, Pittsburgh, Pa., a Corporation of New York. Filed Mar. 29, 1921. Serial No. 456,576. 1 Claim. (Cl. 128—141.)



A gas mask comprising a face covering, a breathing fixture carried thereby and having interior inhalation and exhalation chambers independent of each other, a flexible

member within said face covering connected with said inhalation chamber and arranged to lie over the nose of the wearer, a hose connected with said inhalation chamber, a valve seat in said inhalation chamber, an inwardly opening valve co-operating with said seat to control the communication between said hose and said inhalation chamber, a tube extending into the exhalation chamber and outwardly beyond the same, an annular knife-edge seat in said tube, an outwardly opening disk valve co-operating with said seat to seal said tube and to permit the escape of exhaled air therethrough, a spider located in registry with said annular seat, a spring bearing against said valve with one end and having its other end secured to said spider and an apertured cap fixed upon the outer end of said tube to protect said disk valve and its seat against injury.

1,454,646. SPARK PLUG. WILLIAM MCELROY, Brooklyn, N. Y. Filed Feb. 10, 1921. Serial No. 443,787. 1 Claim: (Cl. 123—169.)



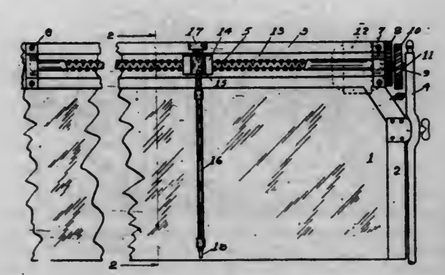
A spark plug embodying a shell, adapted to be screwed into the spark plug hole of an engine, provided intermediate its top and bottom with a shoulder and having its wall apertured above said shoulder, an insulating core extending through the shell and having an enlarged portion seated on the shoulder, a screw plug embracing the core and threaded into the shell to bear against the enlarged portion of the core and normally effect a tight seating of the enlarged portion of the latter upon the shoulder of the shell, but operable, when retracted, to allow the core to lift to permit carbon deposits in the plug to be blown out through the apertures in the shell, and an apron positioned exteriorly of the shell and overlying the apertures in the wall thereof to preclude broadcast distribution of the blown-off deposits.

1,454,647. CASTING APPARATUS. SAMUEL MCFARLAND, Coatesville, Pa. Filed Jan. 13, 1920. Serial No. 351,095. 7 Claims. (Cl. 22—141.)

1. The combination with an ingot mold, including a vertically disposed tube enclosing a space which is substantially rectangular but oblong, in a horizontal plane; of a bottom sprue plate supporting said mold and having a channel beneath said mold; and a conduit for molten metal extending in said channel and including a hollow brick of refractory material having centrally located within said space, a nozzle orifice which is oblong horizontally, more than twice as long as it is wide, and has substantially parallel side walls; said orifice being disposed with its longest horizontal dimention substantially parallel with the longest horizontal dimension of said mold; whereby molten metal is delivered to said mold in a substantially flat stream, and in coaxial relation with said mold tube.

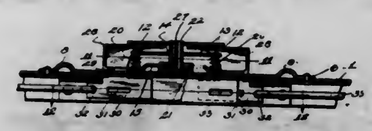
1,454,648. STEAM BOWL FOR CHEMICAL LABORATORIES. JOHN MENZIES, New Haven, Conn. Filed May 27, 1922. Serial No. 564,257. 8 Claims. (Cl. 126—33.)

1. In a steam bowl for chemical laboratories, the combination with a slab, of a funnel-shaped funnel-mount, means for fastening the flaring upper end thereof in the said slab, a funnel installed in the said mount, with a clearance-space between it and the same for the escape of superfluous liquids accumulating around the mouth of the mount, a trap mounted upon the lower end of the mount for the reception of such liquids, and a steam tube mounted in the said trap concentric with the said funnel and rising from the trap thereinto.



1,454,649. METALLIC FENCEPOST. CRAWFORD B. MURTON, Chicago Heights, Ill., assignor to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 18, 1922. Serial No. 530,038. 4 Claims. (Cl. 189—29.)

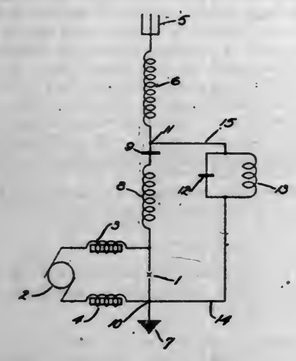
1. A metallic fence post having a row of integral lugs projecting from the front for spacing the wires, and a



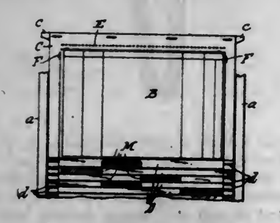
ground anchor in the form of a plate having apertures for receiving said lugs, said lugs projecting sufficiently to penetrate the plate and leave sufficient metal to be riveted over on to the outer surface of the plate, said lugs thereby performing the additional functions of holding the ground anchor in proper location on the post and fastened to it.

1,454,650. WINDSHIELD WIPER. IVAN J. NELSON, Saginaw, Mich. Filed Apr. 5, 1922. Serial No. 549,796. 2 Claims. (Cl. 15—253.)

1. In combination, a wind shield sash having a longitudinal groove in one rail thereof, a revolvable screw shaft within said groove, a corner of said sash being formed with an offset providing a recess, gears connected to said shaft and located in said recess, a traveling nut on said revolvable screw shaft, a spring-pressed wiper carried by said nut, a roller carried by said nut opposite said wiper, said roller traveling upon the outer face of the rail of said sash for the purposes set forth.



1,454,651. TRAVELING-BAG FASTENER. GEORGE PANYITY, Columbus, Ohio. Filed May 13, 1922. Serial No. 560,566. 4 Claims. (Cl. 292—41.)



2. In a bag fastener, the combination with a pair of jaw frames, of a casing carried by one of the jaw frames, a head rotatably mounted in the casing and having opposed surfaces carried thereby, a member yieldably associated with the head, finger pieces slidable in the casing for contact with said member to limit the sliding movement thereof into the casing, catches carried by the other jaw, means slidable with the finger pieces for engaging the catches, and means for rotating the head to cause the cam surfaces to elevate the member, as and for the purpose set forth.

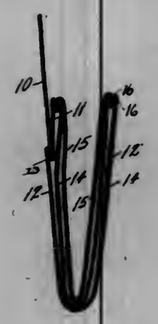
1,454,652. RADIO FREQUENCY TRANSMISSION SYSTEM. HARADEN PRATT, San Francisco, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed Nov. 22, 1921. Serial No. 516,912. 2 Claims. (Cl. 250—17.)

1. In a radio frequency system, a source for generating high frequency oscillations, a load circuit connected in series with the source, a plurality of elements in series with the load circuit and the source, for producing across the terminals of the elements in series a minimum potential drop for the frequency it is desired to use, and a circuit connected directly across the terminals having a maximum impedance for the said frequency.

1,454,653. VISIBLE INDEX OR REFERENCE DEVICE. JAMES H. RAND, Jr., Tonawanda, N. Y. Filed Jan. 5, 1920. Serial No. 349,603. 18 Claims. (Cl. 129—16.)

1. In an index or reference device, the combination of card holders arranged in overlapping order with their horizontal lower margins exposed one above another, transparent cover strips on said exposed margins, staples securing the opposite ends of said cover strips to the holders, and cards retained on said holders with their lower edges under said cover strips between said staples, said staples extending parallel with the lower edges of the holders to stiffen the corners of the holders and cooperating with the opposite ends of the cards to hold the cards in substantial alinement with each other.

6. In an index or reference device, the combination of card holders arranged in overlapping order with corresponding margins exposed one above another, the lower portions of said holders being hinged and adapted to turn backwardly, card-retaining means on said hinged lower portions of the holders, and cards held by said retaining means, whereby the cards can be inverted without removing them from the holders.



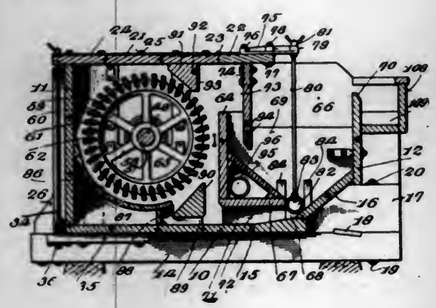
9. In an index or reference device, the combination of card holders arranged in overlapping order with their horizontal lower margins exposed one above another, cards on opposite sides of each holder, retaining means at the lower edge of said holder engaging the lower edges of the cards, said holders having a cut portion for the reception of the upper portion of the card on one side of the holder and another cut portion for the reception of the upper portion of the card on the opposite side of the holder for holding said cards in engagement with the retaining means at the lower edge of the holder.

12. In an index or reference device, the combination of card holders arranged in overlapping order with their

horizontal lower margins exposed one above another, the exposed margins of said holders having colored borders, and cards retained on said holders with their lower margins exposed, said exposed margins of the cards having apertures through which portions of said borders of the card holders are exposed to provide color signals.

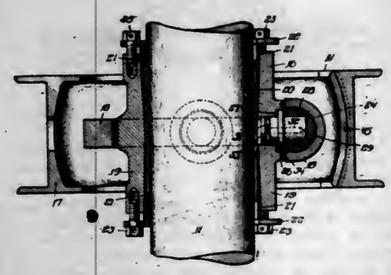
15. In an index or reference device, the combination of card holders arranged in overlapping order with their horizontal lower margins exposed one above another, said card holders having tongues on their rear sides and being nested with one edge of one holder between the body and the tongue of the next holder, said holders having indentations forming a hinged portion on each holder, and said indentation being pressed into the rear faces of the holders whereby said rear faces are smooth and do not interfere with the nesting of the holder.

1,454,654. REVERSIBLE CUFF. GEORGE A. RIPLEY, Dallas, Tex. Filed Mar. 5, 1921. Serial No. 449,644. 3 Claims. (Cl. 2—79.)



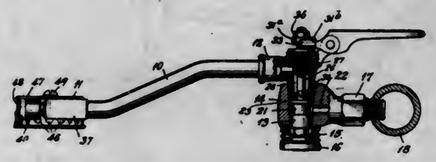
2. A sleeve having a cuff comprising a ply entirely free from the sleeve, said ply having a portion always around the outside of the sleeve and another foldable portion adapted to extend within the sleeve or outside of the sleeve and of said first named portion, a ply between the outside of the sleeve and the inside of the first named portion of the first named ply, stitched to the adjacent free edge of the latter and to the free end of the sleeve, and a third foldable ply stitched at one edge to said free end of the sleeve by the same stitching that attaches the second named ply to the sleeve, the third named ply extending along the foldable portion of the first named ply and stitched to the free edge of the latter.

1,454,655. MOLD FOR FORMING REPAIR PATCHES. JAMES ROBERTSON, Jr., Weehawken, N. J. Filed Feb. 15, 1922. Serial No. 536,649. 6 Claims. (Cl. 18—42.)



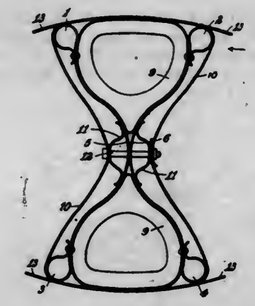
1. A mold for a rubber repair patch with a tread portion and an upstanding flange, the mold comprising laterally separable parts having a recess corresponding in form to the tread and lying partly in the top face of each of the laterally separable parts, one of the laterally separable parts having a convex projection and the other having a concave recess and having its face meeting the bottom of the recess in the top face at a sharp edge, the projection and recess being spaced apart by the amount required for the upstanding flange, means for holding together the laterally separable parts, and a top plate through which pressure is applied for forcing material throughout the mold, substantially as described.

1,454,656. FLOTATION MACHINE. CHARLES E. ROBB and AUGUST SANDBERG, Douglas, Ariz., assignors, by direct and mesne assignments, to William A. Butchart, Denver, Colo. Filed June 13, 1917. Serial No. 174,583. 3 Claims. (Cl. 83—85.)



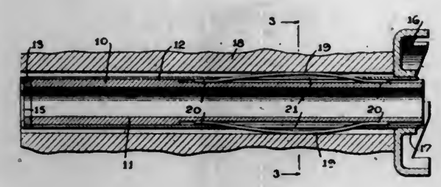
1. A machine of the character described, comprising an agitating chamber that is adapted to receive a liquid, a rotatable agitating device in said chamber, a discharge passageway leading upwardly from the bottom of the agitating chamber to an outlet opening adjacent the horizontal center of the agitating device, said discharge passageway and outlet opening being so disposed with relation to the agitating device that the liquid in said chamber will be lifted by the rapid rotation of said agitating device and discharged laterally through said outlet opening in a direction opposite to that of the rotation of said agitating device.

1,454,657. SELF-ALIGNING PULLEY. WILLIAM C. SMITH, Chicago, Ill., assignor to Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1921. Serial No. 448,881. 2 Claims. (Cl. 64—98.)



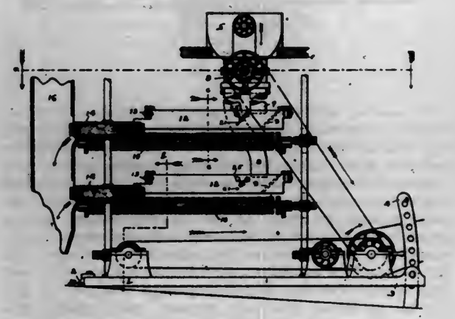
1. Power transmission mechanism comprising, in combination with an axle, a flexible pulley structure including an outer ring member adapted to transmit power tangentially thereof, an intermediate ring member, aligned radial trunnion pins the inner ends of which are seated in recesses carried by the axle and the outer ends of which are journalled in bearings carried by the intermediate member whereby to pivot said member on a diameter thereof, and other aligned radial trunnion pins the inner ends of which are journalled in bearings carried by the intermediate member and the outer ends of which are seated in recesses formed in the outer member whereby to pivot the last mentioned member on a diameter thereof at right angles to the pivoting diameter of the intermediate member, one of the bearings of each pin being capable of self-alignment into a position normal to its member.

1,454,658. FLASH IGNITER FOR GAS BURNERS. OTTO SPAHR, Philadelphia, Pa., assignor to Strause Gas Iron Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1921. Serial No. 447,406. 2 Claims. (Cl. 158—115.)



2. A gas lighter comprising a valve casing connected with a source of gas, a plug rotatably mounted therein, a supply tube carried by and communicating with said plug, a burner carried by said tube, a valve seat in said plug, a valve stem slidably mounted therein and projecting outwardly beyond the same, the projecting end of said stem being externally screw-threaded, a valve at the inner end of said stem for controlling the supply of fuel to said burner, an internally screw-threaded stop adjustably mounted upon said stem for arresting the closing movement of said valve at a distance from said seat whereby a restricted passage is provided for supplying a reduced amount of gas to said burner to maintain a pilot flame thereat, a lock nut for locking said stop in an adjusted position, and a forked handle pivoted on said plug and projecting beneath said stop for actuating said valve and whereby said plug and its associated elements may be pivotally adjusted relatively to said casing.

1,454,659. COMPOUND METAL SPAR. ALBERT P. THURSTON, London, and HAMILTON N. WYLIE, Birmingham, England. Filed Dec. 10, 1919. Serial No. 343,890. 12 Claims. (Cl. 189—37.)

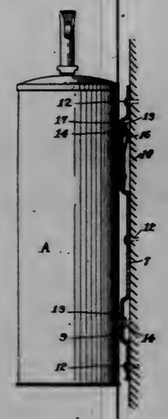


1. A sheet metal structure comprising a plurality of web members connected together in the median plane of the structure and disposed in splayed relationship and forming a number of separate projecting arms in cross section, a tubular member located along the outer edge of each of said projecting arms, and a plurality of reinforcing cross frames disposed at intervals between said projecting arms.

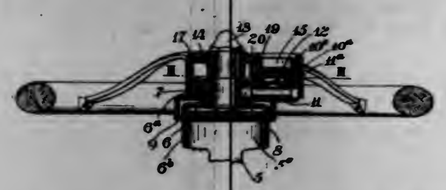
1,454,660. MOUNTING FOR BOBBINS. WALTER I. TUTTLE, Providence, R. I., assignor to Frank Mossberg Company, Attleboro, Mass., a Corporation of Rhode Island. Filed Feb. 5, 1921. Serial No. 442,649. 3 Claims. (Cl. 242—46.6.)

3. In mechanism of the class described, in combination with a bobbin or the like, a rotatable supporting member adapted to enter the bore of the bobbin and support the same to rotate therewith, said supporting member comprising an inner member having a plurality of grooves formed in its surface and an outer metallic sleeve substantially encasing said inner member and having a plurality of slots registering with said grooves, and a plurality of spring members resting in said grooves and pressing outwardly through said slots against the inner surface of said bobbin to prevent relative rotation between said bobbin and said support.

1,454,661. MACHINE FOR MARKING NUTS. JOHN C. WHITE, San Francisco, Calif. Filed Aug. 18, 1919. Serial No. 318,272. 18 Claims. (Cl. 202—37.)



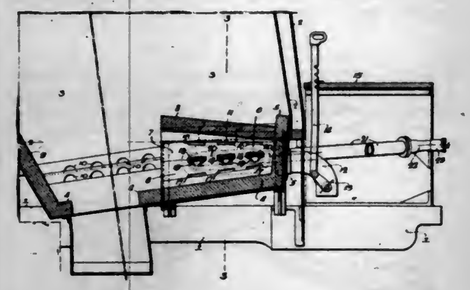
1. A nut marking apparatus comprising a marking mechanism and a conveying channel having a bottom composed of rotating brushes adapted to position the nuts and convey them to the marking mechanism.



1,454,662. SUPPORTING BRACKET. PETER L. WILBUR, Tuckahoe, N. Y., assignor to Ampyr Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 11, 1920. Serial No. 402,923. 2 Claims. (Cl. 248—20.)

1. In a bracket, a plate formed with bulged portions with the extremities of the plate and the portion be-

tween the bulged portions extending in the same plane, openings in the bulged portions having portions of different widths, fingers projecting laterally and forward of the plate, and a detent arranged in the rear of the opening in the bracket for the purpose specified.



1,454,663. STEERING-WHEEL LOCK. FRED E. BAUERMEISTER, Columbus, Ohio. Filed July 25, 1922. Serial No. 577,436. 2 Claims. (Cl. 70—129.)

1. Locking means for the steering wheel of a motor vehicle comprising, in combination, a cap for the steering column having a socket bolt receiving hub, means for securing said cap to the steering column, a lock base member fitting over said cap concealing the cap securing means and carrying a lock bolt adapted to be thrown radially with reference to the steering column into a socket of the socketed cap, said lock base member also carrying a rotary cam member operably connected with the lock bolt, a steering wheel having a spider provided with a cavity, a key operated cylinder lock in said cavity for actuating said cam member, said cylinder lock having its axis standing at right angles to the aforesaid bolt and confined and held between the spider and the lock base, concealed means for connecting the lock base and the spider, said spider having a wall concealing the outer end of said bolt, and means for securing the spider and lock base to the steering rod operating shaft.

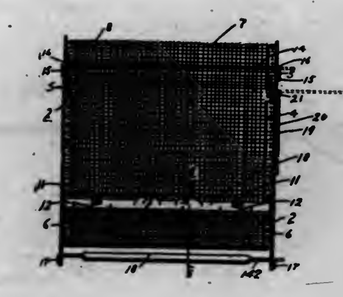
1,454,664. POWDERED-FUEL BURNER. HERMANN BLEIBTREU, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1920. Serial No. 377,791. 6 Claims. (Cl. 110—28.)

4. The combination in means for burning powdered fuel, of a casing forming a combustion chamber open at one end only and flaring towards said end; a series of fuel nozzles at each side of the chamber and communicating therewith; air ports communicating with the chamber above and below the fuel nozzles; air chambers with

which the air ports communicate; means for supplying the chambers with air; and means for feeding powdered fuel to the nozzles.

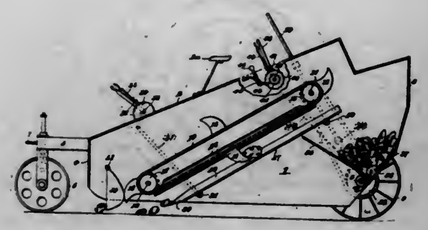
1,454,665. KNIFE LOCK. JOHN BOBEK, Trevorton, Pa. Filed Sept. 22, 1921. Serial No. 502,347. 1 Claim. (Cl. 30—10.)

In a knife comprising a handle having a blade pivotally connected thereto, the said blade having a rectangular bore open at the pivoted end of the blade, a rectangular bolt slidable in said bore adapted for projecting into the handle when the blade is open with the bolt positioned at the rearward limit of its movement, the blade having a longitudinal slot in the back thereof communicating with said bore, a squared pin slidable in said slot and carried by the bolt, a knurled finger engaging knob upon the outer end of the pin and a position retaining spring upon the pin between said knob and the back of the blade when the device is assembled.



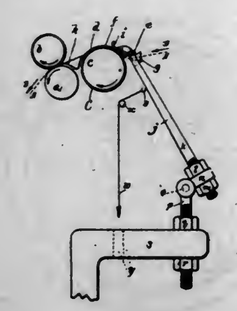
1,454,666. BUCKLE. GEORGE T. BRANNIGAN, Bridgeport, Conn., assignor to The Connecticut Web and Buckle Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 26, 1922. Serial No. 563,778. 4 Claims. (Cl. 24—191.)

1. A buckle comprising a frame having spaced front and back bars, and a lever pivoted to the front bar provided with a front portion and a tongue extending forwardly under the front of the lever from the pivot toward the back bar when the lever is in securing position and terminating in a plain edge, said tongue being bent laterally at a distance from said plain edge to



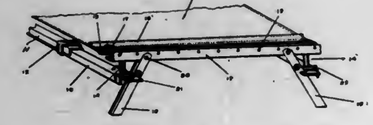
form a surface adjacent the rear bar extending at substantially right angles to a line joining the front and rear bars when the lever is in securing position, said surface being of such a length that the bend and plain edge are on opposite sides of this line and the web is clamped against the rear bar by said surface.

1,454,667. INSECT TRAP. JOHN CLARK BROWN, Minneapolis, Minn. Filed July 31, 1919. Serial No. 314,489. 1 Claim. (Cl. 43—118.)



A collapsible insect trap comprising a wire fabric folded transversely to form side walls, the edges of said walls being folded inwardly and upwardly and hinged together with openings for the passage of insects between them, said fabric folding to a substantially flattened form, panels having inwardly turned edges and tongues formed thereon between which and said edges the ends of said walls are inserted, and bars passing through said panels at the top and bottom for securing them and said fabric together.

1,454,668. STONE-GATHERING MACHINE. JOHN BUGLA, Saginaw, Mich. Filed Oct. 20, 1921. Serial No. 509,023. 2 Claims. (Cl. 55—17.)

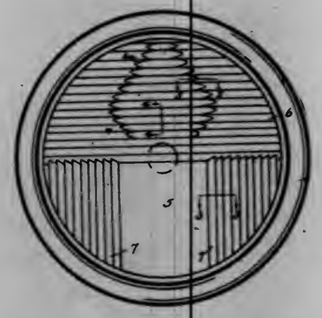


2. A stone gathering machine embodying a body, front and rear supporting wheels therefor, endless conveyors supported in the body, driving connections between the rear wheels and the endless conveyors, an angularly adjustable chute disposed beneath the endless conveyors, and weighted arms arranged transversely of the machine forwardly of the conveyor and chute.

1,454,669. MECHANISM FOR DRAWING OR DRAFTING FIBROUS MATERIAL. ARTHUR CECIL BUTLER, Boston, Mass. Filed Apr. 13, 1921. Serial No. 461,139. 26 Claims. (Cl. 19—130.) (Granted under the provisions of the act of March 3, 1921, 41 Stat. L., 1313.)

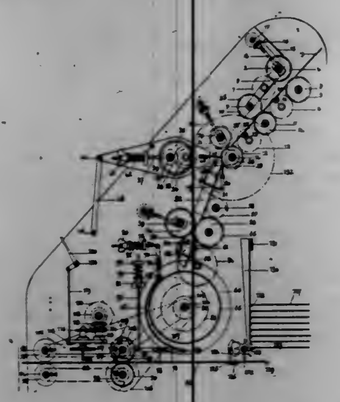
7. In a drawing mechanism, the combination with means for supporting and feeding a roving, of a cap cooperating with said supporting means and exerting pressure along a length of the roving, said pressure being greater at one end than at the other end of said length.

1,454,670. AUTO CAMP BED. FRED H. DUDLEY, Lincoln, Nebr. Filed Aug. 24, 1922. Serial No. 584,046. 2 Claims. (Cl. 5—112.)



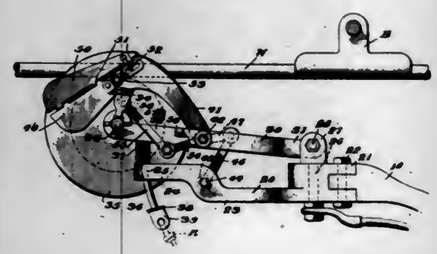
1. A bed corner including an end rail of angle iron, the vertical wall of the angle iron being on its outer side with reference to the bed and the horizontal wall being on the lower side of the angle iron, a side rail of angle iron having its vertical wall on the outer side and its horizontal wall on the upper side of the angle iron rail, said end rail being spaced from and secured to said side rail, an angle iron leg pivotally secured to the vertical wall of said end rail at a point spaced from the extremity of the end rail, one of the walls of the angle iron leg being on the side of the leg adjacent the side rail, an abutment plate secured to the horizontal wall of the side rail and in line with the path of said pivoted leg, and a notch in said abutment plate, said notch having substantially the width of angle iron wall and being slightly displaced from the path of the pivoted leg whereby the binding action of the leg on its pivot will hold the leg yieldably latched in said notch.

1,454,671. HEADLIGHT. JOHN M. DUNLEA, Los Angeles, Calif. Filed June 1, 1922. Serial No. 565,153. 4 Claims. (Cl. 240—48.4.)



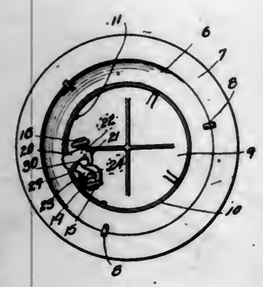
1. A headlight lens comprising a glass plate, a continuous series of horizontal, straight, parallel, wedge shaped prisms covering the upper half thereof, the thicker edge of each prism being continuous and directed downwardly, the angle of the central portion of certain of said prisms being more acute than that of the end portions of the same prisms and merging thereinto, plane parallel surfaces upon the two sides of the plate at the middle portion of the lower half thereof extending from the lowest horizontal prism to the lower edge of the plate, two series of vertical, straight, parallel, wedge

shaped prisms extending from the lowest horizontal prism to the lower edge of the plate, said series of vertical prisms being separated by said plane surfaced portion, the thicker edges of the vertical prisms being directed



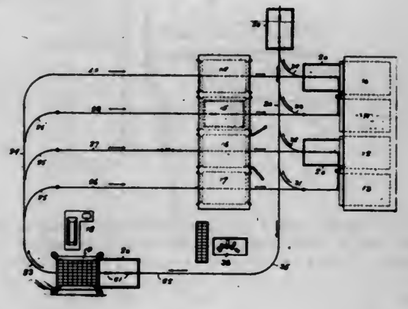
toward the vertical diameter of the plate, and the surfaces of the vertical prisms being each formed upon the arc of a circle tangent to the plane of the plate at the base of the prism.

1,454,672. MACHINE FOR THE MANUFACTURE OF BREAD ROLLS. HENRY PÉTAZ, Paris, France. Filed Dec. 5, 1922. Serial No. 605,068. 4 Claims. (Cl. 107—4.)



4. A machine for the manufacture of bread rolls comprising in combination a hopper for the dough, a pair of rolling cylinders, means for rotating said cylinders, means for adjusting the distance between said cylinders, an inclined scraper plate for receiving the dough rolled between the cylinders, circular revolving knives adapted to cut up the dough sheet into parallel strips, means for rotating said revolving knives, a receiving cylinder, an inclined scraper plate adapted to receive said dough strips from the revolving knives and to deliver them upon said receiving cylinder, a pressing cylinder adapted to press the dough strips upon the receiving cylinder, a transverse knife blade adapted to cooperate with the receiving cylinder for cutting up the dough strips into pieces, a supporting link pivoted at one end to a fixed point, a knife holder for supporting said knife blade pivotally connected to the free end of said link, a driving eccentric, a spring connecting between said driving eccentric and the knife holder, an inclined scraped plate adapted to receive the pieces of dough cut up by said knife blade, a pair of rolling cylinders between which said dough pieces are rolled, an inclined scraper plate below said rolling cylinders, a rotating drum a stationary arcuated plate, means for resiliently holding said arcuated plate at an adjustable distance from the periphery of the drum, a flat receiver adapted to receive the rolled up dough pieces delivered by the drum, driving means for feeding said flat receiver and means actuated by said driving means for giving a crescent shape to the rolled up pieces of dough.

1,454,673. TROLLEY GUARD. MILTON FIEL, Meyersdale, Pa. Filed July 15, 1922. Serial No. 575,289. 27 Claims. (Cl. 191—77.)



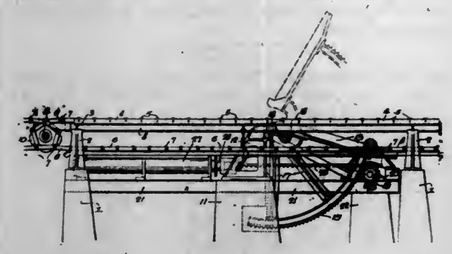
1. In a trolley, a relatively fixed substantially horizontally disposed base fork, a vertically swingable fork pivotally mounted at one end thereof to one end of said base fork, extending above said base fork and spaced therefrom in substantially vertical alinement therewith, a trolley wheel mounted in the vertically swingable free end of said pivoted fork, and means interposed between the free end of said pivoted fork and said base fork normally forcing the free end of said pivoted fork away from said base fork.

1,454,674. METER BOX. SAMUEL I. FLOURNOY, Kansas City, Mo., assignor to Walter S. Dickey, Kansas City, Mo. Filed Feb. 13, 1922. Serial No. 536,285. 2 Claims. (Cl. 137—13.)

1. A meter box cover comprising a disk having depending members on its under side provided with transverse slots, a bar in the slots, the cover having a recess facing the bar and an opening spaced from the recess but also facing the bar, a pivoted lever having a trunnion fitting into the recess and having a meter box engaging end, a projection at right angles to the lever, and a swinging finger having a trunnion projecting through the opening in the cover and provided with a key-engaging portion, the finger being movable in one direction to cause the locking lever to move into functional position and movable in another direction to cause the lever to move in a non-functional position, the finger and lever being held in co-operative positions by the bar.

1,454,675. BAKER'S INSTALLATION. JOHN M. GANTVOORT, Beacon, N. Y. Filed Mar. 25, 1922. Serial No. 546,758. 5 Claims. (Cl. 107—56.)

1. In a baker's installation, a battery of ovens, each adapted to receive a series of removable, superposed, baking shelves, proofing chamber means, a loading table, an unloading table, racks adapted to support in superposed position a group of baking shelves for an oven, trolley means for overhead suspension of the racks, and an overhead track system for the rack trolleys, said track system comprising a circuit of the loading table, proofing chamber means, ovens, unloading table, and thence to the starting point



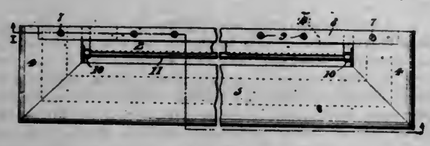
3. In a baker's installation, an oven adapted to receive a series of superposed, removable oven shelves, a rack adapted to support said shelves in superposed position substantially corresponding to that occupied by the shelves in the oven, an overhead suspension system for the rack by which the latter may be shifted to position in front of the oven, and means for tilting the rack to bring the oven shelves thereon into register with the shelf support of the oven, and to facilitate the delivery of the shelves to the oven.

1,454,676. PROCESS OF MANUFACTURING ORNAMENTAL PAPER. MANUEL A. T. GILLBEE, Philadelphia, Pa., assignor to A. M. Collins Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1921. Serial No. 492,175. 4 Claims. (Cl. 91—67.9.)

1. The process herein described of producing ornamental paper, said process consisting in first applying to the surface of the paper a liquid bronze, allowing the paper to dry, then applying a color over the surface of the paper previously prepared, then printing on this prepared surface designs in various colors, diffusing the body color and the colors of the designs, and finally drying the coating.

4. The process herein described of producing ornamental paper, said process consisting in first applying to the surface of a sheet of paper, cardboard, or the like, a liquid bronze, allowing the paper to dry, coating the bronze surface with a color suitably distributed, diffusing the color, drying the coating, calendering the paper, then embossing the sheet, and finally tipping the high spots with bronze, or color.

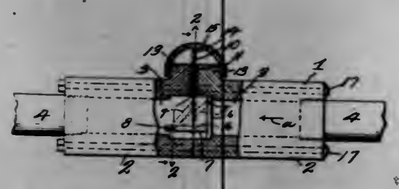
1,454,677. INSPECTION LIFT. CHARLES L. HUSTON, Coatesville, Pa. Filed June 3, 1920. Serial No. 386,369. 2 Claims. (Cl. 80—42.)



1. The combination of a table for supporting rolled plates; means for carrying the plates over the table; a series of arms forming an inspection lift, each arm having toothed segments; a transverse shaft having pinions meshing with the teeth of the segments; and means for turning the shaft to raise the arms.

1,454,678. POCKET MIRROR. WALTER KRUEGER, Chicago, Ill., assignor to Harry O. Rugh, Chicago, Ill. Filed Aug. 30, 1919. Serial No. 320,787. 2 Claims. (Cl. 45—18.)

1. In a mirror device, the combination with a metallic disc, coated on one side with a coating of high reflecting power, a protecting disc cover of soft material, and a main disc cover, said protecting disc cover being placed intermediate the said main cover and the said metallic disc, and a single rivet to so secure the said disc and covers together near an edge thereof, that said covers may be rotated edgewise on the said rivet.

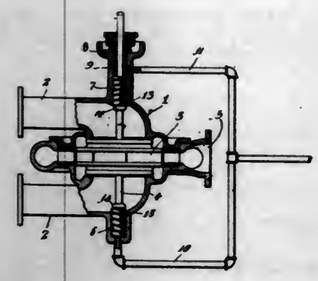


1,454,679. CURTAIN-SUPPORTING ATTACHMENT FOR WINDOW FRAMES. JOSEPH KULCZYCKI, Chicago, Ill. Filed Jan. 19, 1922. Serial No. 530,414. 1 Claim. (Cl. 156—13.)

In combination with a window frame including a head casing provided with an open top socket spaced inwardly of the ends of said head casing, a curtain supporting frame substantially U-shaped in plan and including end members arranged with their free ends disposed to abut a wall surrounding said frame, a metallic strip having its

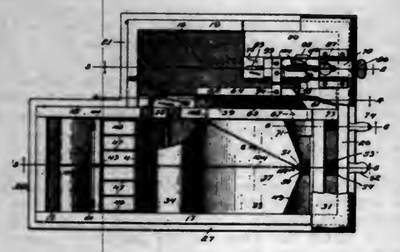
ends fastened upon the upper surface of said end members and rigidly connecting the latter members, a block carried by the under surface of said strip adapted to be received within the socket of the said casing head, and curtain pole supporting brackets upon the said curtain supporting frame.

1,454,680. PRESSURE VALVE. CARLO LALAMA, Beaver Falls, Pa., Filed Mar. 8, 1922. Serial No. 541,981. 1 Claim. (Cl. 67—115.)



A pressure control valve comprising a casing, a gravity actuated horizontally pivoted disc valve in said casing, said disc valve being normally held in raised open position by the flow of fluid through the valve, a member horizontally pivoted in the valve and normally held in raised position by engagement of the free end thereof with the disc valve, said member forming means for holding the disc valve against raising upon loss of pressure and the resumption of pressure by assuming a horizontal position with its free end in engagement with one side of the disc valve, a flexible member connected to the pivoted member at a point spaced from its pivotal point, said flexible member extending through an aperture in the casing, a removable cap carried by the casing and housing the aperture therein, said flexible member having its outer ends connected to the removable cap, said flexible member forming means for limiting the pivoted member in a horizontal position upon a downward movement thereof.

1,454,681. VEHICLE CURTAIN CONSTRUCTION. HENRY LATIFF, Middlesboro, Ky. Filed Dec. 19, 1921. Serial No. 523,400. 3 Claims. (Cl. 296—140.)

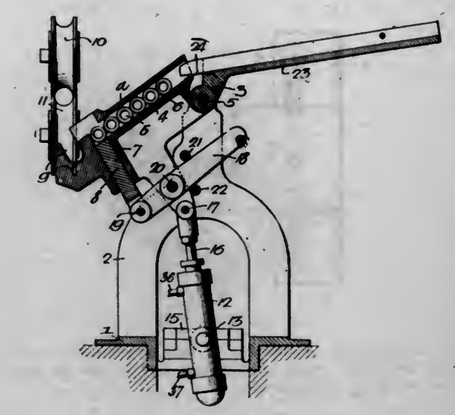


1. A vehicle top comprising a plurality of oppositely disposed tracks, each of said tracks formed of a pair of spaced and opposed trackway sections adapted to be secured with the lower face of a vehicle top, each of said sections having its outer end curved downwardly, a curtain associated with each track, a rod carried by the upper end of each of the curtains and provided with a roller at each end traveling in the track and further provided with a pair of eyes, means for fastening said curtains in side closing positions, and a pair of automatically windable spring elements, having their upper ends anchored with the vehicle top and the lower ends connected to the pair of eyes and windable on themselves for automatically returning the curtain to inoperative position when the curtain is released.

1,454,682. SHAFT BEARING. WILLIAM ROBERT LAYNE, Richmond, Calif., assignor to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Aug. 15, 1921. Serial No. 492,365. 7 Claims. (Cl. 64—10.)

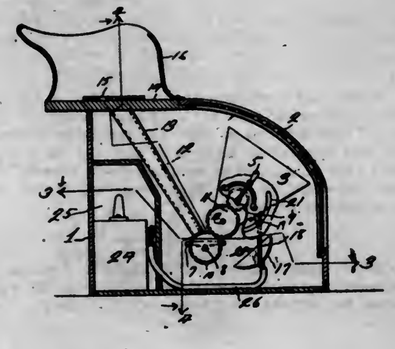
1. A shaft bearing of helical formation having a fixed end and a freely rotatable end and providing a continuous helical oil channel between the convolutions.

1,454,683. GAME APPARATUS. ROBERT J. MARTIN, Oswego, N. Y. Filed Feb. 4, 1922. Serial No. 534,161 10 Claims. (Cl. 46—61.)



1. In a game apparatus, a cabinet formed with a main and an auxiliary compartment, means to provide an outlet leading from the main to the auxiliary compartment, means to provide an inlet leading to the main from the auxiliary compartment, playing devices within said cabinet and delivered to and from the main from and to the auxiliary compartment, a slidable element for directing and releasing said devices for passage thereof through said inlet, means for delivering said devices successively to said main compartment when released by said element, means for projecting said devices when delivered to said main compartment, a coin controlled mechanism for effecting the operation of said element, and means operated from said mechanism to effect the discharge of said devices from said main to said auxiliary compartment.

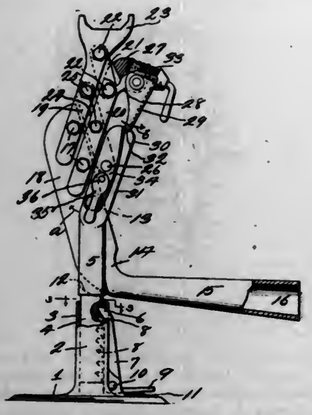
1,454,684. BALL-PLACING DEVICE FOR TUBE MILLS. JAMES H. MATHESON, Reading, Pa. Filed Apr. 4, 1922. Serial No. 549,486. 9 Claims. (Cl. 78—83.)



6. The combination of a standard; a carrier pivotally mounted on the standard; means for raising and lowering the carrier, said carrier having a channel for balls; a pocket at the end of the carrier; a slide adapted to select one of the balls from the channel and lift the ball and allow it to roll into the pocket; and a lever pivoted to the

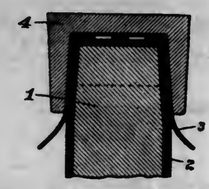
carrier and having one arm connected to the slide, the other arm of the lever extending between two bearings

on the standard so arranged that when the carrier is raised, the lever will be moved on its pivot and will elevate the slide.



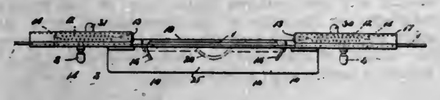
1,454,685. EGG-CANDLING DEVICE. PAUL MUELLER, Ashton, Iowa. Filed May 26, 1921. Serial No. 472,651. 3 Claims. (Cl. 99—6.)

1. An egg candling device comprising a casing, an inclined light passage in said casing, a reflecting cone having its apex end disposed adjacent the lower end of the inclined passage, said reflecting cone being pivotally mounted in the casing, a convexed glass disposed adjacent the upper end of said cone, a mirror disposed below the apex end of the cone and the lower end of the light passage and means for simultaneously adjusting the mirror upon a movement of the reflecting cone.



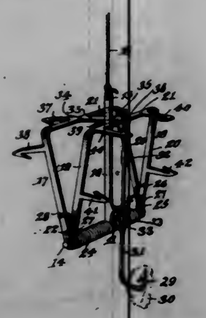
1,454,686. VEHICLE JACK. PETER IVARSEN NAMTVEDT, Terril, Iowa. Filed Feb. 14, 1922. Serial No. 536,584. 3 Claims. (Cl. 254—122.)

1. A vehicle jack comprising a bifurcated standard, a lever pivoted in the bifurcation of said standard, a parallel link device carried by said lever and having one of its ends adapted to be forced upwardly upon a downward movement of the lever, an axle engaging element carried by the upwardly moved end, and a spring actuated dog



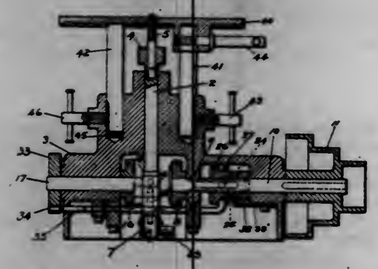
carried by said link construction and cooperating with a notch in the standard for holding the link construction in extended position.

1,454,687. METHOD OF MAKING ACIDPROOF CONTAINERS. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Feb. 10, 1922. Serial No. 535,645. 5 Claims. (Cl. 18—56.)



1. The herein described method of making rubber acid proof containers and the like which consists in applying sheet rubber to a mandrel or core to form the bottom and sides, applying over the bottom and two of the sides a fibrous layer, and vulcanizing the article in an open heat while pressing said fabric against the said bottom and sides.

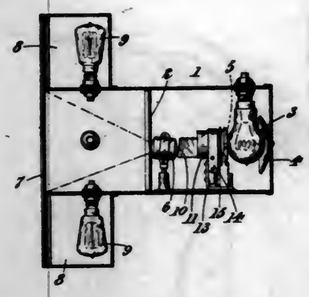
1,454,688. HOLDING, ADJUSTING, AND ALIGNING APPARATUS FOR LENSES FOR EYEGLASSES AND THE LIKE. KARL W. POLLARD, Boston, Mass. Filed Nov. 25, 1921. Serial No. 517,834. 4 Claims. (Cl. 29—80.)



1. Adjusting devices for a pair of lenses, while mounted in a frame comprising a slide adapted to be fitted to a lens aligning and testing instrument, means to hold said frame and lenses, in combination with means permitting the adjustment of each lens in said aligning and testing at the will of the operator.

1,454,689. FISHHOOK. FREEMAN A. QUINTAL, Holyoke, Colo. Filed Sept. 19, 1922. Serial No. 589,118. 4 Claims. (Cl. 43—89.)

2. A device for the purpose set forth comprising a supporting element having a laterally extending stop lug, a pair of oppositely disposed and spring controlled shiftable grappling or snaring members pivotally supported from the lower end of said element, a locking arm carried by one of said members and adapted to project over the other, and a lengthwise shiftable fish hook extending through said lug and one end of said arm when extended for locking said members against the controlling action of their springs until the hook is shifted clear of said arm, said hook having spaced enlargements engaging with said lug to limit vertical movement of the hook in either direction with respect to said element.

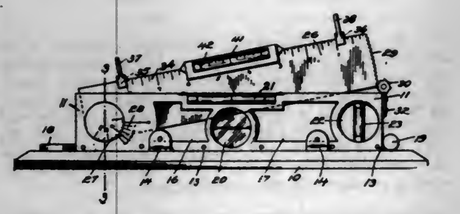


1,454,690. FILING MACHINE. FRANK A. REINHARD, Wilmington, Mass., assignor to Boston Tool and Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1920. Serial No. 366,375. 7 Claims. (Cl. 29—76.)

1. A filing machine comprising, in combination, a file holder, a rotary shaft supporting said holder, a gear fast on said shaft, mechanism including a train of gears for reciprocating said shaft, and means for relatively moving said gear and one of the gears of said train to interrupt the operation of the train and to bring said gears into mesh with each other, whereby the reciprocating motion of said shaft is interrupted and a rotary motion is transmitted to said shaft.

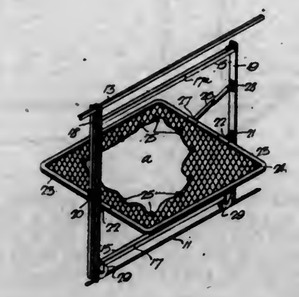
1,454,691. ADVERTISING SIGN AND THE LIKE. STUART F. J. RIDDELL, Ravenscourt Park, and EUGENE FORSTER, Richmond, England. Filed Jan. 17, 1921. Serial No. 437,744. 9 Claims. (Cl. 88—24.)

1. An advertising sign forming a complete unit comprising in combination a chamber, a translucent screen at one end thereof, a kaleidoscope within said chamber, automatic means to cause intermittent rearrangement of the pattern producing particles, and means to project



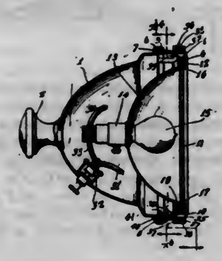
the kaleidoscopic pattern on to the screen comprising light producing means at one end and a lens at the other end of the kaleidoscope.

1,454,692. TYPE BAR FOR STENOGRAPHIC TYPEWRITERS. EDNA G. ROBESON, Atlanta, Ga. Filed Aug. 28, 1922. Serial No. 584,699. 6 Claims. (Cl. 197—9.)



1. A type bar comprising, in combination, a bar supporting member, a type bar supported thereon, a plurality of type mounted on said type bar, selective means upon said member to move said type bar to bring a desired type to a printing position, means whereby continued movement of said selective means moves said type to make an impression.

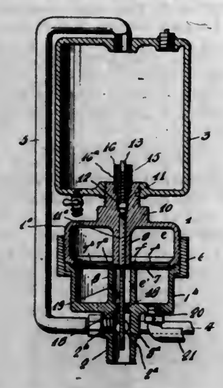
1,454,693. MEASURING INSTRUMENT. FRANK F. SCHLATTAU, Los Angeles, Calif. Filed Aug. 27, 1921. Serial No. 496,084. 8 Claims. (Cl. 33—88.)



1. In a device for the purpose set forth a base, a frame disposed lengthwise thereof, a rule blade within and pivoted to the frame for swinging movement in a vertical plane, spirit levels extending lengthwise of the frame and blade, a vertical spirit level mounted in the frame, a spirit level disposed transversely of the base, and a sighting device on said blade.

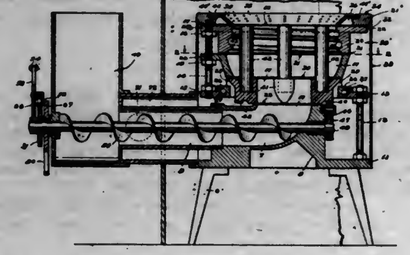
1,454,694. LEATHER DRIER. WALTER M. SCHWARTZ and ELWOOD B. AYRES, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,588. 6 Claims. (Cl. 34—40.)

4. The combination in a drying apparatus, of a casing enclosing a drying chamber and a circulating chamber; fans for circulating air in the chambers; means for heating the air in circulation, each side wall of the drying chamber having vertical slots therein, the slots at one side alternating with those on the opposite side; a series of upper and lower rails at each side of the apparatus, the rails extending through the slots in the casing; frames guided by the rails, the frames, when located within the drier, closing the slots; and a carrier pivotally mounted on each frame, said carrier being provided with means by which a skin to be dried can be attached thereto.



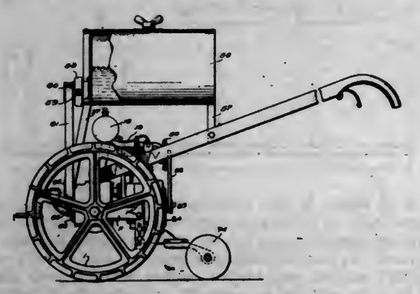
1,454,695. SPOTLIGHT. JAMES R. SHIRREFFS, Los Angeles, Calif.; James R. Shirreffs, jr., administrator of said James R. Shirreffs, deceased. Filed June 7, 1921. Serial No. 475,651. 8 Claims. (Cl. 240—41.)

1. In a device of the nature disclosed, a reversible lamp housing having opposed ports at its portion of greatest diameter and positioned coincident to the vertical axis of the housing whereby in either position of the housing one of the ports functions as a means for draining water from the interior of the housing, and cover plates spaced from and bridging over the respective ports.



1,454,696. OILING DEVICE. ROY H. STULL, Sunbury, Pa., assignor of three-tenths to Norman Suhrie, Sunbury, Pa. Filed Oct. 26, 1921. Serial No. 510,423. 7 Claims. (Cl. 184—56.)

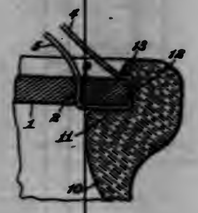
1. In an oiling device, a reservoir having an outlet, a normally closed valve controlling said outlet, a casing, a wall dividing said casing into two compartments, said compartments being connected by a restricted orifice and by a normally closed port, and said wall being movable in response to relative changes in pressure in said com-



partments to open said valve and port, and means for causing fluctuations in pressure in one of said compartments.

1,454,697. UNDERFEED FURNACE. MERLE J. WIGHTMAN, Seattle, Wash. Filed May 26, 1919. Serial No. 299,805. 9 Claims. (Cl. 110—45.)

1. An underfeed furnace, comprising a circular fire pot, means for feeding fuel upwardly into said fire pot and means for effecting the depression within said fire pot of the peripheral portion of the fuel.

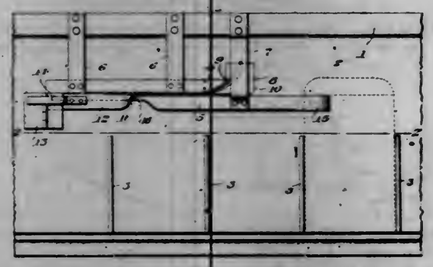


1,454,698. POWER TRACTOR. ALBERT G. BYERLEY, Salem, Ohio. Filed Feb. 17, 1921. Serial No. 445,644. 9 Claims. (Cl. 180—19.)

1. In a two-wheeled power vehicle, an axle, traction wheels mounted thereon, a housing for said axle, said housing forming the frame of the vehicle, a pair of

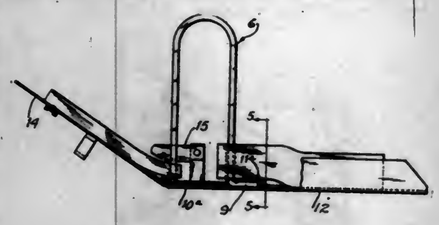
brackets secured to said housing and projecting therefrom, an engine, means for removably securing said engine to said brackets, said engine including a crank shaft, a pinion carried by said crank shaft, a drive shaft, a gear carried by said engine and meshing with the pinion on the crank shaft of the engine, means for detachably connecting said gear with said drive shaft, a worm mounted on said drive shaft, a worm gear loosely mounted on said axle, a clutch keyed to said axle and adapted to engage said worm gear, and means for operating said clutch.

1,454,699. BOTTLE OR JAR SEAL. WILLIAM CHAFFIN, Huntington, W. Va., assignor to Harold B. Crowell and C. C. Crowell, both of Plattsburg, N. Y. Filed May 22, 1922. Serial No. 562,656. 7 Claims. (Cl. 215—51.)



1. A bottle seal comprising a disk having an opening extending therethrough, a string extending through said opening and having end portions arranged to be exposed on the outer side of the disk, and a filler of cementitious material both hermetically sealing said opening and securing the string therein.

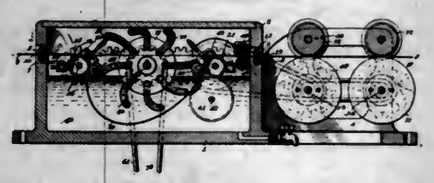
1,454,700. COMPOSITION FOR AND METHOD OF MANUFACTURING SOUND AMPLIFIERS. PASCAL CHARUEST and HENRI HORMISDAS DUCHESNE, Montreal, Quebec, Canada, assignors to Benoit and Mathieu, Montreal, Quebec, Canada. Filed Dec. 24, 1921. Serial No. 524,787. 4 Claims. (Cl. 106—39.)



1. A composition for the construction of resonant sound amplifiers, consisting of pulverized wood, starch and colophony.

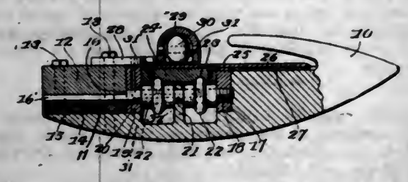
1,454,701. ENVELOPE-CLOSING MEANS. FRANK CLARKE, Waco, Tex. Filed Apr. 30, 1921. Serial No. 465,677. 3 Claims. (Cl. 120—6.)

3. A device of the class described comprising a conveyor belt, a holding member having its forward end curving upwardly and its rear part cut away to leave a reduced flat part, a folding member associated with the holding member, said folding member having a knife edge at its front end and an upwardly extending flange having an outwardly curved front edge and a downwardly and outwardly intermediate twisted part and a spring actuated hinged member at the rear end of the folding means.



1,454,702. FILING DEVICE. THOMAS JAMES CLARKE, Jamestown, N. Y. Filed May 26, 1921. Serial No. 472,707. 8 Claims. (Cl. 129—24.)

6. In a filing device, a sheet holder including spaced parallel legs to extend through spaced holes in the sheet, said legs having feet to rest on a base, and a sheet support associated with said feet to space the sheets slightly above them to prevent accidental displacement or tearing of the sheets.

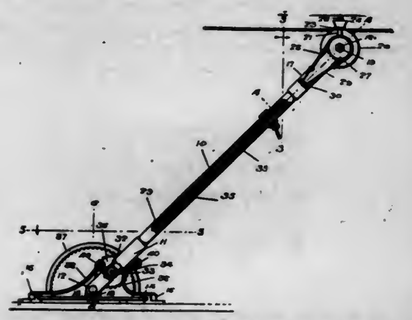


7. In a filing device, a drawer having a downwardly and forwardly movable hinged door, and an arched sheet-holding rack connected to the bottom of said drawer with one of its legs adjacent the hinge line of said door, whereby the sheets held by the inner leg of said rack may be slid along the crown of the arch onto the outer leg and supported by the door when open.

1,454,703. FILM-CLEANING APPARATUS. MAXWELL COHEN, Brooklyn, N. Y., assignor to American Film Cleaning Machine Company, Brooklyn, N. Y., a Copartnership composed of Maxwell Cohen, Henry Levy, and Maxwell Weinberg. Filed Feb. 7, 1921. Serial No. 443,073. 4 Claims. (Cl. 15—100.)

1. In a film cleaning apparatus, a tank adapted to contain a cleaning liquid, a revoluble scrubber mounted in the tank and having spaced flexible scrubbing strips, feeding devices in the tank at opposite sides of the scrubber, said feeding devices themselves feeding the film through the tank in loop formation, with the loop depending into the liquid below the scrubber, and a smooth roller below one of the feeding devices and against which the film is pressed by the flexible scrubbing strips of the scrubber.

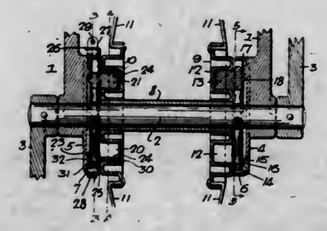
1,454,704. CUTTER AND GUARD FOR MOWERS. WILLIAM N. COLEMAN, Jr., Culverton, Ga. Filed Dec. 15, 1921. Serial No. 522,535. 1 Claim. (Cl. 56—298.)



In a cutting mechanism for mowers, a guard finger having a rabbet in its rear portion, a support for the

finger secured within the rear portion of the rabbet, a vertical bar secured in the forward end of the rabbet, a second vertical bar secured in the rabbet rearwardly of the first vertical bar, a plate secured in the rabbet beneath the support and having transversely extending recesses, a shaft disposed in one of the recesses and through one of the said vertical bars and secured within the other vertical bar, a support for the shaft between the said bars, a peripherally ribbed roller on the shaft between the last-named support and each vertical bar, a slidable bar having its lower face grooved to receive the ribs of the rollers, and a roller supported above and engaging with the slidable bar.

1,454,705. METHOD OF EXTRACTING OIL. FRANK P. CROFT, Philadelphia, Pa. Filed June 25, 1917, Serial No. 176,836. Renewed Sept. 12, 1922. Serial No. 587,847. 2 Claims. (Cl. 87—6.)

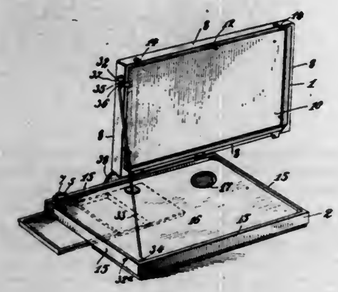


1. The method which consists in coarsely grinding oil-bearing material; heating said material to remove practically all of the moisture therein; grinding said material to a relatively fine form; and then subjecting said material to a relatively high pressure to express the oil therefrom.

1,454,706. TROLLEY-POLE SAFETY DEVICE. GEORGE W. DAGUE, Oklahoma, Okla. Filed May 12, 1922. Serial No. 560,425. 10 Claims. (Cl. 191—73.)

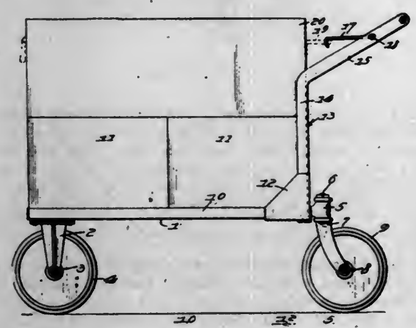
1. A trolley pole mounted for swinging movement to different inclined positions, a member relatively to which the pole is movable, upstanding guiding means carried by the upper end of the pole, and means for maintaining the guiding means in upstanding position in the different inclined positions of the pole operated by the movement of the pole relatively to said member.

1,454,707. COASTER BRAKE. CLARENCE M. DAVIS, Cape May, N. J., assignor, by mesne assignments, to A. Mecky Company, a Corporation of Pennsylvania. Filed July 14, 1921. Serial No. 484,656. 16 Claims. (Cl. 192—6.)



2. The combination in a coaster brake of a wheel having two plates; a crank shaft; a clutch operative to connect one of the plates to the shaft when the latter is turned in one direction; and a second clutch for connecting the second plate to the shaft when it is turned in the opposite direction.

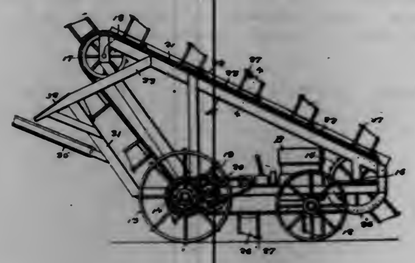
1,454,708. MANUFACTURE OF CARBON BISULPHIDE. ALBERT ERNEST DELPH, Wokingham, England, assignor to Courtaulds Limited, London, England. Filed Mar. 31, 1922. Serial No. 548,533. 2 Claims. (Cl. 23—10.)



1. In making carbon bisulfid by processes involving a treatment with sulfur in a retort at about a red heat, the improvement which comprises carrying out such treatment in a retort composed of a ferrous metal having a firmly adherent coating of metallic aluminum.

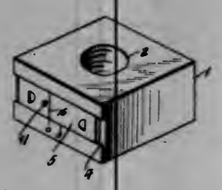
1,454,709. ARTIST'S SKETCH BOX. GEORGE F. DOUGLAS, New York, N. Y. Filed Oct. 18, 1919. Serial No. 331,553. 9 Claims. (Cl. 41—4.)

1. An artist's sketch-box comprising a panel-frame and a palette-frame, means connected to said frames adapting one to pivotally engage the other in a plurality of positions relatively to the other, said means comprising a pair of leaves, one leaf having a pintle and the other a knuckle adapted to embrace the pintle.



1,454,710. TRUCK. CHARLES M. DRINKWATER, Kokomo, Ind., assignor, by mesne assignments, to The Mechanical Development Company, a Corporation of Delaware, and C. M. Drinkwater, New Rochelle, N. Y. Filed May 2, 1921. Serial No. 466,245. 5 Claims. (Cl. 280—49.)

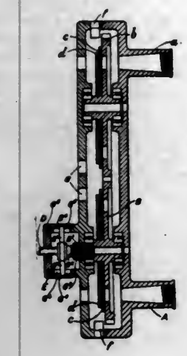
1. A truck including a platform mounted on supporting wheels and provided with a short upwardly extending



border flange, and handle bars secured to the platform and forming grooves extending upwardly from said platform and arranged in alignment with the corner recesses formed by said flange at one end of the platform.

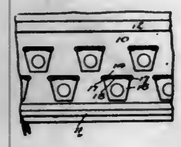
1,454,711. EXCAVATING MACHINE. FREDERIC J. DUSSAULT, Butte, Mont. Filed May 5, 1920. Serial No. 379,127. 1 Claim. (Cl. 198—11.)

An excavating machine comprising a movable support having front and rear axles, wheels mounted on said axles, a substantially triangular shaped frame having one side horizontally mounted on the said axles with one end thereof extending beyond the front wheels and a second side extending upwardly and outwardly beyond the rear wheels, vertical supports connecting the third side with the two said sides, a plurality of sprocket wheels mounted at each corner of the frame, endless chains trained around said sprocket wheels, spaced buckets carried by said chains, an endless belt mounted over the chains beneath the buckets, and means for rotating the chains.



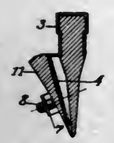
1,454,712. NUT LOCK. JULIUS D. ELLIS, Fulton, N. Y. Filed Jan. 20, 1922. Serial No. 530,626. 6 Claims. (Cl. 151—5.)

1. A nut lock comprising a lock bolt, a rocker associated with said lock bolt, a slide, and means forming a connection between said rocker and said slide, and the parts being so disposed that rectilinear movement of the slide effects longitudinal movement of the lock bolt to secure or release the nut as required.



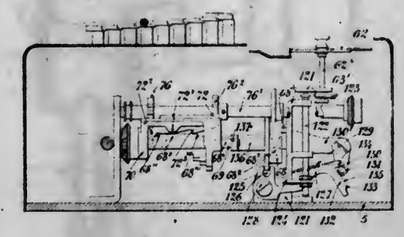
1,454,713. STROBOSCOPIC APPARATUS. ARTHUR JOHN HAWES ELVERSON, Reading, England, assignor to Herbert Kennedy & Company Limited, London, England. Filed Sept. 11, 1920. Serial No. 409,725. 14 Claims. (Cl. 88—14.)

1. In a stroboscopic apparatus for studying the movement of a body having a shaft rotating at a relatively high speed and capable of rotating at different speeds, the combination of a rotating member driven from said shaft, flash-timing means operated by said rotating member and selective means whereby said flash-timing means



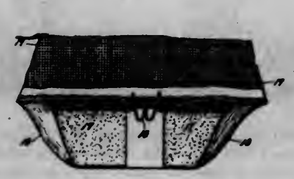
may be actuated to produce each of a plurality of different whole numbers of flashes per revolution of said member.

1,454,714. INDEX FOR FILING DEVICES. CARLO U. FINOCCHIARO, New York, N. Y. Filed Oct. 19, 1922. Serial No. 595,615. 2 Claims. (Cl. 40—16.)



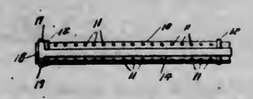
2. In an index for filing devices a cabinet having a drawer with a transparent front panel, a plurality of guides in staggered relation disposed in the drawer, in which may be examined through the glass panel cards with titles of articles position in the cabinet in associated relationship relatively to the guides.

1,454,715. COMBINED COMB AND HAIR CUTTER. CHARLES ADOLPHE FONTAINE, Paris, France. Filed Jan. 6, 1922. Serial No. 527,414. 3 Claims. (Cl. 30—12.)



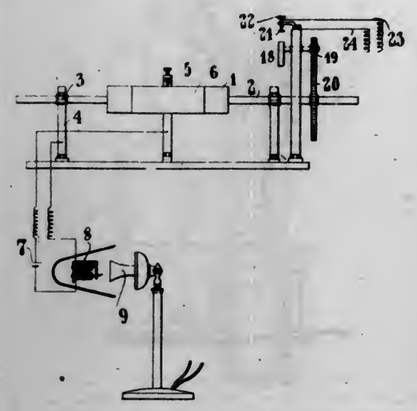
1. The combination of a comb formed with longitudinal grooves on opposite sides thereof, a member slidably mounted on the comb having a body portion formed to extend around the back of the comb and fit in said grooves, and a plate portion extending from the body portion at one side, offset from the comb at the upper end and engaging the teeth thereof near the lower ends, and means for securing a razor blade to the outer side of the plate.

1,454,716. COMPUTING MACHINE. LOUIS FOURNIER and GÉRARD MANO, Paris, France. Filed Jan. 25, 1922. Serial No. 531,805. 15 Claims. (Cl. 235—184.)



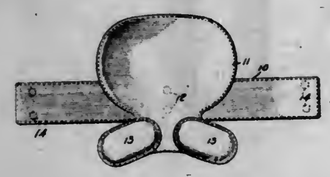
1. In a tens-carrying mechanism for computing machines, the combination of a stepped drum, a movable tooth on said drum, means for causing said tooth to project from the drum on the passage of tens and auxiliary means for accelerating the motion of the movable tooth.

1,454,717. CORD GRIPPING AND SECURING DEVICE. AARON M. ADAMS, Philadelphia, Pa. Filed June 11, 1920. Serial No. 388,295. 1 Claim. (Cl. 24—131.)



As a new article of manufacture, a gripping and securing member comprising a single piece of wire bent to form a straight portion and then having parts bent upon themselves to form auxiliary straight portions folded on the first mentioned straight portion and with said first mentioned straight portion forming gripping loops, the ends of the wire being then bent outwardly and away from the first mentioned straight portion and bent upon themselves to have the extremities of the wire converge, meet and abut against the first mentioned straight portion at the medial part thereof.

1,454,718. HAIR CURLER. ELNORA E. BALDWIN, Rand, Colo. Filed Apr. 13, 1922. Serial No. 552,087. 3 Claims. (Cl. 132—41.)

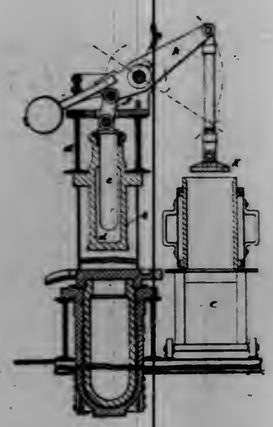


1. A hair curler having a body about which hair is curled, a clasp provided with a clasp portion to engage the body and with a tongue disposed substantially at right angles to the clasp portion, and said portion and tongue being engageable with the body.

1,454,719. FACSIMILE TRANSMISSION SYSTEM. HARRY GUY BARTHOLOMEW, London, England. Filed May 18, 1922. Serial No. 561,911. 2 Claims. (Cl. 178—5.)

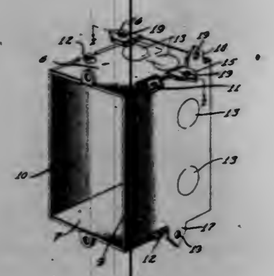
1. The herein described process of facsimile transmission consisting in translating a pictorial representation to operate a sound producing device in order to produce sound signals, translating said sound signals into current impulses and transmitting said current impulses to a receiving station, and reproducing the sound signals at said receiving station and re-translating the sound signals to produce a reproduction of the pictorial representation.

1,454,720. TRUSS. GEORGE A. BERRY, Modesto, Calif. Filed May 19, 1921. Serial No. 470,966. 7 Claims. (Cl. 128—107.)



5. A truss including a carrying element, a broad stiff pressure plate secured at its medial line to said element at the approximate center of the latter, and pads on the plate, said pads being disposed at opposite sides of the medial line and oblique to the latter in planes at an angle to each other, said plate being deflected rearwardly at its upper portion to overhang said pads.

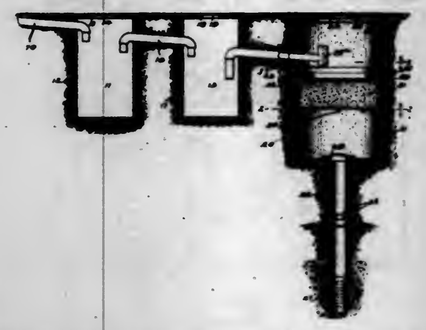
1,454,721. HYDRAULIC OIL PRESS. WILHELM BICKEL, Stuttgart, Germany. Filed Nov. 29, 1920. Serial No. 427,219. 3 Claims. (Cl. 100—50.)



3. In a hydraulic oil press, a sleve cylinder, a pressing piston cooperating with the said cylinder to express the

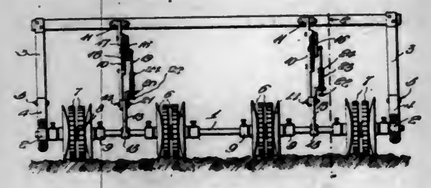
oil from the seed, said pressing piston being formed as a cylinder, a piston operative in said pressing piston

cylinder, and a pusher-out for emptying the sieve cylinder, said pusher-out being adapted to be operated by the piston of the pressing piston cylinder.



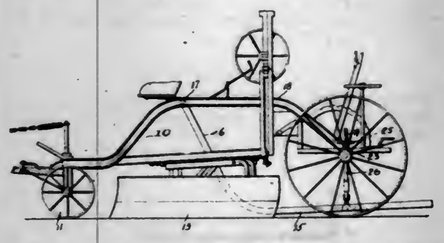
1,454,722. SWITCH BOX. LEO BOUTIN, New York, N. Y. Filed May 29, 1922. Serial No. 564,365. 10 Claims. (Cl. 247—21.)

1. A switch box or the like provided with spurs projecting from the external surface thereof, said spurs being so formed and arranged as to be capable alternatively of being driven into a support, or of being engaged by a nail.



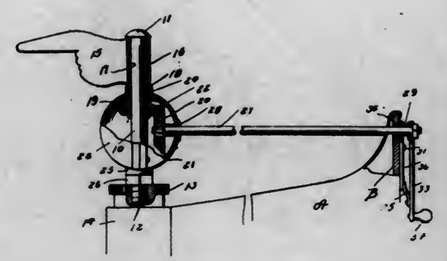
1,454,723. FILTER BED FOR SEWAGE DISPOSAL. WILLIAM THOMAS BURTIS, Glen Head, N. Y. Filed Aug. 7, 1922. Serial No. 580,159. 2 Claims. (Cl. 210—5.)

1. A system of sewerage disposal comprising in combination with a conduit having means interposed therein for intercepting and removing the solid or semi-solid substances, a filter bed having an intake at its upper end communicating with the outlet end of said conduit, said filter bed comprising a cylindrical body having a closed lower end, a downwardly extending outlet pipe in said lower end embedded in the ground, a filtering element interposed between the filter bed intake and outlet, said



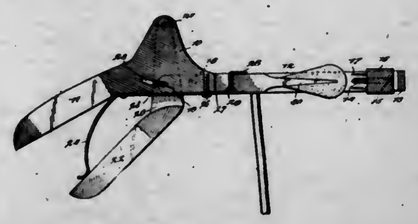
filtering element being removable through the upper open end of the filter bed, and a closure normally closing the upper end thereof.

1,454,724. CRUST-BREAKING ATTACHMENT FOR BEET CULTIVATORS. GEORGE W. CAREY, Oshkosh, Nebr. Filed Sept. 28, 1922. Serial No. 591,128. 4 Claims. (Cl. 97—218.)



1. A crust breaking attachment for cultivators comprising a shaft and means for connecting it with the cultivator, a pair of spaced concavo-convex disks on said shaft with their convex sides disposed adjacent each other in spaced relation, said disks being intended to straddle a row of sprouting plants, and a pair of slightly spaced toothed wheels on said shaft between said disks to break the surface of the ground over the sprouts.

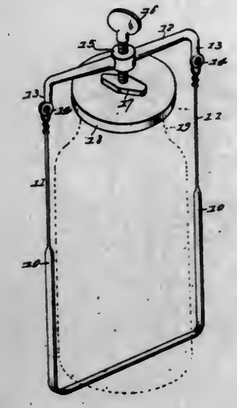
1,454,725. ATTACHMENT FOR GRADERS. ANTON CIMFL, Rice Lake, Wis. Filed June 22, 1921. Serial No. 479,491. 4 Claims. (Cl. 37—150.)



1. The combination with a road grading machine, of an attachment therefor adapted to be thrown into a road surface engaging position alongside of the rear supporting wheels for the purpose of bridging a depression in the road bed to prevent the dropping of the rear wheels and the grader blade below the level of the road surface, said attachment comprising a runner having pivotal connection to the machine frame at its forward end to permit of vertical swinging movements thereof, an upstanding threaded stem having pivotal connection to said runner, and a rotary interiorly threaded manipulating member swivelly mounted on the grader above said runner and threadedly engaging the stem for effecting vertical adjustments of the runner.

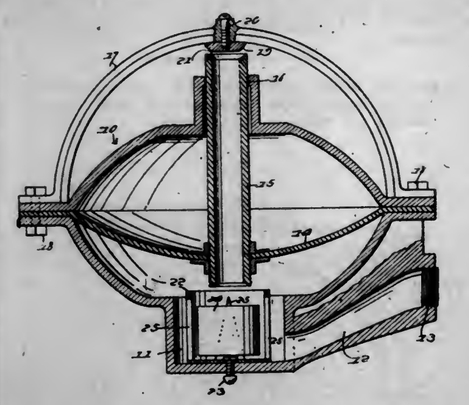
1,454,726. TRAFFIC SIGNAL FOR VEHICLES. HENRY J. COLLINS, Providence, R. I. Filed July 27, 1922. Serial No. 577,870. 4 Claims. (Cl. 116—46.)

1. A traffic signal including a rod, an indicator journaled on said rod, a casing surrounding said rod and on which said indicator rests, said indicator having a sleeve extending into the casing, a gear wheel on said sleeve and within the casing, driving means extending into said casing and cooperating with said gear, a fastening member on said rod below and upholding said casing, and said rod extending below said fastening member for attachment to a support.



1,454,727. TONE REGULATING DEVICE. RAYMOND E. CRISSEY, Syracuse, N. Y. Filed July 15, 1921. Serial No. 484,971. 4 Claims. (Cl. 84—460.)

3. In a device of the class described, the combination of a stationary member formed with a handle at one end and a way at the other end and an intermediate slot, an adjustable member secured to said stationary member and provided with a seat extending into said way, a needle carrying member slidably mounted in said way, parallel links for moving said needle carrying member in said way, a movable handle pivotally secured to said stationary member, and a pivot pin secured to said movable handle and extending through said intermediate slot in said stationary member, as and for the purpose set forth.

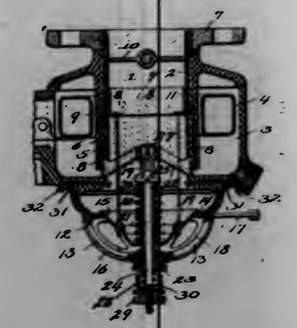


1,454,728. JAR-TOP-FASTENING DEVICE. JAMES M. CRUSE, Waco, Tex. Filed June 7, 1920. Serial No. 387,260. 1 Claim. (Cl. 215—88.)

As an article of manufacture, a jar top fastening device consisting of a cross head carrying a follower plate and a flexible loop to extend beneath the jar and bear upon the bottom thereof, the cross head having depending arms to which the extremities of the loop are loosely connected

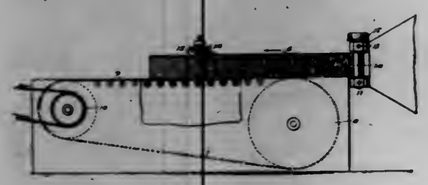
and serving under the tension of the loop, due to the adjustment of the follower screws, to maintain the cross head in operative position on the jar top or cover.

1,454,729. ANTIVACUUM RELIEF VALVE FOR HEATING SYSTEMS. HOMER O. CURTIS, South Sandisfield, Mass. Filed Sept. 7, 1920. Serial No. 408,535. 5 Claims. (Cl. 137—122.)



1. A relief valve mechanism for low pressure steam heating systems having a relief valve tube, a diaphragm operatively connected to said tube and adapted for exposure to steam pressure, a tube closing seat engageable by said valve tube at one end as a result of pressure applied to the diaphragm, and a fluid valve actuable by water of condensation for closing the other end of said valve tube.

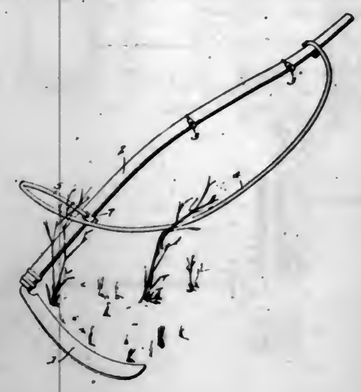
1,454,730. CARBURETOR. CHARLES DE LUKACSEVICS, Newark, N. J., and JULIUS J. WITTAL, New York, N. Y., assignors, by mesne assignments, to Julius Winter, New York, N. Y. Filed Apr. 7, 1917. Serial No. 160,524. 2 Claims. (Cl. 261—12.)



1. A carburetor for internal combustion engines having a body including a carbureting chamber, means for ad-

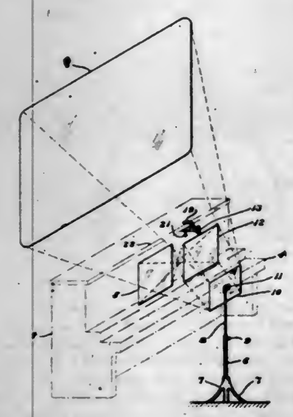
mitting fuel and air thereto, said body being formed of a phenol condensation product.

2. A carburetor having a body composed of a phenol condensation product and having inner and outer walls forming a fuel chamber, said inner wall being grooved and having a wall in sleeve relation thereto forming a carbureting chamber, means for admitting fuel and air thereto, a metallic wall interposed between said inner wall and the wall of said carbureting chamber, said metallic wall and the wall of the carbureting chamber being provided with angularly disposed ducts affording communication between said grooves and the carbureting chamber, and heating means embedded in said outer wall in the vicinity of said metallic wall, whereby heat may be conducted and distributed throughout said carbureting chamber.



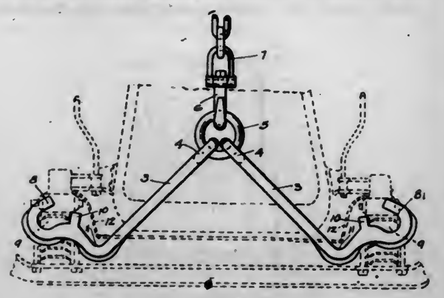
1,454,731. SURFACING MACHINE. WILLIAM H. FRANCIS, Cherryvale, Kans. Filed Apr. 19, 1922. Serial No. 555,650. 7 Claims. (Cl. 25—20.)

1. A surfacing machine including a conveyor adapted to receive a column of material, means adjacent to said conveyor for digging into the face of said column, said means including a rotatable member having a digging edge elongated axially of the member and rigidly carried by said member and means for rotating said member in the direction opposite the direction of movement of the column of material on the conveyor whereby on regulating the speed of rotation of the member the digging edge thereof operates to remove material from the column, convey such removed material away from and then toward the column, and redispose such removed material on the column.



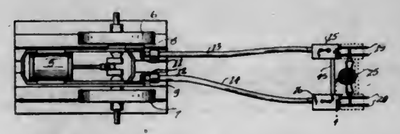
1,454,732. ATTACHMENT FOR SCYTHES. DAVID M. FRIEDT, Dundee, Ohio. Filed July 25, 1921. Serial No. 487,421. 1 Claim. (Cl. 56—325.)

In combination with a scythe including a handle and hand grips therefor, of a strip removably secured to the handle adjacent each end, and extending upwardly therefrom enclosing the hand grips thereon, one end of said strip crossing the handle and being spaced therefrom a



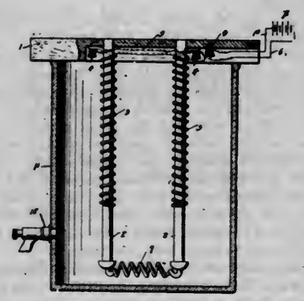
greater distance at the crossing point than at any other point in its length, said strip bent downwardly beyond the crossing point and extending toward the handle for connection therewith and for the purpose specified.

1,454,733. ORCHESTRA LEADER'S PICTURE REFLECTOR. CLOYD A. GRISSINGER, Mount Union, Pa. Filed Feb. 11, 1922. Serial No. 535,868. 1 Claim. (Cl. 88—1.)



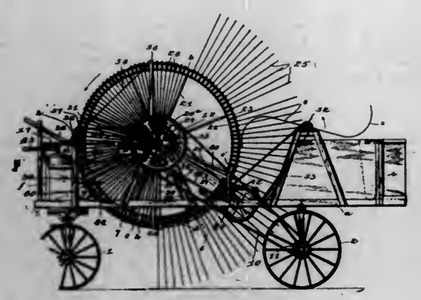
In the device of the class described, the combination with a moving picture screen and a musical instrument including means for supporting sheet music, of a mirror, means for securing said mirror to said musical instrument in juxta-position to the sheet music, a second mirror and supporting means therefor independent of said musical instrument and capable of supporting said second mirror in such relation to said picture screen and to the first said mirror as to effect a reflection of the image in reduced form in the first said mirror.

1,454,734. AUTOMOBILE HOOK. WILLIAM C. GRUNER, Chicago, Ill. Filed Nov. 9, 1921. Serial No. 513,999. 5 Claims. (Cl. 294—78.)



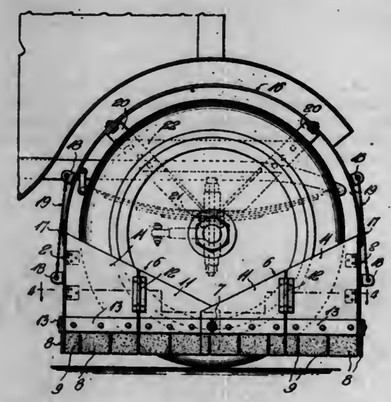
1. A device of the class described comprising two hook members connected at one end by means of a ring, each member being bent outwardly at an angle and forming a depression and being provided with upwardly opening claw-like, hook means at the free end.

1,454,735. TREE-FELLING MACHINE. JOHN EARSLEY HAMLIN, Weed, Calif. Filed Oct. 29, 1921. Serial No. 511,381. 2 Claims. (Cl. 143—68.)



1. In a tree felling device, the combination of power means, flexible shafts extending forwardly from said power means, tracks secured to the tree to be felled, casings slidable on said tracks, a saw extending between said casings, drums within said casings, the ends of said saw being attached to said drums, gearing within each of said casings, a cam on each of said shafts, a clutch mechanism between each of said shafts and said saw, said clutch means being adapted to alternately move said saw, and means for engaging and disengaging said clutches intermittently and alternately with respect to each other.

1,454,736. ELECTRIC WATER STERILIZER AND PURIFIER. WILLIAM T. HARRELL, Wichita, Kans. Filed Aug. 8, 1922. Serial No. 580,417. 1 Claim. (Cl. 204—25.)

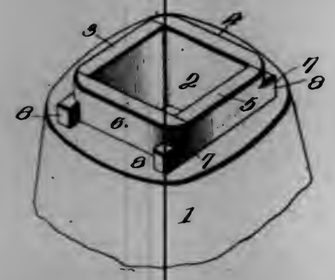


A water sterilizer and purifier, comprising a head, rods of insulating material secured at one end to said head, wire coils mounted upon the rods and constituting electrodes which are electrically connected at their upper ends, a wire coil supported between the lower ends of the rods, and a conductor passing through one of the rods and electrically connected with the electrodes at the ends thereof.

1,454,737. COTTON-PICKING MACHINE. WILLIAM T. HARRIS, Virgilina, Va., LEE F. HAMME, Oxford, N. C., and WILLIAM T. HOOFNAGLE, Glen Ridge, N. J. Filed Jan. 6, 1922. Serial No. 527,433. 8 Claims. (Cl. 56—46.)

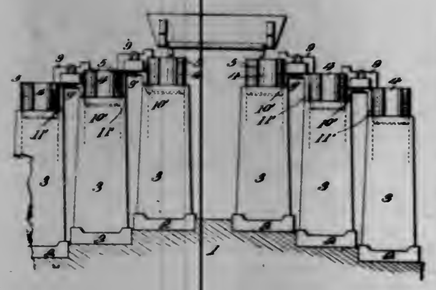
2. In a cotton picking machine, a carrier rotatable about a horizontal axis, a plurality of smooth surfaced picking needles radially movable in said carrier, means for moistening the needles, means for causing the needles to drop vertically into the cotton plants, means for rotating the needles in one direction when lowered, and in the opposite direction when raised from the plants, and means for stripping the cotton from the needles.

1,454,738. MUD GUARD. THOMAS HILTON, Walpole, Mass. Filed Mar. 9, 1922. Serial No. 542,315. 4 Claims. (Cl. 280—152.)



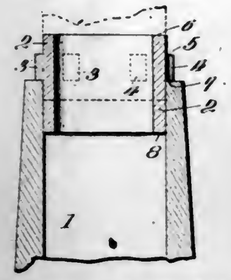
1. A mud guard of the class described embodying mounting means capable of being disposed in an out-of-the-way position, and means extending across the outer side of the lower portion of the wheel to prevent splashing of mud on pedestrians, said means comprising a pair of hinged sections, and each section being itself composed of hinged parts capable of being folded upon each other and against the aforesaid mounting means.

1,454,739. COFFEE CARTRIDGE. CLIFTON BENNET HOLLAND, Nashville, Tenn. Filed June 1, 1922. Serial No. 565,089. 4 Claims. (Cl. 53—3.)



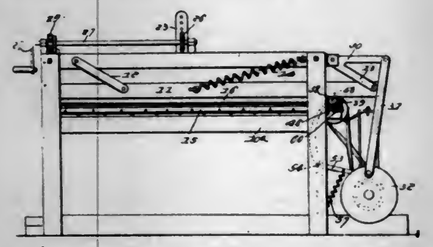
3. A coffee cartridge in the form of an annular substantially flat container formed from upper and lower pieces of coarse and fine fabric respectively, said pieces being stitched or otherwise connected together.

1,454,740. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Jan. 27, 1923. Serial No. 615,319. 15 Claims. (Cl. 22—147.)



1. A feeder for ingot molds, comprising a body portion formed of a series of longitudinal sections provided with interlocking means for holding together said sections.

1,454,741. HOT TOP FOR MULTIPLE CASTING OF METAL INGOTS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 3, 1923. Serial No. 616,721. 12 Claims. (Cl. 22—147.)

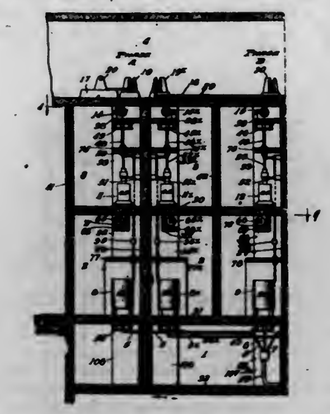


1. A hot top for ingot molds comprising a body portion having a discharge opening below the upper end.

1,454,742. REVERSIBLE FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 12, 1923. Serial No. 618,545. 14 Claims. (Cl. 22—147.)

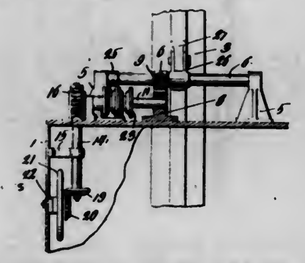
1. A feeder for ingot molds comprising a reversible body portion, and an integral projection carried by the body portion and adapted to support the feeder with either end in the mold.

1,454,743. BAG-CUTTING MACHINE. ISAAC C. HOWLETT, Bangs, Tex. Filed Jan. 3, 1922. Serial No. 526,691. 7 Claims. (Cl. 164—49.)



1. A machine for cutting a continuous strip of material into specified lengths, having a feed roll traversed by the material, a cutter mechanism having an intermittently movable member, a rotary driving member, a clutch for connecting the cutter mechanism with the driving member, and clutch shifting means having an actuating element movable in timed relation with said feed roll, and consisting of a rotary tappet head geared to the feed roll.

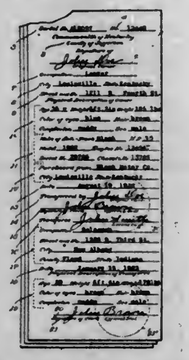
1,454,744. ELECTRIC-SWITCH-HOUSE CONSTRUCTION. BERTRAND G. JAMIESON, Brookfield, Ill. Filed Apr. 8, 1922. Serial No. 550,927. 98 Claims. (Cl. 175—298.)



41. In a switch house, a main bus extending a substantial distance longitudinally, said bus comprising bus phase conductors spaced apart a sufficient distance to provide free room for workmen to pass between the phases, a plurality of line busses comprising each line bus phase conductors extending a limited distance parallel to the main bus conductors, said line bus phase conductors each lying in substantially the same plane as the corresponding main bus phase conductor, and substantially nonconducting barriers forming longitudinal channels for housing the main bus phase conductors and the line bus phase conductors, tie lines between the main bus conductors and the line bus conductors and cells extending between said channels for housing said tie lines.

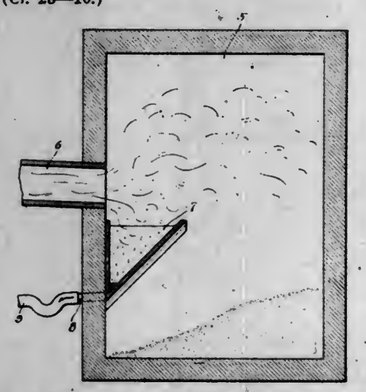
59. In combination, a longitudinal vertical wall, an upper wall, an intermediate wall and a lower wall forming three floors, a line bus extending along the horizontal vertical wall and lying below the upper floor, a main bus extending longitudinally of the longitudinal vertical wall lying below the intermediate floor, a line conductor extending from the line bus vertically downward along the longitudinal vertical wall and passing through the intermediate and lower floors, vertical and horizontal barriers extending laterally from the main vertical wall to form a series of vertically aligned cells, a circuit breaker dis-

posed in a cell immediately above the intermediate floor, and a current limiting device disposed in a cell immediately above the lower floor, said circuit breaker and current limiting device being connected in series in said line conductor.



1,454,745. ELEVATOR BRAKE. ARCHIBALD G. JANES, Fitzgerald, Ga. Filed Feb. 15, 1922. Serial No. 536,833. 2 Claims. (Cl. 187—92.)

1. In combination, an elevator, a pair of rock shafts mounted on the elevator, actuating and actuated cranks extending from the rock shafts, brake shoes carried by the actuated cranks, chains carried by the actuating cranks, an auxiliary drive shaft journaled on the elevator, spools on the auxiliary drive shaft over which said chains are trained, a worm gear keyed to said auxiliary drive shaft, a driven shaft suitably journaled on the elevator so as to extend therethrough and terminate interiorly thereof, and means within the elevator for rotating said drive shaft.

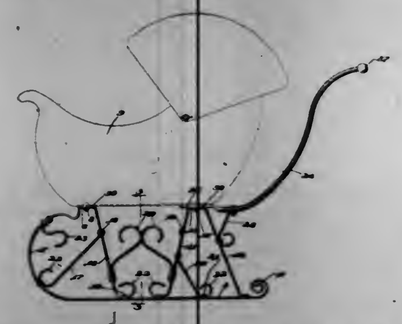


1,454,746. AUTOMOBILE TITLE-IDENTIFYING, THEFT DISCOURAGING AND DETECTING MEANS. CHARLES M. JONES, Louisville, Ky., assignor to Jones National Automobile Registration System, Inc., Louisville, Ky., a Corporation of Kentucky. Filed Jan. 25, 1923. Serial No. 614,869. 2 Claims. (Cl. 283—60.)

1. As an article of manufacture, an automobile and automobile possessor identifying and detecting unit bearing legended spaces for data identifying a particular automobile, legended spaces for data covering the physical characteristics of the first owner in rightful possession of the particular automobile, legended spaces for data covering the physical characteristics of an assignee of the particular automobile in rightful possession thereof on title derived from the first owner, and legended spaces for the signatures of the first owner, an assignee who is to derive title from said first owner, and a recording officer; the legended spaces for data covering the physical characteristics of the first owner preceding the legended spaces for data covering the physical characteristics of the assignee, and the two sets of said legended spaces for physical characteristics being arranged at opposite sides of legended spaces for the reception of the

signatures of the original owner, the assignee and recording officer, and the legended spaces for data covering the physical characteristics of the first owner being preceded by a legended line for the signature of said individual, and the legended spaces for data covering the physical characteristics of an assignee who is to derive title from the original owner being followed by a legended space for the signature of a recording officer, and the first-named legended spaces for the signature of the original owner, the signature of a recording officer and the signature of an assignee being grouped in close proximity whereby a single impressed seal will cover portions of all three signatures.

1,454,747. APPARATUS FOR MANUFACTURING FLOWERS OF SULPHUR. EDGAR KNAPP and JOHN KARL DICKERSON, Middleport, N. Y., and FREDERIK L. BEGTRUP, Louisville, Ky., assignors to Niagara Sprayer Co., Middleport, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 558,027. 9 Claims. (Cl. 23—10.)

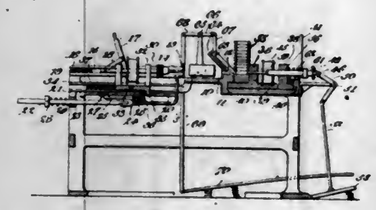


1. A device of the character described comprising a chamber, means for introducing sulphur vapors thereto, and means for collecting the liquid sulphur, said liquid-sulphur-collecting means being located within the chamber at a point adjacent that point at which the sulphur vapors are introduced.

1,454,748. PROCESS OF PREPARING ARSENO COMPOUNDS WHICH ARE STABLE IN SOLUTION. WILHELM KOLLE, Frankfort-on-the-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 12, 1922. Serial No. 528,836. 8 Claims. (Cl. 260—15.)

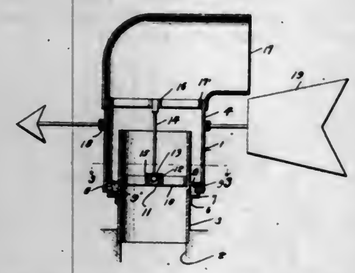
6. As new products, the bodies obtainable by combining arsenobenzenes with sulphoxylate compounds of such amines as are not arsenobenzenes, said bodies being readily soluble in water, more stable in solution than their components, their dosis tolerata being considerably larger than the calculated dosis tolerata of the components, and their therapeutical value being substantially as great as the therapeutical value of the arsenobenzene component.

1,454,749. CONVERTIBLE-BABY-CARRIAGE RUNNER. ABE N. LADIN, Ironwood, Mich. Filed Mar. 13, 1922. Serial No. 543,496. 1 Claim. (Cl. 280—25.)



The combination with a baby carriage body, bolts for attaching the body to a running gear structure, of sled runners, comprising treads having their forward ends curved upwardly and shaped to provide horizontal attaching portions adapted to receive said bolts, substantially U shaped bracing members attached to said treads and having upper horizontal attaching portions adapted to receive certain of said bolts, said treads extending downwardly from the horizontal attaching portions thereon to provide braces.

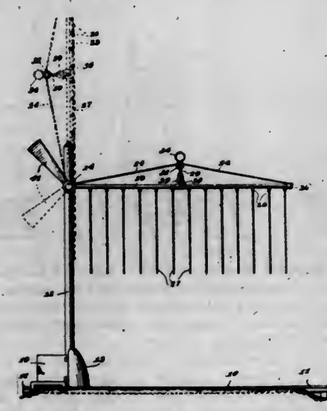
1,454,750. ADJUSTABLE LADDER PLATFORM. GEORGE LE FLOHIC, Washington, D. C. Filed July 22, 1921. Serial No. 486,754. 3 Claims. (Cl. 304—34.)



1. An attachment for ladders comprising a pair of brackets adapted to be slidably mounted on the side pieces of a ladder, a platform formed of two parts, each part having its ends pivoted to the bracket a distance from its inner edge so that when the two parts are moved out of alignment a space will be formed between them to permit the passage of a rung, the abutting edges of the two parts engaging a rung when said parts are in alignment.

1,454,751. DOWELING MACHINE. JOHN LITTLEFIELD, Bayonne, N. J. Filed Dec. 5, 1921. Serial No. 520,138. 17 Claims. (Cl. 144—31.)

1. In a machine for inserting dowels in the dowel holes in barrel heading and for cutting and pointing the dowels after insertion thereof in said dowel holes, means for clamping the barrel heading in fixed position, means co-related to the clamping means for inserting dowels in said dowel holes of the barrel heading, and means also in co-relation to the clamping means for cutting and pointing the dowels after the insertion thereof in said dowel holes.

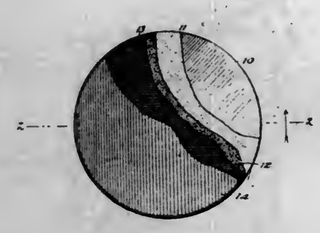


1,454,752. CHIMNEY COWL. WILLIAM T. MCCULLOUGH, Salem, Mo. Filed Nov. 5, 1920. Serial No. 421,977. 1 Claim. (Cl. 98—3.)

A cowl having an anchoring section, a hood section into which said anchoring section extends and relatively to which it moves axially, an elbow section on the hood section, a ring within the hood section, a rod depending from said ring substantially centrally of the hood section and into the anchoring section, said rod having an enlarged lower end, means in the anchoring section to journal said enlarged end, a removable plate on said rod disposed over said enlarged end to secure said rod to the anchoring section, a track wall surrounding the anchoring section and spaced therefrom, an angle iron rigid with and at the base of the hood section, one of the walls of said angle iron being disposed vertically, peripherally grooved rollers within the angle iron journaled on said last mentioned wall to engage said track at their grooves and the other wall of the angle iron extending inwardly and having an opening of greater cross sectional area than the anchoring section whereby it will be maintained spaced therefrom by the engagement of the rollers with the track.

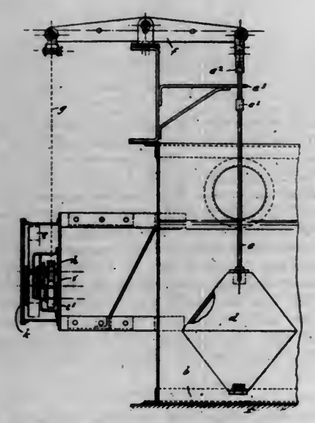
1,454,753. HIGHWAY SIGNAL FOR RAILROAD CROSSINGS. JESSE M. MCGHEE, Knoxville, Tenn. Filed Aug. 19, 1921. Serial No. 493,609. 9 Claims. (Cl. 246—486.)

9. A highway signal for railroad intersections comprising a post, a shaft mounted transversely in the upper end of the post, means for reciprocating the shaft, an arm connected to the shaft and projecting from the post and adapted to be raised and lowered upon operation of the shaft, a triangular frame mounted in inverted position upon the intermediate portion of said arm, a brace wire connected to the ends of the arm and extending



through the upper portion of said frame to brace the frame and the arm, a plurality of signal lights mounted on the frame for indicating position of danger at opposite sides of the roadway, a gong mounted in the frame for sounding a danger signal, and a plurality of pendants spaced along said arm adapted for contact with vehicles passing beneath the arms when lowered.

1,454,754. GARTER. ABRAHAM M. MALOUF and FRED M. MALOUF, Brooklyn, N. Y. Filed June 27, 1921. Serial No. 480,582. 2 Claims. (Cl. 24—245.)

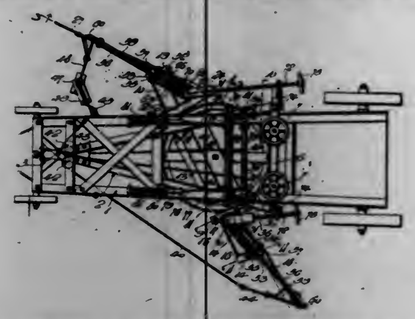


1. A device of the class described comprising a strap fashioned into a main loop including an inner member and an outer member, the outer member being extended to form the outer member of an auxiliary loop, the inner member of which is located between the outer members of the loops; means for uniting the members of the loops to close them at one end; a keeper supported in the other end of the auxiliary loop; and a rider slidable upon the outer member of the main loop and cooperating with the keeper, the rider being supported in the other end of the main loop.

1,454,755. REFLECTOR. ALBERT MATISSE and CARL A. MATISSE, New York, N. Y. Filed May 20, 1922. Serial No. 562,549. 4 Claims. (Cl. 88—1.)

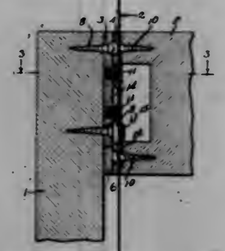
4. As a new article of manufacture, a reflector of the class described, comprising a yellow glass made from silica, minium, carbonate of potash, niter, carbonate of lime, borax, oxide of cadmium, and a reflecting back for reflecting a yellow ray applied to said yellow glass comprising a gold salt, a silver salt, a metal applied by electroplating process, and a protector applied to the metal.

1,454,756. APPARATUS FOR INDICATING THE DENSITY OF LIQUIDS AND AUTOMATICALLY GRADING THE SAME ACCORDING TO THEIR DENSITY. JAMES LESLIE MENNELL, London, England, assignor to Chas. Butters & Co. Limited, London, England. Filed Nov. 30, 1920. Serial No. 427,402. 6 Claims. (Cl. 210—55.)



1. An apparatus for classifying liquid according to its density, comprising a hydrometer balance, an electric switch actuated thereby to traverse a series of electric contacts, an electric motor controlled by said switch and operating to swing a pivoted launder into definite positions, substantially as described.

1,454,757. ATTACHMENT FOR ROAD SCRAPERS OR GRADERS. PETER C. MERILLAT, Winfield, Iowa. Filed Dec. 27, 1921. Serial No. 525,078. 12 Claims. (Cl. 37—155.)

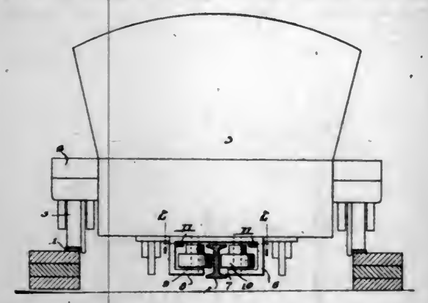


1. The combination with a road scraper including a frame, a turn-table, and a road scraping blade carried thereby, of auxiliary scraping blades connected with the end portions of the first mentioned scraping blade, and

means connected with one of the auxiliary blades for bracing the blades and table against turning in one

direction and for turning the blades and table in an opposite direction to adjust the angular position of the blades.

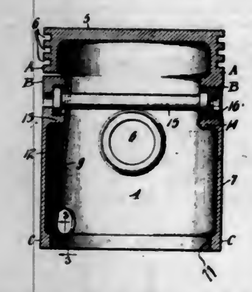
1,454,758. LOCKING JOINT. LAWRENCE W. MURPHY, West Haven, Conn. Filed Dec. 7, 1921. Serial No. 520,565. 2 Claims. (Cl. 20—92.)



1. A joint device of the character described, comprising a pair of members, one of said members movable longitudinally relative to the other, one member of general channel shape and the other member movably fitting within the channel and of a thickness corresponding to the depth of the flanges of the channel, said channel member having a longitudinal slot therein, the longitudinal walls thereof being tapered, said tapered walls having opposed recesses constituting an entrance, and a stud on the other member adapted to be projected through the entrance and having a taper corresponding to the taper of the walls of the slot whereby when the stud is in the slot and one member moved longitudinally relative to the other the two members may be locked together.

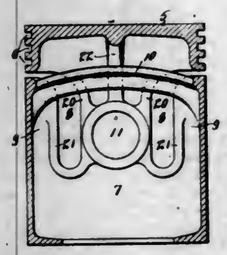
1,454,759. SEALING-WAX STICK. AUGUST NADLER and JOHN R. KINGHORN, Brooklyn, N. Y. Filed May 17, 1921. Serial No. 470,354. 2 Claims. (Cl. 87—19.)

1. As an article of manufacture, a sealing wax consisting in the combination with the usual ingredients, of a quantity of rapidly combustible fibrous material, the quantity of said fibrous material being in a proportion of approximately one per cent with respect to the entire ingredients.



1,454,760. ROLLER-COASTER SAFETY APPLIANCE. MICHAEL J. NEARY, Scranton, Pa. Filed June 24, 1922. Serial No. 570,535. 1 Claim. (Cl. 104—246.)

In safety appliance for roller coasters, scenic railways and analogous railways, the combination of appropriately supported rails, an appropriately supported longitudinal I-beam arranged intermediate of the rails, a car with wheels arranged to travel on the rails, a housing carried at and rigidly and directly connected to the bottom of the car and having a top wall and a bottom wall and an opening in the bottom wall for the projection of the I-beam received in the housing, and freely revoluble hori-



zontally disposed wheels centrally mounted in the housing between the top and bottom walls thereof and also arranged at opposite sides of the web of the I-beam and in spaced relation to the upper and lower portions or flanges of said I-beam.

1,454,761. PISTON. ADOLPH L. NELSON, Indianapolis, Ind., assignor of one-third to Charles S. Crawford, Indianapolis, Ind. Filed Oct. 27, 1920. Serial No. 419,938. 12 Claims. (Cl. 74—108.)

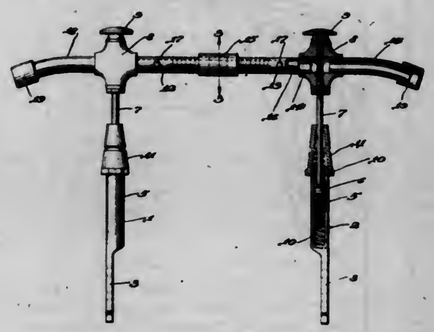
11. A piston having a head and a skirt, a flexible tongue in the skirt between the piston pin openings, and a distance piece of less expansible material extending across the piston and connected at one end to the tongue, substantially as set forth.

1,454,762. PISTON. ADOLPH L. NELSON, Indianapolis, Ind., assignor of one-third to Charles S. Crawford, Indianapolis, Ind. Filed Mar. 7, 1921. Serial No. 450,189. 4 Claims. (Cl. 74—108.)

3. A piston comprising a head and a skirt with wrist-pin bearings, said skirt being also formed with slots sepa-

rating the head from the bearing sides of the skirt at the upper end of said sides and an arched brace connecting said separated portions, substantially as set forth.

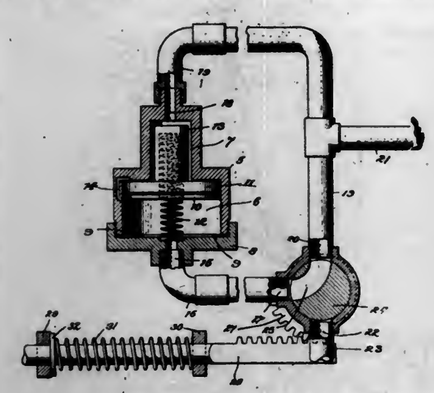
1,454,763. WATCH GUARD. PHILIP H. NOLTING, Jersey City, N. J. Filed Feb. 10, 1922. Serial No. 535,641. 3 Claims. (Cl. 2—153.)



1. The combination with a pocket, of an arcuate spring watch guard secured at its intermediate portion to the bottom of the pocket, and adapted to embrace a watch in the pocket, said guard being bifurcated at one end to receive the stem of a watch in the pocket.

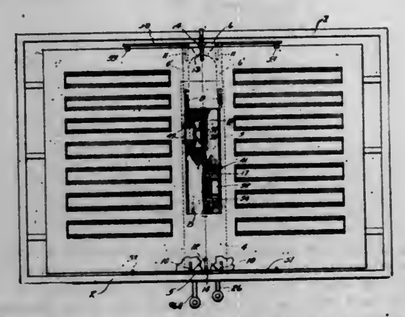
2. In a watch guard, an arcuate spring body shaped to receive a watch, said arcuate spring body being bifurcated at one end to receive a watch stem, and a casing stretched over the spring body.

3. In a watch guard of the character described, an arcuate spring body portion shaped to receive a watch, said spring body portion being bifurcated at one end, the prongs of said bifurcated end being curved to receive and grip the watch stem.



1,454,764. BUMPER. WILLIAM E. O'BRIEN and JOSEPH SMITH, Chicago, Ill. Filed Feb. 14, 1922. Serial No. 536,442. 8 Claims. (Cl. 293—55.)

4. In a bumper for motor vehicles, attaching members, rods yieldably carried by said attaching members, couplings carried by said rods, tubes detachably carried by said couplings and extending transversely to said rods, and means adjustably connecting the facing ends of said tubes to permit adjustment of the distance between said rods, and tubular extensions carried by said couplings and projecting outwardly therefrom transversely to the rods.

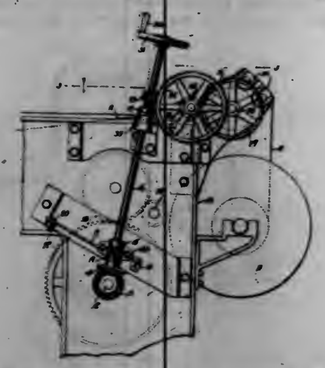


1,454,765. MEASURING DEVICE. JOHN L. PATTERSON, Westhampton, and LUTHER R. BIVINS, Highland Springs, Va. Filed May 26, 1922. Serial No. 563,835. 4 Claims. (Cl. 225—21.)

1. In a measuring device, the combination of a measuring cylinder; a piston movable therein; means urging said piston to one limit of its motion in said cylinder; a supply connection serving to convey fluid under pressure to the measuring cylinder; a discharge connection serving to convey fluid from the measuring device to the point of use; connections to the opposite ends of said cylinder; and a valve operatively associated with said connections

and serving in one position to close said discharge connection and connect the opposite ends of said cylinder, and in another position to connect the discharge connection with one end of said cylinder while interrupting the connection between the opposite ends of said cylinder.

1,454,766. MUSIC-TURNING DEVICE. LOUIS PINELI and CHRISTOPHER COLUMBUS LOOP, Tacoma, Wash. Filed Jan. 3, 1922. Serial No. 526,794. 6 Claims. (Cl. 84—506.)

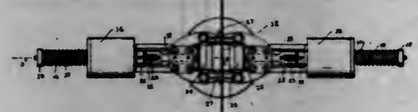


3. The combination with a music rack, and a book supported on the rack having an opening cut in the back edge thereof to expose portions of its leaves, of a leaf turning device fixed to the rack comprising a base member, a leaf turning plate hingedly fixed to the base member and disposed when in set position within the opening of the book, a leaf engaging plate slidably mounted on the turning plate, means for normally retaining the leaf engaging plate in retracted position, a spring for urging it outwardly when released to extend its outer edge beneath the edge of the leaf to be turned, a lever operatively connected to effect operation of the turning plate and to permit extension of the leaf engaging plate, and means for automatically returning the parts to initial position after a turning operation.

1,454,767. POSITIVE LET-OFF MOTION FOR LOOMS. JOHN A. PORTER, Macon, Ga. Filed Jan. 10, 1922. Serial No. 528,163. 9 Claims. (Cl. 139—59.)

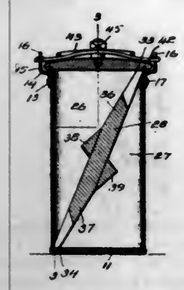
2. In a positive let-off motion for looms, a let-off assemblage including a driven element, a worm shaft, driven means for said shaft, means to optionally establish or dis-

establish connection between said driven means and said shaft, a worm wheel actuated by the worm shaft and actu-



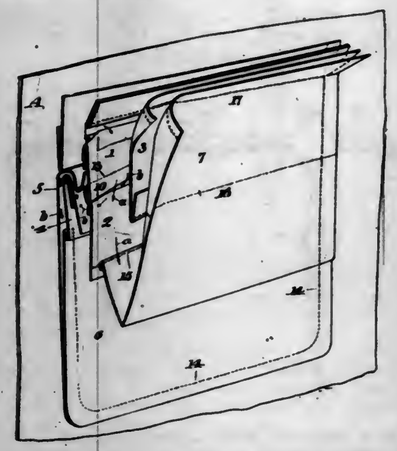
ating said driven element of said assemblage, and means optionally to establish or disestablish connection between the worm shaft and the worm wheel.

1,454,768. LOCK. RAY B. RAYMOND, New York, N. Y. Filed May 8, 1922. Serial No. 559,266. 1 Claim. (Cl. 179—189.)



In a lock for telephone receivers, including a removable structure having one end for impermanent accommodation within the pedestal opening from which the receiver hook emerges and the opposite end of the structure presenting an eye formation to be locked to a terminal eye portion of the receiver hook, a structure for such purpose comprising a rigid member formed of a single piece of wire, including merely a straight length and an eye formed at one end of said straight length by bending the wire piece, all portions of the wire piece being in one plane.

1,454,769. APPARATUS FOR CUTTING SOAP INTO BARS. JULIUS A. SCHWANTES, Milwaukee, Wis., assignor to The Palmolive Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 3, 1922. Serial No. 549,313. 5 Claims. (Cl. 25—105.)

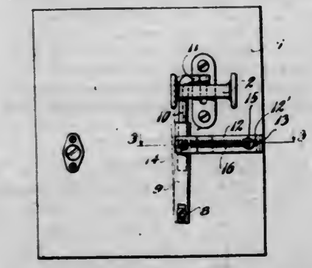


1. In a device of the class described, a pair of reciprocating knives, electrically actuated means for reciprocating said knives, a double switch for controlling said electrical means, said double switch being operated by the material to be cut for successively completing and breaking the circuit including said electrical means.

1,454,770. CHURN. THOMAS E. SMITH, Good Springs, Tenn. Filed Jan. 3, 1923. Serial No. 610,452. 12 Claims. (Cl. 258—89.)

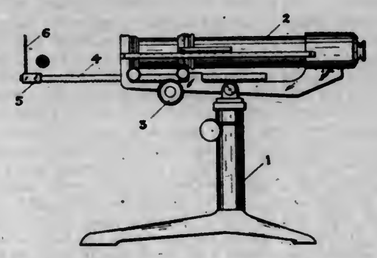
1. A churn comprising a revolvable container and a diagonally disposed imperforate rectangular dasher or abutment element arranged therein and providing said container with a plurality of compartments, said element formed with an opening having a cutaway portion at each end edge.

1,454,771. SAFETY POCKET. JOSEPH STONE, Chicago, Ill., assignor to Stone Safety Pocket Company, Chicago, Ill. Filed Apr. 18, 1922. Serial No. 554,687. 7 Claims. (Cl. 2—15.)



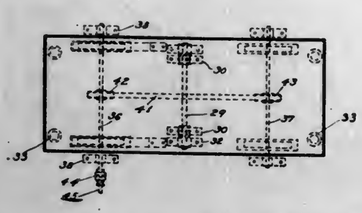
2. A safety pocket for garments comprising a guard welt attached to the edge of the usual pocket opening and extending downwardly, a second strip of material attached at its upper corners only to the lower edge of the guard welt, a third strip of material attached at its upper edge to the garment above the pocket opening, a piece of pocket material attached at its upper edge to the third strip and at its lower edge to the second strip, the three strips and the piece of pocket material forming the usual pocket, and the opening between the unattached edges of the guard welt and the second strip forming the entrance to the secret pocket, a folded strip attached to the outer edge of the second strip and extending upwardly to near the top of the guard welt, and pieces of pocket material attached to the outside of the folded strip and the outer lower edge of the guard welt and forming the secret pocket.

1,454,772. SUSPENSION BRIDGE. VERNON L. SULLIVAN, El Paso, Tex. Filed Nov. 1, 1921. Serial No. 512,012. 5 Claims. (Cl. 14—18.)



1. In a suspension bridge the combination with the bridge structure comprising towers, supporting cables extending between and over the towers to suitable anchors, and a floor structure including cross-beams suspended from said cables, of anti-sway cables fastened to the lower portions of the towers and extending across the underside of the floor of the main span to the center of the cables at opposite sides of the bridge, respectively, and rods connecting said antisway cables to the beams of the floor structure.

1,454,773. TELEPHONE ATTACHMENT. GEORGE W. SUMNER, Dorchester, Nebr., assignor of three twenty-fifths to Russell Mooberry, three twenty-fifths to Thomas Gray, three twenty-fifths to Robert C. Panter, and three twenty-fifths to J. W. Byers, all of Dorchester, Nebr. Filed Oct. 11, 1921. Serial No. 507,008. 6 Claims. (Cl. 179—178.)



1. A telephone attachment of the class described, comprising a pivotally mounted stop member arranged adjacent to the receiver hook of the telephone instrument and adapted to be swung into the path of movement of the receiver hook to intercept the movement thereof, and a slide connected to the said stop member for moving the same.

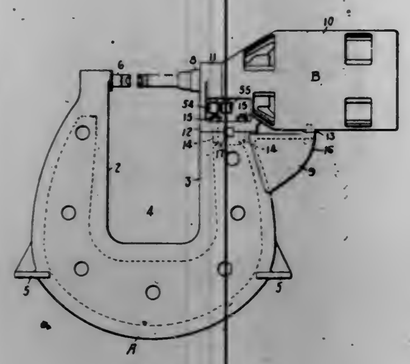
1,454,774. EYE-TESTING INSTRUMENT. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 17, 1919. Serial No. 311,409. 4 Claims. (Cl. 88—20.)

1. In an instrument of the character described, the combination with the instrument proper of a slidable chart carrier mounted thereon, a chart bearing sleeve slidable on the carrier, and a lens carried by the sleeve in advance of the chart, said lens being of focus to project the image of the chart to infinity.

1,454,775. AMUSEMENT DEVICE. MORRIS UNGER, Pittsburgh, Pa. Filed Feb. 9, 1921. Serial No. 443,523. 3 Claims. (Cl. 46—71.)

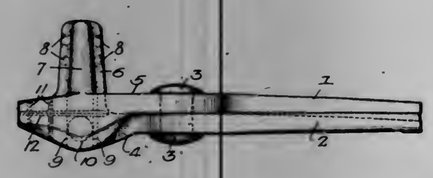
1. In an amusement device of the character described, the combination of a rockable floor-plate; revolving polygonal cams for producing up and down motions of said floor-plate; means for operating said cams; means positioned between said floor-plate and polygonal cams for increasing the noise when said floor-plate is actuated; resilient means for supporting said floor-plate above the reach of said cams when not loaded; all of said means being positioned beneath said floor-plate.

1,454,776. DRYING FORMER AND SOCKET MEMBER THEREFOR. CHARLES HERBERT VAIL, Gloversville, N. Y., assignor to Anthony-Vail Tool & Machine Company, Gloversville, N. Y. Filed June 10, 1922. Serial No. 567,394. 10 Claims. (Cl. 223—17.)



1. In a steam drying device, a form board, a supporting socket therefor having a single inlet bore, means to conduct the steam from said inlet bore to the upper or outer end of the form board interiorly of the latter, means to provide a separate passage for the return of condensation from the interior of the form board to said inlet bore and a single valve for the steam supply and condensation return.

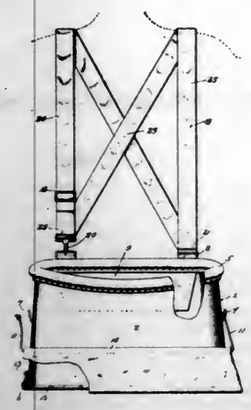
1,454,777. RIVETER. CHARLES J. WALKER, Gary, Ind. Filed Jan. 5, 1918, Serial No. 210,514. Renewed Dec. 15, 1922. 9 Claims. (Cl. 78—46.)



1. In a machine embodying fixed and translatory work engaging elements, an electric motor operatively con-

nected to said translatory element, said translatory work engaging element being arranged to actuate limit switches to break the circuit to said motor after a predetermined extent of travel by said translatory element and the motor being adapted to supply the energy necessary to move said

translatory work engaging element through said predetermined extent of travel, means for supplying current to said motor, and means for automatically breaking the circuit to said motor when the load on said motor exceeds a predetermined maximum.

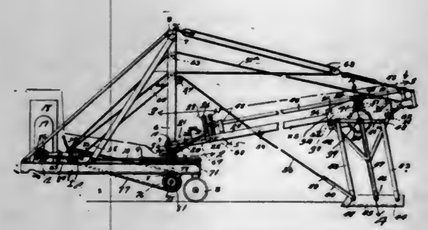


1,454,778. TONGS. LEWIS E. WEGNER, Hagerstown, Md. Filed June 8, 1921. Serial No. 475,885. 3 Claims. (Cl. 294—36.)

1. Tongs comprising a pair of pivotally connected cooperating jaws, one of said jaws having on its working face a substantially hemispherical projection, substantially as described.

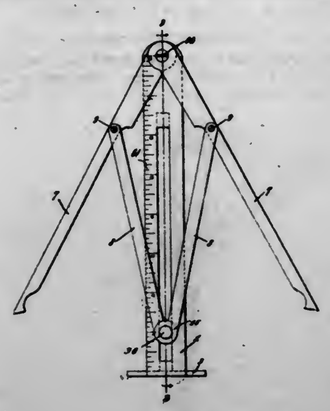
1,454,779. FRUIT-PICKING BUCKET. ALFRED Z. WELLS and JAMES M. WADE, Wenatchee, Wash. Filed Nov. 1, 1921. Serial No. 511,982. 16 Claims. (Cl. 150—2.)

1. A fruit picking bucket comprising a substantially oval shaped body formed of rigid material and open at both ends, an attaching member projecting outwardly from each side thereof, a flexible tubular bottom having its upper end secured to said body and adapted to be folded across the lower end of the body for closing it, flexible connecting members carried by the free end of said bottom at opposite sides thereof and detachably engaging with said attaching members whereby said body may be closed or opened when desired, and oppositely disposed flexible elements secured within said body at



the lower end thereof for retarding the discharge of the contents thereof when said bottom is detached from said attaching members.

1,454,780. WATER, FIRE, AND GERM PROOF COMPOSITION. WALTER E. WILLETT, Syracuse, N. Y., assignor to Con-O-Lite Corporation, Cortland, N. Y., a Corporation of New York. Filed Sept. 29, 1921. Serial No. 504,109. 9 Claims. (Cl. 106—24.)



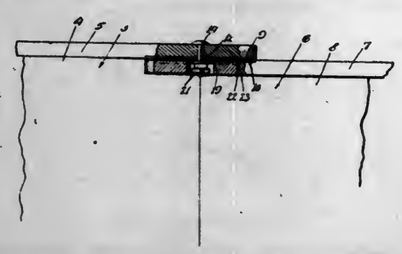
1. As an ingredient for artificial stone, pulverized coke having its particles coated with hydrofluosilicic acid.

1,454,781. EXCAVATING MACHINE. ROY E. WILT, Arcanum, Ohio. Filed Apr. 5, 1921. Serial No. 458,673. 8 Claims. (Cl. 214—134.)

1. In a device of the class described, the combination with a boom, of a traveler longitudinally movable on said boom, said traveler having a shaft rotatably mounted therein at a point above the boom and a shaft rotatably mounted therein at a point below the boom, gear connections between said shafts, downwardly extending brackets carried by the traveler, a digging shovel pivotally mounted in the downwardly extending brackets, parallel link connections between the shaft carried by the traveler below the boom and the shovel, a gear carried by the upper shaft substantially centrally thereof, a shaft disposed above the upper shaft and at right angles thereto, a worm slidably keyed on said shaft disposed above the upper shaft and meshing with the centrally disposed gear of the upper shaft and forming means for operating the gear connections between the upper and lower shafts and varying the position of the digging shovel through the parallel connections.

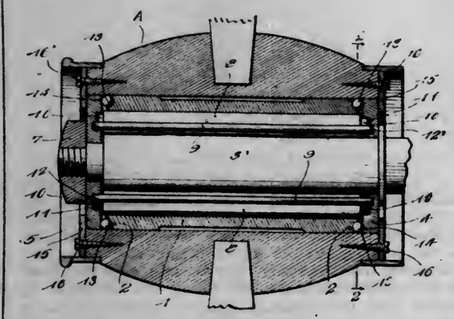
1,454,782. TOOL. EDITH A. WIMMER, Salt Lake City, Utah. Filed Aug. 10, 1921. Serial No. 491,246. 2 Claims. (Cl. 33—91.)

2. In a device of the class described, a main member provided at one end with a transverse head extended laterally beyond said member and of sufficient length to maintain said member at right angles to the work, when the head is slid along an edge of the work; a rider mounted to reciprocate on the main member; a center point carried by the rider and cooperating with the head to draw a line on the work, parallel to the head; arms pivoted at one end to the main member, and links pivoted to the intermediate portions of the arms and to the rider, the arms constituting levers whereby motion may be transmitted to the rider through the instrumentality of the links.



1,454,783. CLIP OR STAPLE. FRANK J. YETTER, Greenfield, Mass. Filed Oct. 10, 1921. Serial No. 506,837. 1 Claim. (Cl. 24—153.)

An article of the character described made of sheet-metal, notched at the opposite edges of the center, and bent or folded double, and having teeth or spurs at the outer edges of the notches, teeth extending inwardly from the body of the device, and provided with spurs bent outwardly from the body of the device at a point in the area formed between different teeth.

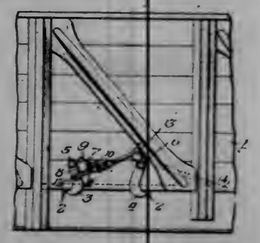


1,454,784. HINGE JOINT FOR CONVERTIBLE ROADSTER SECTIONS. BENJAMIN V. GILMORE, Gauley Bridge, W. Va., assignor to John W. Graham, James A. Graham, and William S. Peck, all of Hinton, W. Va. Filed Mar. 29, 1921. Serial No. 456,595. 2 Claims. (Cl. 296—26.)

1. The combination with a fixed tonneau section and a section pivotally adjustable with relation thereto, the said sections having wooden floors and side walls, of means pivotally connecting the side walls and comprising circular flat relatively thin plates of uniform thickness secured upon the confronting faces of the side walls, the plates and walls having aligned central openings, a pivot element fitted through the openings, one of the plates having an arcuate slot concentric to the opening and the adjacent wall, a groove registering with said slot, and a stud upon the other plate working in the slot and the groove, the pivot element comprising a bolt and a nut

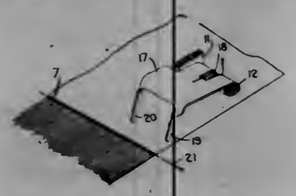
threaded onto the end of the bolt and housed within the opening in one of said walls, the adjacent edges of said floors being adapted to abut when said adjustable section is in open position.

1,454,785. ROLLER BEARING. ABNER EUGENE GRIFFITH, Duluth, Minn. Filed Aug. 30, 1920. Serial No. 406,790. 2 Claims. (Cl. 64—61.)



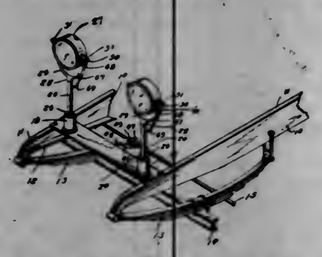
1. A device of the character described comprising a wheel hub, a sleeve fitting tightly within said hub and terminating short of the ends of the hub, disks positioned within said hub between the ends of the sleeve and the ends of the hub and having their central portions cut out and their inner faces provided with circular bearing grooves having their inner peripheral portions countersunk, anti-friction balls between said disks and the ends of said sleeve, main bearing rollers positioned in said sleeve and having their end portions fitting into the grooves in the inner faces of said disks, spacing rollers between said main rollers having their end portions fitting into the countersunk portions of said grooves, retaining disks secured upon the ends of said hub and extending in overlapping relation to the outer faces of the bearing disks, the retaining disks having their central portions cut out to a greater extent than the bearing disks whereby a spindle having a threaded outer end portion and a collar at its inner end may be passed through the bearing disks with the collar engaging one of the bearing disks and the main rollers engaging the spindle and a securing nut upon the threaded end portion of the spindle engaging the second bearing disk.

1,454,786. DUMP-CAR-DOOR LATCHING MECHANISM. DAVID HINDAHL, Chicago, Ill., assignor to National Dump Car Company, Chicago, Ill., a Corporation of Maine. Filed July 3, 1922. Serial No. 572,427. 5 Claims. (Cl. 105—308.)



1. In combination with a dump car door, latching mechanism comprising a pair of pivoted latches, and a cou-

pling link connected with said latches and adapted to insure like movements in them; said latches being presented

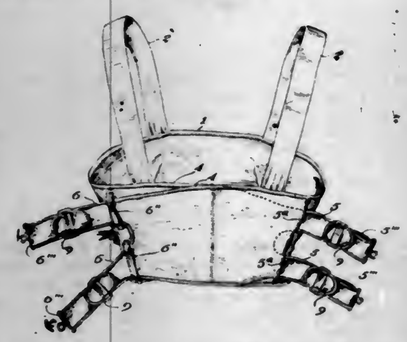


in opposite directions; and said link being connected to them on opposite sides of their pivots.

1,454,787. SELVAGE GUARD FOR LOOMS. CHARLES M. H. LEIGHTON, Milford, N. H., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 30, 1921. Serial No. 518,946. 4 Claims. (Cl. 139—36.)

1. In a loom comprising a frame, a lay, shed forming mechanism, a shuttle and shuttle picking mechanism, and a temple mounted for forward and rearward movement on the frame with the forward movement taking place on the beat-up, an arm pivotally supported on a horizontal axis from the temple and provided with downwardly projecting inner and outer fingers, the arm when depressed with the temple in rearward position acting to position the outer finger rearward of the fell adjacent the selvage and extending transversely across the plane of the cloth and acting to position the inner finger through the shed rearward of the fell whereby on the pick of the shuttle to the opposite side the filling is drawn around the outer finger relieving the strain on the selvage warp, the inner finger upon the beat-up and forward movement of the temple riding up over the fell onto the cloth and acting to raise the arm and withdraw the outer finger before the said pick of filling is beaten in.

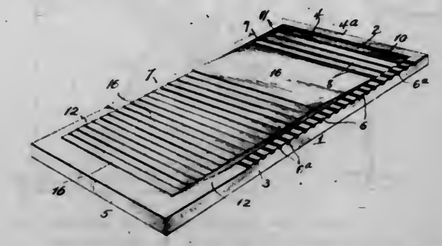
1,454,788. HEADLIGHT MECHANISM. JOHN W. REASER, SAMUEL M. HULL, and FREDERICK H. OSBORNE, Portsmouth, Va. Filed Mar. 31, 1922. Serial No. 548,337. 3 Claims. (Cl. 240—61.)



1. A headlight mechanism including a lamp, a hollow standard on which the lamp is pivoted, a rod slidable in the standard, means operable to slide the rod, a spring to urge the rod into engagement with said means, the standard having a slot therethrough, and means having connection with the rod to said slot operable through sliding movement of the rod to tilt said lamp.

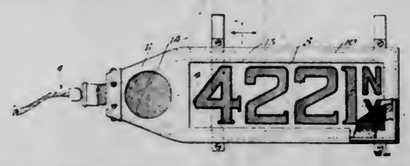
1,454,789. FLEXIBLE SCREW DRIVER. MAURICE R. RENTCHLER, Los Angeles, Calif. Filed May 1, 1922. Serial No. 557,501. 1 Claim. (Cl. 145—61.)

In a screw driver, the combination with a handle, of a rod secured in said handle, a ferrule secured on said handle, a casing having an end portion extending into said ferrule, a spring mounted between said handle and said casing, a flexible shaft extending through said casing and a tool mounted on said shaft and at a point adjacent the extremity of said casing.



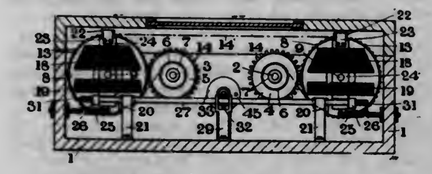
1,454,790. BRASSIÈRE. ISAIAH ROTHKOWITZ, New York, N. Y., assignor of one-half to Joseph Rothkowitz, New York, N. Y. Filed Nov. 16, 1922. Serial No. 601,359. 3 Claims. (Cl. 2—73.)

3. A brassière comprising a front portion and when worn having overlapping bifurcated ends forming the back portion, slits on one side of the brassière, the bifurcations at one end of the brassière being adapted to pass through the slits on the side, straps on the other side for holding the bifurcated end on that side from vertical displacement, each bifurcation of the brassière being adjustable in length with fasteners thereon to fasten it to the side



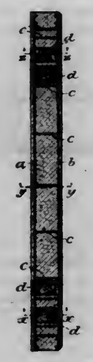
of the brassière in the overlapped position at the back, the front of the brassière having means for keeping it smooth and prevent its rising, and shoulder straps for holding the brassière on the wearer, as described.

1,454,791. CARD INDEX. JOSEPH CLIFFORD RUSSELL, Pittsburgh, Pa. Filed Feb. 9, 1921. Serial No. 443,559. 6 Claims. (Cl. 129—16.)



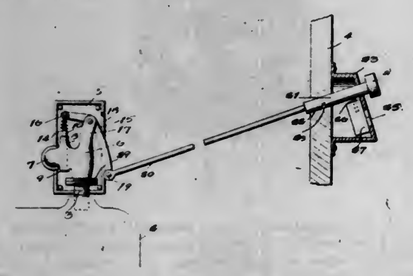
1. In a card index, the combination of a frame having fixed guideways at respective sides, the top wall of one of said guideways having slots, and card supports having end portions movable in said guideways under the top walls thereof, one end portion of each of said supports being movable through one of said slots of the slotted top wall to enter the guideway under the same after the opposite end portion of said support shall have been inserted into the opposite guideway.

1,454,792. AUTOMOBILE LICENSE-PLATE CASING. WALTER A. SCOTT, Brooklyn, N. Y. Filed May 5, 1922. Serial No. 558,639. 1 Claim. (Cl. 40—132.)



An automobile license plate casing which comprises a body portion having one face open and a flanged cover to be placed thereover, the cover being apertured to exhibit the plate, the body portion having a flange around and near its upper edges to receive and support the plate, a cushion on said flange to be disposed between the plate and the flange, means for fastening the cover to the body portion, the walls of the casing and cover at one end sloping or converging toward each other, a cup-shaped cap removably fastened to this end, and means on said cap to support a light.

1,454,793. ROUTE INDICATOR. ERNEST SHAUBSOLE, London, England. Filed May 15, 1922. Serial No. 561,212. 10 Claims. (Cl. 40—42.)



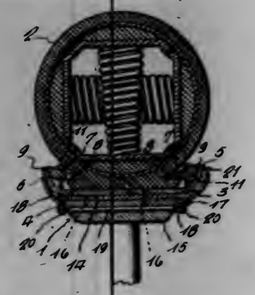
1. A route indicator or recorder having a tape, a feeding device therefor comprising a movable feeding element over which the tape is passed, a gripper adjacent thereto, pivotally supported electro magnetic means adapted when energized to move said gripper onto said tape to grip it against said feeding element, and means for retracting said gripper to free the tape when said electromagnetic means is de-energized, substantially as and for the purpose hereinbefore set forth.

1,454,794. PROCESS FOR THE MANUFACTURE OF RAILROAD SLEEPERS AND THE LIKE OF REENFORCED CONCRETE. OSCAR SMREKER, Lucerne, Switzerland, assignor to the Firm Internationale-Siegwartbalken-Gesellschaft, Lucerne, Switzerland. Filed July 2, 1921. Serial No. 482,272. 2 Claims. (Cl. 25—155.)

1. The process of manufacturing reenforced railroad sleepers and the like provided with insertions of elastic machinable concrete, which consists in manufacturing separably the insertions of elastic machinable concrete, placing said insertions before hardening into the mould in which the sleeper is made at the places which the means for securing the rails to the sleeper will occupy, and in ramming concrete around the insertions.

1,454,795. BURGLAR ALARM FOR AUTOMOBILES. CHARLES H. SUMMERILL, Penns Grove, N. J. Filed Nov. 1, 1922. Serial No. 598,338. 3 Claims. (Cl. 116—33.)

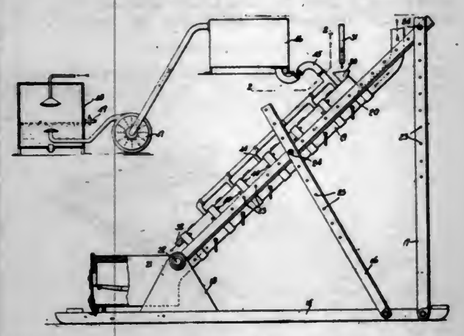
3. In a burglar alarm adapted to be connected with the engine cylinder of an automobile engine, the combination with an audible signal adapted to be operated by fluid under pressure, a conduit connecting the signal with a cylinder of the engine for transmitting fluid under pressure through said audible signal, an exhaust conduit connecting the signal with the atmosphere, diametrically disposed bosses on the exhaust conduit and provided with alined passages in the bosses, a plate forming a valve slidably mounted in the alined passages, a passage in said plate adapted to aline with the passage



in the exhaust conduit, a rod for operating said valve to open or closed position, the other end of the rod being remotely located from the audible signal, a lock provided with a passage adapted to receive the remotely located end of the rod, said rod being slidable through the passage in the lock and provided with a notch adapted to automatically engage the lock bolt of said lock whereby the plate will be locked in a predetermined position with the passage in said plate alining the passage in the exhaust conduit, whereby fluid pressure from the engine cylinder will operate the audible signal.

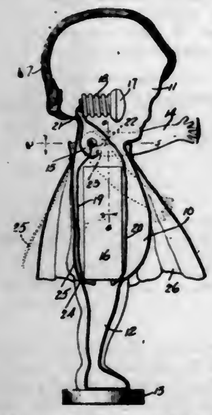
1,454,796. SPOOL. HERBERT OTHRO TAFT, Burlington, Vt. Filed May 9, 1922. Serial No. 559,686. 2 Claims. (Cl. 242—118.)

1. In a spool formed with a longitudinal bore in the end thereof, a sleeve or bushing fitting in said bore, said sleeve having an annular groove adjacent its inner end, a journal pin extending through said sleeve, a stop integral with said journal pin adapted to engage the inner end of said sleeve to limit the outward movement of the journal pin, a spring arranged in said bore coacting against said stop for causing said stop to resiliently engage the inner end of said sleeve, and a sleeve-retaining member passing through the spool and fitting in said groove to hold the sleeve against longitudinal movement.



1,454,797. TIRE RIM. JOSEPH H. TAYLOR, Mellen, Wis. Filed Oct. 1, 1921. Serial No. 504,566. 2 Claims. (Cl. 301—11.)

1. A rim comprising a tire engaging rim including a pair of sections of different widths, flanges formed on the outer edges of said sections, one of said sections being transversely severed, means for securing a tire to said sections, a felly rim supporting the tire rim and having notches to permit said means to extend therethrough, and means securing the felly rim to a wheel felly and engaging one of the flanges.

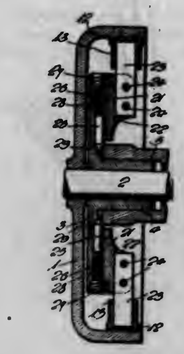


1,454,798. ROASTING FURNACE. JOSEPH THOMAS, Aberdeen, Wash. Filed Jan. 27, 1922. Serial No. 532,163. 12 Claims. (Cl. 263—30.)

1. A roasting furnace including a supporting member, lugs secured to said supporting member, a furnace body pivotally attached adjacent one of its ends to said lugs, and standards attached to said supporting member and

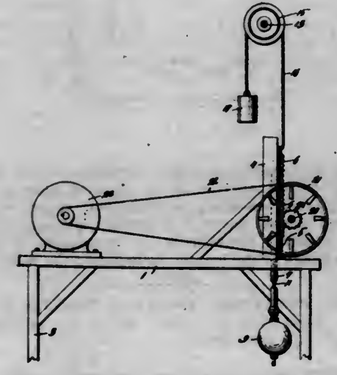
adapted to engage said body to normally withhold the same from movement with respect to said member.

1,454,799. BOUDOIR LAMP. FREDERICK WILLIAM USHER, Brooklyn, N. Y. Filed Dec. 12, 1921. Serial No. 521,741. 2 Claims. (Cl. 240—10.)



1. As a new article of manufacture an ornamental lamp comprising a hollow translucent body in the form of a doll and having pivoted arms, the body being provided at the rear with an opening to give access thereto, an incandescent electric lamp in the head, a battery in the body, a contact on the body, a contact on one arm, and circuit wires connecting the battery, lamp and contacts.

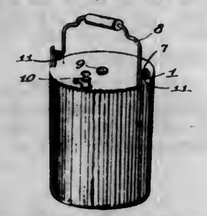
1,454,800. CLUTCH GOVERNOR. JOHN M. VAWTER, Indianapolis, Ind., assignor of one-half to Israel M. Draper, Indianapolis, Ind. Filed Jan. 16, 1922. Serial No. 529,628. 5 Claims. (Cl. 192—56.)



1. In a structure of the character described, a rotary shaft, a clutch cup loose upon the shaft, a spider turning with the shaft, a collar turning with the shaft and slidable longitudinally thereon towards and away from the spider, gripping shoes within the cup, means for bringing the shoes into binding engagement with the cup when the collar is moved towards the spider, arms extending from said spider and engaging the shoes to move the shoes with the shaft, spider and collar when the shaft is rotating, means slidably carried by the spider in radiating relation to the collar for engaging the collar and moving the collar away from the spider

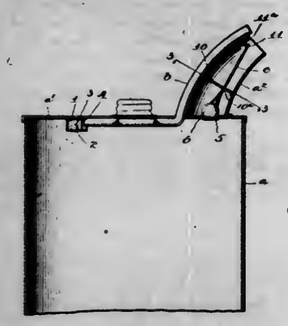
to release the shoes from binding engagement with the cup, and resilient means yieldably holding the collar moving means in an operative position, said collar moving

means being moved to an inoperative position by centrifugal force set up when the shaft and spider are rotating at a relatively high speed.



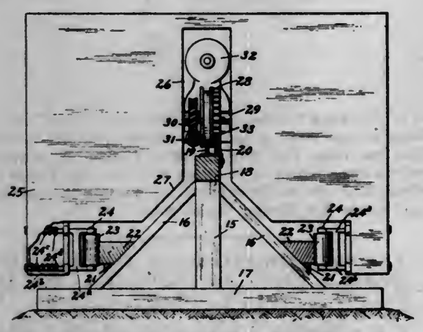
1,454,801. WAVE MOTOR. FRANK I. WEBB and CHARLES S. HARRISON, McKeesport, Pa. Filed Mar. 11, 1921. Serial No. 451,446. 3 Claims. (Cl. 253—10.)

1. In combination, a support, buoyant members, hollow rods attached to said buoyant members, the hollow rods provided with an elongated slot adjacent their upper ends, a flexible cable extending through said hollow rods and said support at one end, anchoring means provided at the other end of said flexible cables, and means for utilizing the power made by the rise and fall of the buoyant members.



1,454,802. SHEET-METAL CAN. BENJAMIN N. WELLS, Raleigh, N. C., assignor to The Seamless Can & Bucket Co., Baltimore, Md., a Corporation of Maryland. Filed Dec. 15, 1921. Serial No. 522,611. 1 Claim. (Cl. 220—72.)

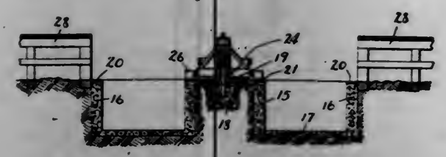
A seamless sheet metal container for liquids having a cylindrical side wall corrugated longitudinally, the depth of the corrugations increasing from the bottom upwardly, said container having integral ears projecting from opposite edges of the side wall, a cover having a



corrugated flange fitting the corrugations in the container and sealed to the container and a faucet on the cover.

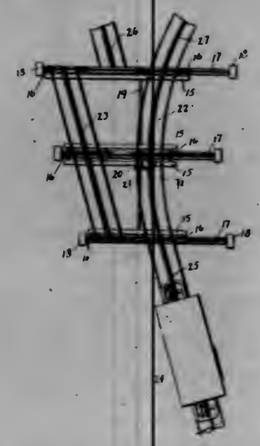
1,454,803. DISPENSING VESSEL. BENJAMIN N. WELLS, Raleigh, N. C., assignor to The Seamless Can & Bucket Co., Baltimore, Md., a Corporation of Maryland. Filed Apr. 18, 1922. Serial No. 554,884. 4 Claims. (Cl. 221—13.)

1. The combination with a vessel having a top provided with an opening and a spout on the top surrounding said opening, of a ball adapted to seat in said opening when the vessel is upright and to roll from its seat when the vessel is tilted, and means for holding said ball on its seat comprising a rod extending into the spout and having a resilient end adapted to bear against the ball, said rod being adjustable longitudinally of the spout to lock and release the ball.



1,454,804. MONORAIL STRUCTURE. THOMAS H. WRIGHT, Los Angeles, Calif. Filed Sept. 15, 1922. Serial No. 588,430. 5 Claims. (Cl. 105—145.)

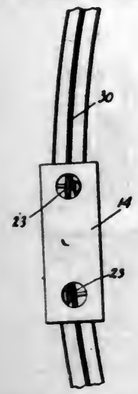
1. A monorail structure comprising spaced ties, vertically disposed beams supported on the ties, horizontally



disposed beams connecting the vertical beams and adapted to support a monorail thereon, divergent brace bars connecting the vertical beams and said ties, horizontally disposed beams connecting the brace bars of one vertical beam with an adjacent beam, and rails secured to the second horizontal beams.

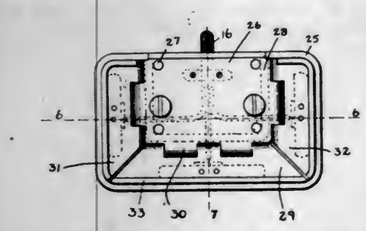
1,454,805. TURNTABLE. THOMAS H. WRIGHT, Los Angeles, Calif. Filed Sept. 15, 1922. Serial No. 588,432. 1 Claim. (Cl. 104—55.)

A turntable comprising a base formed with plastic material and including a central annular portion, a peripheral annular portion, a bottom portion connecting the two at their lower edges, and a hub portion disposed axially of the central portion, tracks on the upper edges of the central and peripheral portions, a carriage including a king pin journaled in the hub portion and rollers movable over said tracks, and a monorail supported on the carriage.



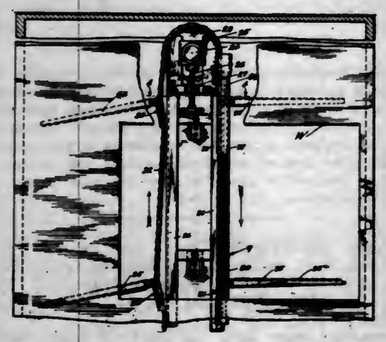
1,454,806. SWITCH DEVICE. THOMAS H. WRIGHT, Los Angeles, Calif. Filed Sept. 15, 1922. Serial No. 588,433. 5 Claims. (Cl. 104—102.)

1. A switch device comprising rails, posts at the ends of the rails, a carriage including wheels movable over the rails, said carriage being capable of occupying two extreme positions in either of which the wheels are adapted to abut the posts, track sections on the carriage, and means for driving the carriage.



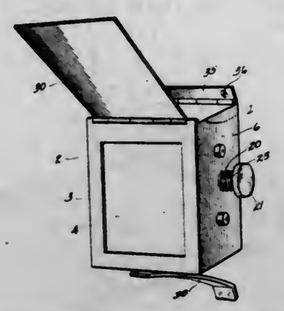
1,454,807. SWIVEL TRUCK FOR MONORAILS. THOMAS H. WRIGHT, Los Angeles, Calif. Filed Sept. 15, 1922. Serial No. 588,434. 6 Claims. (Cl. 105—119.)

1. In combination, a monorail car including a chassis, a member secured to the chassis, rollers sustained on the member, one annular member underlying the first member for rotational movement and adapted to be engaged by said rollers, a wheel carried by the second member



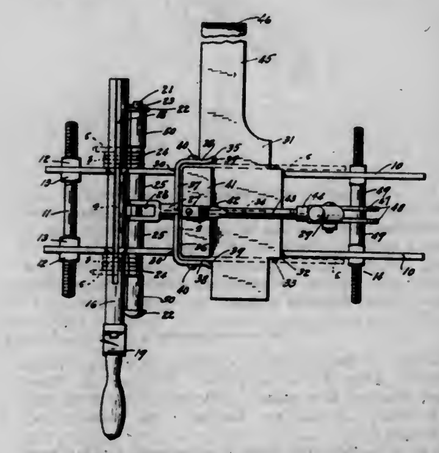
for engagement with the monorail, and driving means carried by the second member for driving said wheel.

1,454,808. TRAFFIC-SIGNAL-OPERATING MECHANISM. GEORGE T. WROUGHTON, Los Angeles, Calif. Filed May 25, 1922. Serial No. 563,545. 5 Claims. (Cl. 200—59.)



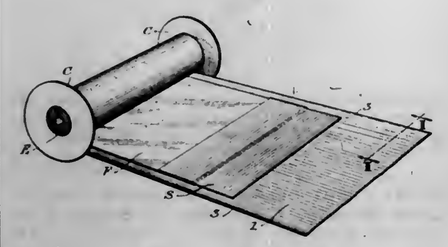
1. A triple switch mechanism including a box having a flanged bottom adapted to be mounted upon a brake pedal and said box being provided with a set of three flat switch closing leaves in a common plane and which may be operated individually or in suitable co-ordination, the flange of the bottom surrounding the leaves.

1,454,809. CONVEYER. ORLANDO J. BOOS, Los Angeles, Calif. Filed Mar. 16, 1920. Serial No. 366,346. 7 Claims. (Cl. 198—190.)



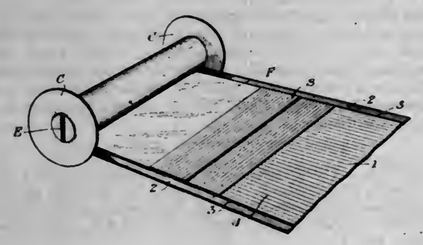
1. A conveying apparatus comprising a vertically arranged set of chain conveyers with cross plates each arranged parallel to given carrier links of the chain, brackets attached to each plate, and receiving arms pivotally attached to the brackets.

1,454,810. AUTOGRAPHIC REGISTER. JAY PETER COWLEY, Tacoma, Wash. Filed June 6, 1921. Serial No. 475,334. 2 Claims. (Cl. 281—7.)



1. In combination with a vehicle dash board, an autographic register comprising a housing mounted on said board having an opening in the top wall, a writing plate mounted within the housing beneath said opening, guide rollers mounted at opposite ends of said plate, a pair of axles mounted within the housing beneath the plate, about which a record strip may be wound drawn over said guide rollers and across the writing plate, gear wheels fixed on said axles in offset alinement, a shaft slidably and rotatably mounted in a wall of the housing, a gear wheel fixed on the inner end of said shaft adapted to mesh with either of the first named gears, a knob on the outer end of said shaft for turning the same to advance the strip, a spring wound about the shaft bearing against the knob to normally retain the shaft gear in mesh with the advancing gear, but yieldably to permit their being disengaged and the shifting of the shaft gear into mesh with the re-winding gear.

1,454,811. MACHINE FOR FORMING TRACK TERMINALS. TOY OWEN CULPEPPER, Toccoa, Ga. Filed Mar. 18, 1922. Serial No. 544,937. 12 Claims. (Cl. 140—71.)

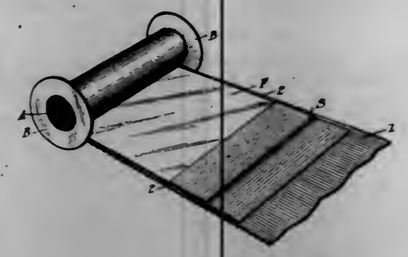


1. A machine for forming track terminals including manually operable means for bending a length of wire into U-shape, a rotatable mandrel having a longitudinally extending groove into which the cross bar of the U-shaped blank is adapted to be disposed, and forming rollers manually shiftable toward or from the mandrel.

1,454,812. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,447. 18 Claims. (Cl. 95—9.)

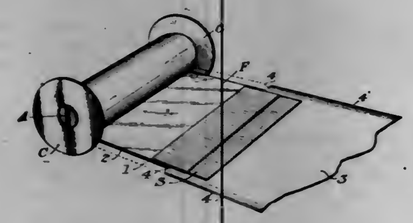
1. A photographic cartridge comprising coiled strips of sensitized material and of protective material, the margins of the protective strip being more flexible than the median portion thereof.

1,454,813. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,448. 7 Claims. (Cl. 95—9.)



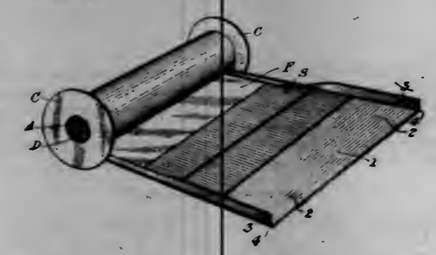
1. An article of manufacture comprising strips of sensitized material and of protective material interwound in a spiral coil, the strip of protective material being wider than the strip of sensitized material, and the side margins thereof being of a uniform thickness less than that of the median portion of said strip.

1,454,814. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,449. 7 Claims. (Cl. 95—9.)



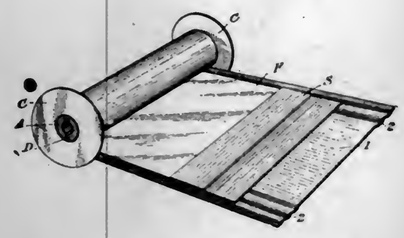
1. An article of manufacture, comprising a spool with end flanges, a band of photographic film wound thereon,

sheet protective material attached to the film and constituting end strips wound on the spools inside the film



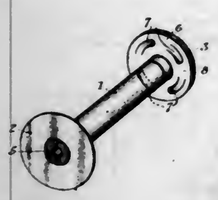
and outside thereof, at least one side margin of each end strip being serrated and the width of the end strips being greater than the distance between the flanges.

1,454,815. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,450. 8 Claims. (Cl. 95—9.)



1. A photographic film cartridge comprising a spool with spaced end flanges having flat inner facing surfaces, strip material, comprising photographically sensitive material and protective material, wound on said spool and including lead strips of protective material, said lead strips only being wider than the distance between said flanges and the rest of said strip material being narrower than such distance.

1,454,816. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,451. 5 Claims. (Cl. 95—9.)

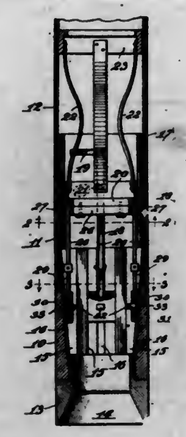


1. An article of manufacture and sale, comprising sensitized material and protective material interwound in a spiral coil, the protective material being wider than the sensitized material and the margins of said protective material being thinner than the median portion thereof and bent to form flanges, the film material lying between said flanges.

1,454,817. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,452. 8 Claims. (Cl. 95—9.)

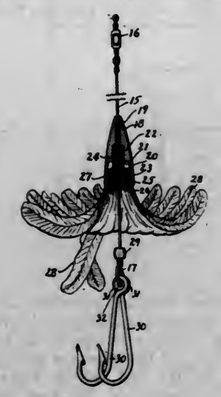
1. A photographic cartridge comprising tightly interwound sensitized material and protective material, there being in the protective material longitudinally extending portions which tend to assume a laterally contracted position but which are held in a laterally expanded position in the cartridge by the pressure of the interwound material.

1,454,818. PHOTOGRAPHIC CARTRIDGE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,453. 6 Claims. (Cl. 95—9.)



1. A photographic film cartridge comprising a core with fixed end flanges, a coil thereon comprising bands of sensitized material and of protective material, and an annular auxiliary flange loosely mounted on said core between, and having opposed surfaces bearing against, one end of said coil and the adjacent flange, said auxiliary flange being resiliently resistant to compression.

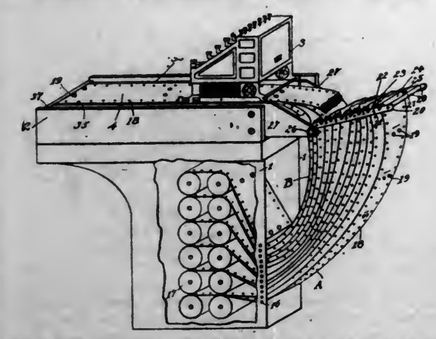
1,454,819. COMBINATION CASING CUTTER, OVERSHOT, AND MILLING TOOL. WILLIAM H. JONES and MARCUS KINNEBREW, Fellows, Calif. Filed Nov. 18, 1921. Serial No. 516,151. 11 Claims. (Cl. 81—189.)



1. In a combination tool, an elongated tubular member, a pair of rings arranged for vertical movement in the upper portion of said tubular member, the lower one of

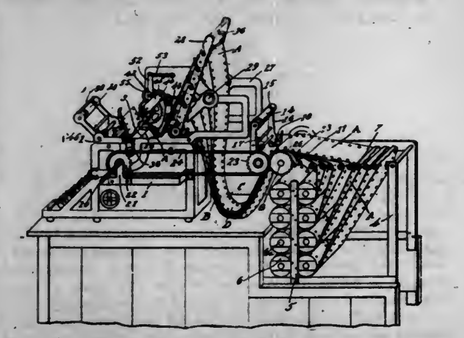
which rings is mounted for limited rotary movement upon the upper ring, springs secured to the upper ring and

adapted to engage a member to which the tool is applied, links depending from the lower ring, and cutter carrying blocks carried by said links.



1,454,820. FISH LURE. WILLIAM H. READLE, San Bernardino, Calif. Filed Aug. 19, 1922. Serial No. 582,881. 9 Claims. (Cl. 43—42.)

1. A fish lure, comprising a supporting member, and a securing member associated with the supporting member to detachably secure the luring members within the supporting member, both of said members being formed to rotatably receive a leader.

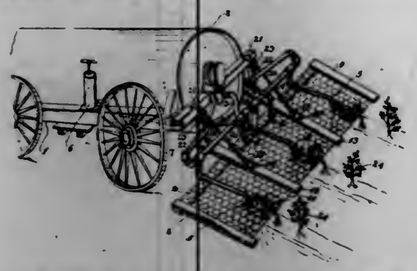


1,454,821. FLAT-BED MULTICOPY MACHINE. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio; said Metzner assignor to said Sherman. Filed June 24, 1920. Serial No. 391,499. 68 Claims. (Cl. 197—126.)

1. In a multi-copy machine a storage rack for paper rolls comprising a pair of vertical members, roll spindle engaging means interspaced on both sides of said vertical members, and a latching means adapted to engage

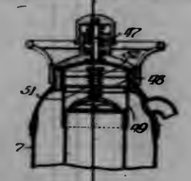
and hold a plurality of spindles in the spindle engaging means on one of said vertical members, said latching means being operable as a unit.

1,454,822. MANIFOLDING TYPEWRITER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Aug. 11, 1920. Serial No. 402,753. 73 Claims. (Cl. 197—126.)



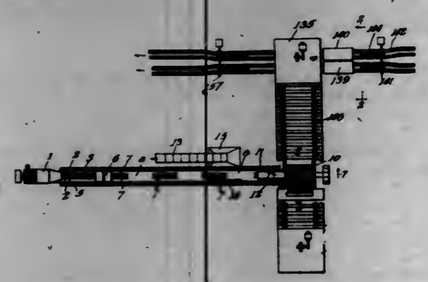
1. In combination with a typewriter having a movable platen, a fixed frame for storage of paper, and means for feeding a plurality of webs of paper continuously from the fixed frame to the platen so as to maintain an excess of paper between the same frame and platen said means acting on each web individually as distinguished from acting on all webs as a group and comprising rotary pin bearing bodies to which the webs are guided so as not to wrap around said bodies, the paper having spaced feeding holes for the pins.

1,454,823. WALL BOARD AND PROCESS OF MAKING THE SAME. HENRY A. SMITH, Santa Barbara, Calif. Filed Sept. 30, 1920. Serial No. 413,902. 3 Claims. (Cl. 154—51.)



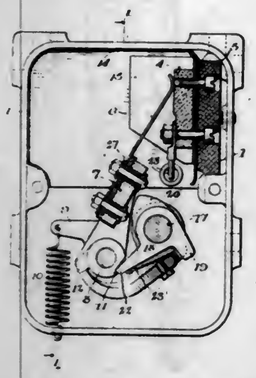
1. A process of making wall board comprising heating asphaltum to approximately 350° F., mixing sawdust and slivers into the asphaltum, placing the mixed mass upon a moving table covered with a thin layer of sand, reducing the mass on the table to about two inches in thickness, applying a thin layer of sand to the upper surface of the mass, applying a compression roller which reduces the thickness of the layer to about five-eighths of an inch, keeping the sand and roller hot to prevent chilling and cracking, delivering the layer of asphaltum and sand from the moving table to a set of compression rollers, and passing the layer between the compression rollers and thereby reducing the thickness to about three-eighths of an inch.

1,454,824. SPRAYING DEVICE. ARENTH A. STUBFORS, Spooner, Wis. Filed Sept. 30, 1921. Serial No. 504,362. 3 Claims. (Cl. 299—29.)



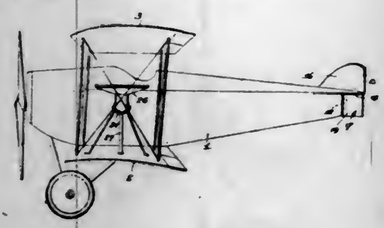
1. The combination with a vehicular spraying machine having a plurality of nozzles arranged to discharge a liquid downwardly, of a flat perforate member, and means for adjustably attaching the perforate member to the machine to support the member in a desired position between the nozzle orifices and the surface to be traversed by the machine.

1,454,825. FIRE EXTINGUISHER. WILLIAM S. TIFFANY, Chicago, Ill., assignor of one-half to E. E. McMorran, Chicago, Ill. Filed Dec. 21, 1917. Serial No. 208,240. 2 Claims. (Cl. 169—32.)



1. In a fire extinguisher, the combination of a tank, a cap therefor, a plunger projecting through said cap, means for preventing the escape of liquid around said plunger, a receptacle disposed within the tank, a frangible seal for the receptacle, means for detachably holding said seal in position, and means connected with said holding means and engaging the mouth of said tank for holding said receptacle in position.

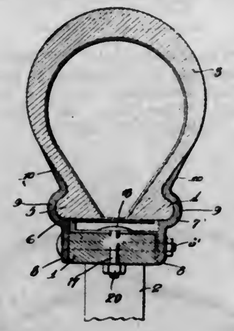
1,454,826. METHOD OF AND MEANS FOR MAKING BRICKS. BERNARD F. WEBER, Chicago, Ill. Filed June 17, 1922. Serial No. 568,971. 65 Claims. (Cl. 25—2.)



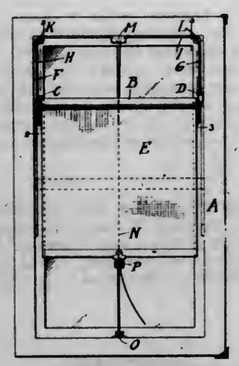
1. The method of making and assembling bricks which comprises, extruding clay thru a die in a parallel-sided stream, assembling slugs of a plurality of brick lengths in parallel relation to each other, and cutting the assembled parallel slugs at right angles into brick lengths.

1,454,827. SAFETY-LIMIT SWITCH FOR ELECTRIC HOISTS. MATTHIAS A. BECK, Milwaukee, Wis., assignor to Milwaukee Electric Crane & Mfg. Co., Incorporated, Millbrook, N. Y., a Corporation of New York. Filed Jan. 12, 1920. Serial No. 350,762. 7 Claims. (Cl. 200—47.)

1. In a safety-limit switch for electric hoists the combination of contact members one of which is movable into and out of engagement with the other, means constantly tending to open the switch, means for releasably holding the switch closed, and means adapted to be actuated by the shifting of a part of a hoist to a certain limit to release said movable contact member, and when said part recedes from said limit, to automatically close the switch.



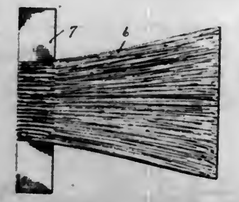
1,454,828. AEROPLANE. THOMAS H. BELL and JOHN G. SCHOENLEBER, New York, N. Y. Filed Oct. 29, 1920, Serial No. 420,434. Renewed Mar. 21, 1923. 3 Claims. (Cl. 244—18.)



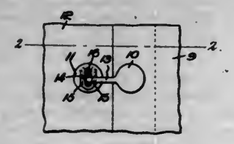
1. In combination with an aeroplane of the biplane type, and a pair of vertically disposed transversely spaced blades included in the tail structure of the aeroplane of a fan, means to drive the fan from the aeroplane motor a hood embracing the fan and tapered rearwardly therefrom, a conduit connected to the hood and extending into the space between the said blades in the tail structure a second conduit, and a valve to direct the air from the blower out of the second conduit exclusive of the said first conduit during the initial start of the aeroplane.

1,454,829. SPRING RIM. THOMAS H. BELL, New York, and JOHN G. SCHOENLEBER, Brooklyn, N. Y. Filed Nov. 27, 1920. Serial No. 426,725. Renewed Mar. 21, 1923. 3 Claims. (Cl. 152—8.)

1. In combination with a wheel having a felly and a tire to be mounted on the felly, side gripping members fixed to the opposite sides of the felly and having retaining flanges to engage opposite sides of the tire, a rim having a fastening flange interposed between one of the gripping members and one side of the wheel felly and including radially spaced apart bands, the said bands being connected together at one edge of each band whereby the outermost band will resiliently engage the innermost surface of the tire.

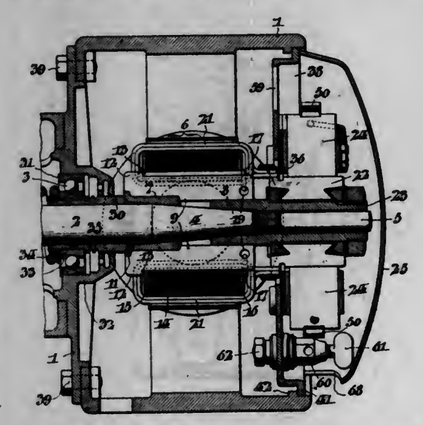


1,454,830. ADJUSTABLE SHADE SUPPORT. AUSTIN D. BAIXEY, New York, N. Y., assignor to Ordinator Company, Inc., a Corporation of New York. Filed May 25, 1917, Serial No. 170,817. Renewed Oct. 30, 1922. Serial No. 598,016. 11 Claims. (Cl. 156—27.)



11. The combination with a window frame of a shade roller, a shade thereon, brackets supporting the ends thereof, said brackets having rotatable wheels, bracket guides secured to said window frame, each of said guides having grooves for receiving opposite sides of a wheel respectively, one of said brackets having a shade roller supporting arm, said arm being pivoted below the axis of the shade roller, and upstanding from its pivot end to the shade roller pintle, the other of said brackets having a depending roller supporting arm, said depending arm being pivoted above the axis of the shade roller, and being secured to the pintle thereof by a ball and socket joint, cords for supporting the said brackets, cord guides at the ends of said bracket guides, cord guides secured to the top of said window frame at substantially the middle portion thereof, a cord holder secured to the sill of said window frame at substantially the middle portion thereof and a cord holder secured to the shade at substantially the middle portion thereof.

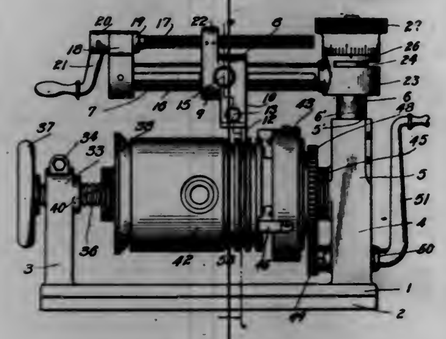
1,454,831. BROOM. HAUGHTON BROWN, Minneapolis, Minn. Filed Mar. 26, 1921. Serial No. 455,723. 4 Claims. (Cl. 15—171.)



1. A broom comprising a bundle of broom straw, the butt ends of the straw being coated with adhesive material, an anchor bar imbedded in the butt end of said straw, a handle secured to said anchor bar, a binding strap of woven wire fabric surrounding and secured to the coated butt ends of broom straw.

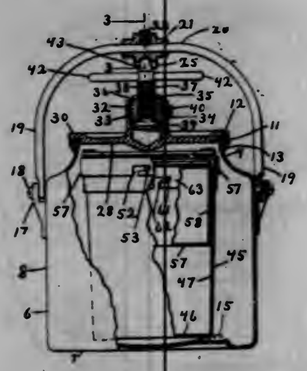
1,454,832. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed June 25, 1919. Serial No. 306,681. 4 Claims. (Cl. 24—224.)

3. A stud and socket fastener comprising, in combination, a stud having a relatively long neck or shank portion and a head, a socket providing a channel for receiving said head of said stud, said shank or neck being offset and having said head projecting inwardly therefrom to permit entrance of said head into said channel.



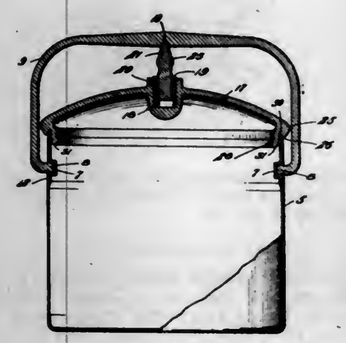
1,454,833. ELECTRICAL MACHINE. LEWIS A. DARLING, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1919. Serial No. 293,763. 4 Claims. (Cl. 171—206.)

1. An armature mounting comprising a shaft with a tapered section and a screw threaded section distinct



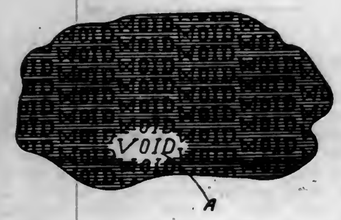
therefrom, and an armature member including a winding internally tapered to fit upon the tapered shaft section and a relatively fixed commutator screw-threaded to screw upon the threaded section.

1,454,834. PISTON-DRESSING MACHINE. ELBERT A. HAMMETT, Kansas City, Mo., assignor of one-half to Ben B. Beldon, Kansas City, Mo. Filed Oct. 10, 1921. Serial No. 506,545. 6 Claims. (Cl. 82—1.)



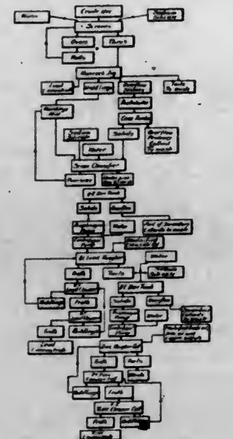
1. A piston dressing device comprising a base, standards on said base, a chuck rotatably carried by one standard, a centering device adjustably supported by the other standard and movable toward and away from the chuck to assist the chuck in supporting a piston, a sleeve longitudinally adjustable with respect to one of the standards, an arm thereon and parallel with the axis of the piston supported by the device, a cutting tool holder supported by the arm, the cutting tool holder being longitudinally movable on the arm, and a feed screw for moving the cutting tool holder longitudinally of the arm.

1,454,835. STEAM-PRESSURE COOKER. JOHN T. SLOCOMB, Providence, R. I. assignor to Economy Cooker Company, East Providence, R. I., a Corporation of Rhode Island. Filed Dec. 13, 1920. Serial No. 430,117. 7 Claims. (Cl. 220—56.)



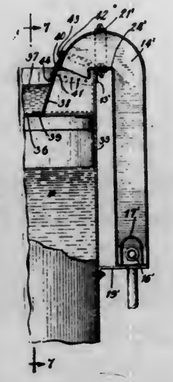
1. In a steam pressure cooking apparatus, a receptacle, a cover on the receptacle, a resilient yoke on the receptacle, a bearing member on the yoke, a threaded post on the cover, a sleeve having threaded engagement with the post and provided with an internal thread, and a rod engaging the bearing member and provided with a thread loosely engaging the internal thread of said sleeve.

1,454,836. STEAM-PRESSURE COOKER. JOHN T. SLOCOMB, Cranston, R. I., assignor to Economy Cooker Company, East Providence, R. I., a Corporation of Rhode Island. Filed Aug. 24, 1921. Serial No. 495,071. 4 Claims. (Cl. 220—57.)



1. In a steam pressure cooker, a cooker body, a cover comprising a top, a lateral rounded shoulder upon the top, a rounded depending shoulder integral with the first shoulder, a depending annular lug provided with a rounded end and depending from the top to a point below the second shoulder and spaced from the second shoulder to admit the cooker body therebetween, the parts forming means for wedgingly pinching the cover and body together.

1,454,837. SAFETY PAPER AND METHOD OF MAKING SAME. BURGESS W. SMITH, Rochester, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed July 17, 1919. Serial No. 311,673. 18 Claims. (Cl. 283—9.)



1. A safety paper on which is printed in non-erasable ink matter which, if exposed, would indicate attempts to give an instrument a meaning different from that which it was originally intended to have, and matter masking the permanently printed matter, said masking matter being printed in erasable ink of the same color as the non-erasable ink.

1,454,838. CONCENTRATION OF MINERALS. WALTER O. BORCHERDT, Austinville, Va., assignor to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 19, 1919. Serial No. 283,628. 33 Claims. (Cl. 83—85.)

1. The method of improving the flotation of minerals associated in a mineral pulp with colloidal constituents, which comprises dispersing normally flocculated colloidal constituents in the mineral pulp, removing colloidal constituents in a dispersed or deflocculated condition from the mineral pulp to an extent sufficient to reduce the flotation-inhibitory effects thereof, and thereafter subjecting the remaining mineral pulp to a flotation operation.

1,454,839. FIRE-EXTINGUISHING APPARATUS FOR OIL TANKS. WILLIS D. WITTER, Roselle Park, N. J., assignor to Foamite Firefoam Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1922. Serial No. 532,239. 5 Claims. (Cl. 169—4.)

1. In apparatus for extinguishing fires in oil tanks, a fire extinguishing means for delivering a fire extinguishing medium to and over the oil level in said tank, the said means including a mouth opening into the tank by way of or through the tank top and separable means connecting said mouth to the tank top for permitting violent removal of the tank top without disrupting or removing the said mouth.

Patents Nos. 1,454,840 to 1,445,768.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 310—No. 3. TUESDAY, MAY 15, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, Apr. 27, 1923.*

James P. Williams, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Paragon Electric Company, 329 East Fifth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered January 31, 1899, No. 32,456, to James P. Williams, 39 and 41 Cortlandt Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Williams at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Williams, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. Patent Office, *Washington, Apr. 28, 1923.*

The Avery Stamping Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Baldwin Tool Works, Parkersburg, W. Va., for registration of a trade-mark and trade-mark registered January 23, 1906, No. 49,168, to The Avery Stamping Company, corner of Coe and Hamilton Streets, Cleveland, Ohio, and a notice of such declaration sent by registered mail to said The Avery Stamping Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Avery Stamping Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. Patent Office, *Washington, Apr. 28, 1923.*

Mary A. Morgan, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of the Windsor Soap Co., Inc., 963 William Street, Buffalo, N. Y., and The Van Camp Packing Company, Inc., of Lemcke Annex Building, Indianapolis, Ind., for registration of a trade-mark and trade-mark registered January 22, 1901, No. 35,317, to Mary A. Morgan, 1330 Dorchester Avenue, Boston, Mass., and a notice of such declaration sent by registered mail to said Morgan at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Morgan, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. Patent Office, *Washington, Apr. 30, 1923.*

Haight Fruit Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Llewellyn A. Banks, of 108 West Second Street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered January 14, 1896, No. 27,647, to Haight Fruit Co., of Redlands, Calif., and the Office having been unable to obtain service on said Haight Fruit Co., notice is hereby given that unless said Haight Fruit Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. Patent Office, *Washington, Apr. 16, 1923.*

Jiffy Apron Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Jiffy Jumper Mfg. Co., of 39 West Adams Street, Chicago, Ill., and Guiterman Brothers, of Fourth and Sibley Streets, St. Paul, Minn., for registration of trade-marks and trade-mark registered February 9, 1915, No. 102,521, to Jiffy Apron Company, 255 Gratiot Avenue, Detroit, Mich., and a notice of such declaration sent by registered mail to said Jiffy Apron Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Jiffy Apron Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Assistant Commissioner.

Condition of Applications Under Examination at Close of Business May 4, 1923.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 72,803; Trade-Mark Division, 2,920. Oldest new case, May 8, 1923; oldest amended, May 10, 1923. The dates given are 1923 except where * indicates 1922.) Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended. DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

ENOCH MORGAN'S SONS COMPANY *v.* THE SANITARY PRODUCTS COMPANY.

No. 1,568. Decided January 2, 1923.

1. TRADE-MARKS—LIQUID SOAP HAS SAME DESCRIPTIVE PROPERTIES AS SCOURING SOAP FOR HOUSEHOLD PURPOSES AND TOILET SOAP.

A detergent cleansing and scouring compound, in other words a scouring soap for household purposes called "Sapolio," and a toilet soap called "Hand Sapolio," are of the same descriptive properties within the meaning of the Trade-Mark Act as liquid soap.

2. SAME—"SOAPOLIN" LIKELY TO BE MISTAKEN FOR "SAPOLIO."

"Sapolio" and "Soapolin" look and sound alike, and their contemporaneous use would be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

Mr. Archibald Cox and *Mr. W. G. Henderson* for Enoch Morgan's Sons Co.

Mr. Chas. S. Grindle and *Mr. J. A. Watson* for The Sanitary Products Company.

ROBB, *J.:*

This is an appeal from a decision of the Commissioner of Patents in a trade-mark opposition case, dismissing the opposition and sustaining the right of the applicant, appellee here, to register the word "Soapolin," used in applicant's business since April of 1917 as a trade-mark for liquid soap.

The opposer, appellant here, and its predecessors in business have used the word "Sapolio" for almost half a century as a trade-mark for a detergent, cleansing and scouring compound, in other words a scouring soap for household purposes, and for many years it also has manufactured and sold under this mark a toilet soap called "Hand Sapolio." The business of the opposer has been very extensive and the mark is well known throughout the United States and in many foreign countries.

[1, 2] We are clearly of the opinion that the goods to which these marks are applied are of the same descriptive properties, within the meaning of the Trade-Mark Act. (*Anglo-American Incand. L. Co.* v. *General E. Co.*, 43 App. D. C., 385; 215 O. G., 325.) To be sure, there are certain differences in the two products, but the points of similarity are more important in a case of this kind. The product of each party is soap, and we are convinced that the contemporaneous use of the two marks would be likely to cause confusion or mistake in the mind of the public or to deceive purchasers. The marks look and sound alike, and there was no apparent reason for such a simulation by the applicant.

The decision is reversed.

Reversed.

Court of Appeals of the District of Columbia.

TINKER *v.* M. F. PATTERSON DENTAL SUPPLY COMPANY.

No. 1,549. Decided March 5, 1923.

1. TRADE-MARKS—"INKTER"—COMMON USE OF ORIGINATOR'S NAME ON UNPATENTED INVENTION.

Where T. originated but did not patent a gold alloy which bears his name and has come into general use by dentists and has long since gone into public use under the accepted name of "Tinker Gold," it follows that anyone may use this generic name in connection with this quality of gold alloy without permission of T.

2. SAME—SAME—USE OF ANOTHER'S NAME AS A TRADE-MARK.

The mark "INKTER" is not sufficiently distinguished from T.'s surname to meet the statutory limitation against the registration of the name of an individual or corporation as a trade-mark.

3. SAME—SAME—SAME.

A personal name cannot be exclusively appropriated by anyone as against others having a right to use it.

4. SAME—SAME—SAME.

The right of an individual to have the registration of his name canceled, like the right of opposition, is statutory, and proof of actual damage is not required.

Mr. F. A. Whiteley for Tinker.

Mr. A. C. Paul, Mr. M. M. Moore, and *Mr. Wm. G. Henderson* for M. F. Patterson Dental Supply Co.

Before ROBB and VAN ORSDEL, Justices, and SMITH, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.:*

Appellant Tinker appeals from the decision of the Commissioner of Patents dismissing his petition for the cancellation of a trade-mark under the provisions of section 13 of the Trade-Mark Act of February 20, 1905 (33 Stats. L., 724).

[1] On April 6, 1920, registration was granted appellee company of the word "INKTER," as a trade-mark used on gold and platinum alloy metal for dental inlays and bridge work. Petitioner, a practicing dentist, originated a gold alloy which bears his name and has come into general use by dentists. Dr. Tinker never patented the formula, hence it has long since gone into public use under the accepted name of "Tinker Gold." It follows that anyone may use this generic name in connection with this quality of gold alloy without permission of the petitioner. (*Singer* v. *June*, 163 U. S., 169, 186; 75 O. G., 1703.)

The tribunals below proceeded upon the assumption that inasmuch as Dr. Tinker had not engaged in any business in addition to the practice of his profession, or used his name to indicate the origin of any particular alloy made by him, he is not in position to claim that he has been damaged by the registration of the mark in question.

[2, 3] We think the case turns upon a different point. The mark here registered is the surname of appellant. It is not sufficiently distinguished to disguise the object of its adoption and registration, or to meet the statutory limitation against the registration of the name of an individual or corporation as a trade-mark. Being the name of the person who originated the goods upon which it is so generally used, it is immaterial that Dr. Tinker failed to manufacture and sell goods designated by his name. A man's name is sacred against use by another as a trade-mark. As this court said in *As-*

bestone Co. v. *Philip Carey Mfg. Co.* (41 App. D. C., 507, 509; 200 O. G., 857):

The statute takes from the realm of possible registration the name of an individual, firm, corporation, or association, except under conditions not existing in this case. This limitation is founded upon sound principles of public policy. "A man's name is his own property, and he has the same right to its use and enjoyment as he has to that of any other species of property." (*Brown Chemical Co.* v. *Meyer*, 139 U. S., 540; 55 O. G., 287.)

Nor can it be appropriated against others who have acquired the right to use it.

It is well settled that a personal name cannot be exclusively appropriated by any one as against others having a right to use it; and as the name "Remington" is an ordinary family surname, it was manifestly incapable of exclusive appropriation as a valid trade-mark, and its registration as such could not in itself give it validity. (*Howe Scale Co.* v. *Wyckoff, Seamans & Benedict*, 198 U. S., 118, 134; 116 O. G., 290.)

[4] Whatever right the public may have acquired in the use of the product known as "Tinker Gold," is beside the case, since appellant's right to object to the registration, by another, of his name as a trade-mark, is protected by statute. (33 Stats. L., 726.) Nor does the public use of the product imply any dedication of appellant's name to trade-mark use, even if such use could legally be made. The designation, "Tinker Gold," can be applied only to the formula discovered and published by Dr. Tinker. The name thus applied is merely descriptive of the gold formula. It has never acquired a trade-mark use, hence the use of the name as a trade-mark by registrant company, is in direct violation of Dr. Tinker's statutory rights. Nor is appellant required to establish damage, as the result of the registration, in order to secure cancellation. As we held in the Asbestone case, the right of an individual to have the registration of his name canceled, like the right of opposition, is statutory, and proof of actual damage is not required, it will be presumed.

The decision of the Commissioner of Patents is reversed.

U. S. Circuit Court of Appeals—Second Circuit.

WESTINGHOUSE ELECTRIC & MFG. CO. *v.* METROPOLITAN ELECTRIC MFG. CO.

Decided April 3, 1923.

[281 Fed. Rep., 528.]

PATENTS—1,224,880, FOR ELECTRIC SWITCH AND FUSE BOX, VALID, NOT ANTICIPATED, AND INFRINGED.

Claims 5, 6, 7, 10, and 12 of the Kries patent, No. 1,224,880 for an electric switch and fuse box, consisting of two compartments and so arranged that the fuse compartment cannot be opened while the switch is on, *Held* valid, not anticipated, and infringed.

APPEAL from the District Court of the United States for the Eastern District of New York.

Suit by the Westinghouse Electric & Manufacturing Company against the Metropolitan Electric Manufacturing Company. From an interlocutory decree, holding valid and infringed claims 5, 6, 7, 10, and 12 of the Kries patent, No. 1,224,880, dated May 1, 1917, for an electric switch and fuse box, and ordering a reference (278 Fed., 666), defendant appeals. Affirmed.

Mr. C. P. Goepel for the appellant.

Mr. Drury W. Cooper and *Mr. Thomas J. Byrne* for the appellee.

Before HOUGH, MANTON, and MAYER, Circuit Judges.

MAYER, *Cir. J.*:

In view of the clear description of the patent and the full recital of the claims in Judge Garvin's opinion, we need only refer to claim 5 as illustrative of the invention. That claim reads:

5. The combination, with a casing having a door hinged thereto, of fuse terminals in one part of the casing accessible when the door is open and inaccessible when the door is closed, supply terminals and live switch contacts in another part of the casing, a barrier within the casing preventing access to said supply terminals and switch contacts when the door is open, pivotally mounted switch arms within the casing for connecting said switch contacts with the fuse terminals, and means operable from without the casing for rocking the switch arms and controlling the door, said means acting to lock the door when said arms are moved toward closed position and to release the door when said arms are moved from closed position.

What the art needed was a device to prevent easy access to switchboards inclosed in boxes or holders installed extensively in manufacturing establishments and particularly in homes. Such access was dangerous to thoughtless or inexperienced persons, who might be seriously injured, and perhaps killed, by contact with exposed parts, and also made thefts of current not difficult of accomplishment. Prior to Kries, these switchboards were inclosed in a box and locked, so as to prevent access, except by the representatives of the lighting company. The fuses, however, may burn out at any time, and under the old system nothing could be done until the company's inspector appeared with his key to open the box.

To overcome this difficulty presented a very practical problem. Kries attained the desired result in a manner which now seems simple, but the very simplicity of which is one of the merits of the invention. He took the inclosing box, with its two compartments, each having a door, one containing the fuses, the other the switch members, extended an operating handle for the switch outside the box, and so arranged his elements that it was impossible to open the fuse-compartment board until the switch was "off," or, when that door was opened, to close the switch until the compartment door had been closed. Another result was that, when it is desired to have the switch remain for an extended time in its open position (as when a householder is away), the switch arm may be locked in that position, so as to make sure that the current is off the meter.

The application encountered the not unusual struggle between the reluctant Examiner and the overstating solicitor; but, notwithstanding its history, we deem the effective interlocking between fuse door and switching member in two-compartment switch boxes as the outstanding contribution to the art.

Only two prior art patents need be referred to: German patent, No. 191,485, to Oerliken, and Austrian patent, No. 36,265, to Meyer. As Hammer, plaintiff's expert said, the Oerliken patent shows—

a casing designed to contain both switch and fuses, and it does segregate the switch members in one compartment, and it does place the fuses in another and separate compartment, and there is a barrier between the two compartments, and there is an interlock between switch-actuating member and fuse compartment door.

But the switch may be closed with the door unlatched, whether by design or accident, or the switch may be closed with the door wide open, by the use of a screwdriver, or even a pencil.

The Austrian patent discloses a single-compartment device, without any barrier, containing both fuses and switches. The operating mechanism is such that it may be easily disengaged, so that the switch may be closed and the partial door left open, and there is nothing inaccessible about any part of the interior of the box.

The failure of the prior art, the effectiveness with which the device works in practice, the ease with which a layman can understand its operation, and the almost complete protection against accident and theft of current combine to make invention clear and to attribute to the disclosure a position of substantial merit. Infringement of the claims of such a patent may not be readily avoided by substituting a less efficient device, while adopting the features which give the invention vitality.

Defendant's device, so far as concerns the interlocking mechanism, is a faithful copy of Figure 6 of the patent drawings, except for some minor mechanical details of no consequence. The district judge put the matter aptly when he said:

Defendant contends that plaintiff's barrier between the two compartments of the box does not go all the way across the casing. This appears to be true, but it is of no consequence, for the opening is so slight that it is well-nigh impossible to get the hand through (thus practically eliminating danger), while the connection that could be made by slipping through a hook, with wire attached, to steal current, would be so imperfect that but little loss would be possible by that means. It is finally claimed that there is no infringement, because in plaintiff's patent the door is closed by the closing of the switch, whereas in defendant's the switch may be closed by the closing of the door. An inspection reveals, however, that the closing of the switch in defendant's device will close the door. The conclusion is reached that defendant's box differs from that of plaintiff's only in slight and nonessential particulars, and that the claims of the patent in suit are infringed.

Finally, it is urged that "barrier" and "inaccessible" used, for instance, in claim 5, supra, are indefinite terms, and that, unless the claims are limited to an impenetrable barrier or complete inaccessibility, they must be held void for indefiniteness. This contention is followed by the argument that, because some one might be able deliberately to injure himself in handling defendant's box, or might more readily steal current than would be possible in a device responding to the claims of the patent, therefore that the claims are not infringed. The patentee rather extravagantly had said in his specification:

I * * * preclude all chance of accidental contact with live wires or conductors, and render impossible the taking of current from within the box or chamber while said box is open.

But all such descriptions are relative within appropriate limits. Nothing mechanical is a perfect barrier nor a perfect defense against accessibility, although in this case the invention reasonably approximates perfection in this regard. No one really desiring to avoid infringement need be deceived in this respect. We have indicated so plainly that there are words not susceptible of mathematical definition, which nevertheless fairly describe what is meant to be conveyed to the skilled worker in the art, that there should be no further doubt on the point. (*Eibel Process Co.* v. *Remington-Martin Co.*, 234 Fed., 624; 148 C. C. A., 390; *Vacuum Cleaner Co.* v. *Innovation Co.*, 239 Fed., 543; 152 C. C. A., 421; *E. J. Manville Co.* v. *Excelsior Needle Co.*, 167 Fed., 540; 93 C. C. A., 216; *Blair* v. *Jeannette McKee Glass Works*, C. C., 161 Fed., 355.)

Decree affirmed, with costs.

948,806, 855,038, H. P. Ball, Music rolls for mechanical music instruments, suit filed Mar. 27, 1923, U. S. D. C., S. D. N. Y., Doc. E 26/208, *Holland Development Co.* v. *Hardman-Peck & Co., Inc.*

999,457, G. E. Kellar, Flume gates, suit filed Dec. 4, 1922, U. S. D. C., S. D. Calif. (N. D.), Doc. B-87, *Martin Iron Works* v. *W. A. Waterman.*

1,082,140, Schonemann & Rauchle, Lock for neck chains, bracelets, and the like, suit filed Mar. 27, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/242, *T. W. Miller (Alien Property Custodian) and Others* v. *J. J. Felsenfeld.*

1,158,933, Kohman, Hoffman & Blake, Manufacture of bread; 1,282,867, same, Bread-making composition, suit filed May 2, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/358, *Ward Baking Co.* v. *G. Gould (The Nudo Process Co.).*

1,216,140, A. Kurtz, Lining for hats, suit filed May 2, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/349, *A. Kurtz and Others* v. *S. Cohn and Others (S. Cohn Co.).* Preliminary injunction granted.

1,229,102, B. E. Lloyd, Talking doll; 1,277,229, same, Sounding device for dolls, suit filed Mar. 29,

1922, U. S. D. C., S. D. N. Y., Doc. E 23/248, *B. E. Lloyd and Others* v. *B. E. Fleischaker and Others (Fleischaker & Baum, Inc., The Gerling Toy Co., Inc.)*. Preliminary injunction granted.

1,229,986, L. K. Litchfield, Garments, suit filed April 26, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/331, *Brohman Co.* v. *Economy Works.* Consent decree in favor of plaintiff and granting permanent injunction.

1,261,692, W. R. Buxton, Key cases, suit filed Feb. 6, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/101, *Buxton, Inc.* v. *D. I. Reiter (Kayendee Metal Mfg. Co.)*. Consent decree in favor of plaintiff sustaining patent. Perpetual injunction granted.

1,269,964, T. C. Schenk, Clamping device for the connection of poles, balks, and the like; 1,431,186, same, Device for clamping timbers together, suit filed Mar. 28, 1923, U. S. D. C., S. D. N. Y., Doc. E 26/211, *Schenk Timber Clamp Corp. and Others* v. *Pyle-Rogers Corp.*

1,277,229. (See 1,229,102.)

1,282,867. (See 1,158,983.)

1,341,076. (See 793,249.)

1,405,209, H. Halle, Calculating attachment for typewriting machines, suit filed Feb. 1, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/82, *Elliott-Fisher Co.* v. *Remington Typewriter Co., Inc., and Others.* Bill dismissed as to Remington Typewriter Co. of Delaware for want of jurisdiction.

1,408,139, M. V. Pruzan, Brassière, suit filed Apr. 27, 1922, U. S. D. C., S. D. N. Y., Doc. E 23/338, *Boyshform Brassiere Co., Inc.* v. *B. Altman & Co., Inc.*

1,411,231, M. L. Weiss, Vulcanization accelerators, interlocutory decree in favor of plaintiff granting perpetual injunction, injunction suspended, U. S. D. C., S. D. N. Y., *Dovan Chemical Corp.* v. *National Aniline & Chemical Co., Inc.*

1,414,321, A. Zwiebelson, Brassière, consent decree sustaining patent and granting injunction, U. S. D. C., S. D. N. Y., *A. Zwiebelson (Mollie Mayer)* v. *La Belle Brassiere Corp.*

1,431,186. (See 1,269,964.)

1,431,408, Melniker & Calmanson, Support for hammocks, suit filed Mar. 28, 1923, U. S. D. C., S. D. N. Y., Doc. E 26/210, *Melniker Hammock Mfg. Co., Inc.* v. *Manhattan Mirror Works, Inc.*

Des. 59,252, J. W. Mayer, Ring or similar article, Consent decree in favor of plaintiff, granting permanent injunction, U. S. D. C., S. D. N. Y., *J. W. Mayer and Others* v. *Fourteen Karat Finding Co., Inc., and Others.*

T. M. 62,016. (See T. M. 62,821.)

T. M. 62,124. (See T. M. 62,821.)

T. M. 62,516. (See T. M. 62,821.)

T. M. 62,821, T. M. 75,976, Vacuum Oil Co., Lubricating, illuminating, and heating oils, greases, etc.; T. M. 62,124, same, Oils, greases, and waxes for the preservation of leather, T. M. 62,516, same, Illuminating waxes, floor and linoleum dressing waxes, etc.; T. M. 62,016, same, Salad oil, bill taken pro confesso and permanent injunction issued, U. S. D. C., M. D. Pa., *Vacuum Oil Co.* v. *American Auto Accessories Stores, Inc., and Others.*

T. M. 75,976. (See T. M. 62,821.)

ADJUDICATED PATENTS.

(U. S. D. C. N. Y.) Wigginton patents, 1,174,458 and 1,222,705, for temporary binder or loose-sheet holder, *Held* invalid. *Kalamazoo Loose Leaf Binder Co.* v. *Wilson Jones Loose Leaf Co.*, 286 Fed. Rep., 715.

(U. S. D. C. N. Y.) Farron patents, 1,194,284, except claim 5, and 1,197,468, relating to binder device, *Held* void for want of invention. *Kalamazoo Loose Leaf Binder Co.* v. *Wilson Jones Loose Leaf Co.*, 286 Fed. Rep., 715.

(U. S. D. C. N. Y.) Farron patent, 1,194,284, claim 5, for adjustable rack and binder, *Held* void for want of invention. *Kalamazoo Loose Leaf Binder Co.* v. *Wilson Jones Loose Leaf Co.*, 286 Fed. Rep., 715.

(U. S. D. C. N. Y.) Patent 1,270,082, for binder with side member flat, *Held* void. *Kalamazoo Loose Leaf Binder Co.* v. *Wilson Jones Loose Leaf Co.*, 286 Fed. Rep., 715.

(U. S. D. C. Tex.) Patents 1,411,391, 1,422,637, and 1,424,530, *Held* valid and claims 1-3 of the first patent and claims 1, 2 of the third patent infringed. *Tucker Bros. Mfg. Co.* v. *Dallas Machine & Tool Co.*, 286 Fed. Rep., 754.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,381,351, Shaw and Skadan, Clamp, decided Mar. 24, 1923, claim 1.

Pat. 1,400,691, L. Malstrom, Method of producing artificial-flower petals, decided Mar. 23, 1923, claim 5.

Changes in Classification.

(Order No. 2,810.)

U. S. PATENT OFFICE, *Washington, Apr. 20, 1923.*

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 187, Elevators (Division XLVII), in subclass 29, Control mechanism, Electric, in the fourth line of the first note following the definition cancel the words "for the normal control of elevator motors" and substitute therefor *involving features peculiar to electric motor control, other than the mere inclusion of electric motor, main and directional switches*, and cancel the last sentence of the note, and in the second line of the search note cancel the words "electrical elevator" and substitute therefor *electric motor*. In subclasses 31, Control mechanism, Door actuated, Electric; 43, Control mechanism, Operator actuated, Electric; and 48, Control mechanism, Controller locks, Door actuated, Electric, in the second line of the search note insert the word *motor* between the words "electric" and "control." In subclasses 32, Control mechanism, Landing stops, and 35, Control mechanism, Limit, Electric, in the second line of the search note cancel the word "electrical" and substitute therefor *electric motor.*

In class 26, Textiles, Cloth Finishing (Division XXI), establish subclass—

21. Splitting double pile fabrics.

The patents contained in this subclass have been taken from class 139, Textiles, Weaving, subclass 50, Cutting double pile fabrics, hereinafter abolished.

In class 139, Textiles, Weaving (Division XXI), abolish the existing subclasses and establish in lieu thereof the following subclasses and definitions:

139.—TEXTILES, WEAVING.
1. Miscellaneous.
2. Pile tufting—
3. Around warp—
4. Oriental knot—
5. Warp traversing,
6. Portable supply,
7. Portable supply—
8. Including tuft presenting—
9. Tuft presenting—
10. Tube frames.
11. Special-type looms—
12. Progressive shedding—
13. Circular—
14. Open back,
15. Contacting shuttle and shed control,
16. Radial heddle movement,
17. Open-back shed,
18. Vertical shed—
19. Seed-corn stringers,
20. Multiple shed—
21. Pile,
22. Narrow ware—
23. Rack and pinion shuttle motions,
24. Irregular warp feed—
25. Terry—
26. Beat-ups—
27. Separate reed,
28. Pushed shed pocket,
29. Hand looms—
30. Pushed harness—
31. Cam shedding,
32. Cam shedding,
33. Manual shedding,
34. Warp frames.
35. Warp manipulation—
36. Fluid treatment,
37. Pile—
38. Loop hook,
39. Transverse wire—
40. Wire control—
41. Including end motions—
42. End motions,
43. Separate cutting mechanism,
44. Pile wires,
45. Oiling,
46. Longitudinal wire, traversing—
47. Anchored release end,
48. Traversing—
49. Lappet,
50. Leno or gauze—
51. Doup heddle—
52. Heddles,
53. Needle-eye heddle,
54. Selvage,
55. Shedding—
56. Disconnecting mechanism,
57. Pushed harness—
58. Double-acting cam,
59. Jacquard—
60. Knotted cord,
61. Multiple cylinder,
62. Group control,
63. Locked open shed,
64. Mid-closing,
65. Double lift,
66. Dobby—
67. Vibrating griff—
68. Jacquard pattern,
69. Mid-closing—
70. Curved motion,
71. Double lift—
72. Locked open shed—
73. Irreversible transmission,
74. Evener direct,
75. Harness levelers,
76. Rotating actuator—
77. Vibrator gear,
78. Pattern direct,
79. Cam—
80. With varying means,
81. Double-acting,
82. Harnessing—
83. Power to both sides,
84. Power to top—
85. Jacquard—
86. Comber boards,

139.—TEXTILES, WEAVING—Con.
Warp manipulation—
Shedding—
Harnessing—
87. Inter-harness-connections,
88. Strap connections,
89. Retractors—
90. Lingoes,
91. Harnesses—
92. Supplemental heddle rod,
93. Heddles—
94. Separate eye,
95. Twisted wire,
96. Perforated strip,
97. Feeding—
98. Lease rods,
99. Interconnected let-offs and take-ups,
100. Let-offs—
101. Multiple—
102. Pile,
103. Tension regulated,
104. Independent of supply,
105. Speed regulation—
106. Exhaustion compensated—
107. Radius—
108. For positive,
109. Tension—
110. For positive,
111. Automatic arresters—
112. Beat-up resisting,
113. Manual resetters,
114. Whip rolls—
115. Positive slackeners.
116. Weft manipulation—
117. Special length—
118. Fringe,
119. Swivel shuttle—
120. With main-shuttle control,
121. With rack and pinion,
122. Stationary supply—
123. Needle—
124. With selvage formers,
125. Shuttle type—
126. Cut lengths,
127. Cut lengths,
128. Separate wefts—
129. Without shedding,
130. Pulled in—
131. Shuttle type,
132. Selectors,
133. Shuttle motions—
134. Magnetic,
135. Narrow ware, positive—
136. Rack and pinion—
137. Weft change,
138. Actuators,
139. End engagement—
140. Single shuttle,
141. End engagement, positive,
142. Fly—
143. Intermediate pickers,
144. Pneumatic,
145. Spring propelled,
146. Lay-carried stick—
147. Vertical bell crank,
148. Foot actuated,
149. Foot construction—
150. Rocker,
151. Lug connections—
152. Foot supported,
153. Lug straps,
154. Lug-strap supports,
155. Shuttle positioners.
156. Disconnecting mechanisms,
157. Picker sticks,
158. Picker spindles,
159. Pickers—
160. Spindle-guided pickers,
161. Picker checks—
162. Special connection,
163. Friction—
164. Lateral,
165. Double-acting shifter,
166. Nonmetallic buffer,
167. Spring buffer—
168. With taut strap,

139.—TEXTILES, WEAVING—Con.
Weft manipulation—
Shuttle motions—
Fly—
Picker Checks—
Spring buffer—
169. With pivoted arm,
170. With offset arm,
171. Box-change motions—
172. Revoluble box,
173. Vibrating actuator and wheel—
174. Rack and pinion,
175. Vibrating actuator and catch—
176. Varied—
177. Step type,
178. Rotating actuator and gear—
179. Axial shift,
180. Vibrator gear,
181. Connecting motions,
182. Box-supporting instrumentalities,
183. Shuttle boxes—
184. Multiple,
185. Shuttle checks—
186. Shuttle actuated,
187. Relieving,
188. Lays or beat-ups,
189. Loose reed,
190. Motions—
191. Separate reed,
192. Reeds,
193. Shuttle guards,
194. Tensions,
195. Selvage-loop retainers,
196. Shuttles—
197. Types—
198. Exteriorly-supported cop,
199. Bow—
200. Brake tension,
201. Tortuous-course tension,
202. Roller bearing,
203. Detecting—
204. Float,
205. Exhaust,
206. Thread-carrier supports—
207. Automatically replenished,
208. Pivoted spindle—
209. Detachable,
210. Spindle-actuated retainer—
211. Exterior,
212. Thread delivery control—
213. Uncoiling engagement,
214. Tortuous course—
215. Threader slot,
216. Spring clamp—
217. Threader slot,
218. Friction material—
219. Threader slot—
220. Loom threading,
221. Threading feature—
222. Slot—
223. Loom threading,
224. Replenishing—
225. With other loom parts control—
226. Suspension—
227. Of main shaft,
228. Of stopping,
229. Delayed,
230. Prevented—
231. Revoked,
232. Multicolor type—
233. Feeler mechanism,
234. Shuttle changing—
235. Manually controlled,
236. Supply and discharge at different ends,
237. Exhausted shuttle deflected,
238. Contacting shuttles,
239. Movable shuttle box—
240. Progressive,
241. Bobbin changing—
242. By moving transferrer—
243. Lay actuated,
244. Transferrer tips,

139.—TEXTILES, WEAVING—Con.
Weft manipulation—
Replenishing—
Bobbin changing—
245. Bobbin supply—
246. With thread control—
247. With gravity feed,
248. With rotary battery,
249. Rotary battery—
250. Battery feeds,
251. Bobbin guides or supports,
252. Shuttle positioners—
253. Inner tip pushers,
254. Bobbin-smash preventers,
255. Ejected-bobbin receivers,
256. Thread control—
257. Incoming thread—
258. Attached to magazine—
259. Shuttle threading,
260. Positioning outgoing thread for cutting,
261. Shuttle clearing—
262. With bobbin manipulation,
263. Cutting mechanism—
264. On shuttle feeler,
265. On lay,
266. On temple,
267. Operated by transfer,
268. Operation prevented,
269. Feeler mechanisms—
270. Suspended actuation,
271. Positively withdrawn—
272. Lay carried,
273. Electric,
274. Magnetic,
275. Detector in shuttle,
276. Becoming quiescent—
277. With auxiliary bobbin and shuttle contact,
278. Yarn impinging and lay actuation,
279. Yarn impinging and penetrating members,
280. Rotary,
281. Side slipping—
282. Spring stressed—
283. Pivoted carrier,
284. Slidable carrier,
285. Pivoted carrier,
286. Slidable carrier,
287. Feeler tips,
288. Positioners,
289. Feeler cooperating bobbin elements,
290. Stopping devices,
291. Fabric manipulation—
293. Temples—
293. Clamping jaw,
294. Rotary—
295. Roller and pod,
296. Roller surfaces,
297. Bearing for rollers,
298. Supports—
299. Sliding,
300. Displacing means,
301. Positioning adjustments,

139.—TEXTILES, WEAVING—Con.
Fabric manipulation—
302. Selvage trimmers—
303. Lay actuated,
304. Take-ups—
305. Irregular shape,
306. Traversing,
307. Sand-roll type—
308. Contacting wind-up,
309. Speed regulation—
310. Increase compensated,
311. Tension,
312. Manual,
313. Automatic let-backs,
314. Automatic arresters,
315. Fraud preventers,
316. Manual resetters.
317. Pattern mechanisms—
318. Picture pattern—
319. Electrical,
320. Lateral shift,
321. Skip motions,
322. Multiple cylinder—
323. With control pattern,
324. Reverse—
325. With control pattern,
326. Multipliers,
327. Loom-part control,
328. Reset,
329. Cylinder motions,
330. Cylinders,
331. Feelers,
332. Pattern guides,
333. Patterns—
334. Movable pins,
335. Cards.
336. Stopping—
337. Harness-mechanism actuated,
338. Pattern-mechanism actuated,
339. Take-up-mechanism actuated,
340. Predetermined,
341. Shuttle-position detectors—
342. Improper presence in shuttle box—
343. Shuttles in both boxes,
344. Positive-shuttle-motion type,
345. Protector-rod type—
346. With sliding frog,
347. With relief mechanism,
348. Thin-place detectors,
349. Warp—
350. With leasing,
351. With break locating,
352. Nonindividual detector,
353. Electrical—
354. Pivoted detector,
355. Shed-lifted detector—
356. Lay knock-off,
357. Lay knock-off,
358. Supports,
359. Nonarrestable vibrator,
360. Arrestable vibrator—
361. Pivoted detector—
362. Lay knock-off,
363. Shed-lifted detector—
364. Lay knock-off,
365. Transverse motion—
366. Lay knock-off,
367. Lay knock-off,
368. Detectors,

139.—TEXTILES, WEAVING—Con.
Stopping—
Warp—
369. Supports,
370. Weft—
371. Detector in shuttle,
372. Detector fork—
373. Vibration preventers,
374. Lay carried—
375. Dropping—
376. Supplementally aided,
377. Slidable tilting—
378. Forks,
379. Grids and cleaners.
380. Weavers' implements—
381. Shuttle threaders—
382. Pneumatic.

386. Curved,
387. Tubular—
388. Uniform,
389. Bags and pockets—
390. Permanently united,
391. Pile—
392. Weft—
393. Chenille—
394. Multiweft planes,
395. Chenille strands,
396. Terry,
397. Separable fabrics—
398. Each with multiweft planes,
399. Tufted—
400. Oriental knot,
401. Multiweft planes,
402. Regularly-shedded warp—
403. Multiweft planes,
404. Selected warp—
405. Multiweft planes—
406. Divided by stuffer warp,
407. Separable,
408. Multiweft planes—
409. Independent plies—
410. Two ply,
411. Three weft planes—
412. Separated weft,
413. Two weft planes—
414. Separated weft—
415. Divided by stuffer warp,
416. Figured, single weft plane—
417. Striped,
418. Double-faced,
419. Cross weave,
420. Materials—
421. Elastic—
422. Inelastic sections,
423. Multiweft planes,
424. Including straw or vegetable stalks,
425. Including metal,
426. Textile-thread type—
427. Including nonfelting animal fibers—
428. Silk.

THOMAS E. ROBERTSON, *Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, MAY 15, 1923.

[VOL. 310. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 111,114. (CLASS 39. CLOTHING.) ARTHUR LETTS, Los Angeles, Calif. Filed May 22, 1918.

American Boy

Particular description of goods.—Boys' Suits, Overcoats, Nightshirts, Pyjamas, Shirts, Blouses, Knitted and Textile Underwear, Pants, Wash Suits, Rompers.
Claims use since July 17, 1911.

Ser. No. 138,292. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) OSCAR J. MILNOR, Rutherford, N. J. Filed Oct. 14, 1920.

VANITILITE

Particular description of goods.—Ladies' Vanity Bags.
Claims use since Aug. 1, 1920.

Ser. No. 139,240. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CLARA I. WOOD, doing business as Snapo Food Products Company, New York, N. Y. Filed Nov. 5, 1920.

Snapo

Particular description of goods.—Highly-Seasoned Sauce for Use on Meat and Fish.
Claims use since Nov. 1, 1920.

Ser. No. 139,518. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THOMAS A. EDISON, INCORPORATED, West Orange, N. J. Filed Nov. 11, 1920.

Electrip

Particular description of goods.—Devices for Controlling the Starting and Stopping of Phonographic Apparatus.
Claims use since Mar. 30, 1920.

Ser. No. 141,229. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LABORATORY SPECIALTY COMPANY, Cincinnati, Ohio. Filed Dec. 17, 1920.

Elesco

Particular description of goods.—Toilet Preparations Consisting of Liquid Shampoos for the Hair; Liquid Lotions for the Face, Hands, and Body; Hair Tonics, Salves for Lips, Sunburns, Etc., Flesh Cleansers for Cleansing the Skin, Rouge for the Cheeks, Cream Massage for Eradicating Wrinkles, Dandruff Remedy, Paste Skin Bleach, and Perfumed Powders for Face and Body.
Claims use since Jan. 1, 1920.

Ser. No. 141,447. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN TEA & COFFEE CO., INC., Nashville, Tenn. Filed Dec. 23, 1920.

Blue Bird

Particular description of goods.—Spices.
Claims use since about Nov. 25, 1919.

Particular description of goods.—Card Games.
Claims use since about Nov. 22, 1895.

168,298. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) REPUBLIC VARNISH COMPANY, Newark, N. J. Filed Mar. 7, 1923. Serial No. 177,106.

Neverbreak

Particular description of goods.—Ready-Mixed Paint, Varnish, and Paint Enamel.
Claims use since January, 1922.

168,299. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES. BENIGNO R. LEMES, New York, N. Y. Filed Mar. 2, 1923. Serial No. 176,840.

EXPRESS

Particular description of goods.—Automatic Pistols, Revolvers, Shotguns, and Rifles.
Claims use since Mar. 22, 1922.

168,300. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) DE ZENG STANDARD CO., Camden, N. J. Filed Feb. 24, 1923. Serial No. 176,540.

Flashlight

Particular description of goods.—Diagnostic Medical Instruments—Namely, Otoscopes, Laryngoscopes, Cystoscopes, Proctoscopes, Bronchoscopes, Tongue Depressors, Mouth Gags, and Specula.
Claims use since May 21, 1921.

168,301. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CHARLES L. POOR CO., New York, N. Y. Filed Feb. 17, 1923. Serial No. 176,213.

Particular description of goods.—Cotton Piece Goods.
Claims use since May 7, 1921.

168,302. (CLASS 11. INKS AND INKING MATERIALS.) THE AMERICAN PRINTING INK COMPANY, Cincinnati, Ohio. Filed Feb. 8, 1923. Serial No. 175,695.

THE AMERICAN PRINTING INK CO.

Particular description of goods.—Printing Inks.
Claims use since May 28, 1904.

168,303. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SOMERSVILLE MANUFACTURING CO., Somersville, Conn. Filed Feb. 6, 1923. Serial No. 175,626.

Scantic Fabrics

Particular description of goods.—Woolen Fabrics.
Claims use since January, 1920.

168,304. (CLASS 15. OILS AND GREASES.) LEONARD E. VAN DRUFF, doing business as Capital City Oil Company, Council Bluffs, Iowa. Filed Jan. 15, 1923. Serial No. 174,608.

RED GIANT OIL

Particular description of goods.—Fuel Oils, Illuminating Oils, Lubricating Oils and Greases.
Claims use since Jan. 1, 1917.

168,305. (CLASS 45. BEVERAGES, NONALCOHOLIC.) GOOD-GRAPE COMPANY, Chattanooga, Tenn. Filed Jan. 13, 1923. Serial No. 174,572.

Good Grape

Particular description of goods.—A Nonalcoholic, Maltless Grape Drink.
Claims use since January, 1922.

168,306. (CLASS 17. TOBACCO PRODUCTS.) THE KHEDIVAL COMPANY, New York, N. Y. Filed Jan. 9, 1923. Serial No. 174,363.

DEMETRIO

Particular description of goods.—Cigarettes.
Claims use since 1902.

168,307. (CLASS 39. CLOTHING.) ESSEX RUBBER COMPANY, Trenton, N. J. Filed Jan. 3, 1923. Serial No. 174,131.

TITE-EDGE

Particular description of goods.—Rubber Soles and Heels.
Claims use since May 29, 1917.

168,308. (CLASS 39. CLOTHING.) THE BERGER BROTHERS COMPANY, New Haven, Conn. Filed Dec. 22, 1922. Serial No. 173,694.

SPENCER

Particular description of goods.—Corsets.
Claims use for not less than one year.

168,309. (CLASS 39. CLOTHING.) W. C. SMITH GLOVE CO. INC., Gloversville, N. Y. Filed Dec. 19, 1922. Serial No. 173,583.

Higrade Handwear

Particular description of goods.—Gloves and Mittens for Men, Women, and Children.
Claims use since Nov. 1, 1921.

168,310. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SARA R. GLASSMIER, doing business as Infallible Hair Color Restorer Co., Philadelphia, Pa. Filed Dec. 13, 1922. Serial No. 173,282.

INFALLIBLE

Particular description of goods.—A Preparation for Restoring Hair.
Claims use since Feb. 4, 1898.

168,311. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) B. HELLER & COMPANY, Chicago, Ill. Filed Nov. 17, 1922. Serial No. 172,159.

$1000.00 GUARANTEED OZO TOILET CLEANER
REG. U.S. PAT. OFF.

Particular description of goods.—A Toilet-Bowl or Privy Cleaner.
Claims use since January, 1922.

168,312. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SODIPHENE COMPANY, Kansas City, Mo. Filed Nov. 11, 1922. Serial No. 171,874.

Sodiphene
First Aid for the Family

Particular description of goods.—Antiseptic Germicide.
Claims use for not less than one year.

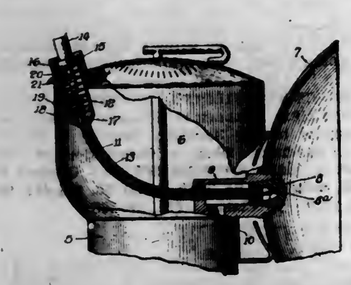
REISSUES.

MAY. 15, 1923.

15,597. MEASURING AND INDICATING APPARATUS. HENRY BREWER, Wilmette, Ill., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1922. Serial No. 604,089. Original No. 1,361,862, dated Dec. 7, 1920, Serial No. 278,406, filed Feb. 21, 1919. 76 Claims. (Cl. 234—5.5.)



49. The combination with a galvanometer, of a source of power, variable electrical means and a plurality of electrical devices adapted severally to co-operate with said means to control said galvanometer, said means varied by said source of power under control of said galvanometer, means for bringing said devices successively into co-operation with said first named means, means for indicating which of said devices is co-operating with said first named means, an instrument for making indications respecting conditions of said devices, and a marker actuated by said source of power under control of said galvanometer to produce a record related to the indications of said instrument.

59. The combination with a temperature responsive device, of a movable structure controlled thereby, a Wheatstone bridge having two arms movable with said structure, a fixed contact associated with said two arms, and a galvanometer associated with said Wheatstone bridge.

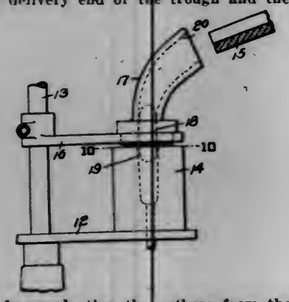
68. The combination with a device responsive to changes in magnitude of a condition, of a plurality of signals for indicating different magnitudes of said condition, means controlled by said device for controlling said signals individualy, and a galvanometer controlled by said means for indicating different magnitudes of said condition.

15,598. CLEANER FOR BURNERS OF CARBIDE LAMPS AND THE LIKE. JACOB W. JACOBSON and JOHN EMIL TURJA, Hancock, Mich., assignors, by mesne assignments, to Grier Brothers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 8, 1922. Serial No. 559,480. Original No. 1,397,170, dated Nov. 15, 1921, Serial No. 407,983, filed Sept. 3, 1920. 13 Claims. (Cl. 158—120.)

8. In combination with a carbide lamp or the like, comprising a gas compartment, a water compartment above said gas compartment, a burner tube at the front of the lamp and adjacent the bottom of the water compartment, said tube communicating with the gas compartment, and a burner tip in the outer end of said tube, of a cleaning device comprising a tube extending through the water

compartment and having one end opening into the burner tube and the other end opening through a wall of the water compartment, a flexible wire in said tube having its operative end normally located opposite to and slightly in rear of the burner tip opening, and an operating member attached to the opposite end of said wire.

15,599. AXLE BEARING. JOSEPH D. CITÉ, Dayton, Ohio, assignor, by mesne assignments, to The Bahmann Iron Works Company, Dayton, Ohio, a Corporation of Massachusetts. Filed Aug. 1, 1922. Serial No. 579,047. Original No. 1,200,511, dated Jan. 7, 1919, Serial No. 196,821, filed Oct. 12, 1917. 4 Claims. (Cl. 105—223.)



1. The combination with a car axle, of a bearing therefor consisting of a housing the interior top and side walls thereof being of a substantially spherical form and the bottom portion thereof being open, and an inner bearing member of spherical form within said housing, the lower side of said inner bearing member being uninclosed at the bottom of the housing whereby it is subject to a universal movement within the housing with a substantial curtailment of frictional engagement with said housing.

15,600. PROCESS OF AND APPARATUS FOR FEEDING MOLTEN GLASS. WILLIAM A. LORENZ, Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y., a Corporation of New York. Filed Mar. 16, 1920. Serial No. 366,443. Original No. 1,300,161, dated Apr. 8, 1919, Serial No. 184,875, filed Aug. 7, 1917. 20 Claims. (Cl. 49—14.)

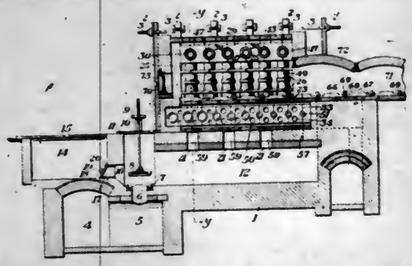
1. In an apparatus for handling gathers of molten glass the combination with a conducting trough and a

shaping mold of a curved inclosing funnel located between the delivery end of the trough and the mouth of

the mold for conducting the gathers from the trough to the mold and shaping them while being so conducted.

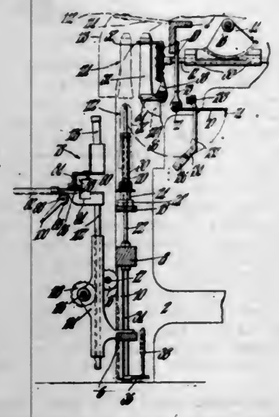
15,601. DEVICE FOR FILLING CENTRIFUGAL CASTING MACHINES. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Sandusky Foundry & Machine Company, Sandusky, Ohio, a Corporation of Ohio. Filed Oct. 4, 1921. Serial No. 506,806. Original No. 1,047,972, dated Dec. 24, 1912, Serial No. 671,457, filed Jan. 16, 1912. 10 Claims. (Cl. 22—65.)

1. A filling device for centrifugal casting machines comprising a closed trough arranged to be rotated and having a discharge opening through one side thereof shorter than the trough and through which the molten metal is discharged into the interior of the machine and having a feed hole, longitudinally spaced from the discharge opening, the trough being closed between the feed hole and discharge opening.



15,602. PROCESS OF MAKING ARTIFICIAL LEATHER. ROLAND B. RESPESS, New York, N. Y., assignor, by mesne assignments, to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed Apr. 4, 1923. Serial No. 629,934. Original No. 1,416,064, dated May 16, 1922, Serial No. 306,453, filed June 24, 1919. 5 Claims. (Cl. 91—68.)

1. The herein described process of making artificial leather consisting in saturating a felted fabric under pressure with a binding agent to form a sheet, drying the sheet, pressing under tension and coating the surface of the sheet with a leather dressing.

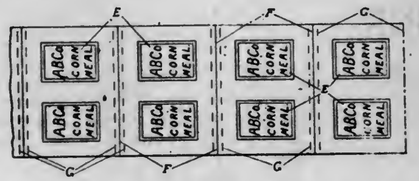


15,603. LEER. LEWIS STEELMAN, Millville, N. J., assignor to H. L. Dixon Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1923. Serial No. 623,531. Original No. 1,178,549, dated Apr. 11, 1916, Serial No. 873,021, filed Nov. 19, 1914. 32 Claims. (Cl. 49—46.)

31. An annealing leer for hot glass articles, comprising a heated furnace portion at the entry end of the leer and a tunnel portion having a gradually decreasing temperature extending therefrom to the exit end of the leer, the leer being arranged for continuous movement of the articles through the heated and tunnel portions to anneal the same in a gradually decreasing temperature, the furnace portion comprising a muffle chamber with an open end leading into the tunnel extension, flues surrounding the muffle portion of the leer chamber in which the articles to be annealed are placed, the side portions of which consist of a plurality of vertically extending flues, said flues being formed of interlocking tiles, an air and gas supply to the flue system, connections within the furnace structure for directing the flame and products therefrom substantially evenly

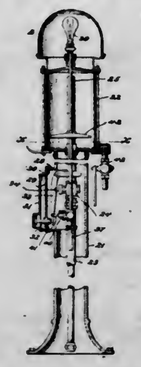
on both sides of the muffle in the side flues, a conduit system beneath the heated muffle chamber in heating relation to its floor, said system receiving the products of combustion from the side flues and leading the said products of combustion in a horizontal longitudinal flow to stack connections, said stack connections being out of the path of travel of the articles being annealed and intermediate the length of the leer and adjacent the end of the heated portion, substantially as described.

15,604. DOFFING APPARATUS. EUGENE R. ALDERMAN, Holyoke, Mass. Filed Mar. 15, 1923. Serial No. 625,384. Original No. 1,419,192, dated June 13, 1922, Serial No. 527,124, filed Jan. 5, 1922. 24 Claims. (Cl. 118—18.)



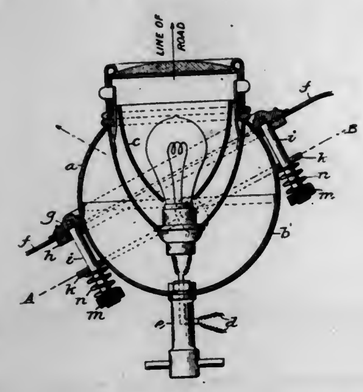
1. The combination with a cap spinning machine having spindles and caps supported thereon, of doffing mechanism comprising annular members for loosely embracing the upper portions of said caps, and means for supporting the caps by engagement with the lower edges thereof in removing the caps from the spindles.

15,605. BAG FORM. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 1, 1923. Serial No. 622,216. Original No. 1,333,374, dated Mar. 9, 1920, Serial No. 285,697, filed Mar. 27, 1919. 9 Claims. (Cl. 283—1.)



1. A fluid pressure device, comprising a casing, a main piston movable therein and formed to provide an oil

reservoir to contain a constant supply of oil, a pump cylinder carried by the main piston and providing a pump chamber, a hollow plunger connected to the casing and operating in the cylinder, an air inlet into the

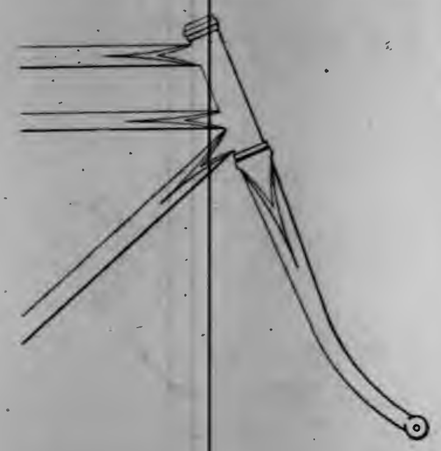


pump chamber, and a restricted opening forming a constant communication between the oil reservoir and pump cylinder under all working conditions, whereby to retard the flow of oil between the reservoir and pump chamber with respect to any pump action.

15,606. LIQUID DISPENSING APPARATUS. AUGUSTUS BOWSER, deceased, late of Fort Wayne, Ind., by Colte H. Boléns and Charles S. Fair, administrators, Fort Wayne, Ind. Filed Jan. 25, 1921. Serial No. 439,881. Original No. 1,316,557, dated Sept. 23, 1919, Serial No. 256,795, filed Oct. 4, 1918. 10 Claims. (Cl. 221—74.)

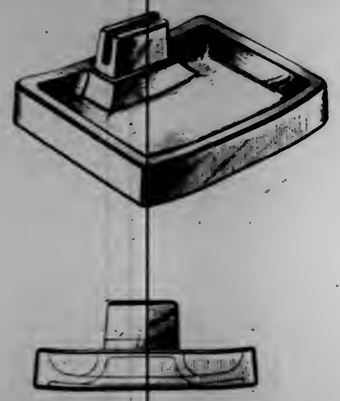
1. In dispensing apparatus of the class described, including a reservoir and an auxiliary tank and a siphon arranged for supplying the latter from the former, the siphon having a foot-valve, a dispensing head including a stand and a transparent measure and an overflow pipe for the measure communicating with the reservoir, a supply pipe extending through the stand and having a throttle-valve located therein, means for alternately supplying air under pressure to the auxiliary tank and releasing it therefrom and including an electric switch for controlling the same located in the stand, and means for simultaneously actuating the throttle-valve and switch.

15,607. DEVICE FOR MOUNTING HEADLIGHTS ON THE BODIES OF MOTOR CARS. ANDRÉ VALLOT, Levallois-Perret, France, assignor, by direct and mesne assignments, of one-half to Herbert E. Vanderveer, Pueblo, Colo., and one-half to A. K. McRae, Denver, Colo. Filed July 25, 1922. Serial No. 577,479. Original No. 1,408,149, dated Feb. 28, 1922, Serial No. 791,094, filed Sept. 22, 1913. 18 Claims. (Cl. 240—7.)



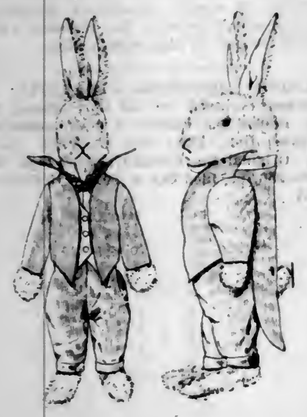
9. In combination with the upper portion of a vehicle having an opening therethrough, a headlight, a dirigible mounting for said headlight in said opening, the head light having a light emitting portion on one side of said portion of the vehicle, and operating means on the other side.

DESIGNS.



MAY 15, 1923.

15,597. MEASURING AND INDICATING APPARATUS. City, Ind., assignor to Excelsior Cycle Company, Michigan City, Ind., a Corporation of Illinois. Filed Dec. 6, 1920. Serial No. 428,820. Term of patent 14 years.

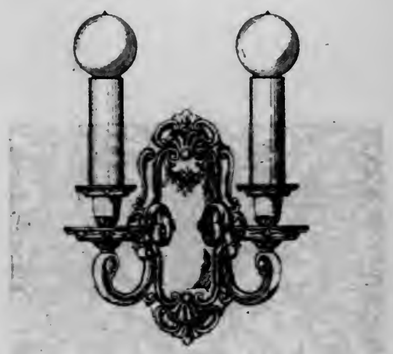


The ornamental design for a bicycle-frame, as shown.

62,352. ASH TRAY. PHILIP L. HEUISLER, Baltimore, Md., assignor to Maryland Glass Corporation, Baltimore, Md., a Corporation of Maryland. Filed Jan. 30, 1922. Serial No. 430. Term of patent 7 years.

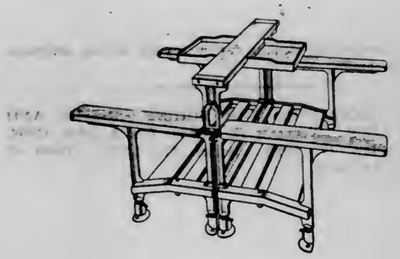
The ornamental design for an ash tray, as shown.

62,353. TOY RABBIT. WILLIAM PAWLEY, New York, N. Y. Filed May 4, 1922. Serial No. 2,062. Term of patent 7 years.

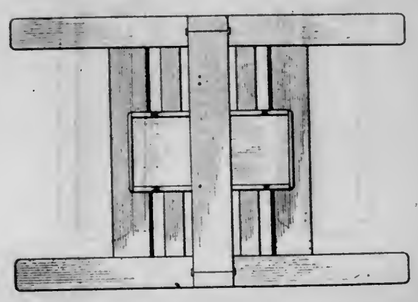


The ornamental design for a toy rabbit, as shown

62,354. SWEATER. LOUIS STRAUSS, Brooklyn, N. Y. Filed Jan. 31, 1922. Serial No. 456. Term of patent 3½ years.

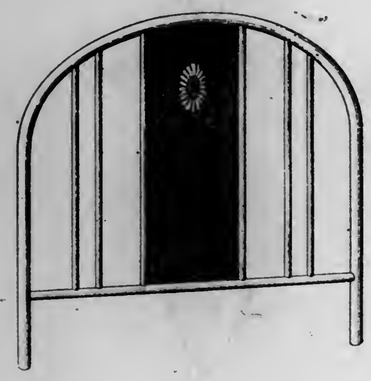


The ornamental design for a sweater as shown.

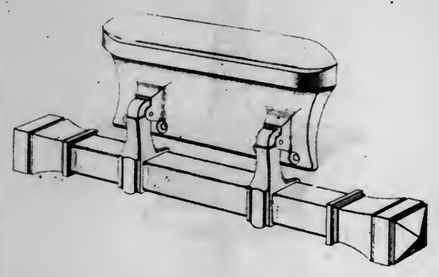


62,355. WALL-BRACKET LIGHTING FIXTURE. HERMAN ABRAMS, Philadelphia, Pa. Filed Dec. 27, 1921. Serial No. 525,257. Term of patent 3½ years.

The ornamental design for a wall bracket lighting fixture as shown.



62,356. SEWING BENCH. WALTER A. ADAMS, Rochester, N. Y. Filed May 17, 1922. Serial No. 2,300. Term of patent 14 years.



The ornamental design for a sewing bench, as shown and described.

62,357. BEDSTEAD END FRAME. FRANK ANDERSON, Buffalo, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed July 9, 1921. Serial No. 483,580. Term of patent 3½ years.

The ornamental design for a bedstead end frame, substantially as shown.

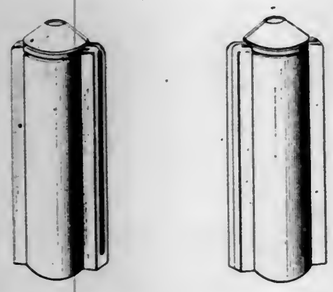
62,358. CASKET HANDLE. FRANK B. ASTON, Elgin, Ill. Filed July 5, 1922. Serial No. 2,963. Term of patent 3½ years.

The ornamental design for a casket handle, as shown.

62,359. SPOONS, KNIVES, FORKS, OR SIMILAR ARTICLES OF TABLEWARE. JOSEPH AVVOCATO, Brooklyn, N. Y. Filed June 7, 1922. Serial No. 2,552. Term of patent 3½ years.

The ornamental design for spoons, knives, forks, or similar articles of tableware, as shown.

62,360. LIGHTING FIXTURE. REX J. COLE, New York, N. Y., assignor to Duplexalite Corporation, New York, N. Y., a Corporation of New York. Filed June 26, 1922. Serial No. 2,826. Term of patent 14 years.



The ornamental design for a lighting fixture, as shown.

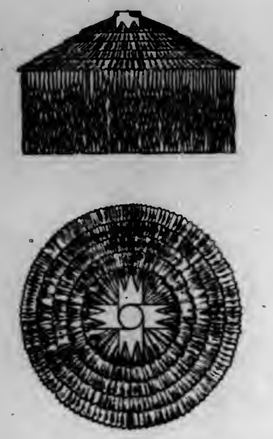
62,361. TEXTILE FABRIC. EMILE ERICSON, Pelham, and ROGER WEISS, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glenriddle, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1922. Serial No. 4,662. Term of patent 3½ years.

The ornamental design for a textile fabric, substantially as shown.

62,362. CONTAINER FOR TOILET CREAMS AND THE LIKE. WILLIAM B. JAMES, Los Angeles, Calif. Filed Mar. 17, 1922. Serial No. 1,221. Term of patent 14 years.

The ornamental design for a container for toilet creams and the like, as shown.

62,363. COMBINED LUBRICATING OIL AND GASOLINE DISPENSING APPARATUS. WESLEY E. KEESEE, Huntington Park, Calif. Filed June 6, 1922. Serial No. 2,550½. Term of patent 7 years.



The ornamental design for a combined lubricating oil and gasoline dispensing apparatus, as shown.

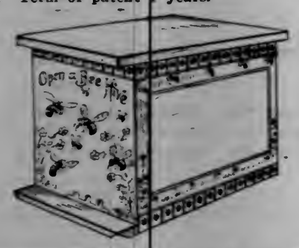
62,364. ADVERTISING SIGN. ADOLF W. PRESSLER, Keene, N. H. Filed June 27, 1922. Serial No. 2,836. Term of patent 14 years.

The ornamental design for an advertising sign, as shown.

62,365. LAMP SHADE. WILLIAM F. RUSCHE, Milwaukee, Wis. Filed July 3, 1922. Serial No. 2,936. Term of patent 3½ years.

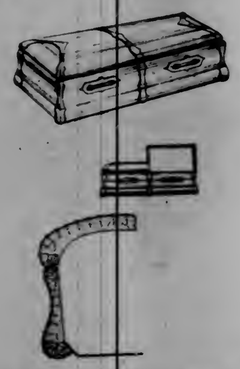
The ornamental design for a lamp shade, as shown.

62,366. ELECTRIC CIGAR LIGHTER. MILTON H. SHOENBERG, San Francisco, Calif. Filed May 11, 1922. Serial No. 2,194. Term of patent 14 years.



The ornamental design for an electric cigar lighter as shown.

62,367. ELECTRIC CIGAR LIGHTER AND STANDARD. MILTON H. SHOENBERG, San Francisco, Calif. Filed May 22, 1922. Serial No. 2,351. Term of patent 14 years.



The ornamental design for an electric cigar lighter and standard as shown.

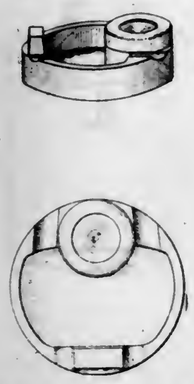
62,368. HONEY RECEPTACLE. GEORGE W. SPIKES, Dalworth Park, Tex. Filed June 10, 1922. Serial No. 2,606. Term of patent 7 years.

The ornamental design for a honey receptacle as shown.

62,369. CASKET. GUSTAVE A. WENDT, Spokane, Wash. Filed June 19, 1922. Serial No. 2,728. Term of patent 14 years.

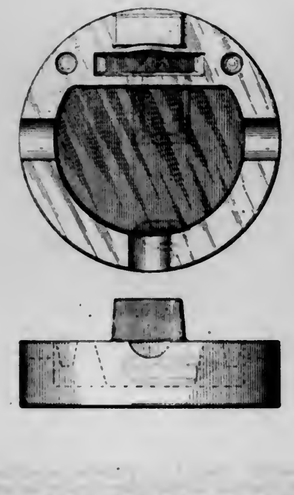
The ornamental design for a casket substantially as shown.

62,370. LAMP STANDARD. FRANK YOEL, Avalon, Pa., assignor to Wm. B. Young Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 17, 1922. Serial No. 2,722. Term of patent 7 years.



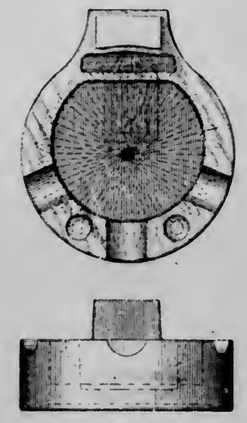
The ornamental design for a lamp standard, as shown.

62,371. EMBLEM, BUTTON, BROOCH, FOB, OR SIMILAR ARTICLE. VICTOR L. BENTSON, San Francisco, Calif., assignor to National Progress Club, San Francisco, Calif., a Corporation of California. Filed Aug. 19, 1922. Serial No. 3,468. Term of patent 14 years.



The ornamental design for an emblem, button, brooch, fob, or similar article as shown.

62,372. COMBINED ASH TRAY AND EXTINGUISHER. EUGENE C. CALLAHAN, Chicago, Ill. Filed Sept. 2, 1921. Serial No. 498,137. Term of patent 7 years.



The ornamental design for the combined ash tray and extinguisher, as shown and described.

62,373. ASH TRAY. IRA M. CLARKE, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed May 16, 1922. Serial No. 2,280. Term of patent 7 years.

The ornamental design for an ash tray as shown and described.

62,374. ASH TRAY. IRA M. CLARKE, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed May 16, 1922. Serial No. 2,281. Term of patent 7 years.

The ornamental design for an ash tray as shown and described.

62,375. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 4,793. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,376. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 4,794. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,377. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 4,795. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

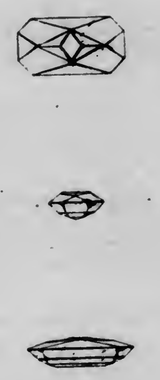
62,378. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 4,796. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,379. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 4,797. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,380. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,916. Term of patent 3½ years.



The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,381. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,917. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,382. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,918. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

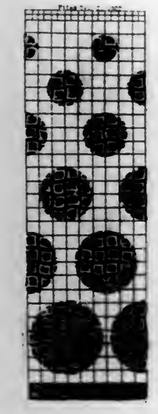
62,383. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,919. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,384. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,920. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,385. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,921. Term of patent 3½ years.



The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

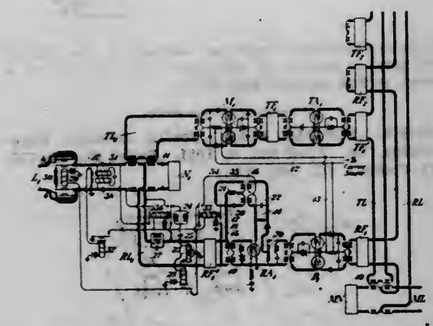
62,386. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1923. Serial No. 4,922. Term of patent 3½ years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

62,387. TEXTILE FABRIC. PAUL REIMANN, New York, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial No. 4,462. Term of patent 3½ years.

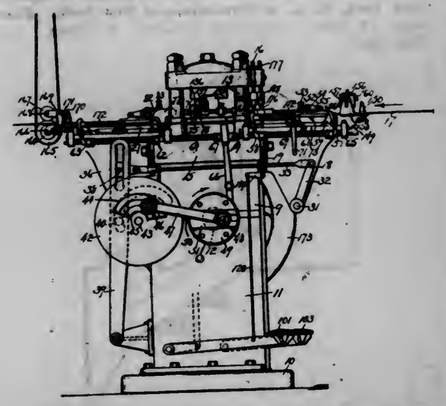
The ornamental design for a textile fabric, as shown.

62,388. FINGER RING. WILLIAM A. H. ROBINSON, Springfield, Mass. Filed Nov. 23, 1922. Serial No. 4,370. Term of patent 14 years.



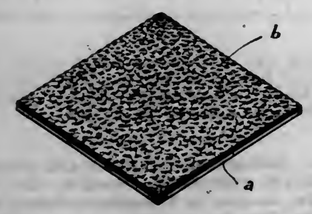
The ornamental design for a finger ring as shown and described.

PATENTS



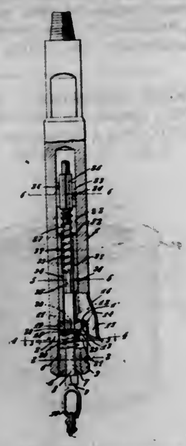
GRANTED MAY 15, 1923.

1,454,840. MEANS FOR RINGING OVER MULTIPLEX TRANSMISSION CHANNELS. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 29, 1919. Serial No. 314,071. 20 Claims. (Cl. 179—4.)



15. An amplifier having a feed back coupling between its input and output circuits whereby said amplifier may be enabled to reamplify certain frequencies, and means independent of said coupling changing the constants of said coupled circuits so that said amplifier becomes a generator of oscillations at said frequencies.

1,454,841. FEEDING MECHANISM FOR DIEING AND OTHER MACHINES. WILLIAM G. ALLEN, Hartford, Conn. Filed Nov. 13, 1920. Serial No. 423,910. 72 Claims. (Cl. 164—21.)



1. A dieing machine having a frame with a punch and die co-operatively supported thereon, a feed mechanism on one side of the die, a feed mechanism on the other side of the die, means for reciprocating said feed mechanisms toward and from the die, and a stop finger arranged to co-operate with one of said feed mechanisms for engaging the stock and retaining it, said stop finger being released from the stock by the engagement therewith of the feed mechanism just before the said mechanism begins to feed the stock.

1,454,842. GLASS TILE FOR COVERING WALLS. MARCEL ANSPACH, Brussels, Belgium, assignor to Societe Anonyme Belge "Saber" Entreprises & Revetements, Brussels, Belgium, a Company of Belgium. Filed Jan. 5, 1922. Serial No. 527,236. 7 Claims. (Cl. 91—70.)

1. A method of preparing glass tiles for wall coverings consisting in coating the back of said tiles with a paste containing a clayey earth, oil, turpentine, a resinous varnish and a siccative, and baking at a moderate temperature the tiles thus coated.

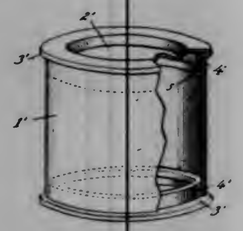
1,454,843. UNDERREAMER. HARRY E. BROWN, Grenola, Kans., assignor to Brown Machine Company, Grenola, Kans. Filed June 8, 1921. Serial No. 476,010. 19 Claims. (Cl. 255—75.)

1. In an under-reamer the combination with a body, and bridles extending therefrom, of cutters between and slidably engaging the upper portions of the bridles, a core interposed between the cutters and projecting between the bridles, and yieldingly supporting means engaging the cutters for holding them normally positioned between the upper portions of the bridles and in engagement therewith.

1,454,844. IRRIGATING DEVICE. JOHN P. CAMPBELL, Woodbury, N. J., assignor, by mesne assignments, to Malcolm C. Ludlam, Woodbury, N. J. Filed Apr. 6, 1920. Serial No. 371,667. Renewed Mar. 2, 1923. 1 Claim. (Cl. 299—47.)

In an irrigating device, in combination, a support comprising a horizontal member, downwardly diverging legs

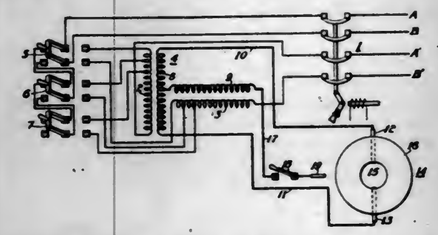
adjacent the ends thereof, skids connecting the ends of said legs upon which the device may be moved, a water motor casing carried by said member at one end thereof, said casing having a tangential water supply passage, a



distributing pipe revolubly connected to the outlet of said passage forming an extension thereof and mounted on said support and connection whereby said motor is adapted to cause oscillation of said pipe.

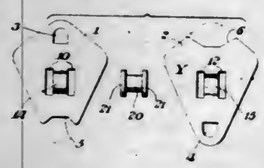
1,454,845. ORNAMENTAL ARTICLE AND METHOD OF PRODUCING THE SAME. NOBLE S. CLAY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 25, 1919. Serial No. 306,617. 7 Claims. (Cl. 41—22.)

1. The method of ornamenting a body which comprises disposing sheet material provided with the desired ornamentation between sheets of thin material impregnated with a binder, disposing the assembled sheets against the body to be ornamented and curing the binder.



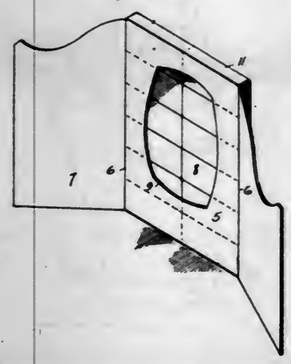
1,454,846. PAPER CONTAINER. FREDERICK COATES, Wyoming, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 14, 1920. Serial No. 373,732. 4 Claims. (Cl. 229—5.8.)

1. An article of manufacture comprising a straight paper tube or shell having its head or end formed from a single piece of paper dished or stamped and crimped at its closed end to form a laterally projecting bead or rim and having its open end inturned upon itself to form a reinforcing and finishing lap, substantially as set forth and for the purposes specified.



1,454,847. SALT-BATH FURNACE. OSA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1920. Serial No. 351,809. 7 Claims. (Cl. 204—64.)

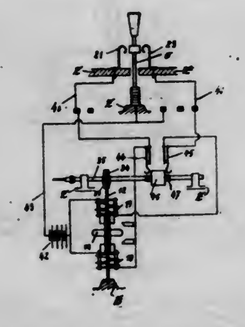
1. In an electrically-heated apparatus, the combination with a conducting bath and means for causing a current to traverse said bath continually, of means whereby the insertion of an article in said bath independently of said



electrodes inherently causes an increase in the current traversing a portion of said bath and also causes a current to flow through said article.

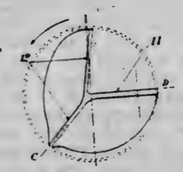
1,454,848. FUSIBLE LINK. JOSIAH DAWSON, Philadelphia, Pa. Filed Mar. 5, 1921. Serial No. 449,755. 11 Claims. (Cl. 169—42.)

1. A fusible link comprising a pair of plates united by fusible material, each plate having a slot and a cylindrical key member having an outwardly directed peripheral flange disposed between the plates with said flange projecting into said slots.



1,454,849. COMBINED SHIPPING, DISPENSING, AND DISPLAY BOX OR CARTON. ALBERT JAY GANZ, New York, N. Y., assignor to Elson Freeman Company, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1921. Serial No. 501,390. 9 Claims. (Cl. 206—44.)

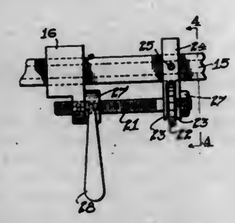
1. A shipping and display carton capable of containing a plurality of articles and having an aperture in its front side, a door on each side of said aperture, said doors presenting relatively large surfaces for the display of advertising matter.



5. A paper carton made from a single blank of paper and comprising a front wall having a sight opening, a rear wall having a central opening through which the packages are accessible for engagement by the fingers and a side wall having a discharge opening formed therein through which the packages may be thrust when engaged through the opening of the rear wall.

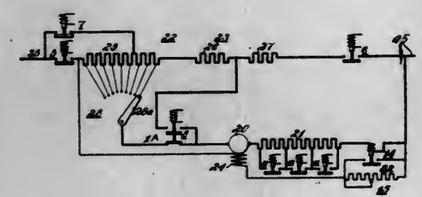
1,454,850. METHOD OF AND APPARATUS FOR DISTANT REGULATION OF CINEMATOGRAPHIC OBJECTIVES. LÉON GAUMONT and LEOPOLD RENÉ DECAUX, Paris, France, assignors, by mesne assignments, to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,037. 13 Claims. (Cl. 88—164.)

1. In combination, a plurality of objectives, one of said objectives being movable around an axis, whereby the image projected through said movable objective may be made to register or superpose, at the screen, upon the image projected by another objective, and means for adjusting said movable objective around said axis, said objective adjusting means comprising a motor having direct and reverse driving parts, a clutch part adapted to make connection with one or the other of said driving parts, means for moving said clutch part to make connection with said driving parts, and a controller actuating said clutch moving means, said controller being distant from the objectives and near the screen.



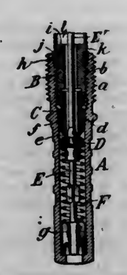
1,454,851. DRILL. HENRI PROSPER GERDIL, Paris, France. Filed June 23, 1920. Serial No. 391,022. 2 Claims. (Cl. 77—67.)

1. A drill comprising a main body, a single radial cutting edge on the end working face of said body, thin longitudinal ribs guiding the drill in the hole formed in the work and thin radial ribs on said end working face in the plane of said longitudinal ribs and adapted to rest in operation upon the bottom wall of the hole formed in the work.



1,454,852. FEED-WEIGHT ADJUSTMENT. HENRY W. GOVIN, Northboro, Mass. Filed Feb. 14, 1922. Serial No. 536,544. 3 Claims. (Cl. 265—49.)

1. In a self feed for carding machines, the combination with a scale pan and an arm movable therewith, of a weight carried directly by, and movable along, the arm, means adapted to be fixed to the arm below the weight for holding the weight at any desired point therealong, a

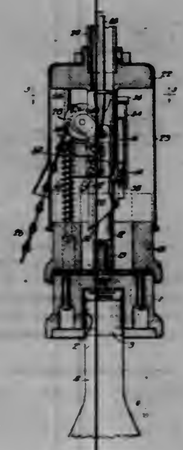


ratchet wheel connected with said means, and a ratchet pawl connected with the arm for holding the ratchet wheel and weight in adjusted positions.

1,454,853. MOTOR-CONTROL SYSTEM. REESE T. KINTZING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,138. 15 Claims. (Cl. 172—179.)

5. The combination with a circuit comprising a motor armature, of a second circuit in parallel relation to said armature circuit and comprising a resistor, means for connecting a portion of said resistor in series with said armature, and a contactor for disconnecting said portion of said resistor from said armature circuit and for connecting a larger portion of said resistor in series with said armature.

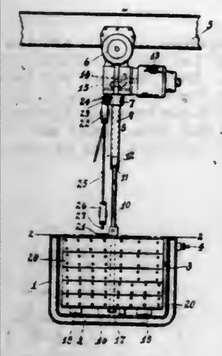
1,454,854. PNEUMATIC VALVE. HENRY P. KRAFT, Ridgewood, N. J. Filed Sept. 2, 1915, Serial No. 48,017. Renewed July 22, 1922. Serial No. 576,869. 6 Claims. (Cl. 152—12.)



1. A valve comprising a casing having an externally and internally threaded neck portion and an internal seating face, a seat member comprising a plug wholly enclosed within said casing and having a packing fitting said seating face, and an independently rotatable screw plug swiveled to said seat member above the latter, and having

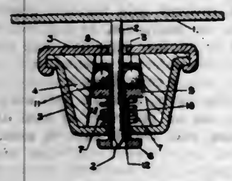
threads adapted to engage the internal threads of the neck portion and force the seat member into place, said screw plug having a head projecting above the casing when the seat member is in place, and constituting a manipulating member for inserting and removing the plugs by hand, the head of the plug projecting only slightly above the top of the casing and being of less diameter than the latter, whereby the external threads of the neck may receive a pump coupling which encloses said head, the latter being adapted to make contact with the packing of said coupling.

4. A pneumatic valve comprising a valve shell having two elongated internal conical seating faces, a screw plug and a seat member entering said shell as a unit and provided with two correspondingly tapered packing rings adapted to seat equally against such conical seating faces, whereby to make a double air-tight joint, the tapered portions of said packing rings being substantially continuous within the limits of movement upon said tapered seats, whereby there is no obstruction to the movement of either of said conical packing rings into wedging contact with the tapered seats.



1,454,855. LAMP HANGER. ERNEST MILTON LARKINS, South Bend, Ind., assignor to George Cutter Company, South Bend, Ind., a Corporation of Indiana. Filed Dec. 30, 1920. Serial No. 433,993. 2 Claims. (Cl. 240—63.)

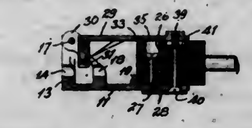
1. A lamp hanger having a supporting member, a pendant catch pivotally supported therefrom and adapted to swing in two opposite directions from a neutral position, a spring adapted to restore the catch to neutral position, and a lamp socket having means whereby it may be raised and lowered and having a stem with a laterally projecting pin, the catch having three cams crossing its neutral axis in alternate directions, the catch having a seat for the pin above the first, lowermost, cam and a stop for the pin located aside from the neutral axis in the direction of the trend of the first cam to prevent the continued rise of the pin without first lowering it, the third, uppermost, cam being open at the bottom to release the pin.



1,454,856. COOKING VESSEL FOR GLAZING FRUIT. WALTER J. O'BRIEN, San Francisco, Calif. Filed Apr. 25, 1921. Serial No. 464,477. 3 Claims. (Cl. 126—272.)

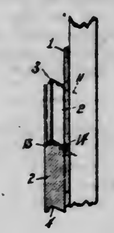
1. In combination, a cooking kettle, a shaft mounted to be lowered into said kettle and to be raised from said kettle, a disk on the lower end of said shaft, a plurality of cooking pans adapted to be placed upon said disk around said shaft and superimposed upon each other, means for

rotating said shaft, and means for lowering said shaft, disk and pans into said kettle and for raising the same out of said kettle.



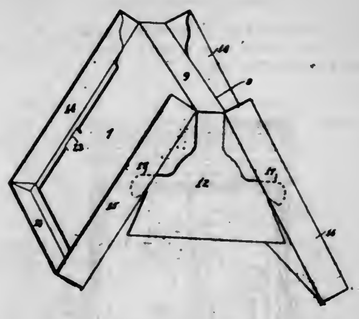
1,454,857. SEPARABLE BUTTON. ELISHA A. PHINNEY, Pawtucket, R. I. Filed Sept. 16, 1921. Serial No. 501,178. 1 Claim. (Cl. 24—110.)

The combination with a button and a pointed centrally positioned stem fixed thereon, of a cup-shaped member having a centrally positioned aperture at its closed end and annular flanges projecting radially from its open end, a body member positioned within said cup-shaped member and having a central, vertically disposed tapered bore therethrough with its smaller end associated with the open end of the cup-shaped member, the outer wall of the body member being tapered in an opposite direction to its bore, a centrally apertured top plate resting upon the upper surface of said body member and having its edges rolled over to engage the flange of the cup-shaped member, a centrally, longitudinally bored ball cage positioned within the tapered bore of the body member and having a tapered peripheral surface, a longitudinally bored shank formed with said ball cage and projecting through the aperture formed in said cup-shaped member, a flange formed on the projecting end of said shank, a spring encircling said shank between said ball cage and the apertured end of said cup-shaped member for urging the ball cage towards the smaller end of the said body member, and balls carried by said cage for engaging the tapered wall of said body member and said stem when the latter is inserted through the cage for releasably connecting the two.



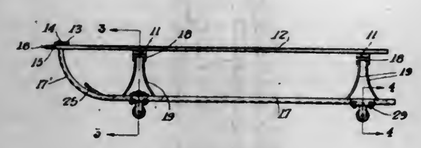
1,454,858. CONNECTION PLUG. WILLIAM EDISON PRICE, New York, N. Y. Filed May 12, 1920. Serial No. 380,749. 3 Claims. (Cl. 173—382.)

2. A connection plug comprising a casing, a cover hinged to one end of the casing, an insulating and contact carrying block closing the opposite end of the casing and clamping jaws carried by the casing and by the cover



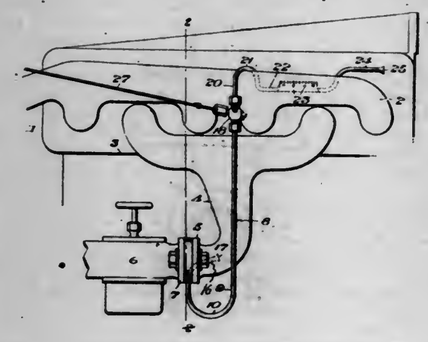
adjacent the hinge, for holding said cable in distorted clamped position.

1,454,859. VENEER BUILDING BLOCK. CHARLES RAW, Toledo, Ohio. Filed May 21, 1921. Serial No. 471,404. 3 Claims. (Cl. 72—19.)



2. A veneer building block of plastic material having a flange provided lengthwise of an edge thereof and spaced at front from the front edge of the block, the flange being of triangular form in cross section with the leg forming the front face shorter than the leg forming the rear face, the flange having a nail receiving notch in its top extending from the front face thereof substantially parallel with the rear face and to and through the rear body edge portion of the block whereby shock or pressure against the front face of the block is distributed in a straight line to the rear edge portion of the block body.

1,454,860. DISPLAY DISPENSER. WILLIAM RELIHAN, Brooklyn, N. Y., assignor to Robert Gair Company, New York, N. Y. a Corporation of New York. Filed July 1, 1920. Serial No. 393,327. 12 Claims. (Cl. 211—24.)

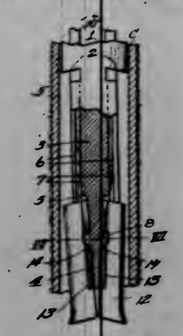


1. A container comprising two container portions, each portion having an open end, the open ends being adjacent to each other, means for connecting the container portions at their open ends and permitting positioning of the container portions in back to back inclined relation for displaying the contents thereof, and means connected to said means for connecting the container portions for supporting the container portions in position for display.

1,454,861. CONVERTIBLE VEHICLE. FRANK RIST, Brooklyn, N. Y. Filed July 3, 1922. Serial No. 572,392. 2 Claims. (Cl. 280—8.)

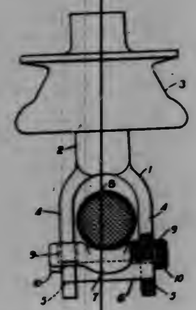
1. A vehicle comprising a platform, a pair of runners, curved, flat, leaf-spring supports interposed therebetween, a cross bar extending between said runners near the front thereof, a narrow plate pivoted centrally to said bar on the under side thereof, a steering bar rigidly extending to the front from said plate, wheels carried at the outer ends of said plats adjacent the runners, and a pair of wheels removably engaged with said runners at the rear.

1,454,862. INTERNAL-COMBUSTION ENGINE. JOHN V. RODERICK, Akron, Ohio. Filed Aug. 25, 1922. Serial No. 584,338. 7 Claims. (Cl. 123—119.)



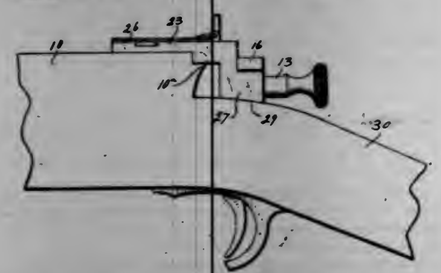
3. An attachment for a gas engine having an intake and an exhaust manifold comprising, an intake pipe adapted to project at one end into the intake manifold said pipe embodying a trap portion, a valve casing at the other end of the pipe embodying a main passageway and an auxiliary passageway communicating with the atmosphere, a rotary core for said casing having a diagonal bore therein and a second bore arranged at an angle to said first bore, and a second pipe connected to the main passageway of said casing said pipe being adapted to hook over the exhaust manifold and comprising a portion adapted to parallel said exhaust manifold.

1,454,863. WELL REAMER. FREDRICK SAGER, Tulsa, Okla., and HOWARD R. HARDENBURG, Kansas City, Mo. Filed June 5, 1922. Serial No. 565,803. 2 Claims. (Cl. 255—75.)



2. In a well reamer, a body portion faced off at opposite sides and reduced to provide downwardly-converging shoulders and a tapered lower end; said end at an intermediate point having downwardly-converging lugs, a pair of cutters slidable on the body-portion to fit flatly against the faced sides thereof higher than or below the said shoulders, and provided with notches for receiving the said lugs when the cutters fit flatly against the said

tapered portion, and means connected to the cutters for sliding them upward on the body portion and having a

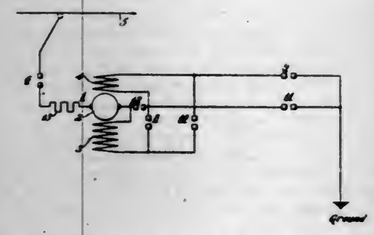


play connection to permit them to assume positions parallel or in downwardly-converging relation to each other.

1,454,864. FEEDER-CABLE SUPPORT. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,410. 7 Claims. (Cl. 248—31.)

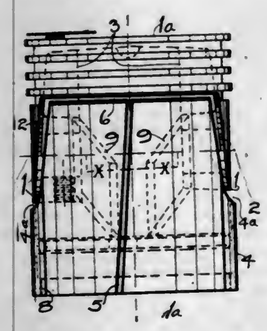
3. A conductor-supporting device comprising a supporting member having a receiving portion therein, a holding member in said receiving portion, and a conductor-seat member fitted over said supporting member and having a portion for preventing the removal of the holding member.

1,454,865. SIGHT BASE FOR RIFLES. HORATIO SEYMOUR SEELY, Syracuse, N. Y. Filed May 29, 1922. Serial No. 564,415. 5 Claims. (Cl. 42—16.)



1. A sight mount for rifles embodying a shiftable bolt, a non-rotatable plunger guide on the bolt, the guide having an extension forming an attachment for an extractor, said mount comprising a base adapted for attachment to said extension and embodying portions rigidly embracing said guide.

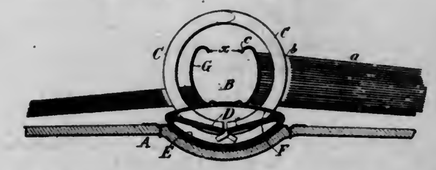
1,454,866. MANIFOLD HEATER. WALTER T. SEITZ, Pittsburgh, Pa. Filed Aug. 19, 1921. Serial No. 493,696. 5 Claims. (Cl. 219—38.)



1. A gasket adapted for insertion in a pipe joint comprising an outer metallic layer, an inner layer of metal electrically insulated from the said outer layer, and an exposed coil of resistance wire carried by the said gasket and having its ends electrically connected to the said outer layer and to the said inner conductor respectively.

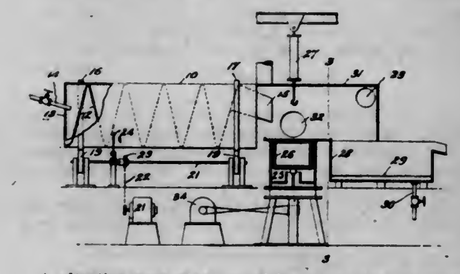
1,454,867. MOTOR-CONTROL SYSTEM. WILLIAM R. TALIAFERRO, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,229. 6 Claims. (Cl. 172—179.)

3. The method of accelerating a motor having two series of field magnet windings that comprises connecting said windings in series relation, energizing one of said windings in the opposite direction, re-energizing said winding in the original direction, and then de-energizing the other of said windings.



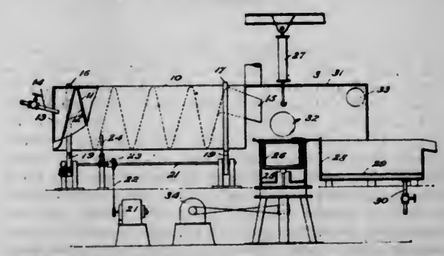
1,454,868. PISTON FOR ENGINES. ROLLAND S. TROTT, Denver, Colo. Filed Apr. 7, 1922. Serial No. 550,345. 9 Claims. (Cl. 74—108.)

1. A piston composed of a head section provided with a plurality of piston ring grooves and with wrist pin lugs



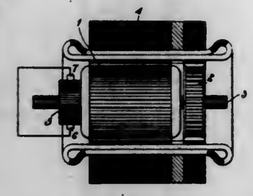
rigidly integral therewith, a skirt section attached directly to said head section upon but one side of a center line, and directly to said wrist pin lugs for but a part of their adjacent sides, and provided with a single longitudinal cut on the other side of said center line, and with flexible means on either side of said cut joining said skirt to said lugs.

1,454,869. LOOSE-LEAF BINDER. CLARENCE D. TRUSSELL, Poughkeepsie, N. Y., assignor to Trussell Manufacturing Company, Poughkeepsie, N. Y., a Corporation of New York. Filed June 16, 1922. Serial No. 568,687. 6 Claims. (Cl. 129—24.)



1. In a loose-leaf binder of the ring type, an aligner for the inner margins of the sheets, consisting of two lateral curved portions, with a central gap or opening between them at the top.

1,454,870. NITRATION APPARATUS. HENRY V. WALKER, Newark, N. J. Filed May 20, 1920. Serial No. 382,810. 1 Claim. (Cl. 23—3.)

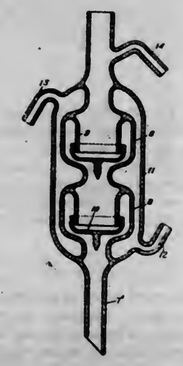


A nitrating apparatus comprising a rotatable nitrating container having a mixing door at one end and an interior peripheral helical partition providing a succession of pockets at the bottom for limited bodies of mixture, and means for feeding acids into the compartment near the charging end of the container.

1,454,871. PROCESS FOR NITRATING CELLULOSE. HENRY V. WALKER, Newark, N. J. Original application filed May 20, 1920, Serial No. 382,810. Divided and this application filed Sept. 23, 1922. Serial No. 589,961. 1 Claim. (Cl. 260—145.)

The process of nitrating cotton and the like which comprises the following steps, namely:—conveying a succession of separate charges of mixed cotton and acids from a charging point to an extracting point by a succession of intermittent movements accompanied by a smooth frictional action on the charges causing gentle agitation during movement forward and subjecting each charge in turn to the extraction process at the end of its travel.

1,454,872. COMMUTATOR REPULSION INDUCTION MOTOR. CLIFFORD A. M. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 16, 1918. Serial No. 258,434. 7 Claims. (Cl. 172—276.)

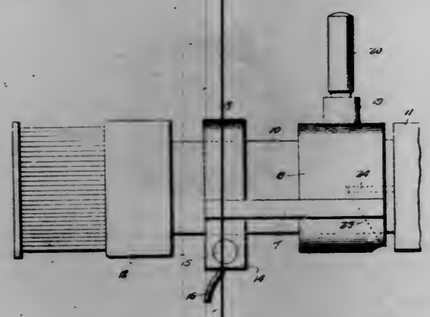


1. In a single-phase, alternating current motor, the combination of two rotors mounted on a common shaft, both of said rotors being active at all time to produce torque on said shaft, and one of said rotors being provided with a commutated repulsion-motor winding and the other of said rotors having a squirrel cage winding, and electrically related windings for producing field fluxes for the two rotors, whereby the current conditions in each field winding are affected by the current conditions in the other.

1,454,873. METHOD OF HANDLING GASES AND PRODUCT CONTAINING DISSOLVED GAS. HENRY C. P. WEBER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 23, 1919, Serial No. 299,302. Renewed Dec. 8, 1920. Serial No. 429,250. 3 Claims. (Cl. 23—10.)

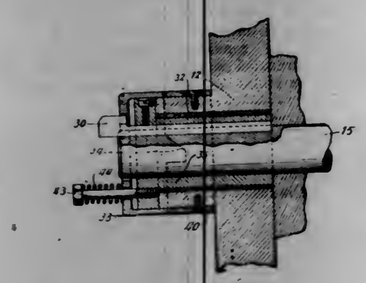
1. The method of handling chlorine for easy manipulation in step-wise chlorination which comprises forming a solution, saturated at definite pressures, of the chlorine in a chlorinated hydrocarbon not readily affected by chlorine in which is dissolved a catalytic agent.

3. A product for convenient shipment and storage comprising a saturated solution of chlorine in carbon tetrachloride containing a dissolved catalytic agent.



1,454,874. FRACTIONATING COLUMN. HENRY C. P. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 5, 1919. Serial No. 315,502. 6 Claims. (Cl. 23—3.)

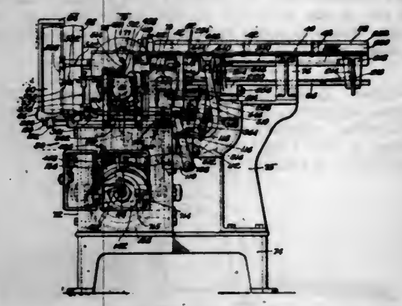
1. A fractionating column comprising a tubular body provided, in its length, with a condensing chamber and



means disposed in the chamber providing for a liquid seal between the ends of the body including a cup, and a depending projection thereon.

1,454,875. ELECTRIC HEATER FOR SHOE MACHINERY. CHARLES L. WHITE, Medina, N. Y. Filed Jan. 24, 1921. Serial No. 439,416. 28 Claims. (Cl. 219—21.)

7. In a machine of the class described, a driven shaft, a tool carried at the free end of said shaft, an electrically heated means movable on said shaft for heating said tool, and means for moving said heating means into and out of the contact with said tool.



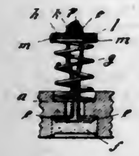
1,454,876. SAFETY STOP FOR DOUBLE SEAMERS. MAGNUS E. WIDELL, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1920. Serial No. 424,695. 7 Claims. (Cl. 113—28.)

1. In a machine for seaming flanged can ends to flanged can bodies, automatic means for stopping the action of the machine when normal movement of the cans therein is impeded, said automatic means comprising a driving element and a driven element having a frictional driving engagement, and means whereby the relative movement of said driving element disconnects from itself the power mechanism.

1,454,877. STOCK-CUTTING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 6, 1920. Serial No. 371,725. 89 Claims. (Cl. 164—21.)

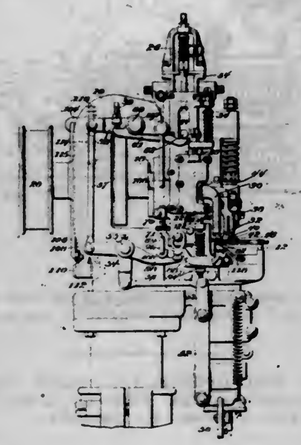
1. A stock-cutting machine having, in combination, means including a die for cutting pieces of sheet material, and means for removing the freshly cut pieces from the

die prior to the cutting of other pieces and for assembling them progressively in stacked formation.



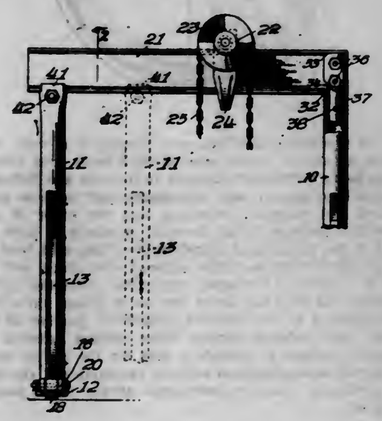
1,454,878. MAGNETIZABLE METER VANE. TRYGVE D. YENSEN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,703. 8 Claims. (Cl. 171—95.)

1. A meter vane formed of a magnetizable ferrous alloy consisting of over 25% nickel and having a hysteresis loss less than 1000 ergs per cubic centimeter per cycle for B—10,000 gausses.



6. A meter vane formed of a magnetizable alloy consisting of substantially equal parts of nickel and iron.

1,454,879. CONNECTION OR BINDING TERMINAL. RUDOLF ZÖLLNER, Dresden, Germany. Filed Apr. 6, 1921. Serial No. 459,197. 1 Claim. (Cl. 173—259.)

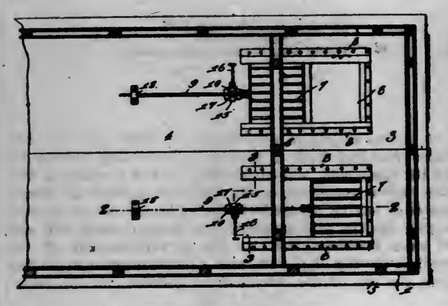


A connection or binding terminal comprising a cotter pin-shaped support having side members of which the upper parts are spaced apart while the lower parts lie closely upon one another, a split head overlapping ends, and outwardly extending feet connected with one another; a coil-spring located over said support; a washer placed upon the upper end of said coil-spring and having two notches forming a tongue between them, and a cap placed over said washer and having two similar notches forming a tongue between them, said washer and cap embracing the upper parts of the side members of said support from opposite sides and adapted when depressed against the action of said coil-spring to spread the lower parts of side members and thereby to open the split head of said support, substantially as and for the purpose set forth.

1,454,880. SOLE-CHANNELING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 7, 1919. Serial No. 302,576. 15 Claims. (Cl. 12—27.)

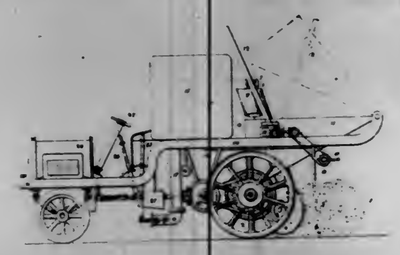
1. A sole channeling machine having, in combination, work supporting and feeding means, and means for forming a shoulder along a portion of the edge of the sole and a lip in continuation thereof along another portion of said edge.

1,454,881. MOVABLE HOISTING DEVICE. FRANK J. BRYANT, West Brookfield, Mass. Filed Apr. 3, 1920. Serial No. 371,040. 5 Claims. (Cl. 189—16.)



1. In a device of the character described, the combination with a pair of up-rights, each consisting of a piece of pipe, and a horizontal I-beam at the top, one of said pipes being split down at the top diametrically to provide jaws for securing it to the lower flange of the I-beam, of removable means for holding said jaws clamped against said flange whereby said up-right can be moved along the flange.

1,454,882. COMBINED LETTER BOX AND CHANGEABLE SIGN. WINTER W. CHRISTIAN and AUGUSTUS G. MAXEY, Owensboro, Ky.; said Christian assignor to said Maxey. Filed Sept. 14, 1921. Serial No. 500,537. 1 Claim. (Cl. 220—1.)



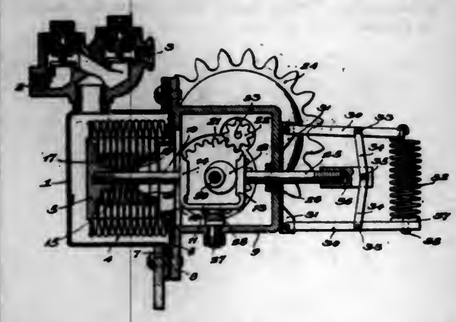
A device for the purpose set forth comprising a back plate adapted to be secured to a fixed support and having re-entrant flanges along its longitudinal side edges, the lower ends of said flanges being closed, side plates provided at their rear side edges with outstanding flanges to engage in the re-entrant flanges of the back plate whereby the side plates will be supported by the closed lower ends of said re-entrant flanges, outstanding flanges at the front longitudinal edges of the side plates, a front plate having re-entrant flanges engaging the outstanding flanges at the front edges of the side plates, a division plate secured rigidly to and extending between the side plates, and a stop flange on the rear face of the front plate adapted to bear upon said division plate whereby to support the front plate.

1,454,883. REFRIGERATOR-CAR PROTECTIVE DEVICE. AMBROSE J. DENMAN and ALMA E. CAUSEY, Dalhart, Tex. Filed Sept. 9, 1922. Serial No. 587,180. 3 Claims. (Cl. 105—377.)

1. The combination with a refrigerator car having an ice compartment and a main compartment and an opening in the ice compartment, of a grating movably mounted within the car and movable to position across or away from the opening, and cooperating means upon the grating and within the main compartment for fastening said grating in open or closed position.

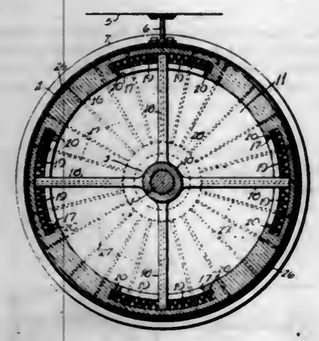
1,454,884. STREET SWEEPER. LOUIS BAPTISTE DONKERS, Antwerp, Belgium. Filed Nov. 14, 1919. Serial No. 338,037. 1 Claim. (Cl. 15—83.)

In a motor driven street sweeper, the combination of a motor vehicle having a frame, a brush mounted transversely of the frame and in a slanting position with respect to the vehicle, an inclined pipe mounted on one side of the frame and terminating adjacent the periphery of the brush, a spiral conveyer mounted for rotation in the pipe, means connecting the upper end of said conveyer with the vehicle for transmitting rotary motion to the conveyer, a platform carried by the lower end of the pipe and extending under one end portion of the brush to a point adjacent the plane of the vertical axis thereof, said platform being adapted to receive material accumulated by the brush, said inclined pipe being formed at the top with an opening, a removable pipe communicating with the first mentioned pipe, and a tank carried by the frame to receive material from the removable pipe, whereby the brush will sweep the dirt onto the platform and along the same into the lower end of the pipe and the spiral conveyer will elevate the dirt and discharge it into the removable pipe from which it falls into the tank.



1,454,885. RUBBER SOLE. GEORGE FERGUSON, Wollaston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 13, 1919. Serial No. 317,203. 2 Claims. (Cl. 36—22.)

1. As an article of manufacture, a rubber sole for turn shoes provided with a marginally extending sewing rib on its upper side, and comprising a tread member of flexible rubber compound, an intermediate member of fibrous material having a relatively high fibrous content located within the rib, said member being comparatively stiff and of such thickness that its top is substantially at the level of the top of the rib, and a fabric member extending over the top of the intermediate member and the rib.



1,454,886. PUMP. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Apr. 16, 1921. Serial No. 461,949. 21 Claims. (Cl. 103—152.)

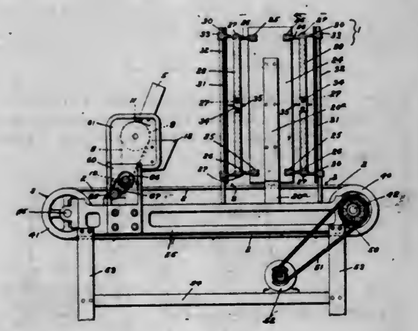
1. The combination of a pump casing having inlet and outlet connections, a resilient pumping member in said casing, means whereby said member is flexed in one direction, said member flexing in the opposite direction by the force of resiliency, and means cooperating with said

member to compensate for changes in the force of resiliency by which said member is moved in said last-named direction.

1,454,887. FRICTIONLESS AIR BRAKE. SEBASTIAN GIOVANNINI, Chicago, Ill. Filed Sept. 6, 1921. Serial No. 498,621. 5 Claims. (Cl. 188—90.)

5. In a device of the character described, a valve comprising a tubular casing open at both ends, said tubular casing being cylindrical adjacent to its ends and fluted intermediately, one of said cylindrical end portions being reduced and threaded exteriorly and the other of said cylindrical portions being threaded interiorly, a head disposed in the last named cylindrical portion, said head being provided with an outlet orifice in its outer end and with a plurality of integral extensions extending beyond its other end into the fluted portion, a piston valve slidably disposed in the reduced cylindrical portion of the casing, said reduced portion being further reduced adjacent to its end to provide a seat for the piston valve, and spring means disposed between the valve and the head for yieldingly resisting movement of the valve toward the head.

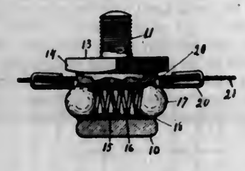
1,454,888. SYSTEM FOR SELLING AND PACKING FOOD PRODUCTS. WESTON GREEN, Dayton, Ohio, assignor to The Green & Green Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 11, 1922. Serial No. 543,127. 2 Claims. (Cl. 229—6.)



1. A triple-sealed three ply casing comprising an inner moisture-proof complete sealed sack of material sufficiently pliable to snugly fit inside of a rigid box, and bodily removable therefrom and insertable into another box of the

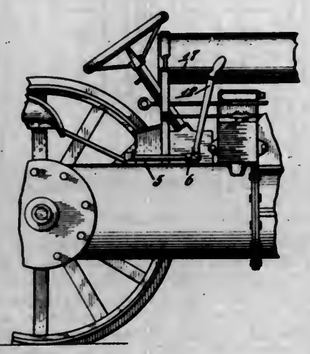
same or different shape and substantially the same cubical capacity, and adapted to fit the same by virtue of its pliability while in its sealed condition, a complete sealed box for containing said removable sack sufficiently rigid to maintain its shape under ordinary commercial handling, and a complete moisture-proof sealed paper

cover to entirely cover said sealed box, whereby the contents of the package is doubly sealed against moisture, the written or printed matter on the sealed box is visible through the transparent cover and whereby the contents of the sack may be preserved in a sealed condition in such other box.



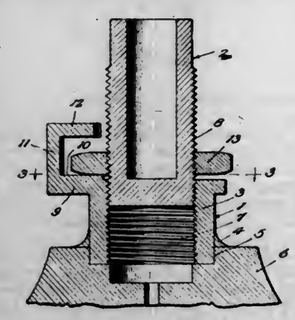
1,454,889. MACHINE FOR SEALING CIRCULARS. ARTHUR H. GUSTAFSON, Chicago, Ill., assignor to Henry E. Holbrook, Boston, Mass. Filed Jan. 26, 1918. Serial No. 213,967. 30 Claims. (Cl. 216—54.)

1. In apparatus of the class described, means including endless carriers for feeding a folder or the like, a wafer magazine, a moistened carrying member for picking a wafer from the hopper and carrying it to a folder, means for stripping the wafer from the carrying means and for placing the wafer across the path of the folder, and a wafer supporter for holding the wafer across the edge of the folder.



1,454,890. SNAP FASTENER. LARRABEE B. HARPE, Louisville, Ky. Filed Mar. 27, 1920, Serial No. 369,427. Renewed Apr. 2, 1923. 2 Claims. (Cl. 24—214.)

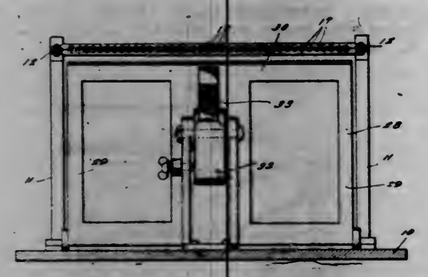
1. In a device as characterized, a stud having a diametrical bore, extending entirely therethrough a ball in each end of and projecting from said bore, a coil spring



in said bore bearing against said balls to force them apart and means to retain said balls within said bore.

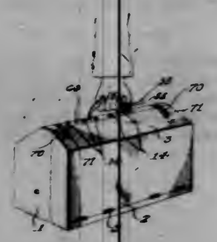
1,454,891. CLUTCH-RELEASE LEVER. JANES B. HOWELL, St. Joseph, Mo. Filed Oct. 16, 1922. Serial No. 594,945. 1 Claim. (Cl. 74—39.)

In combination with a clutch pedal and clutch shaft, a clamp embracing a part of the clutch shaft, an upwardly extended portion forming a part of the clamp and having a flange formed along one edge thereof, a lever secured to the clamp and having one edge thereof contacting with the flange, means for securing the lever to the upwardly extended portion, and means associated with the lever for locking the lever against movement.



1,454,892. GREASE CUP. ROBERT HUNT and LEWIS D. FREEMAN, Portsmouth, Va., assignors, by mesne assignments, to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 12, 1921. Serial No. 451,716. 4 Claims. (Cl. 184—48.)

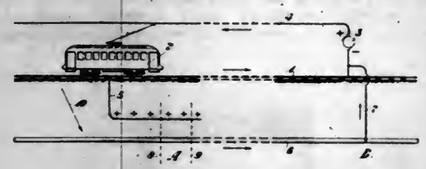
1. In a device of the class described, a relatively fixed part, a member adjustably threaded into the said fixed



part, inner and outer abutments fixed with relation to the fixed part and relatively spaced and rigidly connected, and a locking element threaded on to the adjustable member and having its peripheral portion projecting between the said abutments, the said locking element being adjustable to bind against the inner abutment to lock the adjustable member in its positions of adjustment and being designed to bind against the outer abutment in the event of loosening of the parts whereby to prevent complete disengagement of the adjustable member from the relatively fixed part.

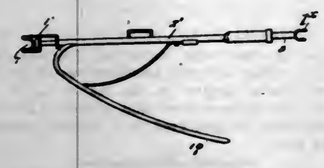
1,454,893. SAW SHARPENING AND SETTING DEVICE. MAURICE JACKSON, Eldorado, Kans. Filed May 16, 1921. Serial No. 469,895. 4 Claims. (Cl. 76—34.)

1. A saw sharpening machine comprising a base, a plurality of uprights rising from said base, a pair of rods slidable through the uprights, cross members connected with said rods, a plurality of files, means connected with said cross members for holding said files, a clamping device disposed between said uprights and beneath said files and adapted to hold a saw to be sharpened, and means for simultaneously adjusting all of the files.



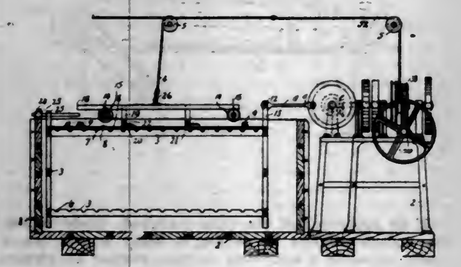
1,454,894. MESSENGER'S SAFETY CARRYING CASE. HENRY F. JOHNSON, Chicago, Ill. Filed May 29, 1922. Serial No. 564,676. 10 Claims. (Cl. 109—6.)

1. In a carrying case, a plurality of barrels opening out through the top of said case and adapted to contain explosive cartridges, firing means for exploding cartridges in said barrels, and means for successively operating said firing means.



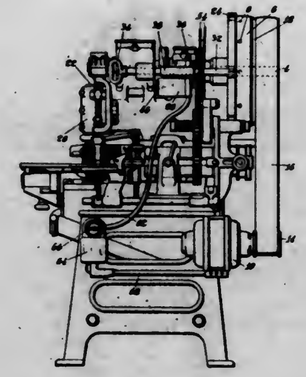
1,454,895. ELECTROLYSIS MITIGATION. GEORGE G. JONES, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,433. 3 Claims. (Cl. 171—316.)

1. An electrically operated railway system, a metallic article buried in the ground in the vicinity of the tracks of said system, means to connect said article to the negative pole of the generator of said system, and a conductor buried in the ground in the vicinity of a section of said



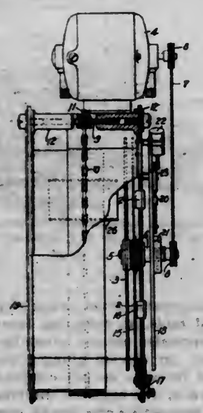
article which would normally have a potential positive to earth, said conductor being connected to a section of the tracks having a potential positive to the potential of said section of said article.

1,454,896. TRAIN-ORDER HOLDER AND HOOK. OTTO F. KLOETZER, Washington, Ind. Filed July 10, 1920. Serial No. 395,225. 3 Claims. (Cl. 258—22.)



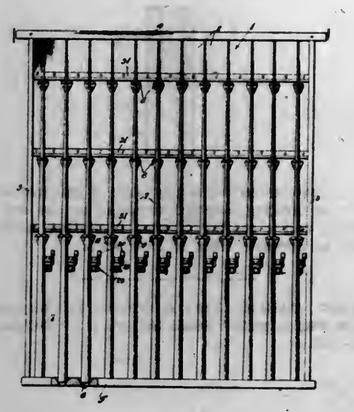
1. A train order holder comprising a pair of brackets secured in spaced relation to the cab of the train, a rod having its ends journalled in said brackets and a hook member provided at one end thereof, a spring strip having one end secured to said rod and its remaining end engaging the hook members, said strip bridging the space between the rod and the member, an arm being secured to said rod and passing through a slot formed in the cab adapted to act as a handle for rocking said rod to move the hook member into position.

1,454,897. MACHINERY FOR DYEING AND TREATING TEXTILES. FELICE FRANCESCO LARIVET, Bath, England. Filed Apr. 14, 1919. Serial No. 289,980. 4 Claims. (Cl. 8—19.)



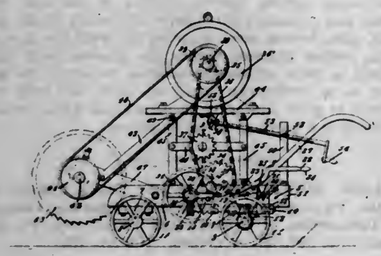
1. In a machine for the treatment of textile fibres, a liquor-carrying-vat, a closed perforated cage or a frame carrying fibre bearing sticks movable lengthwise of the vat when supported on bearing roller fitted transversely and detachably within the vat, and adapted to be moved vertically when the rollers are removed, means for first giving a to and fro motion under liquor, and means for giving at another time a up-and-down motion at a different speed up to the speed down, as stated.

1,454,898. SAFETY DEVICE. BERNARD SCOTT LEE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 4, 1919. Serial No. 328,528. 4 Claims. (Cl. 192—133.)



1. In a machine of the class described, a shaft, a member projecting laterally from the shaft and capable of causing injury to the operator when the member is unguarded, a guard slidably axially of the shaft to cover and uncover said member, power means for operating said member, a switch in an electric circuit for controlling the power means, and means connected to the guard and so arranged as to prevent electrification of the circuit and the starting of the machine in operation when the guard is in uncovering position with respect to said member.

1,454,899. HIGH-SPEED CAMERA. JOSEPH W. LEGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 30, 1920. Serial No. 355,256. 11 Claims. (Cl. 88—16.)

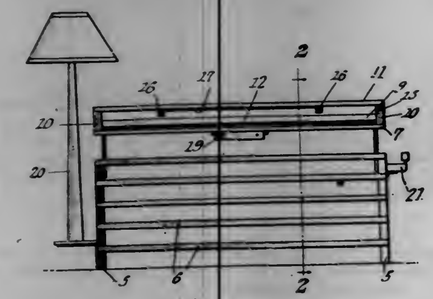


1. In a camera, the combination with a plurality of lenses, of means for permitting a plurality of exposures through the lenses in sequence and a limiting shutter for precluding a second exposure through the lenses.

1,454,900. BILLIARD-CUE RACK. HENRY F. LEVENTRY, Johnstown, Pa. Filed Mar. 5, 1921. Serial No. 449,828. 7 Claims. (Cl. 46—6.)

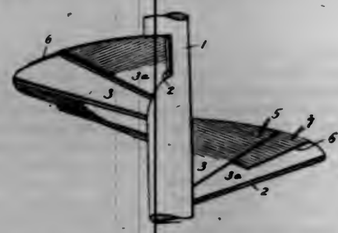
1. In a rack for billiard cues, means for gripping a cue at a plurality of spaced points in its length, the said means comprising sets of relatively movable coacting gripping members, and means operable to simultaneously relatively separate the members of the several sets to permit the introduction or removal of the cue.

1,454,901. SAWING MACHINE. NEILL D. MCARTHUR, Danville, Va. Filed Jan. 24, 1922. Serial No. 531,446. 1 Claim. (Cl. 143—46.)



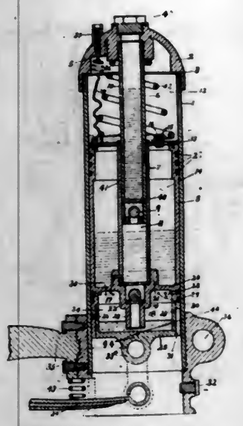
A sawing machine including a wheeled support, an auxiliary support disposed above the wheeled support, vertical supporting arms, having their ends pivotally connected to the supports to permit movement of the auxiliary support with respect to the wheeled support, pivoted arms having connection with the wheeled support and carrying bearings at their outer ends, angularly disposed arms having connection with the pivoted arms and having their upper ends connected to the auxiliary support, a bracket secured to the under side of the auxiliary support, a threaded adjusting rod having its free end supported within the bracket, said adjusting rod adapted to move the auxiliary support to adjust the pivoted arms, a rotary saw mounted in the bearings of the pivoted arms, and means on the auxiliary support for imparting rotary movement to the saw.

1,454,902. SELF-LIGHTING CIGARETTE. JOHN W. MCCLAIN, Chicago, Ill. Filed Oct. 16, 1920. Serial No. 417,303. 2 Claims. (Cl. 131—52.)



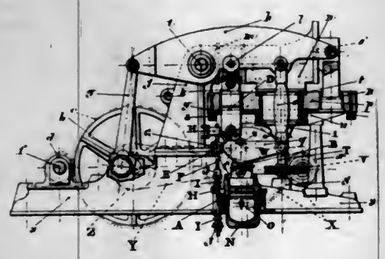
2. A cigarette having a wrapping of ignitible material, a strip of igniting material arranged at one end of the cigarette, and a coating of heat insulating material arranged on opposite sides of said strip.

1,454,903. TABLE. JOHN B. O'NEAL, Jr., Waycross, Ga. Filed July 5, 1921. Serial No. 482,413. 1 Claim. (Cl. 45—122.)



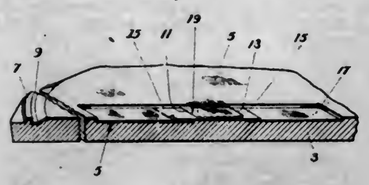
A game table comprising end sections, a table top, a game board having grooves formed in the side edges thereof and extending throughout the length of the game board, arms having pivotal connection with the table and having rollers disposed within the grooves, said rollers adapted to move within the grooves to permit the game board to be withdrawn from the table, and said arms adapted to pivot upwardly to permit the game board to be swung to a position on the table top.

1,454,904. SPIRAL SEPARATOR. FRANK PARDEE, Hazleton, Pa., assignor to Anthracite Separator Company, a Corporation of Pennsylvania. Filed Oct. 11, 1921. Serial No. 507,109. 7 Claims. (Cl. 83—54.)



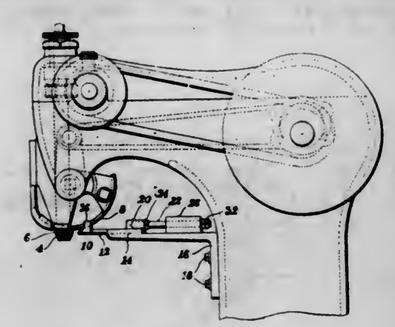
1. A spiral separator having a runway formed with a series of ridges adapted to exert an edge resistance on the material travelling thereon, said ridges being spaced so close together that the lumps of material travel on the peaks of two or more adjacent ridges.

1,454,905. SHOCK ABSORBER. FRANKLIN E. POINDEXTER, Denton, Tex., assignor, by mesne assignments, to Benjamin S. Davidson, Denton, Tex. Filed Feb. 24, 1920, Serial No. 360,666. Renewed Sept. 25, 1922. Serial No. 590,540. 9 Claims. (Cl. 267—64.)



1. A fluid pressure device, comprising a casing, a main piston movable therein and formed to provide an oil reservoir to contain a constant supply of oil, a pump cylinder carried by the main piston and providing a pump chamber, a hollow plunger connected to the casing and operating in the cylinder, an air inlet to the pump chamber, and a restricted opening forming a constant communication between the oil reservoir and pump cylinder under all working conditions, whereby to retard the flow of oil between the reservoir and pump chamber with respect to any pump action.

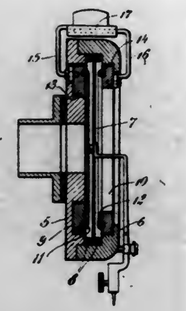
1,454,906. PRESS FOR FORMING BRIQUETTES. JEAN RÉOL, Lyon, France. Filed June 30, 1920. Serial No. 393,151. 1 Claim. (Cl. 25—66.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



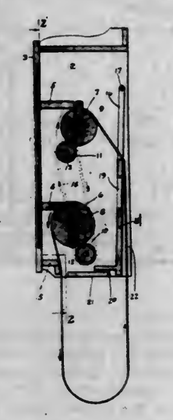
A double compression press comprising a fixed support, a rotary mould table, an operating lever pivoted on said support, a compression plunger pivotally connected to the operating lever, an ejector plunger also pivotally connected to said lever, a second compression plunger arranged to move in the opposite direction to the first, a rod and lever connecting the second compression plunger to the operating lever, a hydraulic cylinder, a piston therein, a block carried by said piston, the said connecting lever being arranged on said block, and a rotary cam arranged to impart maximum speed to the table during the periods between compression and to hold the table against movement during the periods of compression.

1,454,907. ART OF MANUFACTURING SOLES. JOHN H. RIGBY, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 12, 1920. Serial No. 380,782. 15 Claims. (Cl. 12—146.)

1. As an article of manufacture, a molded and vulcanized sole for a turn shoe having a passage leading from the upper surface into the shank portion thereof and adapted to receive and hold in place a shank stiffener after the shoe in which the sole is incorporated has been turned right side out.



1,454,908. VAMP-TRIMMING MACHINE. MOSES E. SHACKLEY, East Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 26, 1919. Serial No. 306,912. 13 Claims. (Cl. 12—83.5.)

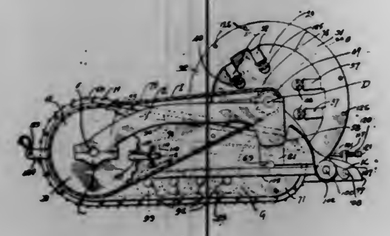


1. An upper trimming machine comprising a guide roll arranged so that one end will engage the face of the insole of a lasted shoe while its periphery engages the inner surface of the material being trimmed, the other end of said roll having a shearing edge, a mechanically operated cutter arranged to cooperate with said shearing edge, and a trimming gage arranged to overlap continuously the overdrawn portion of the upper that lies on the margin of the sole to keep said overdrawn portion at a predetermined distance from the line of trimming when the shoe is tilted so as to lay the marginal portion of the upper against said roll.

1,454,909. SOUND BOX. DANIEL F. SNYDER, Garwood, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Filed May 5, 1920. Serial No. 379,008. 7 Claims. (Cl. 274—27.)

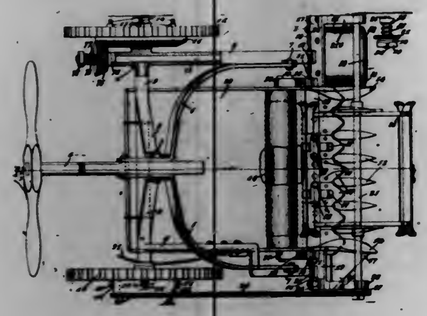
1. The combination with a sound box and a diaphragm mounted therein, of diaphragm engaging rings at opposite sides of the diaphragm and having reversely screw-threaded mountings in the sound box whereby rotation of said rings in one direction will carry the same toward the diaphragm and rotation in the opposite direction will carry them away from the diaphragm and means connecting the rings for rotating both the rings concurrently in one direction or the other.

1,454,910. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 7, 1922. Serial No. 527,749. 6 Claims. (Cl. 45—32.)



6. A towel cabinet comprising a casing, clean and soiled towel rolls mounted therein, a feed roll contacting by gravity with one of said towel rolls, a second feed roll having a driving connection with the first feed roll, a clean towel depending from the cabinet, a shield pivoted in the rear of the cabinet and behind which the towel extends, said shield being movable towards the front of the cabinet to facilitate the insertion of the towel back of the shield and to prevent the soiled part of the towel from contacting with the clean portion during the normal operation of the device.

1,454,911. TRACTOR ATTACHMENT FOR AUTOMOBILES. JOHN R. STEPHENSON and OLIVER C. ARMSTRONG, Los Angeles, Calif. Filed Dec. 12, 1919. Serial No. 344,426. 13 Claims. (Cl. 305—3.)

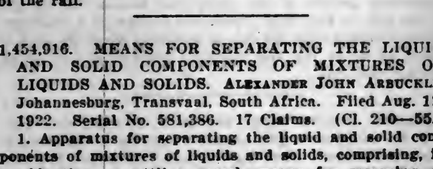


1. A tractor attachment for the rear end of automobiles comprising ground engaging elements, rotatable grip

drums arranged to support the drive wheels of the automobile, said grip drums constituting the sole means of connection between the attachment and the automobile,

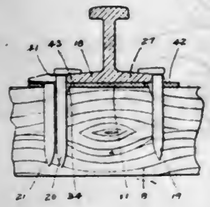
means for raising and lowering the drums and means operatively connecting the drums with the ground engaging elements.

1,454,912. LAWN MOWER. WILLIAM ELBERT TATE, Sr., Weatherford, Tex. Filed Aug. 9, 1921. Serial No. 490,977. 2 Claims. (Cl. 56—258.)



1. In a mower, a frame; a ground wheel journaled on the frame; a cutter bar mounted to reciprocate on the frame; a shaft journaled in the frame; means for connecting the shaft operatively with the cutter bar; intermeshing gears on the ground wheel and on the shaft, the gear of the shaft being movable longitudinally thereon; and spring means coacting with the said gear to hold the same engaged with the gear of the ground wheel and automatically return it after disengagement therefrom.

1,454,913. DIAPHRAGM ADAPTED TO RECEIVE AND PRODUCE SOUND. ERIC MAGNUS CAMPBELL TIGERSTEDT, Frederiksberg, near Copenhagen, Denmark. Filed July 8, 1919. Serial No. 309,494. 2 Claims. (Cl. 181—32.)

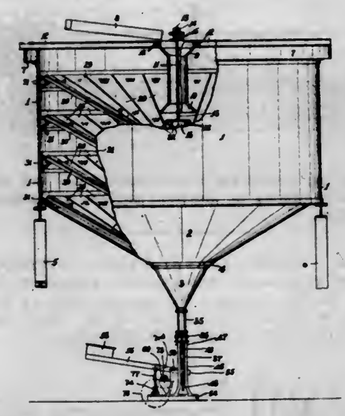


1. A diaphragm comprising a film and a stiff supporting member to which the peripheral portion of the diaphragm is directly attached, and in which said supporting member is embedded, said peripheral portion of the diaphragm covering said supporting member.

1,454,914. PRINTING APPARATUS. LIBANUS M. TODD and CHARLES G. TIEFEL, Rochester, N. Y., assignors to Todd Protectograph Company, Inc., Rochester, N. Y. Filed Mar. 10, 1922. Serial No. 542,693. 16 Claims. (Cl. 197—6.2.)

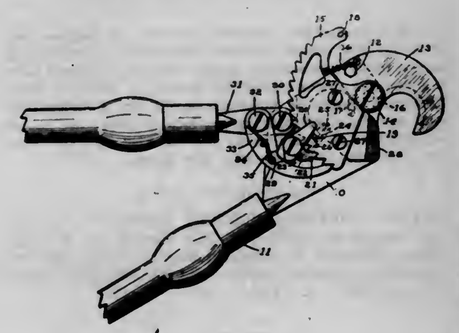
1. In a machine of the class described, the combination with a printing couple operable to print upon and move the check in one direction, of devices operable to move the check in the opposite direction and at an angle to the first movement, and means for effecting operations of said printing couple and said devices.

1,454,915. RAIL MOUNTING. ROBERT W. ANDERSON, Covington, Ky. Filed Dec. 15, 1922. Serial No. 607,057. 7 Claims. (Cl. 238—295.)



1. In a rail mounting of the class described the combination of a tie, a slotted plate, a rail having flanges, and spikes for engaging the flanges on the rail, adapted to pass through the slots in the plate and to be driven into the tie, the spikes being provided with means for cooperatively interlocking upon one another, and upon the plate and rail, whereby to preclude lateral displacement of the rail.

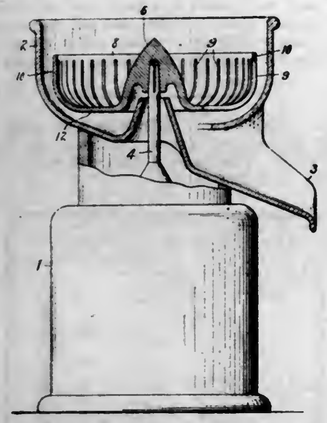
1,454,916. MEANS FOR SEPARATING THE LIQUID AND SOLID COMPONENTS OF MIXTURES OF LIQUIDS AND SOLIDS. ALEXANDER JOHN ARBUCKLE, Johannesburg, Transvaal, South Africa. Filed Aug. 12, 1922. Serial No. 581,386. 17 Claims. (Cl. 210—55.)



1. Apparatus for separating the liquid and solid components of mixtures of liquids and solids, comprising, in combination, a settling vessel, means for removing or discharging the settled solids therefrom including a casing which is in communication with the bottom of the vessel, a shaft which is adapted to be reciprocated in said casing, plates, having openings, arranged upon and

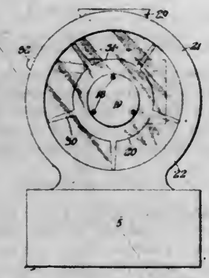
spaced apart along the length of the shaft and means for reciprocating the shaft, and a valve device which controls

the passage of the solids from the casing so that the valve is opened by the pressure of the solids from the discharging means.



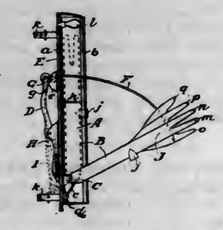
1,454,917. PRUNING SHEARS. LEON J. BARRETT, Worcester, Mass. Filed Sept. 11, 1922. Serial No. 587,514. 7 Claims. (Cl. 30—11.)

1. In a pruning shear, the combination of a hook blade with a ratchet segment pivotally connected therewith, yielding means for moving said segment in one direction, a lever pivotally mounted with respect to said blade and having a pawl thereon for operating the ratchet against the action of said spring, a second pawl pivotally mounted with respect to said blade engaging said ratchet, and means for automatically moving the second pawl into or out of engagement with the ratchet at each end of the stroke of the ratchet segment.



1,454,918. FRUIT-JUICE EXTRACTOR. OSCAR BROPHY, Philadelphia, Pa. Filed Nov. 11, 1922. Serial No. 600,257. 4 Claims. (Cl. 146—3.)

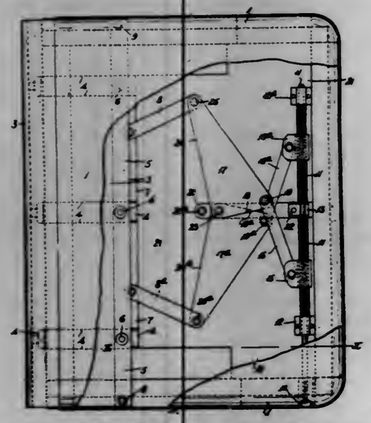
1. A machine for extracting the juice of fruit, comprising, a stationary casing, an extractor bulb rotatably mounted within the casing, a strainer associated with the extractor bulb, and mechanism for rotating the strainer for discharging the juice from the contents of



the strainer into the stationary casing by the action of centrifugal force.

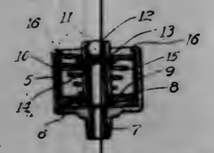
1,454,919. COIN-DEPOSIT RECEPTACLE. JOSEPH N. BUENO, Chicago, Ill. Filed Apr. 19, 1922. Serial No. 555,543. 10 Claims. (Cl. 232—7.)

1. A coin deposit receptacle comprising a coin box, having a coin passage formed therein, a pair of discs, spacing means for said discs, divisional elements carried intermediate said discs forming a plurality of pockets, said pockets being adapted to receive coins, means for intermittently rotating said discs whereby said pockets are brought into registration with the passage of said box.



1,454,920. AUTOMOBILE SIGNAL. WESLEY CLINE, Edmonton, Alberta, Canada. Filed May 5, 1922. Serial No. 558,705. 1 Claim. (Cl. 116—41.)

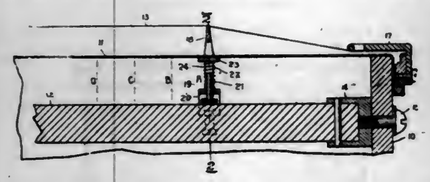
An automobile signal comprising a casing having a front in two parts hinged to a back strip and spring-



held to its open position, an arm pivotally secured in said casing and spring pulled in a downward direction and having fixed fingers and pivoted fingers spring-held to their open position, a lever pivoted to said casing and flexibly connected with said arm for raising purposes, a lamp within said casing, and a clasp attached to said arm for engaging and closing the front of said casing.

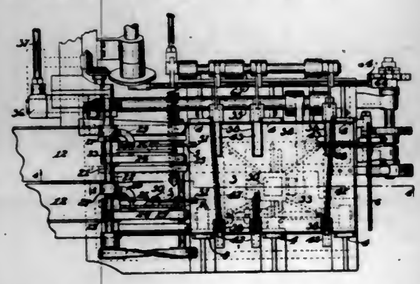
1,454,921. LOOSE-LEAF BINDER AND THE LIKE. ROBERT LYGERTWOOD ESSEX, Johannesburg, Transvaal, South Africa. Filed Sept. 3, 1921. Serial No. 498,210. 5 Claims. (Cl. 129—41.)

1. In a loose-leaf binder, front and back covers, an adjustable back, a spindle having right and left-hand screw threads, a nut on each of said threads, and a pair of bell-crank levers, one arm of each of which is connected to the adjustable back and the other to one of the nuts.



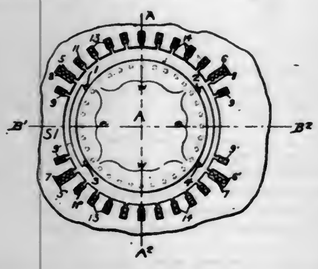
1,454,922. LUBRICATING DEVICE. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Original application filed Nov. 18, 1918, Serial No. 262,930. Divided and this application filed May 28, 1920. Serial No. 384,031. 2 Claims. (Cl. 184—45.)

1. The combination with a receptacle having an end closure provided with a conduit for securing it to a bearing, of a plunger slidable in said receptacle, a tubular member extending through and secured to said plunger in alignment with said conduit, the outer end of said tubular member being provided with an outwardly closing closure and means for making a detachable connection with a grease gun, and a spring for urging said plunger toward said end closure.



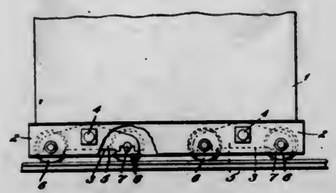
1,454,923. MUTE FOR STRINGED MUSICAL INSTRUMENTS. ALBERT D. GROVER, Long Island City, N. Y. Filed Apr. 19, 1921. Serial No. 462,635. 5 Claims. (Cl. 84—273.)

1. A mute for the vibrating diaphragm of a stringed musical instrument in which the rim thereof is provided with a stick, comprising a slidably mounted member spaced from said stick, a supporting device resiliently carried by said member and adapted to bear against



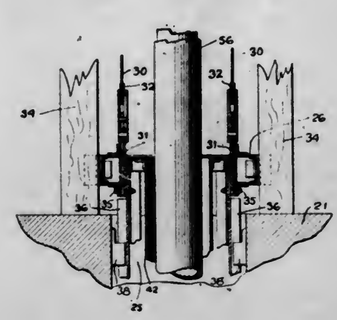
the vibrating diaphragm of said instrument, and adjustable means carried by the said member and supported on the stick.

1,454,924. NEWSPAPER-STACKING MECHANISM. SEVERIN HALVORSEN, Seattle, Wash., assignor to Newspaper Stuffing Machines Co., Seattle, Wash., a Corporation of Washington. Filed Aug. 28, 1920. Serial No. 406,579. 16 Claims. (Cl. 271—87.)



1. In a newspaper handling machine, an endless conveyor for the papers having projecting paper-engaging fingers, paper accelerating means comprising endless belts engaging the under side of the papers as they are being discharged from the main conveyor, and complemental belts and their operating means located above the papers and mounted to swing about one end and with the other end yieldingly bearing upon the paper.

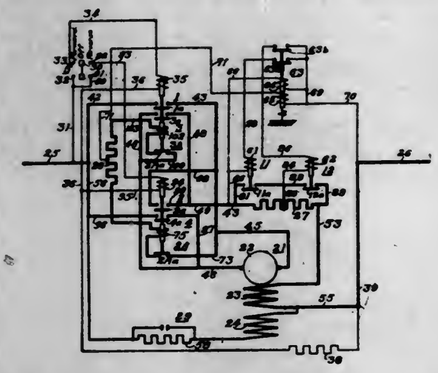
1,454,925. DYNAMO-ELECTRIC MACHINE. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1917. Serial No. 202,690. 24 Claims. (Cl. 172—276.)



2. A single-phase motor comprising a commutator-type armature, a plurality of brushes associated therewith to permit magnetizing currents to flow in certain armature inductors, a magnetizable stator member enclosing said armature, and an exciting field winding producing a magneto-motive force substantially coaxial with that of the magnetizing armature inductors and having its coilsides so located with respect to said brushes that the magnetic leakage between said exciting field winding and the armature turns carrying said magnetizing current is relatively large, the arrangement being such that a resultant starting flux is produced.

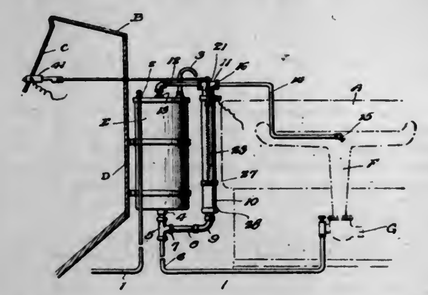
1,454,926. WEIGHT-EQUALIZATION DEVICE. GEORGE H. F. HOLY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1920. Serial No. 428,872. 4 Claims. (Cl. 105—211.)

1. The combination with a transformer, of a main supporting frame comprising a plurality of pairs of spaced members, a plurality of wheel frames pivotally mounted between the members of each pair for independent pivotal movement with respect to said frame.



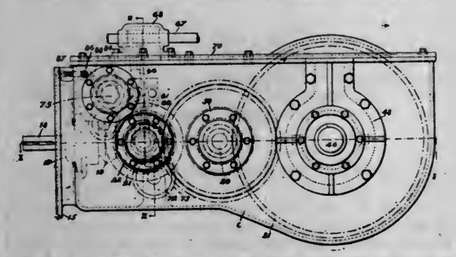
1,454,927. PILE-DRIVING APPARATUS. EDWARD H. HORSON, Brooklyn, N. Y., assignor to Merritt & Chapman Derrick & Wrecking Company, New York, N. Y., a Corporation of West Virginia. Filed Nov. 15, 1919. Serial No. 338,259. 3 Claims. (Cl. 61—74.)

1. In a pile driving apparatus, a float, a derrick thereon having vertical ways, a pile driving hammer operatively mounted in said ways, a pile guide movable vertically in said ways and guiding means connecting said pile guide and float, operative to permit a relative rocking movement between said pile guide and float while maintaining driving relation between the pile and hammer.



1,454,928. CONTROL SYSTEM. GEORGE W. HURTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,158. 10 Claims. (Cl. 172—288.)

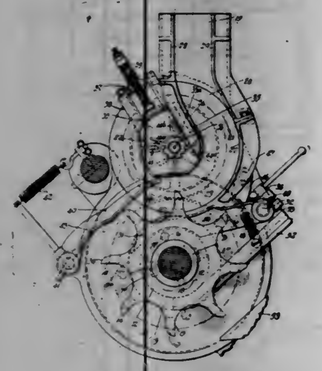
2. The combination with a motor having an armature and means for effecting dynamic braking thereof, of means comprising a relay for accelerating said motor, said relay being electrically connected to said armature and



to said braking means during certain operative periods of said motor.

1,454,929. HEATING PRIMER. HERBERT G. IRWIN, Floydada, Tex. Filed June 15, 1920. Serial No. 389,217. 7 Claims. (Cl. 123—180.)

1. In a primer for internal combustion engines, an electrically heated chamber, a valve forming a cap therefor, a heating element carried by said valve within the chamber, means for admitting fuel to the chamber at the end opposite the said valve to flow over the heating element, and means for energizing said heating element.



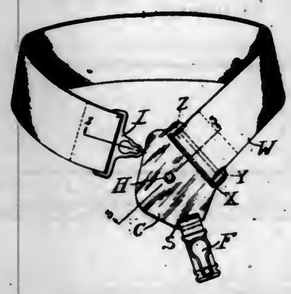
1,454,930. TRANSMISSION MECHANISM. LESTER HOKE KEIM, Chicago, Ill., assignor to R. D. Nuttall Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,318. 5 Claims. (Cl. 74—57.)

5. In a transmission mechanism, the combination of a driving shaft, driven shafts, and means for transmitting power from the driving shaft to the driven shafts com-

prising an intermediate shaft, symmetrically-arranged gears on the driven shafts meshing with the pinions on the intermediate shaft, and a differential mechanism between the pinions on the intermediate shaft, said differential mechanisms having bevel gear wheels, side plates limiting the axial movement of the bevel gear wheels, and said pinions having extended hubs projecting into and secured to the hubs of said bevel gear wheels.

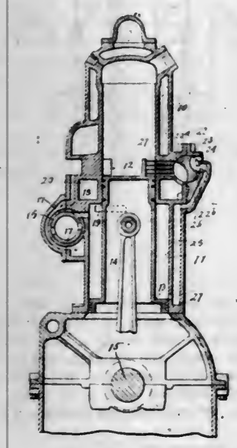
1,454,931. BOTTLE FEEDING AND GUIDING DEVICE. JOSEPH H. KONEFES, Chicago, Ill. Filed June 27, 1921. Serial No. 480,839. 16 Claims. (Cl. 198—22.)

1. In a bottle-feeding and guiding device, the combination of a horizontal rotary bottle-supporting table; guides above the table, not movable with the table, forming a channel adapted to maintain and conduct bottles in upright position at a predetermined distance from the center of the table; and means for pushing such bottles into and through said channel.



16. In a bottle-feeding and guiding device, the combination of a horizontal, rotary bottle supporting table; guides above the table, forming a channel adapted to maintain and conduct bottles in upright position on the table; and a rotating feeding disk, extending some distance over the table and forming the bottom of a chute leading into said channel, said disk travelling considerably faster under said chute than the speed of the table under said channel.

1,454,932. FISHERMAN'S FLY BOOK. ALBERT S. LANGBEIN, Philadelphia, Pa., assignor to F. W. Klinger & Langbein Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1921. Serial No. 439,087. 1 Claim. (Cl. 43—32.)

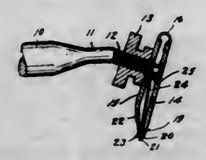


A book of the character stated consisting of foldable covers, a box formed of rigid material connected with one of said covers, said box having a covering lid, a pocket formed of duplicate waterproof sheets one of which is transparent, a closing flap for said pocket, said pocket being located parallel with said cover, means for securing said pocket to the backbone of the book, a sheet of absorbent fabric parallel with said pocket and being secured to said backbone, said covers being adapted to inclose said box, pocket and sheets, and a flap on one of said covers adapted to overlap the other cover and to be secured in closed position thereto.

1,454,933. GARTER. DAVID C. LASH, Shirley, Mass. Filed Sept. 12, 1921. Serial No. 500,030. 8 Claims. (Cl. 241—6.)

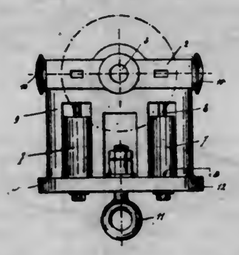
1. A garter comprising a fastener, a web, and an integral plate of flexible material for connecting the web and fastener, said plate having a slot near its lower edge for reception of the fastener, a pair of juxtaposed web-receiving slots near its upper part, said slots extending obliquely to said first slot, and a connecting element at the central part of the plate.

1,454,934. INTERNAL-COMBUSTION ENGINE. CHARLES M. LEECH, Lima, Ohio; Charles E. Kindell administrator of said Charles M. Leech, deceased. Filed July 12, 1920. Serial No. 395,499. 5 Claims. (Cl. 123—71.)



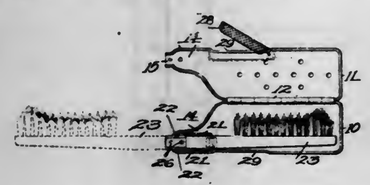
1. In an internal combustion engine, a cylinder, a piston therein, means for supplying combustible mixture to the cylinder, a throttle valve controlling the supply of mixture to the cylinder, and means by which air is supplied to the mixture before its admission past the throttle valve, said valve controlling said means.

1,454,935. BASE FOR PORTABLE LAMPS. WILMAR F. LENT, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 27, 1922. Serial No. 539,474. 6 Claims. (Cl. 240—53.)



1. A base for portable lamps having in combination a clamping member and means for drawing said member within the base, including two springs arranged to act on telescopic members.

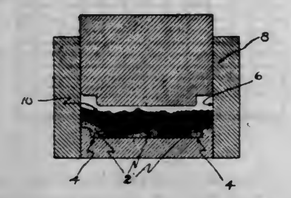
1,454,936. SAFETY RAZOR. ARTHUR E. LEVENE, Seattle, Wash. Filed July 5, 1921. Serial No. 482,367. 4 Claims. (Cl. 30—12.)



1. A safety razor including two spaced apart plates having blade clamping edges arranged to engage with and firmly clamp a blade throughout its entire length and in close proximity to its cutting edge, both of said clamping edges terminating short of the cutting edge of the blade and the clamping edge of the outermost plate being beveled on the exterior to form a guard member that follows the cutting edge of the blade.

1,454,937. OVERHEAD RUNWAY. PIERRE MARTIN, Brussels, Belgium. Filed Dec. 4, 1922. Serial No. 604,888. 2 Claims. (Cl. 104—34.)

1. In an improved overhead runway, the combination with a suspended track formed of two parallel rails of a plurality of carriers each comprising: a carrier body fitted with a shaft having two carrier wheels monted thereon by means of ball bearings, two buffers respectively on the front and on the rear end of said carrier body, two vertical guiding rollers located in suitable spaces of said body and of a diameter somewhat larger than the thickness of the body, and means, secured to the carrier body, for the suspension of chains, lifting tackle and like intermediate devices for the suspension of the load, substantially as described.

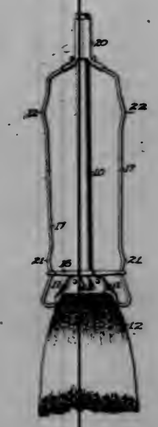


1,454,938. FOLDING TOOTHBRUSH. GUSTAVE E. W. MILLER, Boston, Mass. Filed Apr. 16, 1919. Serial No. 290,456. 10 Claims. (Cl. 15—185.)

1. In a folding tooth brush, the combination with a casing, of a movable link connection pivoted therein, and a tooth brush pivotally connected with said link connection and readily detachable therefrom.

7. In a folding tooth-brush, the combination with a casing, of a link pivoted thereto, and a tooth-brush shank pivotally mounted on said link, said link having opposite yielding projections in alignment extending toward each other and the tooth brush shank having opposite depressions for receiving said projections.

1,454,939. METHOD OF MAKING ARTICLES OF VARICOLORED PLASTIC MATERIALS. HAROLD N. MICHAELSEN, Boston, Mass., assignor to Rawson Electrical Instrument Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1920. Serial No. 350,018. 1 Claim. (Cl. 18—48.8.)



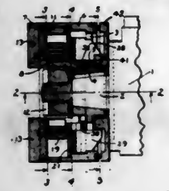
The method of making a homogeneous composition of matter with blended colors, that comprises placing a partial reaction condensation product in irregular masses in a mold of irregular contour so as not to cover entirely the bottom of the mold, placing a differently colored partial reaction condensation product in the mold over the first-named condensation products and so as to cover the portions of the bottom of the mold not covered by the first-named condensation product, and applying heat and pressure to chemically intermold the condensation products at their juncture and to integrally unite them into a single mass, whereby the color of each condensation product and a blending of the colors at their juncture are obtained.

1,454,940. MOP. ABRAHAM MORRISON, Worcester, Mass. Filed July 8, 1921. Serial No. 483,808. 3 Claims. (Cl. 15—120.)

1. A mop comprising a handle, a mop cloth, a mop holder fixed to the end of said handle, a guide rotatably mounted on said handle, a sleeve freely movable angularly and longitudinally on said handle, and a wire wringer frame fixed to said sleeve, slidable in said guide,

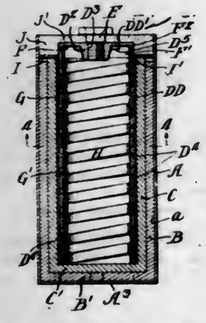
and extending through said mop cloth, said frame having portions bent to yieldingly cooperate with said guide

to hold said frame in either extended or withdrawn position.



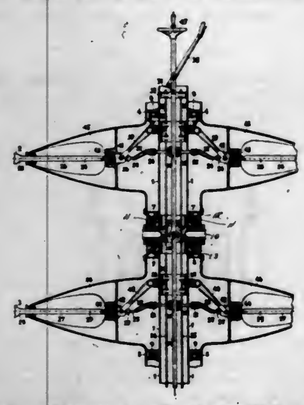
1,454,941. RAT TRAP. NILS OSCAR NILSSON, Worcester, Mass. Filed May 11, 1922. Serial No. 560,190. 2 Claims. (Cl. 43—69.)

2. In a rat trap, the combination of a feed box having an opening at each end near the top, a platform pivoted adjacent to one of said openings and having the free end extending from it inwardly toward the other, a stop near the other end for limiting the upward motion of the platform, a weight on the platform near the end of the box for holding it up against the stop, said box having a horizontal door along one side by which fowls can have access to grain or water located in the bottom of it, said door being located at a level lower than said openings, a screen under the platform slanting from a position above the opening to a point near the bottom and at a distance from that side of the box, and a readily removable cover for the box.



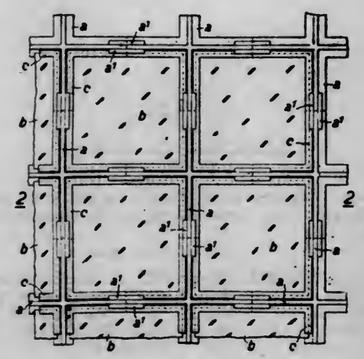
1,454,942. IMPULSE COUPLING. JOHN PAULY, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed May 17, 1921. Serial No. 470,298. 16 Claims. (Cl. 123—149.)

1. In an impulse coupling comprising rotatable driving and driven members and an impelling spring arranged to be stressed upon angular displacement of said members, the combination of a locking mechanism therefor comprising a laminated sheet metal locking member, an abutment arranged to be engaged thereby and mechanism



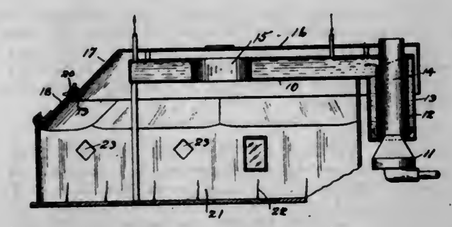
for releasing said locking member from engagement with said abutment.

1,454,943. ELECTRIC BATTERY. DAVID PEPPER, Philadelphia, Pa. Filed Aug. 9, 1921. Serial No. 490,858. 4 Claims. (Cl. 204—34.)



1. An electric battery comprising an outer cup shaped container of lead, a layer of active material in close electrical and mechanical contact with the inside walls of said cup constituting the cathode of the battery, a zinc cup shaped anode set with its closed end uppermost in the battery and spaced from the cathode layer, a seal of non-permeable non-conducting material closing the space between the top of the lead and zinc cups and acting to hold the zinc cup anode in position, and an electrolyte in contact with both electrodes.

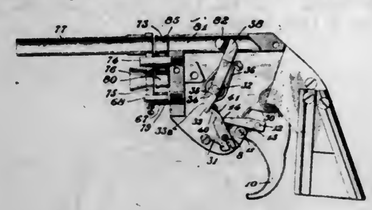
1,454,944. SYSTEM OF HELICOPTER SCREWS. RAUL PATERAS PESCARA, Barcelona, Spain. Filed July 15, 1920. Serial No. 396,597. 5 Claims. (Cl. 244—19.)



1. In a helicopter, a pair of oppositely rotating propellers each having movable blade portions, a central hollow spindle mounting said propellers for rotation thereon, and mechanism including elements within said spindle for adjusting the blades and movable portions thereof independently.

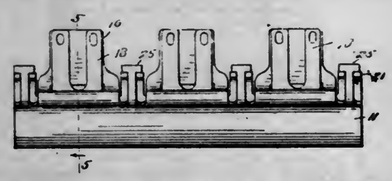
1,454,945. ACID RECEIVER. PAUL LUDWIG PFANNENSCHMIDT, Jena, Germany. Filed Aug. 8, 1921. Serial No. 490,733. 4 Claims. (Cl. 23—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an acid receiver a window-shaped framework, rigid in itself and made of acid-proof material, and comparatively thin, acid-proof plates fastened to the said framework and adapted to cover the openings of the same.



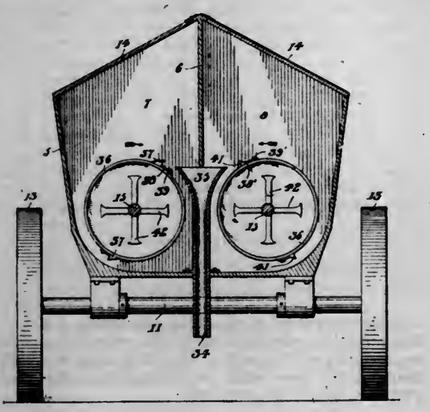
1,454,946. BROODER. MARY CHASE BARON, Hampden Meadows, R. I. Filed Aug. 26, 1920. Serial No. 406,185. 7 Claims. (Cl. 119—34.)

1. In a brooder, a heat-distributing member, a hood about said member, curtain supports about the periphery of said hood, curtains on said supports for inclosing the brooding chamber, and said supports being shiftably mounted on the hood to move the curtains bodily in a horizontal plane to open position from closed position.



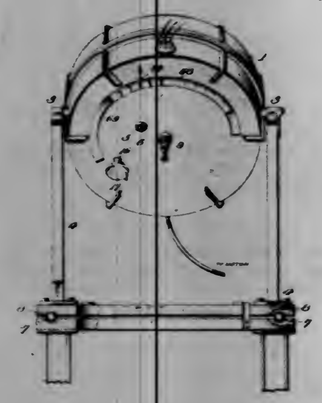
1,454,947. AMUSEMENT DEVICE. ARCHIE H. BECHTOL and WALTER A. TRATSCH, Memphis, Tenn. Filed Dec. 19, 1922. Serial No. 607,915. 17 Claims. (Cl. 124—15.)

1. In an amusement device, the combination of a propelling device; a trigger controlling said propelling device; means for pivoting said device for movement in a horizontal plane; means for pivoting said device for movement in a vertical plane; means to normally lock the mechanism; a safety means comprising a spring controlled pivoted member and preventing injury to said mechanism when the trigger is pulled while the



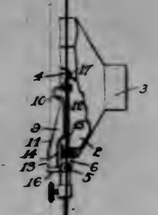
parts are locked; a target toward which balls may be fired from said device; and means for automatically returning the fired balls to said device.

1,454,948. RAIL COUPLING. EARL T. BENNINGTON, Colonial Heights, Ohio. Filed Nov. 29, 1920. Serial No. 427,111. 9 Claims. (Cl. 104—111.)



1. A coupling for two adjoining overhead rails comprising clamping members adapted to extend over and to produce clamping pressure down on the heads of the rails, and having detachably connected portions for engaging the webs of the rails.

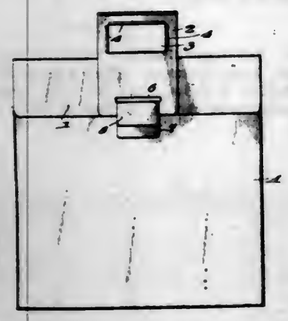
1,454,949. PLANTING MACHINE. JOE BLATECKY, Racine, Wis. Filed June 7, 1921. Serial No. 475,753. 2 Claims. (Cl. 221—122.)



1. In a planting machine, an upright delivery tube, a receptacle in which said tube is substantially centrally mounted, a partition in the receptacle dividing the same into non-communicating compartments arranged side by side with the upper end of the said tube being outwardly flared and communicating with both of said compartments, and means for delivering material from each of said compartments intermittently and simultaneously into the upper end of said tube.

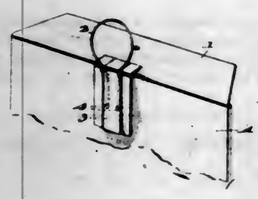
1,454,950. OPTICAL SYSTEM. JAMES M. BOYLE, U. S. Army. Filed Oct. 15, 1918. Serial No. 258,241. 15 Claims. (Cl. 88—2.7.) (Filed under the act of Mar. 3, 1883, 22 Stat. L. 625.)

1. In an optical system, the combination of a reflector, means adapted to transmit thereto a succession of images of an object arranged to produce the effect of a single image in stereoscopic relief, and means cooperating with said image transmitting means to indicate the distance of the object when its image appears in stereoscopic relief.



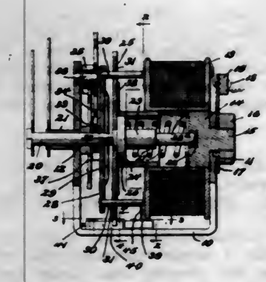
1,454,951. STYLUS FOR PHONOGRAPH REPRODUCERS. JULIUS A. BROWN, Peekskill, N. Y. Filed Aug. 13, 1921. Serial No. 491,971. 1 Claim. (Cl. 274—35.)

A stylus arm for a sound box, comprising a plate having a portion converging from the inner end outwardly to an intermediate portion, thereupon having a reduced portion, and then again converging from the reduced portion toward the outer end.



1,454,952. FASTENING AND HANDLE FOR PAPER ENVELOPES AND RECEPTACLES. JOHN W. BUNKER and ASHTON M. BONEY, New York, N. Y., assignors to Service Bag Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1921. Serial No. 448,180. 2 Claims. (Cl. 229—68.)

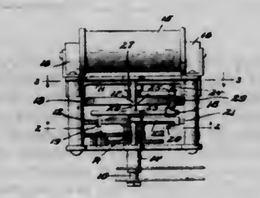
2. The combination, with a receptacle and flap, of a handle secured to one of said parts, said handle having two slots, one for the fingers in carrying the receptacle, and a fastening device secured to one of said parts and



its free end adapted to enter the other slot in the handle and be bent back to secure the flap and receptacle together.

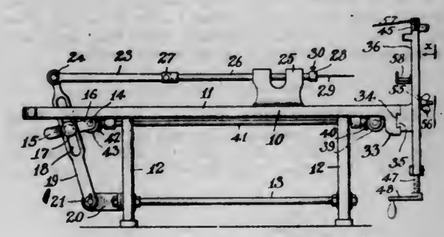
1,454,953. PAPER ENVELOPE OR BAG. JOHN W. BUNKER and ASHTON M. BONEY, New York, N. Y., assignors to Service Bag Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 26, 1921. Serial No. 448,181. 1 Claim. (Cl. 229—52.)

The combination with a receptacle, of a handle in the form of a loop secured at the open end thereof, the ends of said handle bent upwardly to form hooks which hook beneath a portion of the material and a reenforcing strip attached to the envelope at the point where the handle is fastened.



1,454,954. SECONDARY ELECTRIC CLOCK. THADDEUS STEPHENS CASNER, Plainfield, N. J., assignor, by mesne assignments, to George Rawak, New York, N. Y. Filed Aug. 31, 1920, Serial No. 407,160. Renewed Sept. 21, 1922. Serial No. 589,686. 14 Claims. (Cl. 58—26.)

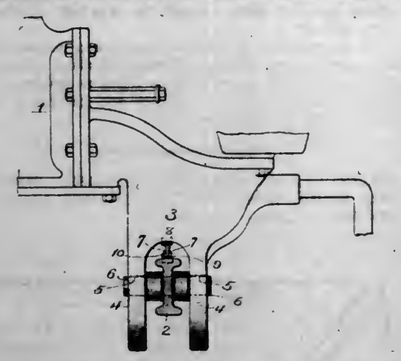
1. In a secondary clock, in combination, a frame, a disk member and a cam member mounted in said frame



for relative rotation about the axis of the disk and relative linear movement parallel to the axis of the disk, and means for effecting axial movement of said disk member relatively to said cam, whereby they are brought into engagement and relative rotation produced, for the purpose set forth.

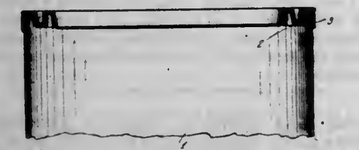
1,454,955. CLOCK. THADDEUS STEPHENS CASNER, Plainfield, N. J., assignor, by mesne assignments, to George Rawak, New York, N. Y. Filed Sept. 18, 1920, Serial No. 411,070. Renewed Sept. 21, 1922. Serial No. 589,685. 5 Claims. (Cl. 58—26.)

1. In a clock mechanism, the combination of a minute hand and its supporting shaft, means to impart a step by step forward movement to said hand, and an inertia device arranged to control or regulate said forward movements.



1,454,956. APPARATUS FOR MANUFACTURING HAIR GOODS. THEOPHILE CHARLES, New York, N. Y. Filed Jan. 5, 1922. Serial No. 527,279. 14 Claims. (Cl. 132—51.)

1. An apparatus for manufacturing hair goods comprising a suitable main frame, a supplemental frame movably mounted in connection with the main frame, means for supporting a workpiece in connection with the supplemental frame in an angular position, means for supporting strands of hair in connection with the supplemental frame, and a member movably mounted upon the main frame and adapted to pass through said workpiece to engage and pull one of the strands of hair through said workpiece.



1,454,957. SAFETY DEVICE FOR TRACTORS. JOHN COCKRILL, Jackson, Tenn. Filed July 23, 1921. Serial No. 487,136. 3 Claims. (Cl. 180—82.)

1. The combination in a tractor, of an axle and a body movable vertically with relation to the axle and normally resting on the axle, electrical circuit closing means adapted for connection in the sparking circuit of the tractor, said circuit closing means having its respective members connected with the axle and the vertically mov-

able body and normally in contact whereby relative upward movement of the body will separate the members and break the circuit.

1,454,958. METAL CONTAINER. WILLIAM T. DAVIES, Cleveland, Ohio, assignor to The Patterson-Sargent Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 20, 1922. Serial No. 537,692. 1 Claim. (Cl. 220—42.)

In a device of the class described, in combination, a can; a top ring secured thereto, the said top ring being provided adjacent its inner periphery with an annular channel opening into the can and formed by two radially spaced, substantially parallel walls connected by a resilient bridge, the top ring also being provided with another annular channel of greater diameter than, but adjacent to the first channel and opening out of the can, this latter channel being formed by the outer wall of the first said channel a wall spaced radially outwardly therefrom and substantially parallel therewith and a resilient bridge connecting the two walls; and a cover having two annular channels, the side walls of which are adapted to engage frictionally with substantially all of the surfaces of each of the corresponding side walls of the annular channels in the top ring.

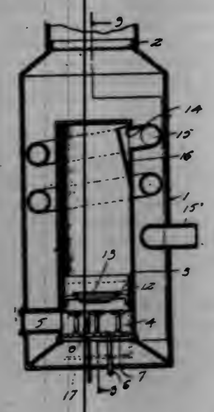
1,454,959. CELLULOSE-ETHER COMPOSITION. HENRY DREYFUS, London, England. Filed Nov. 16, 1920. Serial No. 424,511. 4 Claims. (Cl. 106—40.)

1. A composition of matter containing a cellulose ether and a high boiling aromatic low-carbon alkyl sulfonamide preparation which is liquid at ordinary temperature and becomes more viscous and gelatinous when cooled to low temperatures.

1,454,960. CELLULOSE-ARALKYL-ETHER COMPOSITION. HENRY DREYFUS, London, England. Filed Nov. 16, 1920. Serial No. 424,512. 1 Claim. (Cl. 106—40.)

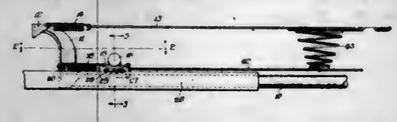
A composition of matter containing an aralkylated derivative of cellulose and a high boiling aromatic low-carbon alkyl sulfonamide preparation which is liquid at ordinary temperature and becomes more viscous and gelatinous at low temperatures.

1,454,961. COMPOSITION CONTAINING CELLULOSIC DERIVATIVES. HENRY DREYFUS, London, England. Filed Nov. 16, 1920. Serial No. 424,513. 2 Claims. (Cl. 106—37.)



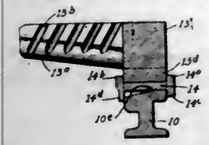
1. A composition of matter comprising nitrocellulose and a high boiling aromatic low-carbon alkyl sulfonamid preparation, which preparation is liquid at ordinary temperature and becomes more viscous and gelatinous when cooled to low temperatures.

1,454,962. AUTOMOBILE HAT HOLDER. MARK W. DYE, Seattle, Wash. Filed Apr. 18, 1922. Serial No. 554,769. 1 Claim. (Cl. 43—13.)



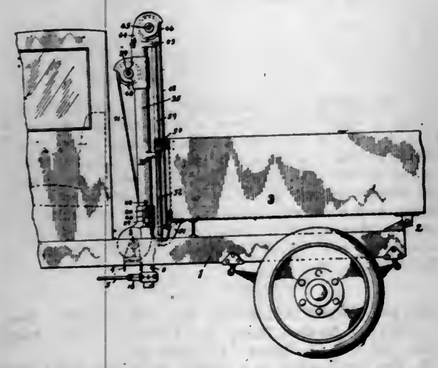
A hat holder made of a single piece of wire bent first in the middle into a hat loop, then twisted from the ends of said loop into an arm, then coiled from the ends of said arm into two spring coils, and then bent rearwardly from the outer ends of said coils into parallel and spaced apart arms, each adapted to be bent around a transverse bar in the top of an automobile and terminating in a hook adapted to hook around that portion of the arm adjacent the transverse bar for securing the hat holder in position.

1,454,963. GAS FURNACE. HARRY E. FENDRING, Los Angeles, Calif. Filed Nov. 16, 1920, Serial No. 424,430. Renewed Aug. 31, 1922. Serial No. 585,577. 1 Claim. (Cl. 126—116.)



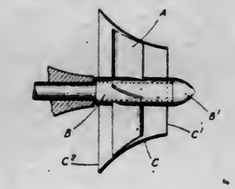
A furnace comprising an outer shell having a heat conducting pipe leading from its upper end, air intake means for the shell, an inner shell within the outer shell and in spaced relation thereto and having its upper end closed, means supporting the inner shell above the base wall of the outer shell, a firebox in the inner shell, passage means to the firebox through the shells, a fuel burner within the firebox, a band adjacent the firebox within the inner shell to protect the shell against excessive heat, a deflector supported by said band, a flue leading from the inner shell adjacent its top and through the outer shell, and a deflector in the inner shell over the entrance of the flue to cause the heat and by-products of combustion to strike said deflector before entering the flue.

1,454,964. BEDSPRING FRAME. BEN K. FORD, Oak Park, Ill., assignor to Union Bed and Spring Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1922. Serial No. 598,992. 6 Claims. (Cl. 5—210.)



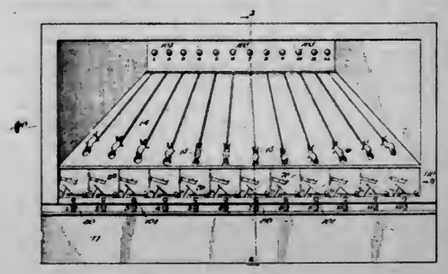
1. A mounting for a bed-spring frame adapted to rest on a bedstead side rail, comprising in combination, a sheet-metal plate element of the bed-spring frame having depending slotted end flanges, a supporting bar adjustable in the slots of said flanges and designed to bear on the bedstead siderail, a transverse element of the bed-spring frame, a sheet-metal socket member receiving said transverse element and having legs extended down through holes of said plate and bent over thereunder to fasten the parts together.

1,454,965. CHAIN GRATE. RANDOLPH E. SPENCER GRARE, Chicago, Ill. Filed Jan. 10, 1920. Serial No. 350,585. 7 Claims. (Cl. 110—40.)



6. In mechanism of the class described, a supporting member, said supporting member having a seat, a grate bar having a portion engageable with said seat, and spring means to lock said bar in seated position.

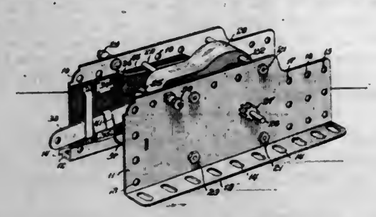
1,454,966. TRUCK-BODY HOIST. FRANK G. GIBB, Detroit, Mich., assignor of one-half to Trevor G. Murton, Detroit, Mich. Filed Mar. 2, 1922. Serial No. 540,606. 9 Claims. (Cl. 298—21.)



1. In a hoist, the combination of a horizontal shaft and a rope drum mounted thereon, a guide pivoted on said shaft, a ram slidable in the guide, a rope sheave at the upper end of the guide, a rope extending from the lower end of the ram over the sheave to the drum, a sheave at the upper end of the ram, and a rope extending from the body over the second sheave to the same drum.

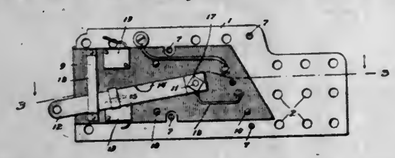
1,454,967. SCREW PROPELLER AND SIMILAR APPLIANCE. JAMES HERBERT WAINWRIGHT GILL, Norfolk, England, assignor to Gill Propeller Company Limited, King's Lynn, England, a Company of Great Britain. Filed June 15, 1920. Serial No. 389,195. 5 Claims. (Cl. 170—168.)

1. In a screw propeller the combination of a hub, blades radiating from the hub, and a shroud mounted on the ends of the blades, the inner surface of the shroud having approximately the contour of a nozzle designed to give regular progressive increase in velocity or head to the fluid stream on which the propeller operates, and the blades having axial increase of pitch in the direction of flow through the shroud to conform with the acceleration of the water passing through the shroud.



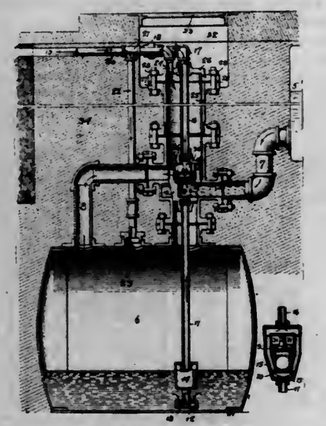
1,454,968. AMUSEMENT APPARATUS. MONNOSUKE HIGUCHI, College Point, N. Y. Filed July 12, 1921. Serial No. 484,117. 21 Claims. (Cl. 46—56.)

21. A game apparatus which comprises a missile, a casing within which said missile is disposed, means within the casing for throwing the missile, and circuit-operating means actuated by the missile when the missile is thrown by the skill of the operator in a predetermined manner.



1,454,969. MOTOR. FRANK HORNBY, Liverpool, England, assignor to Meccano Limited, Liverpool, England, a British Corporation. Filed Apr. 28, 1920. Serial No. 377,169. 4 Claims. (Cl. 172—36.)

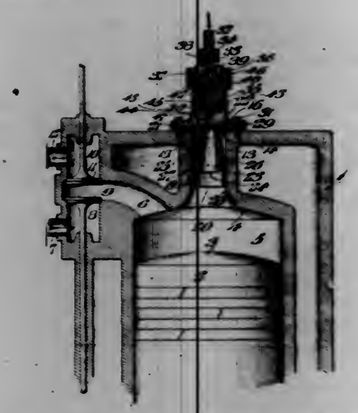
1. A terminal assembly for an electric motor comprising a slab of insulating material, brush-holders mounted thereon, a movable switch member mounted thereon and constantly connected to one brush-holder, and a pair of



field connectible terminals also mounted on the slab, said terminals being cooperable one at a time with the switch member.

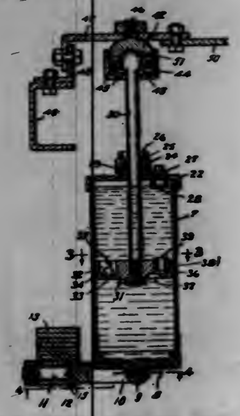
1,454,970. SWITCH. FRANK HORNBY, Liverpool, England, assignor to Meccano Limited, Liverpool, England, a British Corporation. Original application filed Apr. 28, 1920, Serial No. 377,169. Divided and this application filed Sept. 17, 1921. Serial No. 501,324. 6 Claims. (Cl. 200—164.)

2. In a switch, an insulating base, a pin projecting laterally therefrom, a relatively long strip of insulation pivoted on the pin, a T-shaped conducting strip shorter than the insulating strip having one end-portion wrapped about the pivoted end of the insulating strip and the arms of the T wrapped about the mid-portion of the insulating strip, and means for retaining the strips on the pin.



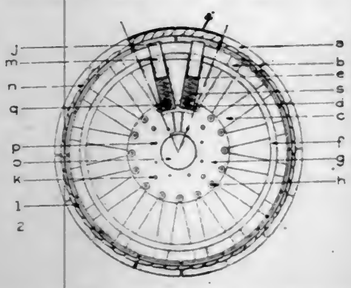
1,454,971. LIQUID-DISPENSING SYSTEM. SAMUEL DONNELLON LOVE, Rahway, N. J., assignor to Allen Pressure System Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1920. Serial No. 373,634. 6 Claims. (Cl. 221—74.)

1. In a liquid dispensing system, a storage tank, a working tank filled by gravity therefrom, a standard rising from the working tank, a discharge pipe passing



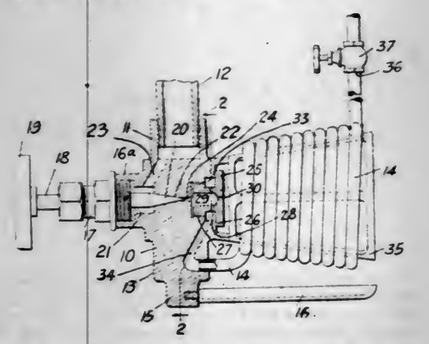
upward from the working tank through the standard, a non-return valve fitting arranged in said standard and connected to the discharge pipe and having a by-pass communicating with the latter, and a fill pipe opening through the standard to said non-return valve fitting and serving to convey liquid from the storage tank to the working tank through the non-return valve passage in said fitting.

1,454,972. BURNER FOR INTERNAL-COMBUSTION ENGINES. EDWARD L. LOWE, Palo Alto, Calif. Filed Dec. 29, 1922. Serial No. 609,777. 16 Claims. (Cl. 123—32.)



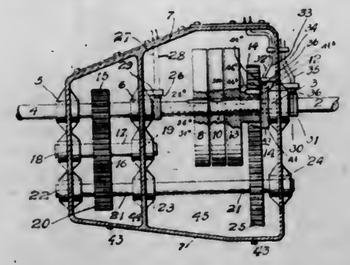
1. In a device of the character stated, a burner composed of an outer sleeve, an inner sleeve positioned within said outer sleeve, both of said sleeves being open and unobstructed at their lower ends, and flaring and of gradually increasing diameter in cross section, whereby a flaring ignition chamber is formed between said sleeves open at its bottom and a relatively large flaring combustion chamber is formed within said inner sleeve, said chambers being in communication at their upper and lower ends.

1,454,973. SHOCK ABSORBER. ANGUS P. MALLOY, Jr., Seattle, Wash. Filed Feb. 13, 1922. Serial No. 536,089. 4 Claims. (Cl. 188—88.)



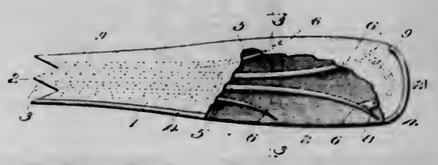
1. The combination with two relatively vibratory members, of a hydraulic cylinder arranged to be secured to one of said vibratory members, a piston reciprocable in said cylinder, a piston rod connected with said piston and having its outer end secured to the other vibratory member, a liquid by-pass extending through said piston, a valve plug for regulating the area of opening of said by-pass and a cover for said cylinder, said cover having an opening capable of being aligned with said screw plug to permit the adjustment of said valve plug.

1,454,974. ELASTIC WHEEL. PERICLES MARCHETTI, Godoy, Santa Fe, Argentina, assignor to Sindicato Argentino para la Explotacion de Inventos, Buenos Aires, Argentine Republic. Filed Aug. 25, 1919. Serial No. 319,709. 1 Claim. (Cl. 152—29.)



A wheel having a rim, radially movable spring projected spoke members projecting therefrom, segmental tire sections on the outer ends of the spoke members, arranged in closely spaced relation and provided with longitudinal grooves in their outer sides, and flexible cables connecting said tire sections together and arranged in said grooves, the depth of said grooves being such as to protect the cables and cause the outer peripheral surfaces of the tire sections to bear directly on the road surface.

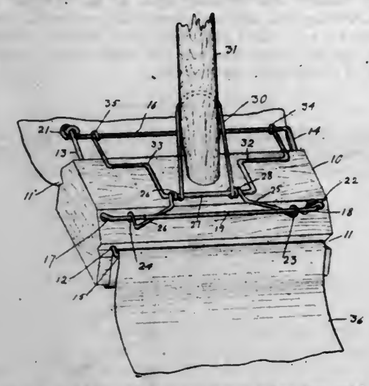
1,454,975. LIQUID-FUEL BURNER. FRANK MARTINDELL, Brooklyn, N. Y., assignor to The Anthony Company, Long Island City, N. Y., a Corporation of New York. Filed June 24, 1920. Serial No. 391,455. 2 Claims. (Cl. 158—75.)



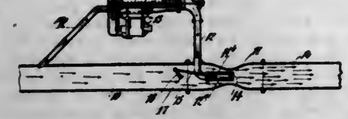
1. In a steam generating liquid fuel burner, the combination of a body casing having a fuel supply connection, a discharge nozzle of substantially cylindrical shape screwed into the said body casing, the said nozzle having a cylindrical mixing chamber open at one end for the inlet of fuel, orifices at its side walls and a small outlet opening, a fuel regulating valve within the body casing and located between the said fuel supply connection and the said discharge nozzle, a circularly coiled pipe at the outlet end of the burner having one end connected to a valved water supply and the other end to the body casing, a duct within the body casing connecting the latter end of the coiled pipe with the said orifices in the discharge nozzle, and a fuel pan below the said coiled pipe, fastened to the body casing.

1,454,976. REVERSE MECHANISM FOR MOTOR BOATS. IRA C. MATTHIESSEN, Ithaca, N. Y. Filed Nov. 2, 1921. Serial No. 512,356. 2 Claims. (Cl. 74—59.)

1. In a device for reversing the direction of rotation of the driven shaft of a motor boat, a drive shaft, a driven shaft in alignment with the drive shaft, a magnetic clutch comprising an intermediate magnetic member fixed on the drive shaft, a lateral magnetic member loose on the drive shaft and a lateral magnetic member slidable on the driven shaft, means for operatively connecting the loose magnetic member on the drive shaft with the driven shaft, and means for successively energizing said lateral magnetic members and said intermediate magnetic member and causing the slidable lateral magnetic member on the driven shaft to contact with the fixed intermediate magnetic member on the drive shaft for direct drive or causing the loose lateral magnetic member on the drive shaft to contact with the fixed magnetic member on the drive shaft, and through the means for operatively connecting said loose magnetic member with the driven shaft, reverse the direction of rotation of the driven shaft.



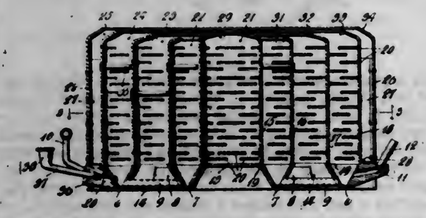
1,454,977. METAL PROPELLER FOR AEROPLANES, DIRIGIBLES, BALLOONS, AND THE LIKE. THOMAS MIDDLETON, Schenectady, N. Y. Filed Feb. 18, 1921. Serial No. 446,001. 20 Claims. (Cl. 170—159.)



1. A propeller comprising relatively thin metal plates shaped to form the blades of the propeller, and a series of hollow tapered ribs interposed between the aforesaid plates and having their outer ends flared toward the opposite side edges of the plates for forming an interior support.

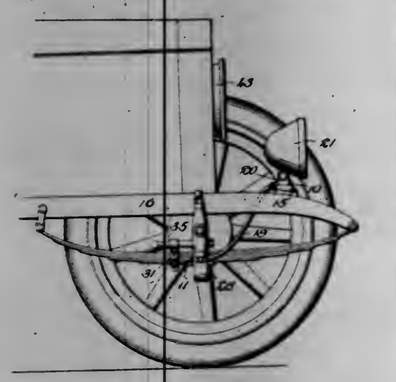
1,454,978. MOP HOLDER. JOHN MIKENAS, Amsterdam, N. Y. Filed Apr. 15, 1922. Serial No. 553,256. 3 Claims. (Cl. 15—231.)

1. A mop holder of the class described comprising a perforated base block, clamping frames having portions slidably disposed in the perforations in said block, means for drawing said frames into clamping engagement with said block to clamp a mop cloth to said block, and a handle for said block adapted upon being inserted in the handle socket to engage and to lock said frames in their mop clamping position.



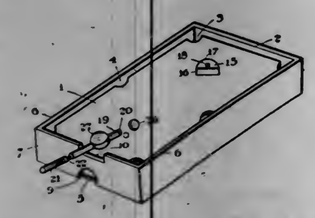
1,454,979. FUEL-FEEDING APPARATUS. JOHN E. MUHLFELD, Scarsdale, and VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignors to Locomotive Pulverizing Fuel Company, New York, N., Y., a Corporation of Delaware. Filed Nov. 21, 1918. Serial No. 263,459. 3 Claims. (Cl. 302—36.)

1. In fuel feeding apparatus, the combination of a main conduit for passage of blast air, with a venturi therein; a smaller secondary conduit branching from the main conduit at a point on the way to said venturi and returning to the main conduit at the throat of said venturi, and having therein an air current of less velocity than the current in the main conduit; with a feeder in said secondary conduit for feeding fuel into the current therethrough, for delivery to and admixture with the main current.



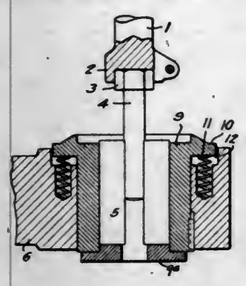
1,454,980. OIL BURNER. CLYDE W. MUMMERY, Richmond, Mich. Filed Oct. 21, 1922. Serial No. 596,058. 3 Claims. (Cl. 158—87.)

1. In a burner, spaced inner and outer circular troughs, and a pair of slotted shells mounted on each trough, said



shells being concentrically arranged and forming annular combustion chambers above the troughs and an intermediate annular air chamber open at the bottom, and communicating thru said slots with the combustion chambers, the upper ends of the shells being flanged inwardly at the top to direct the air and combustion products toward the center of the burner.

1,454,981. DIRIGIBLE LIGHT FOR MOTOR VEHICLES. SUMNER E. ORR, Tacoma, Wash. Filed Nov. 7, 1921. Serial No. 513,413. 13 Claims. (Cl. 240—62.)

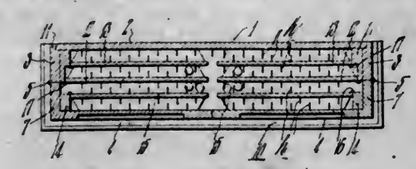


1. The combination with a vehicle having a frame and steering gear, of a dirigible lamp operating mechanism embodying a bracket mounted on the vehicle frame, a rotatably mounted lamp supporting plate, operatively disposed on said bracket; a single flexible rod joining said lamp supporting plate to the steering gear; a spring operatively disposed between said bracket and said plate whereby said spring at all times tends to rotate said plate against the force of said rod, whereby is provided a flexible yielding connector between the steering mechanism and the lamp for providing steadiness of the light, said rod functioning to impart steering movements to the lamp.

1,454,982. GAME. HENRY THOMAS PYE, Montreal, Quebec, Canada. Filed Sept. 14, 1921. Serial No. 500,568. 1 Claim. (Cl. 46—61.)

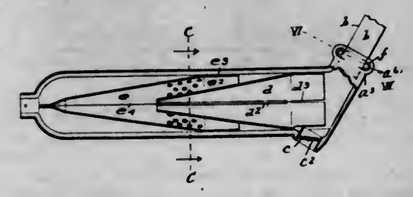
In a game, a board having box sides and a playing slot and ball return opening at one end, an inclined bottom secured in said slides having converging guides and inclined surfaces leading to said opening, a playing board flush with the bottom of said slot and having a plurality of curved openings at the corners and intermediately adjacent to the box sides, a cue in the form of a spring gun operating a ball and having a thumb rest intermediate of its barrel portion and a glancing block adjustable rotatably and having a flat ball surface and a semicircular ball surface for caroming the ball to the sides or board openings.

1,454,983. BOLT-TURNING MACHINE. CHARLES L. SAVIDO, Lima, Ohio, assignor to Walter H. Foster, New York, N. Y. Filed Apr. 13, 1921. Serial No. 461,089. 3 Claims. (Cl. 82—20.)



1. A machine for turning and facing headed bolts including in combination mechanism for securing relative feeding and rotary movement and a spring device arranged to hold the tool up to the work during the turning of the shank of the bolt and to yieldwhen the tool engages the face of the bolt head and therefore to cause a slower feeding movement near the end of the operation.

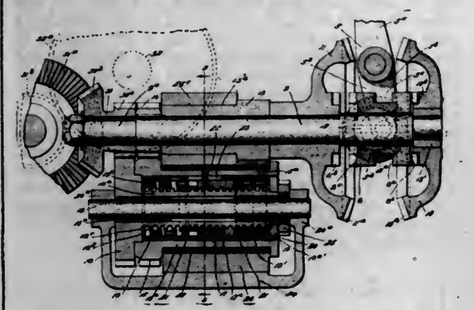
1,454,984. WELL-DRILLING APPARATUS. VICTOR A. STEWART, Brooklyn, N. Y., assignor of one-half to Rougier Thorne, Glen Cove, N. Y. Filed Apr. 4, 1921, Serial No. 458,327. Renewed Oct. 14, 1922. Serial No. 594,656. 8 Claims. (Cl. 255—76.)



1. In a well-drilling aparatus, a rotary tubular shaft, a bit and a rope or cable connected with said bit for lowering or raising the same freely through said shaft, said bit comprising a stock or body portion transversely slotted in its lower end and a pair of blades pivoted within said slot and being heavier at their outer or cutting ends and adapted to be folded upwardly with their cutting ends uppermost when the bit is to be lowered through said shaft and to automatically unfold outwardly and downwardly on leaving the lower end of said shaft, and said blades on an upward pull of said rope to withdraw the bit through said shaft, being adapted to automatically fold together with their heavier ends downward, and the lower end of said shaft being adapted when the shaft is lowered to interlock with said blades for imparting movement thereto.

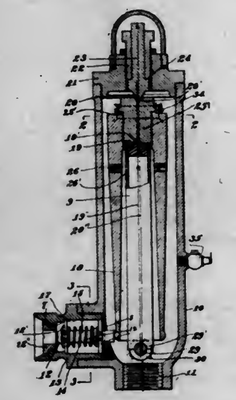
1,454,985. CABINET. WILLIAM J. TATE, Springfield, Mass. Filed Jan. 18, 1921. Serial No. 438,125. 2 Claims. (Cl. 211—7.)

1. A compactly constructed key cabinet comprising a rigid rectangular frame having two wide sides constituting top and bottom walls of the cabinet and two narrow sides constituting stationary side walls of the cabinet, said wide sides having their excess width disposed entirely in front of said narrow sides; two doors each comprising a relatively narrow strip hinged at one lateral edge to one of the narrow sides of said frame, and a wide panel rigidly secured to the opposite lateral edge of said strip and disposed at right angles thereto, said strips constituting movable side walls of the cabinet and said panels constituting the front walls thereof, plaques hinged to both the stationary and movable side walls of the cabinet; spacing strips rigidly secured to the rear sides of the plaques on the stationary part of the cabinet and to the front sides of the plaques on the doors, said strips being located adjacent the upper and lower edges of said plaques; and a plurality of key-supporting hooks carried by each of said plaques between said spacing strips.



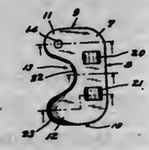
1,454,986. MUFFLER FOR INTERNAL-COMBUSTION ENGINES. HORACE T. THOMAS, Lansing, Mich. Filed Sept. 7, 1918. Serial No. 252,997. 4 Claims. (Cl. 137—160.)

1. A cylindric muffler composed of two semi-cylindrical complementary halves of pressed steel seamed together and having inlet and outlet openings, each of the halves carrying baffle plate sections fastened to it and extending diametrically across the muffler.



1,454,987. CUSHIONING DEVICE FOR REVERSING MECHANISM. HERBERT E. TOWNSEND, East Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed June 17, 1922. Serial No. 569,135. 4 Claims. (Cl. 74—98.)

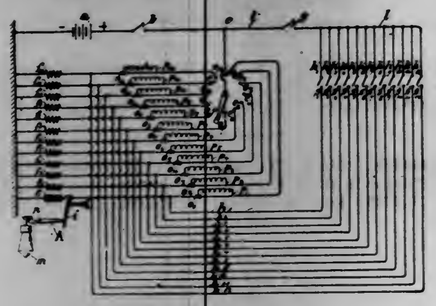
1. A cushioned reversing and driving mechanism for reciprocating loads, having in combination, a clutch mechanism for rotating a shaft alternately in opposite directions, a longitudinally extending cushion-enclosing sleeve, means for engaging this sleeve with the driving shaft to impart rotary motion thereto, grooves formed on the inner periphery of said sleeve, a hollow cylindrical traversing nut containing on its outer periphery splines to engage the grooves in said sleeve, and threads on its inner periphery, a threaded sleeve adapted to engage the threads on the inner periphery of said traversing nut, a set of springs coiled around the threaded sleeve and enclosed



by the grooved sleeve, washers intermediate said springs and traversing nut, and means extending from the threaded sleeve to drive the reciprocating load.

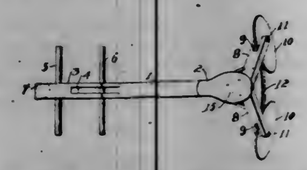
1,454,988. TRAP. WILLIAM J. TURNER, Seekonk, Mass. Filed July 31, 1919, Serial No. 314,539. Renewed Oct. 10, 1922. Serial No. 593,656. 30 Claims. (Cl. 236—59.)

29. A trap having in combination a valve, an expansion member, and a lever intervening; the expansion member being a post having pivotal support at its end remote from the lever whereon it may swing to permit substitution of levers having short arms of various lengths.



1,454,989. WINDOW-SASH-HOLDING DEVICE. WILLIAM F. WATKINS, Seattle, Wash., assignor to Watkins Appliance Company, Inc., Seattle, Wash., a Corporation. Filed Sept. 4, 1920, Serial No. 408,297. Renewed Nov. 11, 1922. Serial No. 600,480. 1 Claim. (Cl. 292—241.)

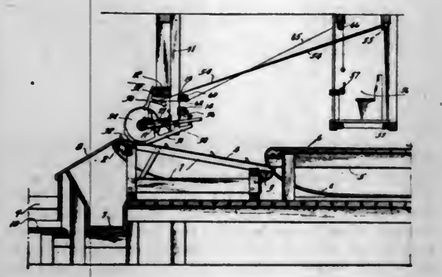
A window sash holder comprising a relatively thin metal plate having a rear edge provided with a centrally located indentation that forms a rearwardly projecting



lug near each end, one of said lugs having a perforation therein, a reinforcing flange formed by bending the rear edge of said plate upwardly around said lugs and said indentation said flange at the location of said indentation being narrow and forming a stop and at the location of one of said lugs being wider and forming a fingerhold, and curved spring like friction members integral with the body of said plate and located near the front edge thereof.

1,454,990. BOMB-THROWING DEVICE FOR AIRCRAFT. OSCAR WILCKE, Friedrichshafen, Germany, assignor to the Firm: Luftschiffbau Zeppelin Gesellschaft mit beschrankter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,576. 11 Claims. (Cl. 244—1.

1. In a system for releasing bodies from aircraft in combination, a source of electric current, a main and a plurality of shunt circuits adapted to be connected with said source of current, a plurality of suspension devices and of electromagnets adapted to cooperate therewith and to be inserted in parallel in said circuits, a switch in each shunt circuit and a distributing switch adapted to insert said electromagnets, one after the other, in said main circuit.



1,454,991. AMUSEMENT DEVICE. WINFIELD WILLIAMS, San Jose, Calif., assignor to J. F. Patterson and Hortense Bean, a Copartnership operating as Patterson-Williams Mfg. Co., San Jose, Calif. Filed Nov. 10, 1920. Serial No. 423,163. 5 Claims. (Cl. 46—27.)

1. A device of the character indicated comprising a supporting member, a swivelling wheel mounted thereon, a seat member mounted at one end on said supporting member, a seat thereon facing said supporting member, and revoluble means adapted to travel in a circular path about the vertical axis of said swivelling wheel operatively mounted to support the other end of said seat member.

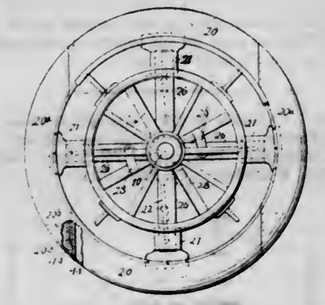
1,454,992. AUTOMATIC LUMBER TRIMMER. CHARLES W. WILLETTE, Seattle, Wash. Filed Nov. 30, 1921. Serial No. 518,871. 9 Claims. (Cl. 143—41.)

1. The combination with a lumber conveyer and an overhanging structure, of a horizontal, driven shaft supported from said structure, a saw frame pivotally mounted upon the said shaft, a saw mounted within the frame, means connected with the shaft for driving the saw, a lifting shoe pivotally fixed to the saw frame with an end portion thereof extended within the path of lumber advanced by the conveyer, a lever pivotally mounted on the saw frame having its lower end normally engaging a part of the shoe whereby upward movement of the latter effects like movement of the saw frame, a locking arm

pivotally fixed to the supporting structure with its lower end normally disengaged from the locking lever, and means for actuating the locking arm into engagement with the latter to thereby retain the saw frame against upward movement and to cause said lever to be moved pivotally sufficiently to cause it to disengage the shoe so as to permit free pivotal movement of the latter.

1,454,993. VISE. HENRY R. BOTHWELL, Cincinnati, Ohio, assignor to Samuel Newman, Cincinnati, Ohio. Filed July 1, 1921. Serial No. 481,872. 16 Claims. (Cl. 90—61.)

1. In a vise, a pair of jaws, one jaw being movable toward and away from the other jaw, guiding means for said jaws, a screw, a nut on said screw, and a member movably engaging said nut and said one jaw, for simultaneously forcing said one jaw toward the other jaw and toward said guiding means.



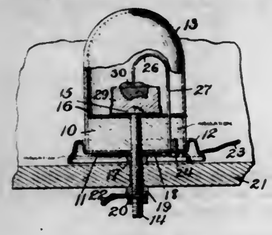
1,454,994. CIGAR CUTTER. LEWIS DE MATTEO, Newark, N. J., assignor to Durand & Company, Newark, N. J. Filed Apr. 4, 1921. Serial No. 458,206. 2 Claims. (Cl. 131—38.)

2. A device of the kind described comprising cheek pieces forming a body portion and spaced apart and having substantially circular ends and having aligned

openings, a cutter pivoted at its rear edge between the cheek pieces and having a thin central portion to form a blade to shear across one of said openings, a shield along the bottom and part way up the end of the cheek pieces, the cutter having a shoulder to engage one end of the shield when the cutter is shut, the cutter also having a recessed part opposite the other end of the shield, and a spring-pressed latch to engage the cutter.

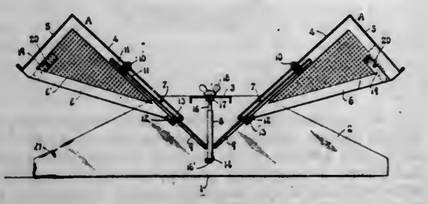
1,454,995. COLLAPSIBLE TIRE CORE. HAROLD A. DENMIRE, Akron, Ohio, assignor of one-half to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 23, 1920. Serial No. 375,989. 7 Claims. (Cl. 154—9.)

1. In a collapsible core, the combination of a shaft, a collar thereon having two diametrically opposed radial guide bars, two core sections, brackets fixed to said core sections and slidably supported on said guide bars respectively, a wheel which is rotatably mounted on said sleeve and has two crank pins, and links which respectively connect said crank pins and core section brackets.



6. In a collapsible tire core, the combination with a shaft, two pairs of core sections, each pair being radially movable in paths at right angles to the paths in which the other two core sections move, mechanisms for moving said two pairs of tire sections toward and away from the axis of the shaft, each core section comprising a sheet metal shell and solid end plugs secured in the ends thereof.

1,454,996. CUTTING AND WELDING TORCH. THOMAS A. EERETT, WILLIAM P. BROWN, and HUGH F. BROWN, San Francisco, Calif. Filed Oct. 21, 1921. Serial No. 509,295. 1 Claim. (Cl. 158—27.4.)

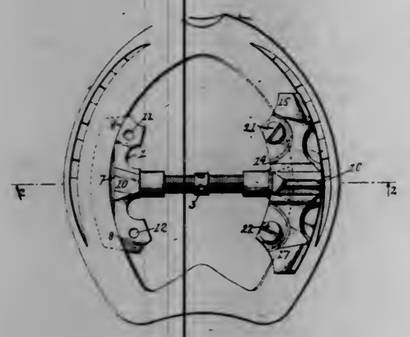


In a torch of the character described, a handle member having a casting at one end thereof provided with an outer end socket; said socket having shoulders formed interiorly thereof and terminating at its inner end in a pocket, and channels in said casting, through which gas may be directed, opening into the base of said pocket and into the socket between said shoulders, a torch member threaded into said socket having a bore in the end thereof and having channels leading from the base of said bore through which gas can be directed to the torch tip, and a plug having one end fitted within said bore and its opposite end extended into said socket and provided with shoulders engageable with said socket shoulders forming an annular chamber about the plug, and having a reduced end extending into said pocket; said reduced end having a transverse channel therethrough, and said plug having longitudinal channels therein opening into the channels of the torch member and at their opposite ends into the annular chamber about the plug and the transverse channel at the end thereof.

1,454,997. CRYSTAL DETECTOR. GAETANO GRECO and KARL G. WOLFF, Newark, N. J. Filed Apr. 18, 1922. Serial No. 554,555. 3 Claims. (Cl. 250—31.)

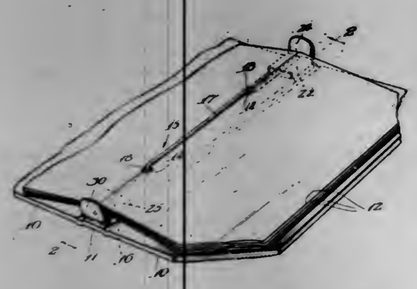
1. A crystal detector comprising a block of insulating material, a bottom plate on which the block rests, a screw secured to the block and passing through the bottom plate and a material distance therefrom to form a support, a nut on the screw, a washer of insulating material between the nut and the bottom plate, a block of metal on the insulating block and electrically connected to the screw, a crystal in the block of metal, and a wire having one end in electrical contact with the bottom plate, said wire extending through the block of insulating material and having its end bent over and in contact with the crystal.

1,454,998. ANIMAL TRAP. LOUIS HARGE, New Memphis, Ill. Filed Oct. 4, 1922. Serial No. 592,232. 11 Claims. (Cl. 43—61.)



1. An animal trap comprising a housing provided with a door, a rotary tripping member, a trippable member pivoted to said door and engaged with the periphery of said rotary tripping member to retain the door in its open position, said trippable member being movable on its pivot to pass from said tripping member, and a bait holder whereby said rotary tripping member is turned to release said trippable member.

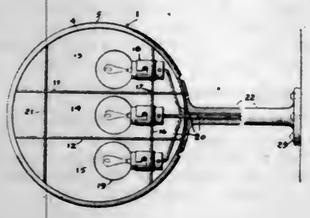
1,454,999. NONSLIP DEVICE FOR HORSES. MICHAEL HALLAHAN, New York, N. Y. Filed Feb. 11, 1921. Serial No. 444,207. 5 Claims. (Cl. 168—30.)



1. A non-slip device for horses, composed of a pair of opposed members each provided with means for engaging

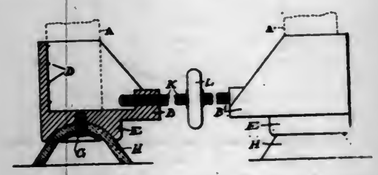
the inner side portions of a horseshoe, means for forcing the members into contact with a shoe, and calks on the

bearing face of each member, one of which is transverse of the member and the other two longitudinal thereof on either side of the first calk.



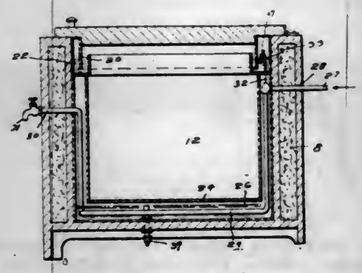
1,455,000. TEMPORARY OR LOOSE-LEAF BINDER. FREDERICK H. HARRIS, Chicago, Ill. Filed Oct. 27, 1920. Serial No. 419,926. 10 Claims. (Cl. 129—1.)

3. A temporary or loose leaf binder comprising a retaining member having an intermediate raised offset and plain ends adapted to be inserted through apertures in the sheets, a supporting member embracing sockets in which the ends of the retaining member normally lie, and locking means for normally holding the retainer member from endwise movement.



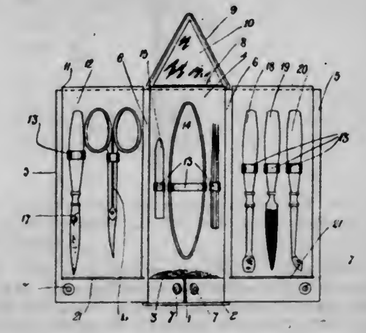
1,455,001. STOP AND TURN SIGNAL. YAKICHI HONDA, Fowler, Calif. Filed July 26, 1922. Serial No. 577,534. 4 Claims. (Cl. 177—329.)

2. A stop and turn signal comprising a circular casing, glass lenses comprising the side walls of the casing and having stop and turn designations appearing thereon, partitions dividing the interior of the casing into compartments opposite which copartments the said designations are arranged, said partitions engaging along their longitudinal edges the lenses, a member for supporting illuminating means extending at right-angles to and through said partitions and having its longitudinal edges spaced from the lenses, means of illumination supported by said member within the respective compartments and



a brace member extending at right angles to and through said partitions at ends thereof opposite to the member for supporting the illuminating means.

1,455,002. LADDER FOOT. ALBERT JOHNSON, Liverpool, England, assignor to Thomas Henshaw, Liverpool, England. Filed June 25, 1919. Serial No. 306,756. 3 Claims. (Cl. 228—61.)

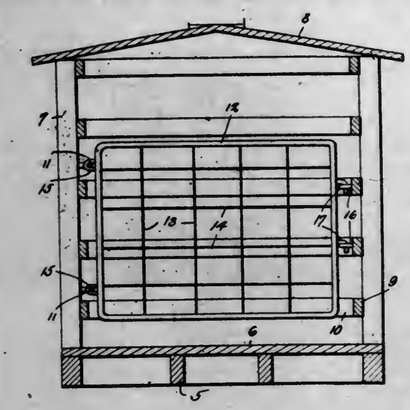


1. In a device of the character described, the combination of a pair of metallic members, each member having a socket formed therein for the reception of a ladder foot; a suction pad secured to the under face of each of said metallic members; and an adjustable connection between said metallic members for drawing the same together whereby the feet of a ladder may be securely held in place within said socketed members.

1,455,003. ICE BOX OR REFRIGERATOR. CLIFFORD S. JOHNSON, Mobile, Ala., assignor of one-half to Moreland M. Marsh, Mobile, Ala. Filed Sept. 18, 1922. Serial No. 589,021. 2 Claims. (Cl. 62—83.)

1. In an ice box construction an outer box and an inner box, the latter being divided into three compartments, the central one of which constitutes an ice compartment, the other of said compartments being chilled by the ice in said central compartment, a water receiving trough extending about the upper portions of all of said compartments and a cover for each of said compartments, each of said covers having a depending flange extending entirely therearound and entering the water in said trough when said covers are in closed position as and for the purposes stated, a service water supply pipe extending through the ice receiving compartment, a branch extending from the service water supply pipe into the said trough and a float valve controlling the flow of water from said branch into said trough for maintaining a uniform water level in the trough.

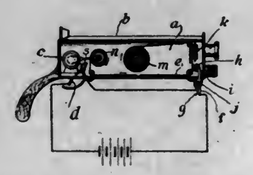
1,455,004. CASE FOR MANICURE INSTRUMENTS. SIEGFRIED HENRY KAUFMANN, London, England. Filed Oct. 22, 1921. Serial No. 509,692. 5 Claims. (Cl. 132—79.)



5. In a case for manicure instruments, a triangular base, a fixed back secured in an upright position at one side of the base, hinged sides connected to the back and adapted to turn about the hinged connection to the open position, loops for supporting the instruments upon the inner wall of the upright back and hinged sides and snap button fastenings on the lower edges of the sides to engage the base and a lid hinged along the top of the upright sides to turn down and engage over the upper edges of the hinged sides, a receptacle in the base for powder and puff and projecting flaps on the hinged sides to engage over and close the receptacle when the hinged sides are folded together.

1,455,005. PROCESS OF PRODUCING ANHYDROUS METALLIC CHLORIDE. BERT S. KIRKPATRICK, San Pablo, and FRANK S. MORGAN, Berkeley, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a Corporation of California. Filed Sept. 18, 1920. Serial No. 411,137. 4 Claims. (Cl. 23—13.)

1. The process of producing metallic chloride which consists in forming an alloy between the metal whose chloride is to be formed and a second metal having a chloride forming or vaporizing temperature higher than that of the first metal, which alloy has a melting temperature between the chloride forming and vaporizing temperature of the first metal and such other metal and below the melting point of said first metal, bringing the alloy to a molten state, contacting with chlorine, and collecting the resultant metallic chloride.

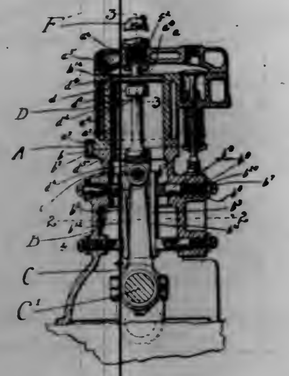


1,455,006. STOCK CAR. JAMES H. KOON, Onarga, Ill. Filed Jan. 8, 1921. Serial No. 435,898. 1 Claim. (Cl. 119—11.)

In a stock car, supporting rods secured to one wall of the car, gate members having loops formed at one end thereof and adapted to embrace portions of the supporting rods, hook members at the opposite end of the gate members, keepers secured to the opposite wall of the car,

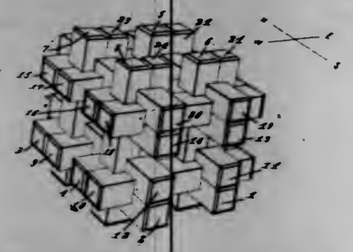
said keepers adapted to receive the hook members of the gates, to secure the gates in various positions of adjustment.

1,455,007. APPARATUS FOR PRACTICING SIGHTING AND DETERMINING PHOTOGRAPHICALLY THE DEVIATION ERRORS. OSKAR MESSTER, Berlin, Germany, assignor to N. V. Aerofoto, Amsterdam, Netherlands, a Firm. Filed May 29, 1919. Serial No. 300,766. 1 Claim. (88—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



An apparatus for practicing sighting and determining photographically the deviation errors comprising a cylindrical casing having end walls closing said casing and representing in contour a machine gun, a handle provided at one end wall of said casing, a photographic apparatus arranged within said casing and including a lens carried by the other end wall of the casing, a strip film feeding mechanism arranged within said casing, an electric motor for actuating said film feeding mechanism, an electric circuit in which is included said motor, a switch arranged within said casing and included in said electric circuit, a trigger arranged adjacent said handle and operatively connected to said switch, a circuit breaker carried by said casing and included in said electric circuit, said circuit breaker comprising a spring pressed lever, a roller carried by said lever and adapted to rest upon said film strip whereby the circuit breaker will be kept closed and sighting means arranged upon said casing parallel with the optical axis of said photographic apparatus whereby a series of pictures may be taken to ascertain whether the apparatus has been sighted correctly.

1,455,008. INTERNAL-COMBUSTION ENGINE. JOHN T. RAUEN, Dayton, Ohio. Filed July 12, 1920. Serial No. 395,803. 5 Claims. (Cl. 74—84.)

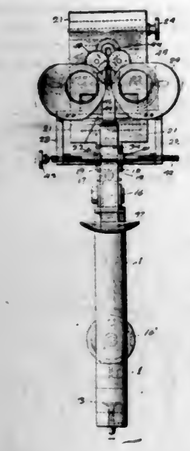


1. In a combustion engine having a base chamber casing the combination with a cylinder, of a piston rod ex

tending thru the cylinder top, a head bearing for one end of the piston rod and mounted on the cylinder top, a piston mounted on the rod and within the cylinder,

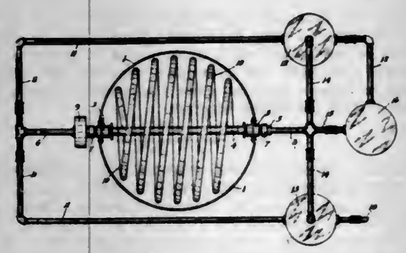
a guide block upon the piston rod, guide plates for the guide block, and means to take up wear of the block and of the guide plates.

1,455,009. PUZZLE BLOCK. WILLIAM H. SCHENK, Gladstone, Nebr. Filed Aug. 5, 1922. Serial No. 579,887. 1 Claim. (Cl. 46—41.)



A puzzle of the class described comprising twenty bars, certain of which are arranged in two sets, the sets being disposed in parallel planes, each set including two spaced groups, and each group embodying a pair of bars disposed edge to edge, others of the bars being arranged in two other sets, said other sets being disposed in parallel planes at right angles to the planes in which the first specified sets are located, each of said other sets including two spaced groups, and each group embodying a pair of bars disposed edge to edge, the bars of the groups of each set being notched to receive the bars of a group of the other set in interlocking relation, and to form passages; four others of the bars being disposed at right angles to the bars of the sets and being notched for interlocking engagement therewith, no two of the bars being notched alike; and four plain keys being inserted into the passages, parallel to said four bars, and in edge to edge relation therewith.

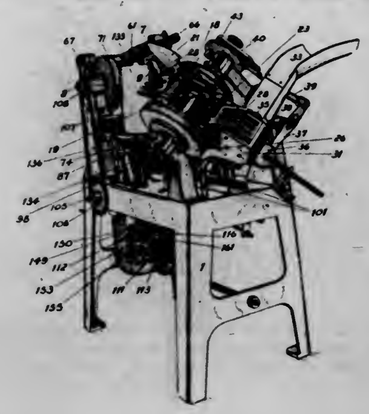
1,455,010. METHOD OF DRILLING WELLS. JOHN C. SWAN, Marietta, Ohio. Filed Oct. 29, 1919. Serial No. 334,126. 6 Claims. (Cl. 255—1.)



1. The method of drilling cased wells which consists in carrying out the drilling operations with an anti-corrosive liquid more viscid than water, and having a higher specific gravity than water.

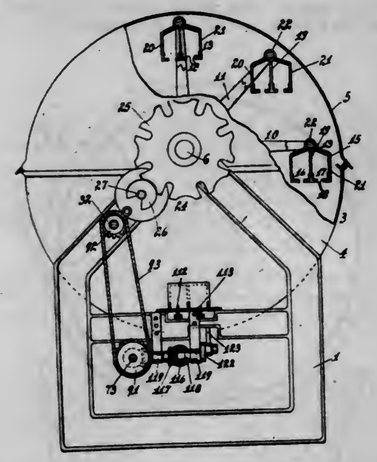
1,455,011. OPTICAL INSTRUMENT. JOHN T. THOMPSON, San Francisco, Calif. Filed July 19, 1920. Serial No. 397,277. 5 Claims. (Cl. 88—20.)

1. An optical instrument comprising a pair of lens cells; means for adjustably supporting said cells; and means engaging said cells whereby the same may be rotated simultaneously either in the same or opposite directions.



1,455,012. CREAM RIPENER AND PASTEURIZER. CARL J. WESTERGAARD, Minneapolis, Minn. Filed June 30, 1921. Serial No. 481,689. 1 Claim. (Cl. 257—79.)

A cream ripener and pasteurizer having in combination a base having a circular top, a single vertical cylindrical vessel secured to said base and of substantially the same diameter as the top thereof, bearings at opposite sides of said vessel extending through the walls of the same, a pipe rotatably mounted in said bearings and a coil secured to said pipe and communicating therewith at its ends, the longitudinal axis of the coil thus being normal to the axis of said vessel, said coil having its convolutions of different diameter conforming to the curvature of said vessel.



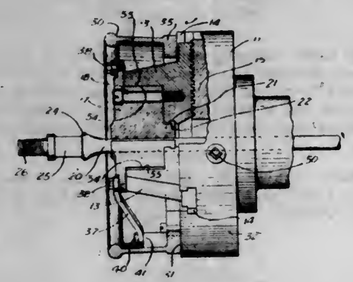
1,455,013. CANNING MACHINE. JOHN F. ANDERSON, Oakland, Calif. Filed Sept. 18, 1917. Serial No. 191,922. 18 Claims. (Cl. 226—96.)

1. An improvement in canning machines of the character described comprising a feed trough, a cutter operating transversely of said trough, a filling chamber, independently movable primary feed members to advance

the material cut, and means cooperating with said feed members to transfer material from said trough to said filling chamber.

1,455,014. CAN EXHAUSTER. JOHN F. ANDERSON, Oakland, Calif. Filed Mar. 22, 1922. Serial No. 545,779. 12 Claims. (Cl. 126—272.)

1. In a can exhauster, a heated drum, a reel mounted in said drum, said reel including a plurality of pivotally suspended longitudinal shelves, means for intermittently rotating said reel, a feeding mechanism for feeding the cans into the forward end of the lowermost shelves while said shelves are at rest in said position, said feeding mechanism including a delivery conveyor, notched wheels extending into one side of the delivery end of said conveyor for engaging the cans and delivering them from the delivery end of said conveyor, star wheels adjacent the delivery end of said conveyor for receiving the cans delivered therefrom, a pair of guideways extendings from said star wheels to a point corresponding to the lowermost position of the reel shelves into one of which guideways said star wheels deliver alternate cans, and a pusher rod for delivering the other alternate cans from said star wheels into the other guideway; means for advancing the cans through said guideways onto said reel shelves and rearwardly through said shelves, and a discharge mechanism at the rear end of the reel to receive the cans advanced through the reel shelves.



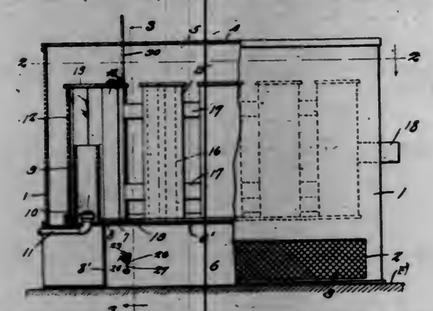
1,455,015. SOAP. FREDERICK C. ATKINSON, Indianapolis, Ind., assignor to American Hominy Company, Indianapolis, Ind., a Corporation of New Jersey. Filed Apr. 5, 1919. Serial No. 287,856. 2 Claims. (Cl. 87—5.)

1. A toilet soap consisting of toilet soap stock combined in an intimate mixture with corn meal and finely ground corn-cob cellulose, substantially as set forth.

1,455,016. PROCESS OF PRESERVING COTTON SEED. FREDERICK C. ATKINSON, Indianapolis, Ind. Filed May 3, 1919. Serial No. 294,609. 3 Claims. (Cl. 99—5.)

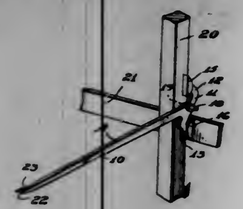
3. The process of treating cotton seed for the purpose of preserving the same against deterioration due to fermentation which consists in mixing from five to ten per cent of dry, pulverized, cereal product with the seeds and allowing the seed to remain in contact with said pulverized product for a considerable period of time.

1,455,017. SWING-JAW CHUCK. CHARLES F. AXELSON, Los Angeles, Calif., assignor to Axelson Machine Co., a Corporation of California. Filed May 31, 1922. Serial No. 564,995. 4 Claims. (Cl. 279—114.)



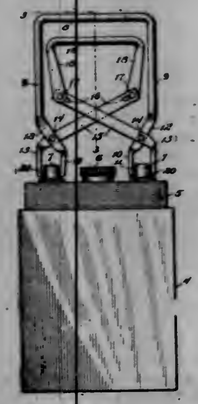
1. In a device of the class described, the combination of: a plurality of radially disposed jaw blocks; means for imparting radial movement to said blocks; jaw members pivoted on said blocks; a ring member mounted exteriorly of said jaw members, said ring member being provided with means for manually gripping same; and links operatively disposed between said ring and said jaw members whereby said jaw members may be swung between their active and inactive positions.

1,455,018. FURNACE. BENJAMIN F. CALDWELL, Pomona, Calif. Filed Aug. 9, 1921. Serial No. 490,990. 2 Claims. (Cl. 126—116.)



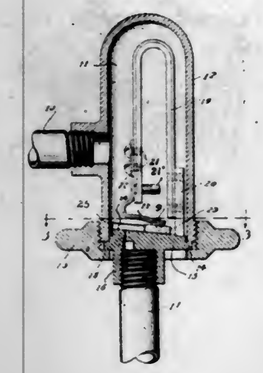
1. A furnace including a casing having an air inlet and an air outlet adjacent the bottom and top thereof respectively, a housing within and spaced from the walls of the casing, a combustion tube extending upwardly from the housing, a fresh air box projecting into the housing and opening into the combustion tube, a burner supported within the combustion tube, radiators mounted on the housing and within and spaced from the casing,

one of said radiators enclosing the combustion tube, air flues exteding through the radiators and communicating



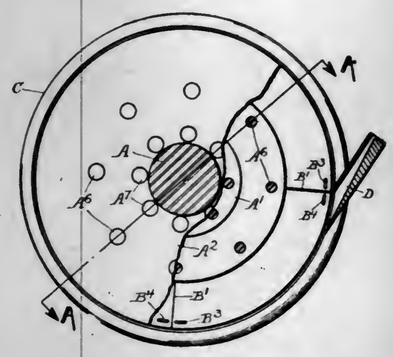
with the housing, and means for directing fresh air into the housing in controllable quantities.

1,455,019. BOARD-STRIPPING DEVICE. THOMAS CAMERON, Bennington, N. H. Filed June 12, 1922. Serial No. 567,870. 5 Claims. (Cl. 254—131.)



1. A board stripping device, comprising a shank, an obliquely disposed arm rigidly connected intermediate of its length to one end of the shank, means pivotally mounted at one end of the arm designed to engage a board, and means on the arm adapted to provide a fulcrum.

1,455,020. GRAPPLE. HARRY COLLINS, Sweetwater, Tex. Filed Feb. 3, 1922. Serial No. 533,910. 5 Claims. (Cl. 29—84.)

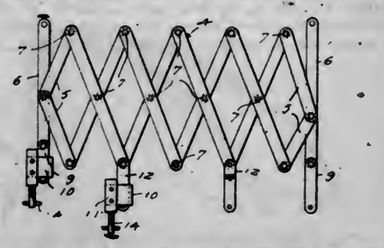


1. In a device of the class described, a pair of spaced fixed jaws, movable jaws for each of said fixed jaws, a movable hand grip, and toggle mechanism connecting the hand grip with said movable jaws.

1,455,021. AUTOMATIC STEAM TRAP. GEORGE W. COLLIN, Bridgeport, Conn. Filed July 30, 1921. Serial No. 488,544. 6 Claims. (Cl. 236—59.)

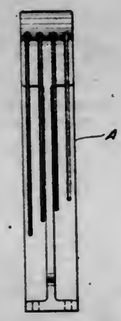
4. In a steam trap, a chamber, a thermo loop, one end of which is secured within the chamber, a thermo plate secured to the free end of the thermo loop, adjustment means for changing the relation of the loop and plate, and a slide valve carried by said thermo plate.

1,455,022. TURBINE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle National Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 2, 1921. Serial No. 458,069. 7 Claims. (Cl. 253—50.)



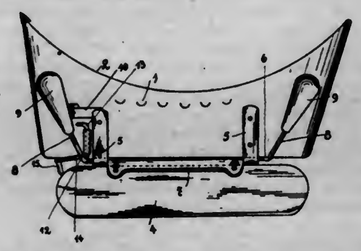
1. In a steam turbine rotor, a shaft, a plurality of annular plates mounted thereon, said plates being radially cut adjacent their periphery and bent between the cuts in planes inclined to the axis of rotation and to the plates themselves, to form a continuous substantially spiral steam passage, and spacing lugs on said plates adapted to hold the flat and the inclined portions in position.

1,455,023. LUGGAGE CARRIER. JOHN J. HANRAHAN, Niagara Falls, N. Y. Filed Sept. 23, 1921. Serial No. 502,651. 11 Claims. (Cl. 224—29.)



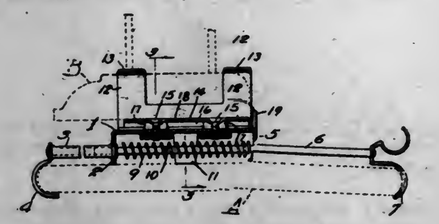
11. A luggage carrier comprising a longitudinally extensible body, supporting links pivoted to the lower end

of said body, said links having an offset portion, and clamps having eye pieces adapted to receive the links and



support said body, said offset portion limiting the movement of the links into said eyes.

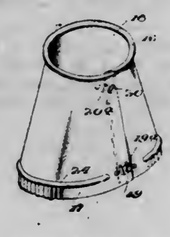
1,455,024. CHIME-ROD HOLDER FOR CLOCKS. WALTER J. HERSCHEDE and WALTER EBERHARDT, Cincinnati, Ohio. Filed Sept. 6, 1921. Serial No. 498,821. 5 Claims. (Cl. 116—169.)



4 A chime rod holder comprising a base, a vibrating oar mounted at one of its ends upon the base, a shoulder formed on the other end of the vibrating bar, a rib extending over the base and vibrating bar and merging into the shoulder, and a head adapted to seat chime rods mounted on the shoulder.

1,455,025. SELF-ACTING EYE PROTECTOR. KARL KERN JENNY and WILHELM BALZER-ALBER, Basel, Switzerland. Filed Dec. 14, 1921. Serial No. 522,430. 4 Claims. (Cl. 2—149.)

1. A self acting eye-protector, comprising in combination, a screen or box, suitably shaped to fit around the eyes, a transparent shutter hingedly connected to said screen or box and balancing means, adapted to permit said transparent shutter to be opened or closed by a slight shaking of the wearer's head and then to remain opened or closed until another shake of the head is made.



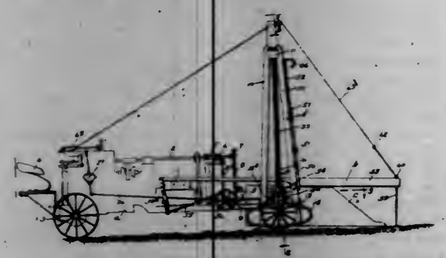
1,455,026. SAFETY SADIRON HOLDER. HANS L. JORGENSEN and ALEXANDER N. POULIN, Chicago, Ill. Filed June 29, 1916. Serial No. 106,622. 13 Claims. (Cl. 68—27.)

7. A flat iron holder comprising a rest for the iron, guard members positioned to engage the upper surface of the body of said iron to retain it upon the rest, said members being adjustable with respect to the rest for accommodating various sizes of irons, and securing means for attaching said holder to an ironing board.

13. A flat iron holder comprising a rest for the iron and means for supporting such rest on an ironing board and spaced therefrom, together with a hook rigidly associated with said rest and formed to engage one edge of the ironing board, a rod slidably mounted in the space between the rest and the board and provided at its outer end with a hook adapted to engage the opposite edge of the board, and a spring housed in the said space between the rest and the board and arranged to react upon said rod for yieldingly drawing the hooks toward each other.

1,455,027. STOVEPIPE-REDUCING JOINT. MARTIN LUDWIG, Albany, Oreg. Filed July 5, 1921. Serial No. 482,494. 1 Claim. (Cl. 285—203.)

As an article of manufacture, a stove pipe joint made of a single piece of sheet material arranged with its vertical edge portions in lapped relation and so fashioned as to provide a body having a greater area at its lower end than at its upper end, and having an outwardly extending flange at its upper end, said body having vertical corrugations extending from the lower end thereof so that the cross sectional area of the body is constant for the determined distance from the lower end thereof and decreases regularly toward the upper end of the body, means for fixedly securing the lapped portions together at the upper end of the body, and other means for securing the lapped portions together adjacent to their lower ends in various adjusted positions with respect to each other to vary the area of the body at the lower end thereof.



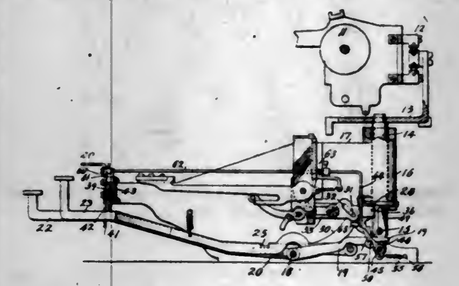
1,455,028. AIR-COOLED ENGINE CYLINDER AND METHOD OF MAKING SAME. ALVIN C. MCCORD, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 500,252. 11 Claims. (Cl. 29—156.4.)

1. An engine cylinder having its inner surface continuous and unbroken and constituting the wearing surface of the cylinder, a jacket fitting about the outside of said cylinder, heat radiating members on said jacket and

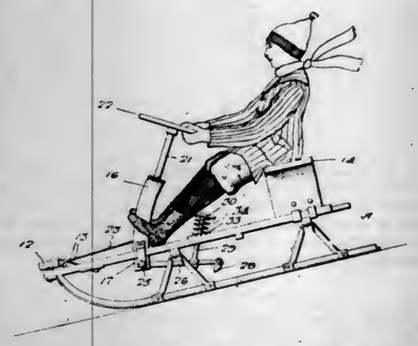
projecting outward therefrom, said jacket having parts extending into said cylinder wall and terminating short of the inner wearing surface thereof, and said jacket, members and parts being made of a metal of a greater heat conductivity than the metal of which the cylinder wall is made.

1,455,029. SHOCK LOADER. SWAN OLSON, Minneapolis, Minn. Filed Mar. 31, 1921. Serial No. 457,301. 12 Claims. (Cl. 214—113.)

1. A shock loading device comprising, a frame, a carrier, means for elevating and lowering said carrier in said frame, means for swinging said carrier about a horizontal transverse axis when elevated in said frame, and a rake member co-operating with said carrier, and independent means, respectively, for moving said rake to place the material on said carrier and for elevating said rake.



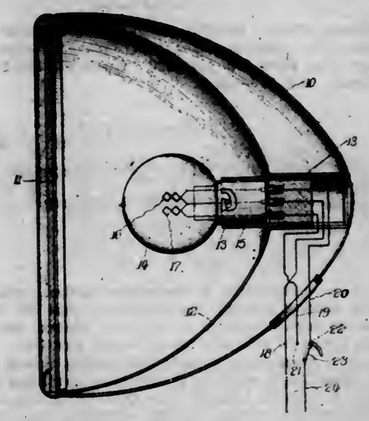
1,455,030. TYPEWRITER. LYMAN R. ROBERTS, Rutherford, N. J., assignor to L. R. Roberts Typewriter Company, Stamford, Conn., a Corporation of Delaware. Filed May 22, 1920. Serial No. 383,397. 10 Claims. (Cl. 197—79.)



1. In a typewriter, and in combination, a frame, a case-shift unit movable in the frame and including a cross bar, a lifting lever for engaging said cross bar to case-shift said unit, a locking member anchored to said frame and normally hooking over said cross bar to hold the case-shift unit from movement out of normal position, and an actuating element having an operable connection with said locking hook and operable upon operation of the lifting lever to cause the removal of said locking member from locking position.

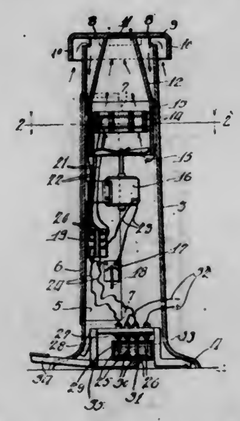
1,455,031. TYPEWRITER. LYMAN R. ROBERTS, Rutherford, N. J., assignor to L. R. Roberts Typewriter Company, Stamford, Conn., a Corporation of Delaware. Filed Aug. 3, 1920. Serial No. 400,891. 9 Claims. (Cl. 197—79.)

1. In a typewriter, and in combination, a frame, a case-shift unit movable in the frame, a lifting lever for case-shifting said unit, a rock shaft journaled in the frame, a combined locking member mounted on said rock shaft and having an arm for hooking over a portion of said unit to prevent movement thereof out of normal position and a second arm normally out of operative position, for taking under a portion of said unit when in shifted position to hold the same in such position; a rocker arm on said rock shaft, and a pin on said lifting lever for engaging said rocker arm to rock said shaft, thereby to remove said first named arm out of locking position and to insert said second arm into operative position.



1,455,032. SLED. ANTONI SKUPIEŃ, Port Henry, N. Y. Filed Oct. 18, 1921. Serial No. 508,462. 2 Claims. (Cl. 280—22.)

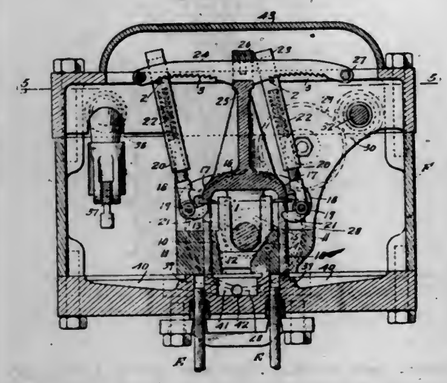
1. The combination with the frame and steering rod of a sled, of a forwardly projecting reduced extension on the frame, strips pivotally connecting said extension and steering rod, a yoke shaped member vertically mounted on the frame provided with a central opening at the top and having its ends parallel on either side of the frame, a bar provided with an opening in alinement with that of the yoke and having its ends in parallel alinement with those of the yoke connected with said yoke, a steering post journaled through the openings in said yoke and bar, and flexible elements connecting the steering rod with the steering post and adapted to be alternately wound about and unwound therefrom upon turning of the steering post.



1,455,033. MULTIPLE-FILAMENT ELECTRIC-LAMP HEADLIGHT. HARVEY H. SLATER, Kenosha, Wis. Filed July 15, 1921. Serial No. 484,853. 1 Claim. (Cl. 240—41.)

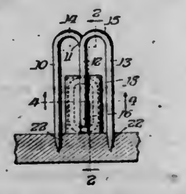
In a head-light construction of the character described, the combination of a reflector, a multiple-filament electric-lamp bulb, and a single plug and associated socket to hold said bulb in said reflector, said bulb having two substantially-parallel closely-adjacent concentrated filaments directly opposite one another on opposite sides of the axis of the reflector at the focus thereof and

equally distant from such focus, said filaments being adapted to be rendered independently or simultaneously luminous and each having reflective action over the entire surface of the reflector.



1,455,034. ELECTRICAL DRYING APPARATUS. JAMES W. SMALL, Chicago, Ill. Filed July 3, 1922. Serial No. 572,690. 14 Claims. (Cl. 34—26.)

1. Electrical drying apparatus comprising a casing having a plurality of openings in its top; an electrical heating element in the casing; and a partition in the casing separating said openings and adapted to direct air from certain of the openings to the heating element and from the latter to the other openings.

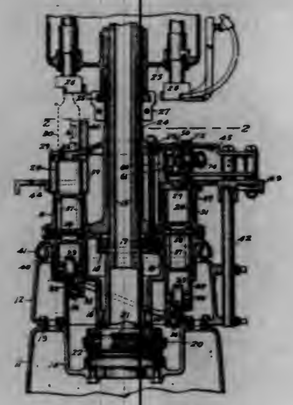


1,455,035. PUMP. BRUCE C. WHITE, New York, N. Y., assignor to R. Hoe & Co., New York, N. Y., a Corporation of New York. Original application filed July 7, 1915, Serial No. 38,528. Divided and this application filed June 1, 1918. Serial No. 237,702. 3 Claims. (Cl. 103—168.)

1. A multiple pump consisting of a frame carrying a series of pump chambers and plungers, said pump chambers opening for suction and discharge in the line of movement of the plungers, suction and discharge chambers, a second frame movable transversely to the line of movement of the pump chambers, carried by the first mentioned frame and movable therein parallel with the line

of movement of the plungers, means mounted in said second frame for operating the plungers, and a shaft extending through the frames and carrying eccentric mechanism for moving said frames to shift the pump chambers for suction and discharge and operate the pump plungers.

1,455,036. INSERT FOR HANGERS. WILLIAM E. WHITE, Chicago, Ill. Filed Apr. 27, 1921. Serial No. 464,879. 2 Claims. (Cl. 72—105.)

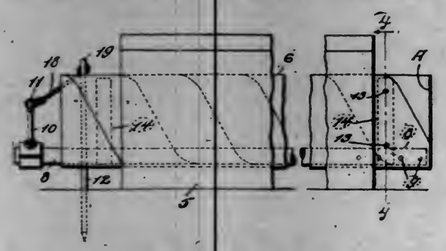


1. In an insert, the combination of a length of wire having sharpened ends and bent to provide loops composed of four parallel sections of wire, including two upper bends and one lower bend, the upper bends serving as anchoring devices, a ring supported on said lower bend, and a housing having an open bottom held between the two middle sections of wire and shaped to receive and permit bodily vertical movement of said ring, said housing being positioned to act as a stop when the pointed ends are driven into a form.

1,455,037. PACKAGING APPARATUS. CLEMENTS G. BELDEN, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, a Corporation of Maryland. Filed Apr. 5, 1919. Serial No. 287,710. 12 Claims. (Cl. 198—22.)

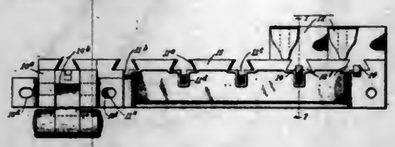
1. In packaging apparatus, the combination with rotary mechanism having associated therewith a plurality of spaced bottle-receiving pockets for positioning the bottles during the packaging operation, of means for advancing bottles, indiscriminately spaced, toward packag-

ing position, a stop device for stopping bottles successively before they reach a position to be taken by the



pockets, and means moving with and in synchronism with said pockets for rolling the stopped bottles past said stop device.

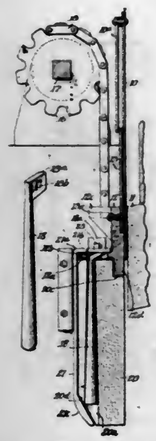
1,455,038. INNER TUBE. HOWARD F. BLEDSOE, Ellensburg, Wash. Filed Jan. 10, 1922. Serial No. 529,755. 1 Claim. (Cl. 152—13.)



An inner tube of the character described comprising an inner wall of rubber, a cord wound spirally around same, a rigid strip between the cord winding and the inner wall to fix the inner diameter of the tube and determine the outer periphery and an outer covering of fabric.

1,455,039. METHOD OF MOLDING PLASTIC STRUCTURES AND APPARATUS FOR USE IN SAME. GEORGE A. BONELLI, Kingman, Ariz. Filed Sept. 12, 1921. Serial No. 500,091. 3 Claims. (Cl. 25—128.)

3. In an apparatus for molding plastic structures, in combination with an outer form and spaced therefrom by a coiled annular spacing member, a spirally wound inner core whose normal diameter is smaller or larger than that of the cavity to be molded; means for expanding or contracting said core for use as a mold; means for holding said core in that expanded or contracted position; and means for relaxing said core for purposes of withdrawal from the set plastic structure.

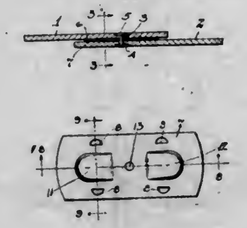


1,455,040. CHAIN GRATE. EUGENE L. BROWN, Jr., Chicago, Ill., assignor to R. E. Spencer Geare, Chicago, Ill. Filed Jan. 10, 1920. Serial No. 350,583. 9 Claims. (Cl. 110—40.)

1. In a chain grate, a supporting member, said supporting member having a tapered seat, a grate bar having a tapered portion engageable with said tapered seat, and spring means to lock said bar in seated position.

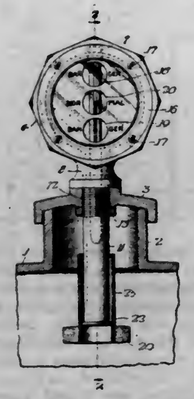
8. In a chain grate, a chain link having spaced apart lugs, the adjacent surfaces of said lugs converging downwardly to provide a tapered space therebetween, a supporting member having a tapered extremity fitting in the space between said lugs, transverse apertures extending through said member and lugs, and fastening means extending through the latter.

1,455,041. FEED GATE FOR AUTOMATIC STOKERS. EUGENE L. BROWN, Jr., Chicago, Ill., assignor to R. E. Spencer Geare, Chicago, Ill. Filed June 21, 1920. Serial No. 390,437. 16 Claims. (Cl. 110—173.)



1. A feed gate for furnaces comprising a carrier, a plurality of refractory members, and an individual hanger for each of said members detachably suspended from said carrier.

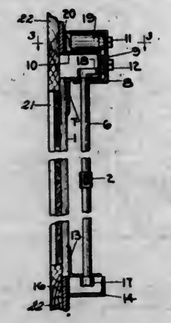
1,455,042. JOINT FOR FOLDING RULES. FRED BUCK, Saginaw, Mich., assignor to The Lufkin Rule Company, Saginaw, Mich., a Corporation of Michigan. Filed Nov. 15, 1919. Serial No. 338,257. 1 Claim. (Cl. 33—120.)



In a device of the character described, the combination of two overlapping rule sections, plates of lesser width than said sections mounted between the adjacent faces thereof at the respective ends of said sections, a pair of

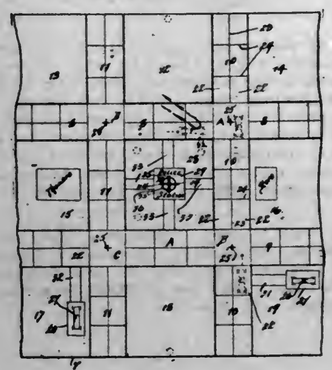
lugs pressed outwardly at right angles to the plane of each plate at points spaced from the side edges centrally of each half thereof, a stud holding each of said plates in engagement with its respective rule section, and serving as a pivot for said rule sections, one of said plates being provided on each side of said pivot with an upwardly pressed resilient projection lying at an acute

angle to the plane of said plate and having a beveled outer edge of semi-circular shape formed integrally with said plate, and the other of said plates having a pair of openings of a shape corresponding with said projections, and similarly spaced, to receive said projections when said rule sections are in open or closed position.



1,455,043. AUTOMOBILE RADIATOR THERMOMETER. ARTHUR CAMERON, Chicago, Ill. Filed Sept. 30, 1918. Serial No. 256,333. 5 Claims. (Cl. 73—52.)

1. In a thermometer construction for the radiators of automobiles, the combination of a tube depending therein above the water, means to support the tube, a float member forming an extension of the lower end of said tube, said member and the tube being telescoped together, so that the lower end of the float member will always rest on the surface of the water, and a thermometer disposed in operative relation to the upper end of said tube, so that heat rising in the tube from the water will operate said thermometer.

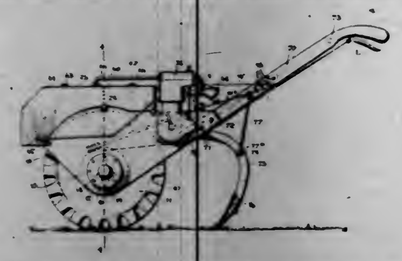


1,455,044. CAR-DOOR HANGER. THEODORE R. CHANDLER, Davenport, Iowa. Filed Dec. 1, 1922. Serial No. 604,134. 11 Claims. (Cl. 20—23.)

10. The combination with a wall, of a door set into the side thereof, a track, a hanger rigidly fastened to said door and adapted to move laterally and longitudinally on said track, means manually operable to move the door and hanger laterally into closed position

and resilient means adapted to yieldingly hold said door laterally out of closed position and permit longitudinal movement thereof along said track.

1,455,045. GAME APPARATUS. HARRY L. CONDÉ, Syracuse, N. Y. Filed Mar. 25, 1922. Serial No. 546,583. 4 Claims. (Cl. 46—63.)



1. In a game, a chart containing representations of the streets of a town or city, the streets being divided into spaces, game pieces movable over the face of the chart arranged to follow the street indications, a post carried by the chart, a rotatable member carried by the post having marked thereupon the traffic signals Stop and Go, whereby the game pieces may be signaled to advance from square to square.

1,455,046. TRACTOR CULTIVATOR. CHARLES EDWIN DOWNIE and GEORGE D. GRAVELY, Pomeroy, Ohio. Filed July 17, 1922. Serial No. 575,437. 7 Claims. (Cl. 180—19.)

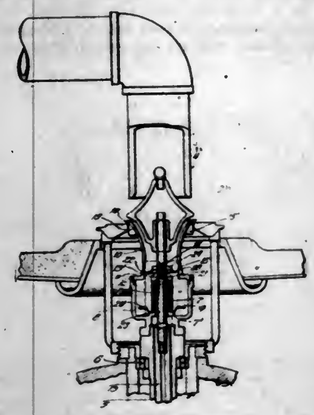
1. In a tractor cultivator of the character described, a traction wheel, a rotatable axle keyed to said traction wheel, a frame comprising metallic side plates and spacing means therefor, bearings secured to said side plates and receiving one end of said axle, a power plant supported upon said side plates and including a pair of cylinders, the cylinders being symmetrically arranged with respect to the longitudinal axis of the cultivator and one such cylinder being secured to each of said side plates, said cylinders having a common crank shaft including a portion extending between the side plates, worm gearing for driving the axle from said crank shaft

including a worm fixed to a portion of the power plant between the side plates, a transmission shaft actuated from said worm, a worm wheel loosely mounted on the

axle and driven from said transmission shaft, and clutch mechanism for connecting the loose worm wheel to the axle.

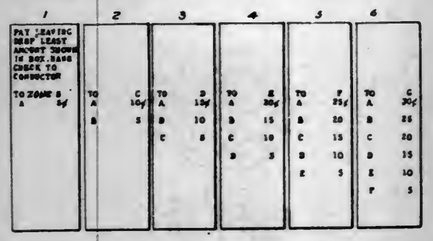
1,455,047. HYPODERMIC SYRINGE. LUELLA L. GOOLD, Arlington, Mass. Filed Oct. 29, 1919. Serial No. 334,182. 3 Claims. (Cl. 128—216.)

1. A hypodermic syringe comprising a container having a compressible body portion and a rigid end portion provided with a rigid annular seat, and with a compressible annular clamping flange forming, with the seat, an annular groove, a flexible and rupturable diaphragm, the margin of which is inserted in said groove and clamped therein by the compression of said flange to form a liquid-tight joint, and a hypodermic needle having a liquid-tight connection with the rigid end portion.



1,455,048. LOOM. FREDERICK C. HALL and JAMES TOWNSON, Pawtucket, R. I., assignors to Jenckes Spinning Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Dec. 21, 1920. Serial No. 432,255. 11 Claims. (Cl. 139—59.)

9. In a loom for weaving cord tire fabric consisting of comparatively heavy warp threads or cords bound together by fine and widely spaced filling threads, the combination with the harness and lay of feeding in mechanism to which all the warp threads lead from the warp thread supply and from which they lead to the harness, mechanism for actuating the feeding in mechanism to feed in an unvarying length of each warp thread during each cycle of the loom, and means for maintaining a substantially uniform tension on each warp thread delivered to the feeding in mechanism.

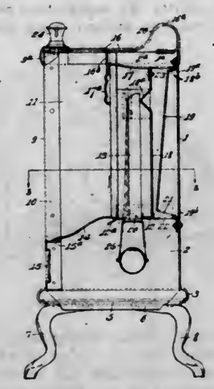


1,455,049. OIL BURNER. FRANKLIN HARDINGE, Chicago, Ill., assignor to Hardinge Brothers, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 16, 1921. Serial No. 470,211. 15 Claims. (Cl. 158—77.)

5. An oil burner comprising a rotary hollow shaft, a cup mounted on the upper end of said shaft, said cup having inner and outer cylindrical walls spaced apart to provide an oil receptacle, an outwardly flaring atomizing nozzle mounted on the upper end of said cup, a stand-pipe projecting through said hollow shaft and the

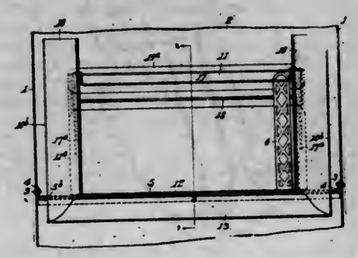
inner cylindrical wall of said cup, and the upper end of said stand-pipe being provided with a plurality of longitudinally elongated slots.

1,455,050. RAILWAY FARE TICKET. CLARENCE W. HEATH, Sand Springs, Okla. Filed June 15, 1922. Serial No. 568,641. 4 Claims. (Cl. 283—30.)



1. A fare-ticket system for railways comprised of a set of tickets for each destination locality having the proper destination locality printed on the upper portion thereof, and below said destination the names of the departure localities preceding the particular destination in the direction of travel, the indicia of said departure localities being arranged in a vertical column in the order of their occurrence in the direction of travel and the proper amount of fare between each of said departure localities and the said destination being printed horizontally opposite each departure locality whereby, when the ticket is issued the proper destination appears at the top, and by tearing off the lower part of the ticket immediately below the indicia of the departure locality where the passenger embarked, the last line on the ticket will show the departure locality and the fare to be paid.

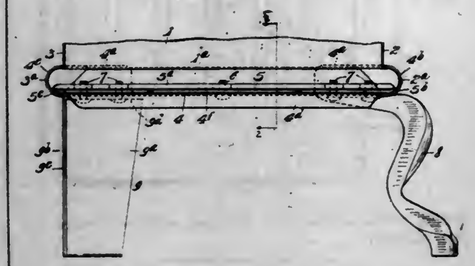
1,455,051. RADIANT GAS HEATER. WILLIAM W. HOLLOWAY, Wheeling, W. Va., and HENRY KIELBERG, Martins Ferry, Ohio, assignors to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 26, 1922. Serial No. 577,722. 9 Claims. (Cl. 126—92.)



1. In a radiant gas heater, a sheet metal casing consisting of a rear wall and side walls, said side walls having their front edge portions turned inwardly, a horizontal radiant support located within said casing, said support having burner apertures adapted to be em-

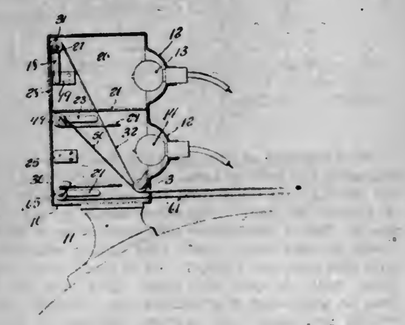
braced by radiants seated thereon, a fender extending forward from said support, a back wall seated upon said support rearward of said apertures, and upright shield

plates overlying said support and said fender, said plates being interposed between the inturned edge portions of the side walls and said back wall.



1,455,052. RADIANT SUPPORT AND HOLDER FOR GAS HEATERS. WILLIAM W. HOLLOWAY, Wheeling, W. Va., and HENRY KIELBERG, Martins Ferry, Ohio, assignors to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 26, 1922. Serial No. 577,725. 5 Claims. (Cl. 126—92.)

1. In a radiant heater, the combination with a heater casing, of a horizontal member mounted within said casing and forming a seat for a plurality of alined tubular radiants, said member having apertures therein adapted to be embraced by such radiants, a metal back-wall located rearward of said apertures and having a part in engagement with the backs of such radiants, laterally disposed shields, and a retaining member carried by said shields, said retaining member being shiftable into and out of operative relation to the upper ends of such radiants.

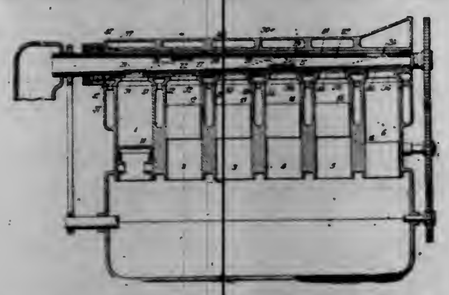


1,455,053. SUBSTRUCTURE FOR STOVES. WILLIAM W. HOLLOWAY, Wheeling, W. Va., and HENRY KIELBERG, Martins Ferry, Ohio, assignors to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 26, 1922. Serial No. 577,726. 5 Claims. (Cl. 126—305.)

1. The combination with a sheet-metal stove casing having outwardly pressed terminal rolls of approximately semi-cylindrical shape formed on the lower ends of its front, side and rear walls, of upper and lower panel-members adapted to be disposed in clamping relation to the terminal edges of said rolls, the lower of said members being shaped to embrace a side-wall roll and the

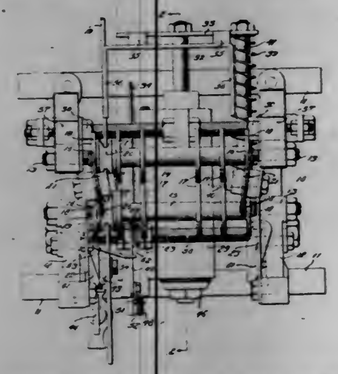
adjacent ends of the rolls of the front and rear walls, and the upper member being adapted for having its outer lateral edge seat interiorly of said side-wall roll, and means for attaching said plates together said members being adapted for having stove supporting legs attached thereto.

1,455,054. AUTOMOBILE SIGNAL. MATHEW G. IVANDICK, North Chicago, Ill. Filed Apr. 18, 1922. Serial No. 554,775. 1 Claim. (Cl. 177—327.)



The combination of a housing, a partition dividing said housing into two compartments, a stop plate pivoted in one of said compartments, left and right plates pivoted in the other of said compartments, an electric lamp in each of said compartments, means for moving the stop plate to visible position and illuminating one of said lamps to make said stop plate visible, and means for moving either of the left and right plates to visible position, and simultaneously moving said stop plate to visible position and illuminating both of said electric lamps.

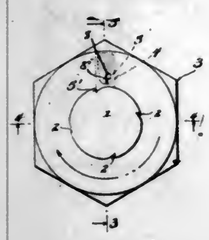
1,455,055. VALVE FOR EXPLOSIVE ENGINES. KENT E. KELLER, Ava, Ill. Filed Oct. 31, 1917. Serial No. 199,481. 8 Claims. (Cl. 123—59.)



1. In an explosive engine, a series of cylinders, pistons therein, an inlet port for each cylinder, an exhaust port

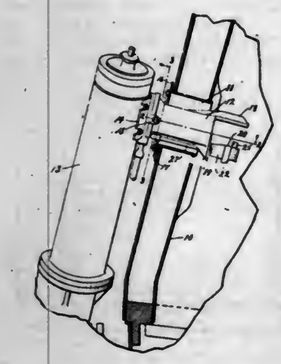
for each cylinder, and means to control the opening from said exhaust ports comprising a conical exhaust valve

having ports of the same angular width and area for each cylinder.



1,455,056. VIAL-BOTTOMING MACHINE. ROBERT KOENIG, Haddon Heights, N. J. Filed Oct. 4, 1921. Serial No. 505,424. 14 Claims. (Cl. 49—7.)

13. Apparatus of the character described including a magazine for holding tubes to be operated upon; means for moving said tubes from the magazine; rolls forming a support for said tubes when moved by said moving means; means for heating said tubes between their ends while on said rolls; other rolls of less diameter than said first rolls and normally out of engagement with said tubes while on said first rolls; other rolls adapted to bear on said tubes at a position approximately over said second mentioned rolls whereby portions of the tubes will be moved into engagement with said second mentioned rolls when the tubes become softened by said heating means, said third mentioned rolls being disposed at an angle to apply tension to said heated tubes in opposite directions whereby the tubes will be separated and moved off of said first and second mentioned rolls and allow said third mentioned rolls to move downward; means for effecting actuation of said tube moving means; and means movable by said third mentioned rolls during their downward movement to render said latter actuating means operative substantially as described.

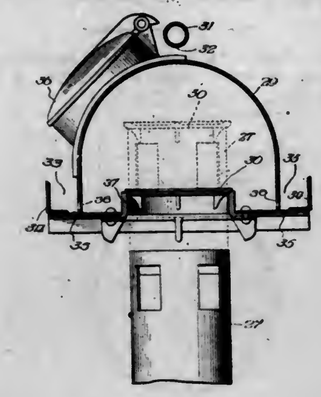


1,455,057. AUTOMATIC LOCK NUT. BERT LINDSAY, Antigo, Wis., assignor of one-fourth to Leon Lindsay, one-fourth to Frank Lindsay, and one-fourth to William Lindsay, all of Antigo, Wis. Filed May 5, 1921. Serial No. 466,931. 1 Claim. (Cl. 151—10.)

In a threaded bolt having a series of longitudinal ratchet tooth grooves interrupting its threads; the combination of a key having a cylindrical portion and a wing portion; a nut having an aperture of key hole shape and a radial cavity extending from its bore and open only at the bore, a spring controlled tooth plunger mounted in the cavity for engagement with the ratchet tooth bolt grooves, the plunger being provided with a

recess for receiving said key having walls radiating from the key aperture of the nut, one of which is adapted to be engaged by the wing of said key, whereby the plunger is lifted in opposition to its spring and held in such lifting position by the mere rotation of the shaft of the key.

1,455,058. LOCOMOTIVE STOKER. NATHAN M. LOWEB, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Aug. 8, 1918. Serial No. 248,949. 9 Claims. (Cl. 110—104.)

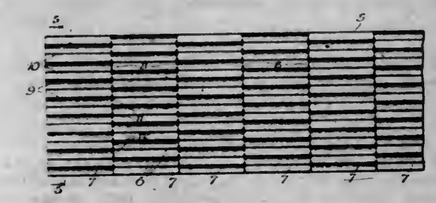


7. In a mechanical stoker, in combination, a plate over which fuel may be impelled and having a laterally opening channel, adjacent its delivery end and an abutment at the forward margin of the channel, such abutment being approximately normal to the path of the impelled fuel and projecting above the level of the plate.

8. A fuel distributor comprising, in combination, a substantially horizontal tube, a blast nozzle discharging through the tube, an abutment crossing the lower portion of the discharge end of the tube and projecting above the inner surface thereof, the tube being provided with laterally opening pockets immediately back of the abutment.

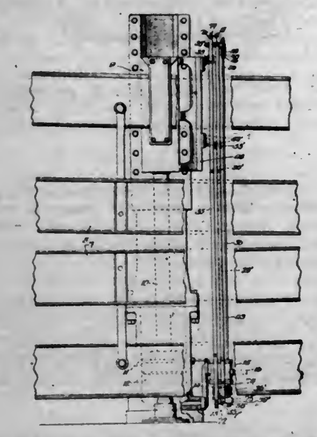
1,455,059. COOLING MEANS FOR EXHAUST MAINS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1919. Serial No. 330,962. 7 Claims. (Cl. 261—10.)

1. In a coking plant, in combination: an exhaust main provided with water inlets along its opposite sides; gutters respectively located on opposite sides of and substantially co-extensive with said exhaust main and discharging water through said inlets into the interior of the main; and a water pipe positioned above and sub-



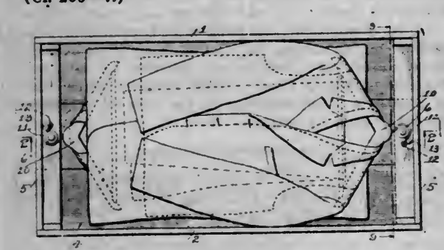
stantially co-extensive with said main, and provided with a series of discharging holes for permitting cooling water to flow over the opposite sides of the aforesaid main into said gutters; substantially as specified.

1,455,060. PROCESS OF RECOVERING IRON OXIDE AND OTHER PRODUCTS FROM SPENT IRON SLUDGE. CHARLES V. BACON, Mahwah, N. J. Filed Oct. 5, 1922. Serial No. 592,608. 3 Claims. (Cl. 134—59.)



1. The process which consists in subjecting iron sludge comprising essentially highly impure iron oxide and while in a pasty condition to the action of a quantity of sulphuric acid sufficient to at least correspond to a substantially combining weight as compared with the amount of iron oxids treated, heating the mass to a sufficient temperature and for a sufficient time to concentrate the acid and convert the mass into a porous spongy condition then elevating the temperature and roasting the resultant mass to effect the decomposition thereof into oxy-sulphur acid gases and iron oxide and separately recovering such iron oxide.

1,455,061. METHOD OF FORMING FOLDED STRIPS OF MATERIAL. ARTHUR M. BARRETT, Chicago, Ill. Filed Oct. 6, 1919. Serial No. 328,923. 2 Claims. (Cl. 154—33.)



1. The method of forming folded strips of material which consists in perforating in one direction a sheet of the material to be used, and simultaneously folding said sheet in a direction transverse to the perforation line, and subsequently tearing off folded strips on the perforation lines.

1,455,062. AUTOMATIC HYDRAULIC CONTROL VALVE FOR EXPANDING MACHINES. ALBERT J. BATES, Chicago, Ill., assignor to Bates Expanded Steel Truss Co., Wilmington, Del., a Corporation of Delaware. Filed May 13, 1918. Serial No. 234,259. 21 Claims. (Cl. 188—10.)

1. In an apparatus of the class described, the combination of the movable member of a metal expanding machine, fluid pressure actuated means for moving said movable member, valve-mechanism for the control of fluid pressure, and valve-mechanism actuating-means controlled by the movements of the movable member to cut off the supply of fluid pressure at a predetermined position of the movable member, said valve mechanism including a quick acting valve for immediately cutting off the supply of pressure.

1,455,063. PACKING AND SHIPPING CASE FOR GARMENTS. JOHN THOMAS BATTS, Grand Rapids, Mich. Filed Mar. 13, 1922. Serial No. 543,260. 5 Claims. (Cl. 206—7.)

1. In a garment packing and shipping case; a plurality of garment hangers, having sustaining hooks adapted to be hooked around the supporting post hereinafter named and provided with end portions extending outwardly from said supporting post; a supporting post inside the case for the hangers; a hook-retaining member parallelly disposed relatively to the supporting post and fixed in such position as to engage said portions of the hooks to hold the hooks against unhooking movement from the supporting post.

1,455,064. VEHICLE SIGNALING DEVICE. WILLIAM JOHN BROLEY, Arverne, N. Y. Filed Apr. 1, 1921. Serial No. 457,590. 4 Claims. (Cl. 116—43.)

1. In a traffic signaling device, a rectilinear casing, means for interiorly lighting the same, and a removable

plate having an opaque ground, a transparent window and transparent identification media, and a translucent ribbon-film back of said window, said ribbon-film having stenciled signaling indica, and a spring-actuated

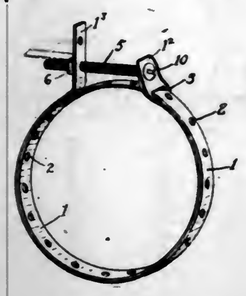
roller upon which said ribbon-film is normally wound and means for unwinding said ribbon-film whereby selective parts thereof may be displayed through said window.

1,455,065. TUBE-PAINTING MACHINE. PHILIP BELLOWS, Boston, Mass., assignor to Dampney Company of America, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1921. Serial No. 442,098. 33 Claims. (Cl. 91—39.

4. In a tube coating machine, apparatus adapted to be passed through a tube and comprising, in combination, a container, depositing mechanism, means for delivering coating material from the said container to the depositing mechanism, and means for actuating said depositing mechanism.

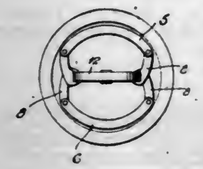
7. In a tube coating machine, apparatus adapted to be passed through a tube and comprising, in combination, a container, a rotary depositing element, means for delivering coating material from the container to the depositing element, and mechanism for rotating said element.

22. In a tube coating machine, the combination with apparatus adapted to be passed through a tube for distributing a coating material over the inner surface thereof, of mechanism for drawing said apparatus through the tube, and means associated with said mechanism for directing a draft of air through the said coated tubes.



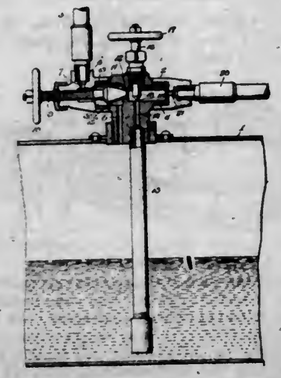
33. In combination, applying means, spreading means, mechanism for moving both said means over a surface to be coated, and feed means actuated by said movement for producing a flow of said applying means, whereby said flow is proportional to the rate of progress of the device over the surface.

1,455,066. FOLDING TABLE. JOHN WORLING BEREMAN, Wichita, Kans. Filed Jan. 11, 1921. Serial No. 436,495. 4 Claims. (Cl. 45—116.)



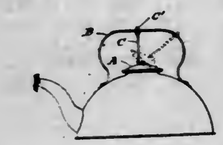
1. In a folding table: a recessed top section, a leg pivoted thereon to fold into the recess, an inclined brace having a break-joint, a main link pivoted to the butt of said leg near the leg-pivot, means to restrain said link from swinging away from the table top, a truss-rod having one end engaging said brace by contact, means on said link to guide the engaging end of the truss-rod, and a strut pivoted on the inner end of the top section in line with the truss-rod; said truss-rod being pivotally connected to the free end of said strut, and said inclined brace connecting said leg with the top section of the table; substantially as described.

1,455,067. CLAMP. MORRIS BERMAN, Mattapan, Mass. Filed Dec. 18, 1919. Serial No. 345,729. 2 Claims. (Cl. 24—19.)



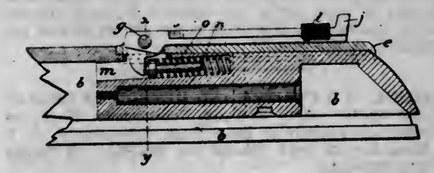
2. A tube clamp comprising a flexible strip having a series of spaced fastener holes therein extending substantially from end to end thereof, and having an upwardly bent head provided with a transverse slot at the point of bend and through which the opposite end of the strip is adapted to be passed, whereby to provide a tube encircling band, said strip beyond said head extending as a superposed layer partially encircling said band, the free end of said strip adapted to be bent upwardly at selected points to position one of the fastener holes opposite said upwardly bent head, a fastener carried by said head and engaging the opposing fastener hole of the strip, and means for detachably locking said fastener to said strip comprising a locking element on said fastener adapted to be set against the free end of the strip, that portion of the strip beyond said locking element adapted to be bent over upon said locking element whereby to frictionally clamp said locking element against movement on said fastener.

1,455,068. BOTTLE CAP. SIGURD BJORKQUIST, Blaney, Mich. Filed July 15, 1922. Serial No. 575,270. 2 Claims. (Cl. 215—51.)



1. A bottle cap comprising a closure disk provided with an annular band having an interior annular groove, curved pressure links adapted to be moved into and out of the groove, transversely extending toggle links, means to connect the toggle links with the terminals of the said pressure link, a handle connected to the central meeting ends of the said toggle links whereby the latter may be raised and lowered to move the said pressure links for releasing or applying the pressure of the pressure links against the said band and the closure disk for loosening or tightening the closure disk in the bottle neck.

1,455,069. HEATER AND KINDLER. GUSTAVE BLUMMEL, Toledo, Ohio, assignor to Ferguson Furnace Company, Toledo, Ohio, a Corporation of Delaware. Filed June 27, 1921. Serial No. 480,660. 4 Claims. (Cl. 158—50.1.)

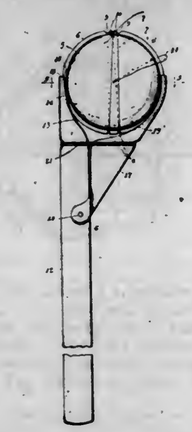


1. The combination with a fluid supply tank, of a valve connected with the tank and with a source of compressed air supply, said valve comprising a body having an air chamber having independent communications with the air supply and with the tank, a mixing chamber having a communication with the bottom of the tank and also having a delivery outlet independent of said communication, a direct communication between the air chamber and the mixing chamber, and a double acting valve operating in the air chamber for closing said air supply communication or said direct communication.

1,455,070. KETTLE-LID-RAISING MEANS. WILLIAM HERBERT SIMPSON BREWER, Epsom, New Zealand. Filed July 24, 1920. Serial No. 398,806. 1 Claim. (Cl. 53—9.)

The combination of a kettle having an opening in the top, a substantially inverted U-shaped handle rigidly secured to the kettle, a lid loosely mounted in the opening, a rod rigidly attached at one end to the lid and provided at its opposite end with an eye loosely encircling the handle.

1,455,071. REAR SIGHT FOR FIREARMS. JOHN M. BROWNING, Ogden, Utah. Filed May 13, 1922. Serial No. 560,757. 8 Claims. (Cl. 42—1.)



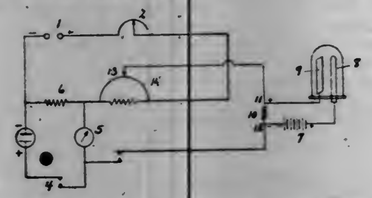
1. In a rear sight for automatic pistols having a recoiling breech-slide, the combination of a recoil-actuated breech-slide, a base-plate lengthwise movably attached on said breech-slide, and a spring mounted in said breech slide and holding said base-plate yieldingly in its attachment on said breech-slide.

8. A rear sight for automatic pistols having a recoiling breech-slide, comprising a breech-slide, a base-plate movably attached to said breech-slide, an adjustable sight-leaf pivoted to said base-plate, and a member yieldingly slidable within said breech-slide, said sight-leaf and said member co-operating to yieldingly secure said base-plate on said breech-slide and to yieldingly hold said sight-leaf adjusted on said base-plate.

1,455,072. DEHYDRATION OF ALCOHOL. HYYM E. BUC, Roselle, N. J., assignor, by mesne assignments, to Standard Development Company, a Corporation of Delaware. Filed Oct. 21, 1921. Serial No. 509,408. 5 Claims. (Cl. 195—15.)

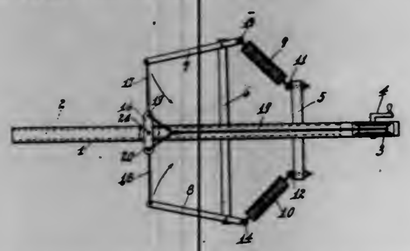
4. The process of dehydrating alcohol which comprises mixing 20% to 50% of kerosene with the alcohol to be dehydrated, heating the mixture with lime distilling the mixture and separately condensing the dehydrated alcohol.

1,455,073. PARACHUTE TOY. CLAUDE L. BUNTEN, Rawlins, Wyo. Filed Apr. 8, 1921. Serial No. 459,632. 4 Claims. (Cl. 244—21.)



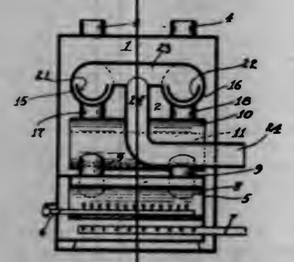
2. A toy comprising a projectile consisting of a pair of oblate semi-spheroidal shell sections, flanges on the edges of said shell sections that provide a rib on the assembled projectile; said rib provided with registering recesses, a retaining element wound about said projectile and engaging said recesses, a parachute connected to said shell sections and enclosed within said shell sections, and a holder and thrower for said projectile consisting of a pair of yielding jaws having their opposing faces grooved to receive and seat the rib of said projectile, and a projection on one of said jaws adapted to enter one of said recesses on the projectile whereby when said projectile is thrown from said holder the projection will cause the rotation thereof.

1,455,074. APPARATUS FOR RECORDING LIGHT. THEODORE WILLARD CASE, Scipio, N. Y. Filed Dec. 11, 1920. Serial No. 430,095. 10 Claims. (Cl. 234—1.5.)



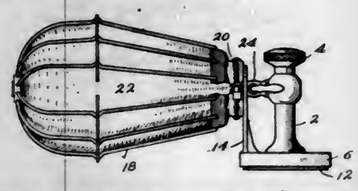
1. In an apparatus of the class described, an electrical circuit containing a known but variable electromotive force, a second circuit coupled with the first circuit so that the electromotive forces of the two circuits oppose each other, a light reactive resistance and a potential in

said second circuit and means for varying the electromotive force of the first circuit so as to equal the electromotive force of the second circuit as the latter is varied in accordance with variations in the resistance of said light reactive resistance.



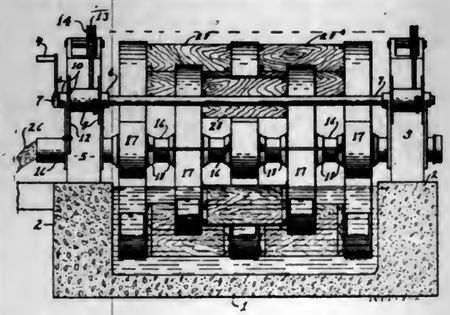
8. A light recording apparatus comprising the combination with a record sheet calibrated in units of light intensity and time periods, of a galvanometer, a circuit including the galvanometer and a light sensitive cell, means rotated a distance and in a direction dependent upon the extent and direction of the deflection of the galvanometer and means actuated by said rotated means for making a record upon said sheet of the intensity of the light to which said light cell is exposed.

1,455,075. CATAPULT. SAMUEL E. CHAPMAN, San Mateo, Calif. Filed Nov. 9, 1922. Serial No. 599,813. 3 Claims. (Cl. 124—1.)



1. A catapult comprising a barrel, said barrel having a bore therein, a rider in said bore, levers pivoted adjacent said barrel, springs connected at one end to the levers and at the other ends to the barrel, cables secured to said levers and extending through said rider whereby said rider is retracted, and means for holding said rider in the retracted position.

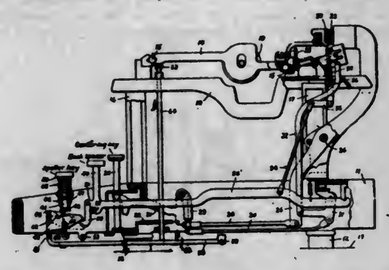
1,455,076. HEATER. JAMES A. CLYMER, Oakland, Calif. Filed June 10, 1922. Serial No. 567,310. 4 Claims. (Cl. 126—116.)



1. A heater comprising an outer fresh air chamber and a heating chamber within said fresh air chamber, said heating chamber including a combustion drum, a plurality of circulating drums above the combustion drum, pipes connecting the combustion drum with each of the circulating drums, upper drums above the circulating drums and pipes connecting the upper drums and the circulating drums, a pipe connecting the upper drums and a pipe leading from the last mentioned pipe to an outlet.

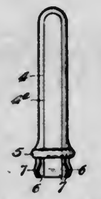
1,455,077. VALVE TESTER. SAMUEL M. COFFMAN, Kansas City, Mo. Filed Dec. 31, 1921. Serial No. 526,314. 1 Claim. (Cl. 73—51.)

A device of the character described, comprising a chambered head, a gasket recessed into said chambered head, a standard surmounting said chambered head and having a duct leading thereto, a knob surmounting said duct, a valve connected to the standard and having a duct communicating with the first-mentioned duct, an elastic air container secured to said valve, a bracket extending upwardly from the chambered head and provided with an annular shoulder, and a guard clamped to said shoulder to protect the air container.



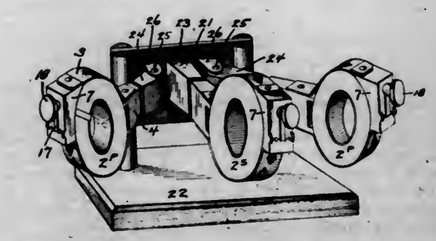
1,455,078. WATER-DRIVEN PUMP. JOHN M. COLLINGWOOD, Wichita, Kans. Filed June 11, 1921. Serial No. 476,828. 2 Claims. (Cl. 103—85.)

1. In a water driven pump, a horizontal tubular shaft, bearings and bearing supports therefor; a plurality of bucket sections, spaced apart in parallel planes, each bucket section comprising a hub element rigid to the tubular shaft with four individual bucket elements radiating from said hub element; the bucket sections being alternately arranged in their parallel plane positions from the horizontal shaft or so as to present a passage for paddles between adjacent bucket elements of the central bucket section of any series of three bucket sections; and paddle elements horizontally connecting between correspondingly positioned bucket elements of the outer bucket sections of such series and passing between adjacent bucket elements of the central bucket section thereof substantially as specified.



1,455,079. TYPEWRITER AND METHOD OF OPERATING SAME. CARL F. COOK, Schenectady, N. Y., assignor of one-half to John Flam, Schenectady, N. Y. Filed Jan. 3, 1921. Serial No. 434,852. 18 Claims. (Cl. 197—91.)

1. The method of setting the carriage of a typewriter so that a line of type, when typed from the setting, will be centered, which consists in bringing the carriage to a position corresponding to the center of the space within which the line is to be typed, and back spacing the carriage

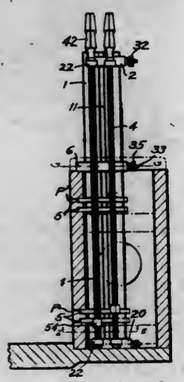


at the rate of one space per pair of spaces in the line of type, each of the back spacing steps being performed substantially simultaneously with the observation of each pair of spaces by the operator.

1,455,080. DUST CAP FOR TIRE VALVES. CLYDE R. CROSON and JACOB W. KINDELBERGER, Wheeling, W. Va. Filed Aug. 11, 1922. Serial No. 581,230. 6 Claims. (Cl. 152—12.)

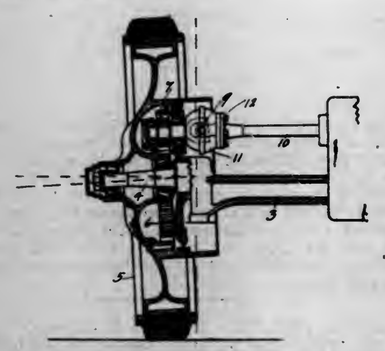
1. The combination with a tire-valve stem, of a rim nut screwed upon said stem, said nut being hollow and having a reduced neck, a stem-enclosing dust cap movable longitudinally to and from seated relation to said nut, said cap having resilient fingers adapted to enter and yieldingly engage said nut whereby it is retained in place, said cap and said stem being shaped relatively to prevent rotation of the former, and the interengaging parts of said cap and said nut being shaped relatively to prevent rotation of said nut.

1,455,081. INDUCTANCE COIL. ERNEST G. DANIELSON, San Francisco, Calif., assignor to E. T. Cunningham, San Francisco, Calif. Filed May 25, 1921. Serial No. 472,504. 3 Claims. (Cl. 171—242.)



1. In an induction coil mounting, means providing terminals for the coil, means for varying the number of effective turns of the coil, and a common means for tightly holding both of said latter means against the outside periphery of the coil structure.

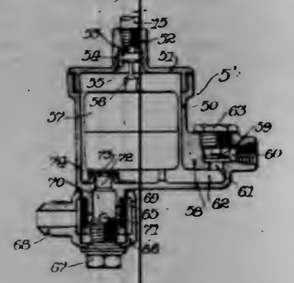
1,455,082. SPRING BUMPER. ERNEST G. DANN, Chicago, Ill. Filed Dec. 7, 1922. Serial No. 605,494. 14 Claims. (Cl. 293—55.)



1. In an article of the class described, the combination of two individual bumper sections, each including a resilient outer impact member and a separate unitary inner supporting member and the members of each section being connected together at their adjacent extremities, and means connecting the adjacent extremities of said two sections together.

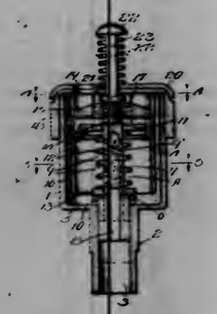
1,455,083. GAUGE FOR PISTON-VALVE CYLINDERS. CHARLES W. DEUTER, Seattle, Wash. Filed Aug. 2, 1922. Serial No. 579,270. 5 Claims. (Cl. 33—163.)

1. In a gauge for the purpose specified, a gauge stick, a plurality of gauge fingers slidable thereon, and each including a nut, a screw for the nut of each of said gauge fingers extending alongside the gauge stick, means supporting said screws from said gauge stick for rotation, and means whereby said screws may be engaged for rotation adjacent the end of the gauge stick.



1,455,084. MOTOR AXLE DRIVE. WILLIAM W. DILLER, Indianapolis, Ind. Filed Mar. 20, 1922. Serial No. 545,335. 2 Claims. (Cl. 74—7.)

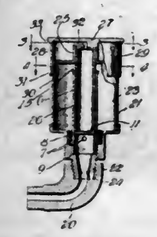
1. The herein described method of repairing motor trucks having an axle with downwardly bent ends and



road-wheels thereon correspondingly oblique to a vertical plane and having a driving shaft drivingly connected with the wheels, said shaft having universal joints near each end, which consists, first, in removing the ground wheels from the axle, then substituting rigid joints for the universal joints in the driving shaft, then bending the axle until the driving mechanism connecting the shaft-ends and the wheels will function normally, and then securing the ground wheels on the axle.

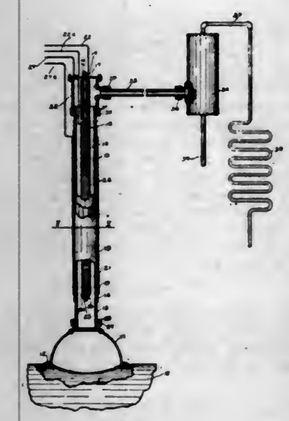
1,455,085. FUEL-FEED SYSTEM FOR AUTOMOBILES AND THE LIKE. FRANCIS EDWIN EDWARDS, Crystal Lake, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 30, 1917. Serial No. 204,484. 2 Claims. (Cl. 103—164.)

1. In a fuel feed system, a pumping chamber, a float in said chamber, projections holding said float spaced from the bottom of said chamber, one of said projections forming a housing, and an inlet valve covered by said housing.



1,455,086. OIL CUP. FRANKLIN H. ELWELL, Chicago, Ill. Filed Nov. 29, 1920. Serial No. 427,123. 13 Claims. (Cl. 184—28.)

6. In a device of the kind described and in combination, a casing having an oil reservoir therein and having an oil duct leading therefrom, an apertured hollow plunger in said duct and extending into said reservoir, a sleeve between the plunger and casing wall free to move relative to the end wall of said reservoir so as to seat thereagainst, and means for actuating said plunger and sleeve to seat the sleeve and force the oil in said reservoir through said duct, said plunger being slidable relative to said sleeve.

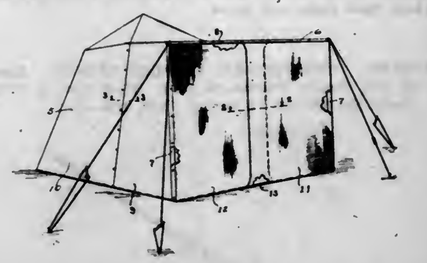


1,455,087. OIL CUP. FRANKLIN H. ELWELL, Chicago, Ill. Filed June 24, 1921. Serial No. 480,038. 10 Claims. (Cl. 184—69.)

7. An oil cup having a lubricant chamber, a sleeve within said chamber and forming a second lubricant chamber, the upper end of said sleeve being spaced from the top of said oil cup, apertures through said sleeve at its lower end and communicating with the outer chamber to permit oil to flow therethrough to the outlet thereof, a cap for closing said inlet to the oil chambers, a plunger carried by said cap and slidable within said inner

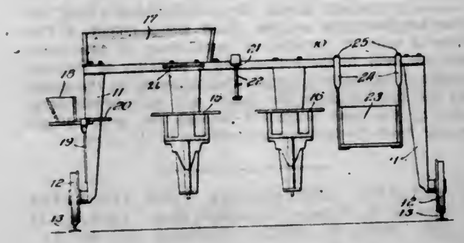
chamber, said plunger having a vent therein adjacent its upper end and communicating with the atmosphere and the oil chambers only when said cap has been substantially fully seated, whereby the seating of said cap will cause said vent to be normally inoperative and cause the plunger to exert a pressure on the oil in the inner chamber, forcing it through said outlet.

1,455,088. ELECTRICALLY-OPERATING TREATING CHAMBER FOR HYDROCARBON VAPORS AND GASES. JAMES L. MCCABE, Wichita, Kans. Filed Feb. 3, 1922. Serial No. 533,904. 4 Claims. (Cl. 196—25.)



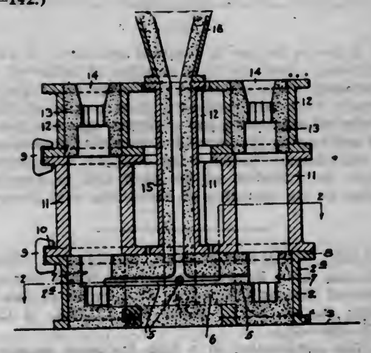
1. In an apparatus for treating hydrocarbon oils, vapors and gaseous mixtures; a tubular treating chamber having walls of a non-electric conducting material, an insulating element axially arranged within the treating chamber and surrounded by a space intermediate the walls thereof; a heating coil arranged on said element and in an electric circuit, said coil also serving as an electrode of another circuit and an insulated electrode of the other circuit enveloping the treating chamber.

1,455,089. TENT. JOKUM J. MUNSON, Milwaukee, Wis. Filed Feb. 20, 1922. Serial No. 538,022. 5 Claims. (Cl. 135—14.)



1. In a tent, the combination of two closure curtains

arranged to partially overlap each other, the overlapping edges of said respective curtains being supported by elas-

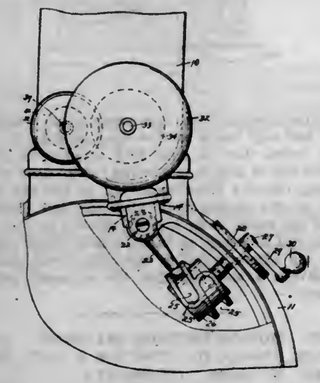


tic members, and means to which the extremities of said members are attached, for the purpose specified.

1,455,090. MOLDER'S TRUCK. ALBERT NELSON, Chicago, Ill., assignor to The American Brake Shoe & Foundry Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 17, 1921. Serial No. 508,290. 2 Claims. (Cl. 22—9.)

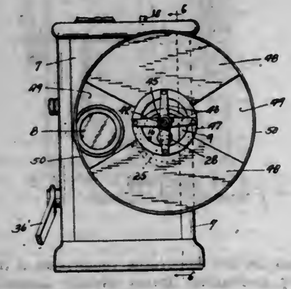
1. A molder's truck, comprising a cross-head, wheeled supports for the ends of the cross-head, said cross-head being at an elevation to clear a windrow of molders' sand on the floor of a molding room, a cope molding machine, and a drag molding machine, said machines being carried by the cross-head in spaced relation to lie at opposite sides of a windrow of molders' sand on the floor, and each of said machines being disposed in position for access thereto by a molder standing on the floor at one side of the cross-head.

1,455,091. METHOD AND APPARATUS FOR CASTING ROLLS. WILLIAM H. NICHOLS, Wilkinsburg, Pa. Filed Jan. 10, 1921. Serial No. 436,313. 6 Claims. (Cl. 22—142.)



1. The method of casting chill rolls that comprises arranging adjacent to a common pouring gate a plurality of molds each having a separate and independent chill, pouring molten metal into said grate, and directing said metal tangentially into the lower portions of said molds.

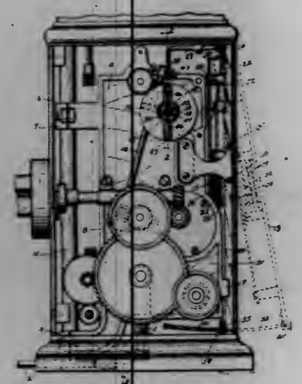
1,455,092. DAM. FRED A. NOETZLI, Berkeley, Calif. Filed Oct. 23, 1920. Serial No. 418,897. 6 Claims. (Cl. 61—30.)



1. In a multiple arch dam the combination of arches and buttresses, said buttresses having two separate walls and braces between said walls.

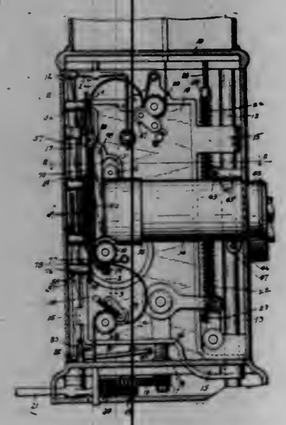
1,455,093. SPEED CONTROL. ALVAH C. ROEBUCK, Chicago, Ill. Filed June 14, 1920. Serial No. 388,926. 21 Claims. (Cl. 74—26.)

1. A speed control comprising a motor bracket pivotally mounted; an arm extending laterally from and rigidly attached to said motor bracket; a shaft disposed tangentially to the axis of the motor shaft; a cam on said shaft having a spiral cam groove therein engaging the free end of said arm; and manually operable means for rotating said shaft.



1,455,094. INTERMITTENT-SHUTTER MECHANISM. ALVAH C. ROEBUCK, Chicago, Ill. Filed Nov. 4, 1920. Serial No. 421,783. 16 Claims. (Cl. 88—19.3.)

1. Motion picture apparatus comprising a lens; an intermittent shutter pivoted on an axis parallel to the

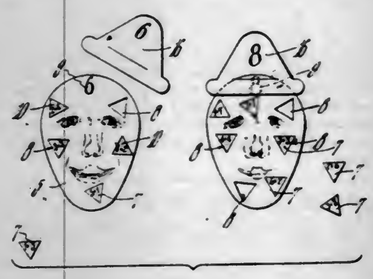


axis of said lens; and means for shifting the axis of said intermittent shutter bodily relatively to said lens, without changing the parallelism of said axes.

1,455,095. FIRE-DOOR-OPERATING MECHANISM. ALVAH C. ROEBUCK, Chicago, Ill. Filed Nov. 4, 1920. Serial No. 421,784. 14 Claims. (Cl. 88—19.4.)

1. Motion picture apparatus comprising a casing having top and side walls with a door opening in one side wall; a casing door in said door opening hinged at its top at the top of said door opening; a fire door pivoted on the casing door; a lever connected to the fire door and pivoted on the casing door with one end close to the hinge of the latter; and a lever pivoted to the top wall with one end disposed at substantially right angles and close to the adjacent end of the other lever, one of said levers having a slot engaging the adjacent end of the other lever.

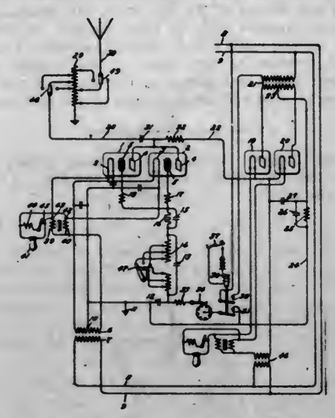
1,455,096. MOTION-PICTURE MACHINE. ALVAH C. ROEBUCK, Chicago, Ill. Filed Nov. 4, 1920. Serial No. 421,785. 21 Claims. (Cl. 88—17.)



1. Motion picture apparatus comprising a housing; a film-moving mechanism frame slidably mounted in the housing and having a film guide thereon; a door pivoted to the housing on a horizontal axis well above said guide; a plate slidably mounted on said door; film tension shoes yieldably mounted on said plate and adapted to cooperate with said film guide; and an operative connection between said frame and plate.

1,455,097. PYROTECHNIC DISPLAY DEVICE. JOHN B. VAN DOREN, Providence, R. I. Filed Nov. 6, 1922. Serial No. 599,216. 5 Claims. (Cl. 102—20.)

1. A pyrotechnic display device comprising a long narrow longitudinally grooved sheet metal holder, a continuous body of pyrotechnic composition in the groove and adherent to the holder, and a plurality of localized bodies of pyrotechnic composition adherent to the holder on the face opposite the groove and successively ignitable by the heat conducted through the metal of the holder from the burning composition in the groove.

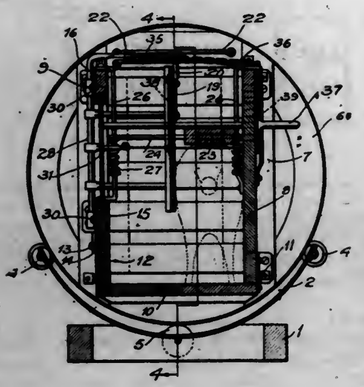


1,455,098. EDUCATIONAL GAME APPARATUS. MILDRED L. WARREN, Springfield, Mass. Filed June 11, 1921. Serial No. 476,731. 9 Claims. (Cl. 35—2.)

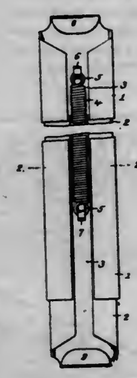
1. A device for use in teaching arithmetic to children comprising a card having a notation of numerical value prominently displayed thereon, a plurality of pieces for assembly with said card each piece bearing a different notation of said value, and a picture separate from said card and bearing also graphic display matter said picture and said display matter being designed to cooperate to attract the attention of the child and to develop his interest in the operation of assembling said pieces.

1,455,099. HIGH-FREQUENCY SIGNALING SYSTEM. WALTER R. G. BAKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 5, 1922. Serial No. 527,168. 8 Claims. (Cl. 250—17.)

1. The combination in a high frequency current generating system of a three electrode electron discharge device having plate and grid circuits associated therewith, means for generating oscillations in said grid circuit independently of any coupling between the circuits, and a series condenser in said grid circuit which is shunted by a resistance for maintaining the average potential of the grid negative with respect to the cathode.



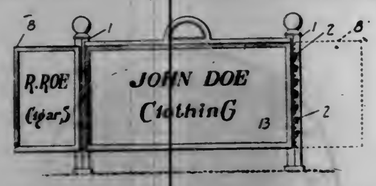
1,455,100. INSECT TRAP. LEWIS L. BELNAP, Oakland, Calif. Filed Apr. 10, 1922. Serial No. 550,961. 1 Claim. (Cl. 43—109.)



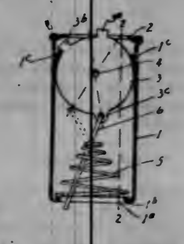
An insect trap including a bracket for supporting a food container, said bracket being formed with a gooseneck, a pair of lugs on said gooseneck, a bowl fitting over said gooseneck, and a pair of spring clips secured to the inside of said bowl for engaging said lugs and detachably holding said bowl upon said gooseneck.

1,455,101. CRATE FOR CATCHING AND HOLDING HOGS. WILLIAM L. BARLOW, Clear Lake, Iowa. Filed June 4, 1921. Serial No. 475,036. 7 Claims. (Cl. 119—103.)

1. An animal crate comprising a housing including a stationary side wall and a bottom releasably held in a closed position and movable to an open position when released, a clamping board movably mounted in the housing and movable toward and away from the stationary wall, an upper clamping element positioned between the clamping board and stationary wall and mounted for vertical movement and yieldably held in a raised position and movable downwardly to engage the back of an animal, means for releasably holding the upper clamping element in a depressed position, means for moving the clamping board toward the stationary wall for clamping engagement with the side of an animal and holding the board in a clamping position, and movable closures for the ends of said housing.

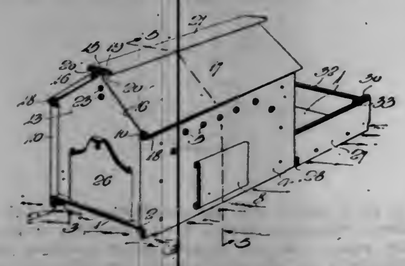


1,455,102. EXTENSION CURTAIN ROD. WILLIAM J. BERGENS, Chicago, Ill., assignor to The Novelty Patents Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1921. Serial No. 507,297. 4 Claims. (Cl. 156—19.)



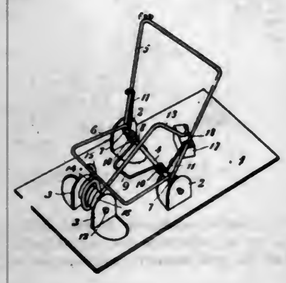
3. In a curtain rod, the combination of a pair of tubular telescoping sections having attaching means at their remote ends, and a coiled spring arranged longitudinally in the interior of said sections and attached at one end to one section and at the other end to the other section, said attaching means comprising integrally formed hooks on the respective sections, the said section having gaps along their entire length, said spring being introduced through said gaps into place in said sections, with the spring attaching means accessible through said gaps.

1,455,103. INTERCHANGEABLE AND ADJUSTABLE SIGN. CULLYE T. BERRY, near Dayton, Ohio. Filed July 21, 1922. Serial No. 576,410. 4 Claims. (Cl. 40—145.)



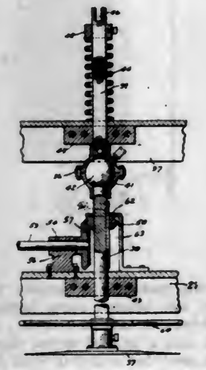
1. In a device of the type described, the combination with a post triangular in cross section, of an inclined bracket device attachable to one face of said post, a bracket device attachable at right angles to an adjacent face of said post, and a sign supported by each bracket device.

1,455,104. CATCH. DANIEL W. BLACKWELL, San Diego, Calif. Filed Mar. 26, 1921. Serial No. 455,729. 3 Claims. (Cl. 292—78.)



1. A device of the class described, including a plate provided with spaced apart recesses secured to one member, a casing secured to the opposite member, a revoluble member in said casing provided with spaced apart lugs on its edge adapted to extend past the face of said casing and enter said recesses in said plate and a conical spring means for controlling and retarding the movement of said revoluble member.

1,455,105. KNOCKDOWN CHICKEN COOP. WILLIAM L. BUTCHER, Bringhurst, Ind., assignor of one-half to William M. Harmon, Cutler, Ind. Filed May 18, 1922. Serial No. 561,923. 6 Claims. (Cl. 119—19.)

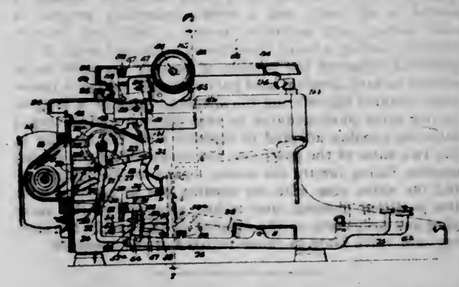


1. A structure of the character described comprising a flooring having depending side flanges, side walls having their lower edges provided with inner flanges for engaging the depending flanges of the flooring when the walls are slid into engagement with the flooring, said walls having upper flanges extending outwardly and having end flanges extending inwardly, abutment strips secured against the inner faces of the side walls adjacent the end flanges, end walls having outstanding side flanges engaging the end flanges of the side walls, said abutment strip having engagement with the inner faces of the end walls to hold the end walls against inward movement and engaging the flooring to hold the flooring against upward movement, and a roof carried by the end walls and having engagement with the upper flanges of the side walls.

1,455,106. TRAP. WILLIAM F. BUTLER, Hillside, N. J. Filed Feb. 27, 1922. Serial No. 539,677. 8 Claims. (Cl. 43—82.)

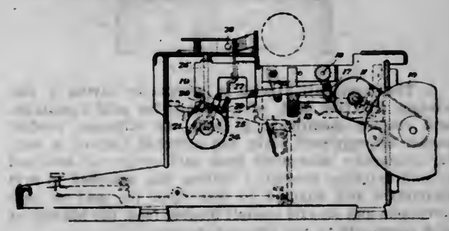
1. In a setting mechanism for traps, the combination of a movable element adapted to be held by the bait in position to maintain the trap set, an animal-catching element, means whereby the setting of the later moves the said movable element to receive the bait and to be arrested thereby, and means connected with said movable element for holding and releasing said animal-catching element.

1,455,107. BEET HARVESTER. LOUIS VICTOR CIRAC, Fallon, Nev. Filed Apr. 30, 1921. Serial No. 465,878. 2 Claims. (Cl. 55—107.)



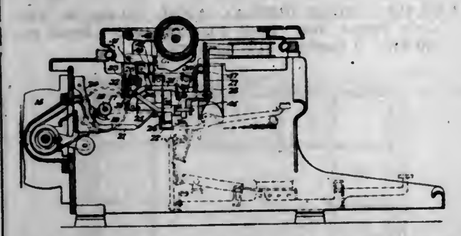
1. In a beet harvester of the character described a topping device comprising a vertical shaft consisting of an upper part and a lower part, a ball and socket joint between said two parts, cutting means at the lower end of the lower part, a bevel gear slidable on said lower part adapted to transmit rotary motion to the same, whereby it is rendered active, a slot in the upper end of the upper part, an eccentric engaging said slot adapted to impart downward motion to said shaft and spring means for opposing said downward motion.

1,455,108. PADDING-COVER CLAMP FOR PRESSING MACHINES. WILLIAM COLCLOUGH, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed May 7, 1919. Serial No. 295,351. 4 Claims. (Cl. 68—9.)



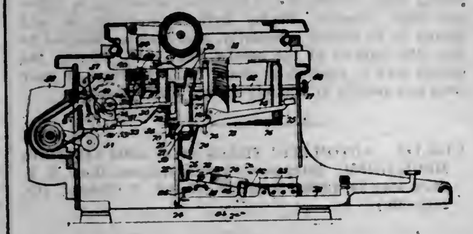
3. In a press, a work holding plate, a pad therefor, a cover cloth on said pad, and clamp means for said cloth comprising yielding backing pad, and a swinging clamping plate supported for movement toward the backing pad and adapted by engagement of its edge therewith to clamp and embed the cover cloth therein.

1,455,109. CASE-SHIFT MECHANISM. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed July 25, 1922. Serial No. 577,357. 46 Claims. (Cl. 197—73.)



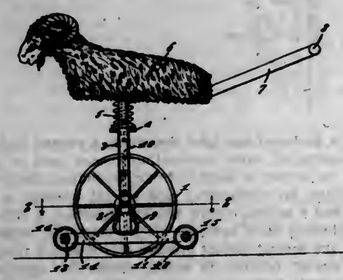
4. A typewriting machine comprising a constantly-rotating drive-shaft, a case-shift-support, means adapted to be operated through said drive-shaft for shifting the case-shift-support to its upper-case position, and key-actuated means for connecting said shifting means to the drive-shaft.

1,455,110. RIBBON MECHANISM. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed July 25, 1922. Serial No. 577,360. 8 Claims. (Cl. 197—151.)



8. In a typewriting machine, a motor-actuated swinging actuator-frame embodying a type-bar actuator-bar, a ribbon-feed mechanism embodying a ratchet device, and a link connecting said ratchet device to one of the swinging parts of said actuator-frame, whereby reciprocation of the actuator-frame by the motor will operate the ratchet ribbon-feed.

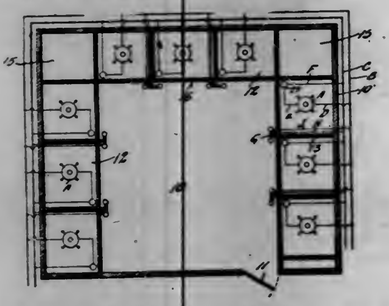
1,455,111. RIBBON SHIFT AND VIBRATING MECHANISM. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed July 25, 1922. Serial No. 577,361. 12 Claims. (Cl. 197—157.)



1. In a typewriting machine, a type-carrier-actuator, a ribbon-guide, mechanism for actuating the ribbon-guide through the medium of said type-carrier-actuator embodying color-shift devices, and means on the frame of the machine for adjusting said color-shift devices.

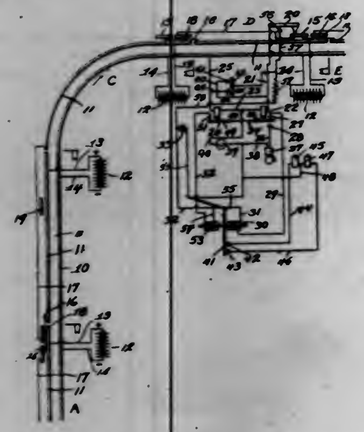
1,455,112. TYPEWRITING MACHINE. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed July 25, 1922. Serial No. 577,362. 44 Claims. (Cl. 197—17.)

1. In a typewriting machine, a series of type-carriers, an actuator common to all the type-carriers, a spring for actuating the actuator in its working stroke, a motor for retracting the actuator and restoring the power of said spring, and key-actuated selecting devices, said spring being strong enough to overcome the resistance offered by one of the type-carriers but not strong enough to overcome the resistance offered by more than one, whereby upon operation of more than one of the selectors the actuator will be prevented from completely operating either type-carrier sufficiently to cause a printing action.



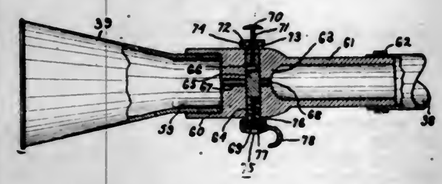
1,455,113. INITIATION DEVICE. ULYSSES S. DE MOULIN, Greenville, Ill. Filed Oct. 30, 1922. Serial No 597,889. 4 Claims. (Cl. 46—70.)

1. An initiation device including a supporting wheel, a structure carried thereby, a body or saddle portion



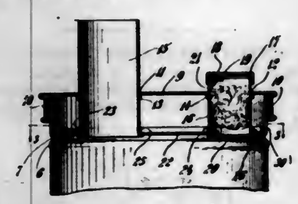
mounted on the structure, a handle bar connected to said body, and means carried by the structure for limiting the tilting movement of the structure in any direction.

1,455,114. STORE-DISPLAY ROOM. JAMES M. ENGLAND, Dallas, Tex. Filed June 26, 1922. Serial No. 570,837. 2 Claims. (Cl. 35—12.)



1. In an electric light fixture display room, a room from which the daylight is excluded when closed, a plurality of display booths built against the walls of the room and facing inwardly of the room, each of said booths being decorated and furnished according to different color schemes, display fixtures arranged in said booths to be lighted selectively, and curtains adapted to shut the interior of the booths from view, whereby the booths may be separately viewed from the room, or more than one quickly alternately viewed for comparison.

1,455,115. AUTOMATIC TRAIN STOP AND CONTROL MECHANISM. HARRISON FRANCIS HALLER, Ilion, N. Y. Filed May 23, 1916. Serial No. 99,405. 7 Claims. (Cl. 246—59.)

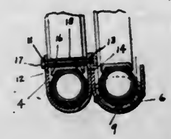


4. In a device of the kind described, a circuit including electro-magnetic valve controlling means and a circuit breaker in series, a second circuit including electro-magnetic means for controlling said circuit breaker, a train battery and a second circuit breaker in series, a third circuit including said battery, electro-magnetic means for holding the second circuit breaker closed and a ramp controlled circuit breaker in series, ramps for opening the ramp controlled circuit breaker, a track battery, an electrical connection between said battery and ramps, and train supported conductor means for maintaining a circuit from a ramp through the electro-magnetic means for holding the second circuit breaker closed and including contact means on the ramp controlled circuit breaker.

1,455,116. VACUUM CLEANING APPARATUS. FRANK E. LUMLEY, Omaha, Nebr. Filed Aug. 18, 1921. Serial No. 493,323. 1 Claim. (Cl. 15—155.)

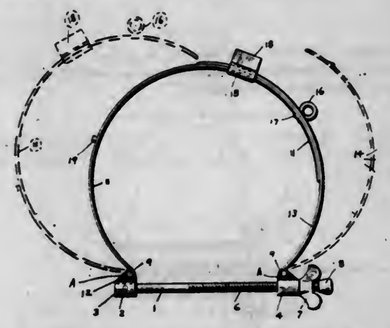
A suction device comprising a tubular handle being of differential diameter, the portion being of the smaller diameter being hollow and adapted to be connected to a hose, the portion of larger diameter having a thick partition wall therein extending substantially from the adjacent end of the portion of smaller diameter and extending a major portion of the length of the portion of greater diameter, said portion of greater diameter having a socket in its outer end, a nozzle removably secured in said socket, said partition having a relatively narrow opening passing axially therethrough, the end wall of the partition adjacent the portion of smaller diameter being curved to said opening, said partition also having a transverse channel intersecting the opening centrally, a reciprocating valve plug mounted in said channel and having a tapering opening adapted to register with the opening in the two sides of the partition, the outer end of the flaring opening facing toward the nozzle, means for yieldably holding the valve plug with its opening out of registry with the partition opening, and means attached to the valve plug and projecting on the exterior of the handle for moving said valve plate to cause registry of the openings.

1,455,117. COLLECTOR RECEPTACLE. WILLIAM A. MCCLELLAND, Ridgewood, N. J., assignor to The Fuchs & Lang Manufacturing Company, a Corporation of New York. Filed Feb. 3, 1922. Serial No. 533,858. 11 Claims. (Cl. 183—48.)



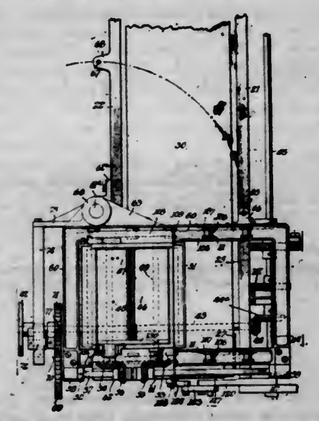
1. The combination with a receptacle having a diaphragm receiving seat, of a closure for said receptacle, said closure comprising a cover, an entrance conduit passed through said cover and attached thereto, a sealing diaphragm suspended from said cover and attached to said entrance conduit, a sealing ring attached to said diaphragm and adapted to rest upon the seat of said receptacle and an exit conduit leading from the interior of said receptacle to the exterior thereof.

1,455,118. AUXILIARY-TIRE CARRIER. JULIUS C. MANOCK, Angiola, Calif. Filed Sept. 15, 1921. Serial No. 500,893. 1 Claim. (Cl. 224—29.)



An auxiliary tire carrying attachment, comprising a U-band and a bolt adapted to embrace and be secured to

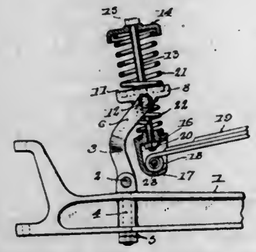
an auxiliary tire supported and carried by an automobile, a second U-band secured to one limb of said first named



band, and of a size to embrace a second tire, and a tire supporting chair secured to and supported by said second U-band.

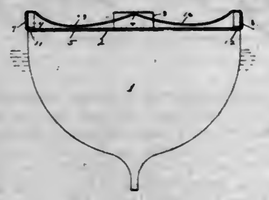
1,455,119. SECURING MEANS FOR SPARE TIRES. JULIUS C. MANOCK, Angiola, Calif. Filed May 31, 1922. Serial No. 564,816. 2 Claims. (Cl. 70—17.)

1. A tire lock and anti-vibrator, comprising, in combination, two arcuate members of conformable curvature, said members hingedly connected at one end, said connection including two lugs on a bar, one fixed and one slidable thereon, and means for urging said slidable lug toward said fixed lug, and securing the same.



1,455,120. DOUGH-SHEETING APPARATUS. FRANK M. PETERS and WARREN H. HUNGERFORD, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 15, 1921. Serial No. 437,390. 13 Claims. (Cl. 107—12.)

1. In dough rolling apparatus, the combination of a travelling conveyor, roll means arranged to deliver a dough sheet to said conveyor, and means for swinging said roll means to change the delivery of the dough sheet relative to the direction of travel of the conveyor.

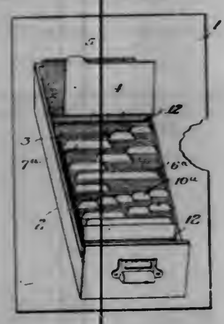


5. Dough sheeting aparatus comprising a belt conveyor, a pair of rolls for forming a dough sheet and delivering same cross-wise of the conveyor, and means for bodily reciprocating said rolls as a unit cross-wise of the belt.

1,455,121. SHOCK ABSORBER. CHARLES C. PFLITTNER, Barton, Wis. Filed Feb. 5, 1921. Serial No. 442,708. 3 Claims. (Cl. 267—29.)

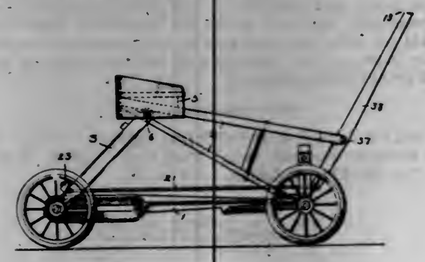
1. A shock absorber comprising a fork-shaped member adapted to be attached to a portion of the chassis of an automobile, an apertured member pivotally mounted within said stationary fork-shaped member, a rod provided with a sliding bearing in the apertured member, a spring positioned upon each side of said apertured member and surrounding said rod, means for operatively connecting said rod with the outer ends of the springs, and means for connecting the lower end of said rod with the eye of an automobile spring.

1,455,122. WRECK-RETRIEVING DEVICE. HENRY J. SCHMITT, Portland, Oreg. Filed Sept. 4, 1919. Serial No. 321,632. 3 Claims. (Cl. 9—9.)



3. The combination with the top deck of a ship having transversely disposed openings in the side walls thereof, a buoy casing provided with a pivotal lid mounted on said deck intermediate the said side walls, a buoy normally housed in said casing, an endless line slidably connected to the buoy and extending transversely across the deck through said openings, and means when the ship is submerged below the surface of the water for automatically raising the lid in said casing and permitting the buoy to float to the surface for the purpose specified.

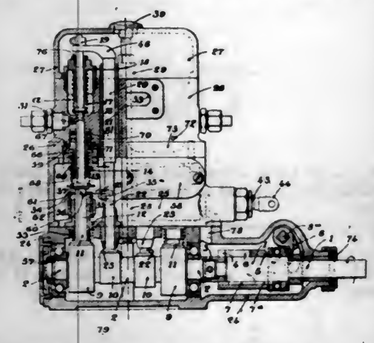
1,455,123. ILLUSTRATIVE DISPLAY SHEET. ISAAC G. STEVENS, Rochester, N. Y., assignor to Yawman & Erbe Mfg. Co., Rochester, N. Y., a Corporation of New York. Filed Mar. 16, 1922. Serial No. 544,328. 2 Claims (Cl. 35—17.)



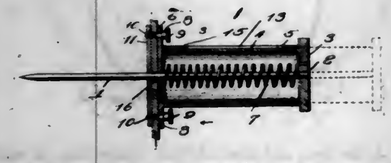
1. The combination with an illustrative display sheet bearing a pictorial representation of an index file in

perspective view including a container and a series of indexed elements therein having index tabs, the sheet being slotted along a line indicative of the position of

one such element, of a physical specimen of such element adapted to be inserted in the slot and having an index tab adapted to project therefrom in simulation of the tabs represented in connection with the pictorial units.



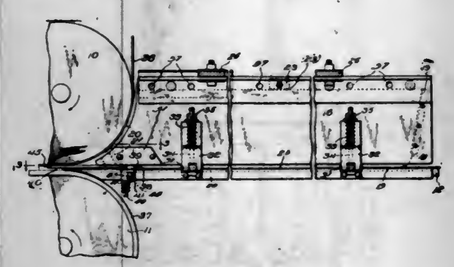
1,455,124. VEHICLE. JOHN SWINLAND, Duluth, Minn. Filed Apr. 13, 1922. Serial No. 552,078. 4 Claims. (Cl. 208—37.)



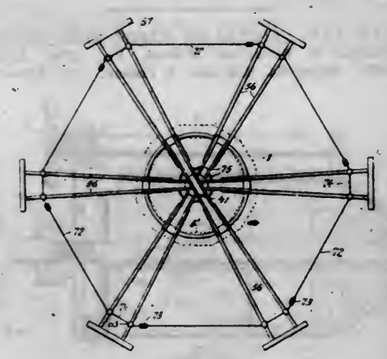
1. A wheeled vehicle of the class described comprising a front axle, a rear axle, a reach uniting said axles, a superimposed two part frame structure one part of which is pivotally mounted upon the forward end of the reach and the other part pivotally carried upon the rear axle, a seat in close juxtaposition to the pivotal union of the two parts, a lever pivoted in the forward end of the first mentioned part of the superstructure and operable from the seat, means connecting the lower end of the lever with the lower end of the second mentioned part, means whereby the rear axle may be operated independently of the action of the reach, and means cooperatively uniting the rear axle and the reach whereby independent motion of either will rotate the axle forwardly for the purpose described.

1,455,125. FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. EUGÈNE HENRI TARTRAIS, Maisons-Laffitte, France. Filed July 16, 1921. Serial No. 485,233. 7 Claims. (Cl. 123—140.)

1. A pump for injecting liquid fuel for internal combustion engines comprising a pump body, a piston movable in said pump body, a rotary driving shaft, a cam on said shaft for actuating the piston in its discharge stroke, a spring for actuating the piston in its suction stroke and an adjustable stop member for limiting the suction stroke of the piston, the cam having its maximum diameter over a portion extending at least about half the circumference whereby the piston is lifted and the adjustable stop member is relieved for a considerable part of each revolution of the cam.

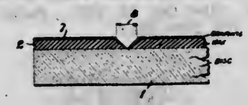


1,455,126. HATPIN. YUKINO TSUTSUI, Seattle, Wash. Filed Oct. 19, 1922. Serial No. 595,543. 1 Claim. (Cl. 132—71.)



A hat pin, comprising a pair of tubular telescopic members, a pin mounted in one member extending through a slot formed in the other member for limiting the telescopic movement of the members and preventing disengagement thereof, a pin secured in one member extending through the other and adapted to be contained in said members in extended relation, resilient means for normally holding the members in telescoped relation to project the pin, means for holding the members in extended relation against the tension of the spring, and means for securing the other member to a hat.

1,455,127. PLASTER-BOARD APPARATUS. CLARENCE W. UTZMAN, Buffalo, N. Y., assignor, by mesne assignments, to The Beaver Products Company, Inc., a Corporation of New York. Filed June 14, 1922. Serial No. 568,272. 34 Claims. (Cl. 154—1.)

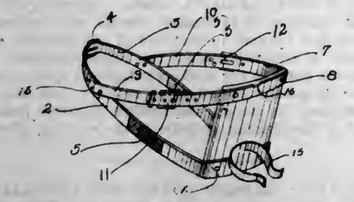


22. In apparatus for making plaster board, the combination with the usual spreading rolls of a hopper side having a point extending to said rolls and arranged to permit the margin of a cover sheet to pass under it, a folding device pivotally mounted and located in the path of the cover sheet margin for folding up the margin along the outer side of said hopper side, said folding device having a member running along the folded margin and extending beyond the end of the hopper side, and a spring associated with said member for pressing the latter against the folded margin and capable of permitting said member to yield.

1,455,128. CARROUSEL. RUDYARD S. UZZELL, Jamaica, N. Y. Filed June 17, 1920. Serial No. 389,786. 6 Claims. (Cl. 46—27.)

4. In a carrousel, a tower, a series of rotatable car supporting frames separably mounted on said tower, arms extending outward from said frames, and longitudinally resilient rods connecting said arms together, said rods being arranged to expand or contract independently of one another.

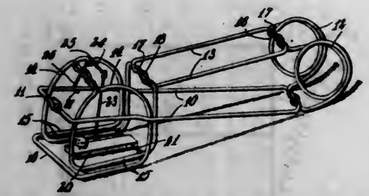
1,455,129. PHONOGRAPH RECORD AND RECORD BLANK AND METHOD OF MAKING THE SAME. WILLIAM M. VENABLE, Pittsburgh, Pa. Filed Mar. 6, 1920. Serial No. 363,746. 7 Claims. (Cl. 91—68.)



1. The method of preparing a phonograph record blank for recording purposes which consists in warming the disc or plate, in applying a film of melted wax, and in cooling the disc or plate before cooling the exposed surface of the melted wax.

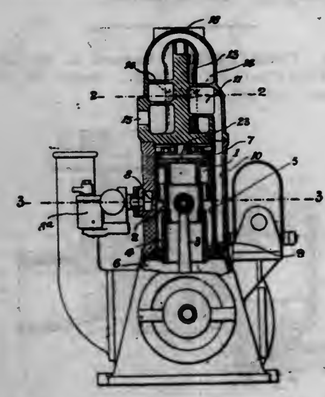
3. The method of preparing a phonograph record blank which consists in covering the surface of the disc or plate with a solution of wax in a volatile solvent, in floating the disc upon melted wax until the solvent has evaporated, and in cooling the blank by placing it upon cold water.

4. As a new article of manufacture, a record blank comprising a disc of glass having a covering of wax and one of graphite thereover.



1,455,130. MINER'S LAMP. WILLIAM W. ZICKLER, Mullan, Idaho. Filed Apr. 10, 1922. Serial No. 551,324. 1 Claim. (Cl. 240—60.)

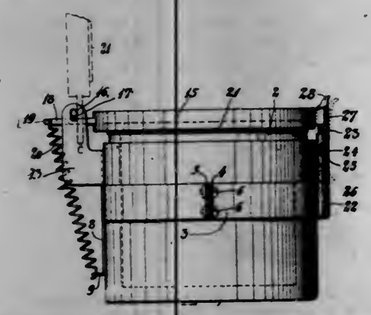
The combination with a pad of a band having elastic portions therein and a rear detachable fastening device for the free ends of the band, a crown band comprising a strap fixed on the pad and formed with a socket, side straps attached to the first mentioned band, detachable fastening devices connecting the ends of the fixed strap



and the free ends of the side straps, and a clamp fixed to said pad having resilient retaining arms.

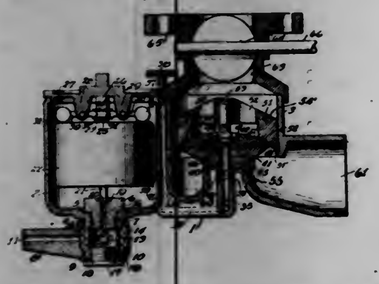
1,455,131. ANIMAL TRAP. EDWARD L. ZIOLA, Ashton, Nebr. Filed Apr. 6, 1922. Serial No. 550,133. 3 Claims. (Cl. 43—81.)

1. An animal trap comprising a single length of wire arranged in the form of a pair of vertical loops at its rear end, and having a pair of reaches extending forwardly from the lower sides of said loops and united at their forward ends in a movable jaw element, said wire having a pair of reaches extending forwardly from the upper sides of said loops and arranged at their forward ends in the form of vertical loops having flat bottom portions, said last loops being substantially parallel to said reaches and united at their lower forward ends by the intermediate portion of the wire which constitutes a fixed jaw, and a trigger device holding said movable jaw element raised.



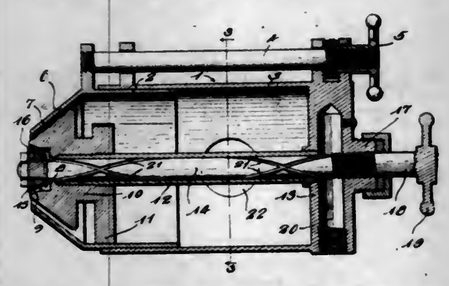
1,455,132. INTERNAL-COMBUSTION ENGINE. JOHN DAVIDSON, Tutbury, Burton-on-Trent, England. Filed Apr. 28, 1921. Serial No. 465,214. 4 Claims. (Cl. 123—53.) (Granted under the provision of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an internal combustion engine of the specified type, working cylinders; a crank chamber; a charging



cylinder between the working cylinders and the crank chamber; working pistons in the working cylinders; a charging piston in the charging cylinder rigidly connected to said working pistons; a tubular extension on said charging cylinder; a stationary tubular guide embracing said extension; a port in that end of the charging cylinder which is situated nearest the crank chamber; inlet and exhaust ports in the working cylinders; and a passage between the port in the charging cylinder and said inlet ports adapted to convey combustible mixture from the said end of the charging cylinder to the working cylinders.

1,455,133. HINGED COVER FOR CONTAINERS. FRANK WELLINGTON DOWNS, Washburn, Wis. Filed Nov. 25, 1921. Serial No. 517,590. 4 Claims. (Cl. 220—35.)

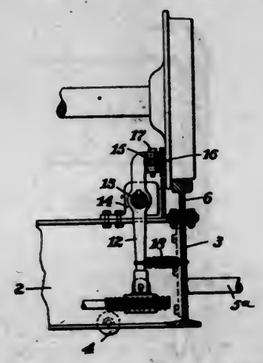


3. The combination with a container having an open mouth, of a supporting band removably secured about said container adjacent the mouth thereof, a pair of vertical bearing members integral said band, each of said bearing members being provided with a vertical slot adjacent the upper edge thereof, a cover to seal said mouth, a rubber gasket carrier on the under surface of said cover and adapted to register with the mouth of said container, said cover being provided with a rearwardly extending portion having a transverse shaft carried adjacent the outer end thereof, said transverse shaft being mounted at each end in said slots, a tension spring connected at one end to said rearwardly extending portion of said cover and at its other end to said band, a spring pressed plunger disposed on said band and adapted to press against said cover at the front edge thereof when said cover is closed, and a spring actuated clasp for locking said cover in a sealed position.

1,455,134. CARBURETOR. EDWARD E. ECKERT, Chicago, Ill. Filed Jan. 5, 1921. Serial No. 435,205. 3 Claims. (Cl. 261—44.)

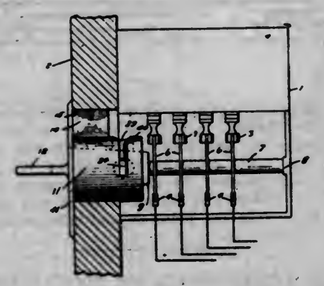
1. In a carburetor, a cylindrical mixing chamber, a fuel feeding head comprising two conical heads, said conical heads having their bases disposed adjacent to each other and being of the same diameter, the lower head having a centrally raised portion spacing the upper conical head therefrom, and having an annular groove disposed adjacent to the raised portion, said raised portion having radial grooves therein, a tubular member connecting said conical heads together and having a cylindrical portion projecting above the upper conical head, said tubular member having openings therein communicating with said grooves, and a ring slidably disposed in said chamber and having a recess adapted to snugly receive the upper end of said tubular member, said ring being adapted to move with respect to said tubular member.

1,455,135. LIQUID OR VAPOR FUEL BURNER. CHARLES O. EVERHART, Warren, Pa. Filed Jan. 9, 1922. Serial No. 528,059. 5 Claims. (Cl. 158—76.)



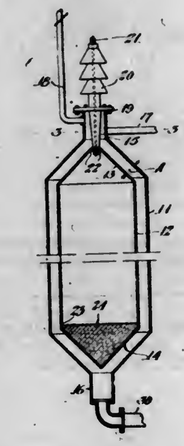
1. A burner comprising a casing having a fluid pressure inlet, the front end of said casing being open and having a frusto-conical forwardly tapered flange, the rear end of said body being closed, a frusto-conical head within and in closely spaced relation with said flange, the front end of said head having a central recess, a peripherally grooved atomizer mounted in said recess and increasing in size toward its front end to spray a multiplicity of fuel jets into the fluid pressure discharged between said flange and head, and a fuel supply tube discharging into said recess.

1,455,136. OIL SEPARATOR. PERRY H. GENTZEL, Newton, Mass. Filed Oct. 13, 1919. Serial No. 330,179. 1 Claim. (Cl. 210—164.)



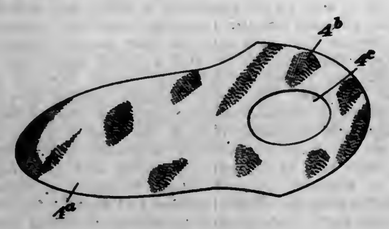
A filter for removing oil from water passing from a condenser to the boiler of a steam power plant, comprising a casing having a head removable therefrom, said casing having an opening in its wall for communication with a condenser and another opening in the bottom of the casing for communication with a boiler, a filter mounted concentrically within the tube and spaced from the wall of the casing to form an annular chamber, said filter being closed at the top by the head of the casing and in communication with the said opening in the bottom of the casing, a wire gauze screen covering said tube, and the wire gauze screen surrounded by textile material in the nature of linen terry cloth, substantially as set forth.

1,455,137. RAILWAY BRAKE. HARRY R. GRIFFITHS and SAMUEL G. WALKER, Baltimore, Md. Filed May 28, 1921. Serial No. 473,550. 1 Claim. (Cl. 188—62.)



In combination, a railroad cradle adapted to empty loaded cars, a track thereon, brake mechanism between the rails of said track including a pivot member extending below and above said track, the upper part thereof carrying car wheel engaging means, the lower part being attached to actuating means adapted to cause the wheel engaging means to approach a car wheel upon the track, said wheel engaging means being carried in a slot in the upper end of the pivoted member by a lost motion connection.

1,455,138. AUTOMOBILE LOCK. CHARLES A. HABENICHT, San Francisco, Calif. Filed Apr. 4, 1921. Serial No. 458,238. 3 Claims. (Cl. 70—46.)

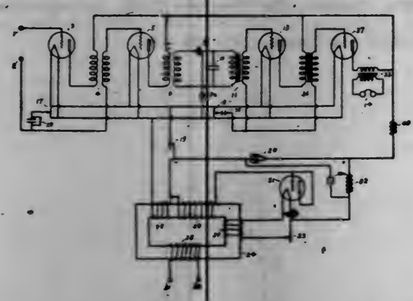


1. In combination with a supporting board, a detachable switch lock comprising a housing adapted to be inserted in the board having means thereon for locking the same against rotary motion, a switch controlling plug associated with the housing and locking means for the plug, comprising means for locking the plug against rotation and means for simultaneously locking the plug to the housing and the board against longitudinal motion.

1,455,139. ELECTRIC DEHYDRATOR. FORD W. HARRIS, Los Angeles, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Oct. 19, 1920. Serial No. 418,059. 3 Claims. (Cl. 204—24.)

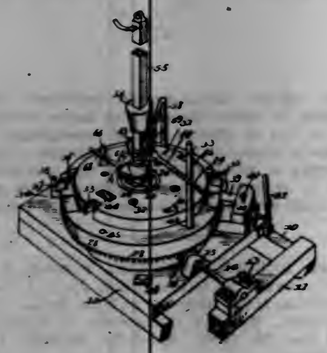
1. An electric dehydrator for petroleum emulsions comprising an outer electrode; an inner electrode supported so that an electric field of substantially uniform thickness is formed between said electrodes; and means for causing a rapid agitation of the emulsion to be treated to all points between said electrodes having a wider separation than the thickness of said field.

1,455,140. RUBBER FOOTWEAR. THEODORE E. LA FAYETTE, ALFRED A. GLIDDEN, and JOHN J. GAUGHAN, Watertown, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1920. Serial No. 434,042. 1 Claim. (Cl. 36—6.)



An article for forming the upper and heel strap of a rubber overshoe of the foothold type comprising a blank of fabric of substantially elliptical shape having a widened-out rear portion provided with a central opening, the rear edge of the blank being substantially concentric to the rear edge of said opening.

1,455,141. RADIO RECEIVING APPARATUS. PERCIVAL D. LOWELL and FRANCIS W. DUNMORE, Washington, D. C. Filed Mar. 27, 1922. Serial No. 547,111. 21 Claims. (Cl. 250—20.)



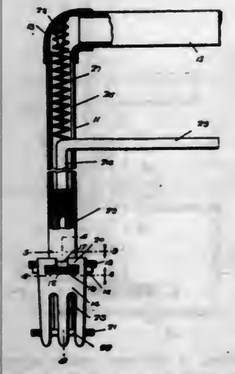
1. In an apparatus for receiving radio signals the combination of a source of signal energy, means for amplifying said energy, means for rectifying said

energy, and a source of alternating current for supplying power to said amplifying means and a plurality of

means in circuit with said amplifying means for eliminating the hum of said alternating current in said apparatus.

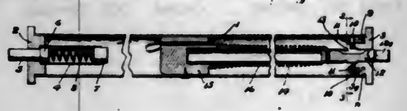
1,455,142. ROTARY TABLE FOR WELL BORING. JOSEPH D. LOYD, Hosston, La. Filed Sept. 10, 1921. Serial No. 499,675. 9 Claims. (Cl. 255—23.)

1. In a well boring apparatus, a rotary top including a base, an inner annular turntable operatively supported for rotation upon said base, an outer annular turntable disposed concentrically to and with its upper face in approximate alignment with the upper face of the inner turntable, the inner turntable having a tubular, centrally disposed member extending upward therethrough and extending through the base, a plate carried by the inner turntable and extending outward over the upper face of the outer turntable, said plate being less in diameter than the outer turntable, a bushing carried within the tubular member and engaged for rotation therewith and adapted to receive a driving bushing or pipe gripping slips, a pair of pipe gripping means engaging with each of said turntables, power operated means for rotating the outer turntable, and means for locking both turntables together for unitary movement and for locking the inner turntable against movement.



1,455,143. MEDAL HOLDER. ALBERT MAURER, New York, N. Y. Filed Nov. 15, 1921. Serial No. 515,214. 1 Claim. (Cl. 40—1.6.)

In a medal holder, the combination of a flexible bar for supporting a ribbon, seating members for pins secured to said bar, pins secured in said seating members, filler members secured to said bar between said seating members, a cloth covering secured about said bar and filler members, and hollow holding members having a threaded perforation and adapted to be screwed upon said pins, said pins being adapted to be inserted through

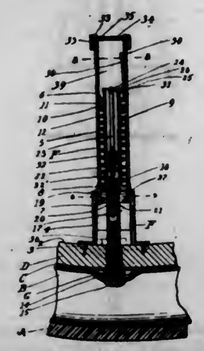


a garment, and said holding members being adapted to bear against the inner surface of said garment, whereby said bar is detachably secured thereto.

1,455,144. WEED EXTRACTOR. WALTER C. MOORE, Owensboro, Ky. Filed May 11, 1922. Serial No. 560,052. 6 Claims. (Cl. 55—65.)

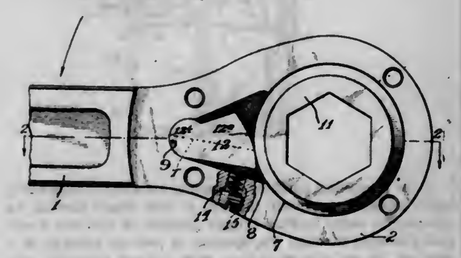
4. A weed extractor comprising a shank, a pair of plates secured to the shank, jaws, one of said plates having portions on which the jaws are fitted for swinging movement, and the other plate having slots receiving the jaws for retaining same on said portions, and operating means connected to the jaws.

1,455,145. SHADE ROLLER. ANTHONY MORPETH, Muskegon, Mich. Filed May 3, 1920. Serial No. 378,504. 4 Claims. (Cl. 156—36.)



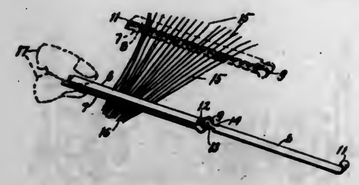
3. A shade roller comprising a hollow elongated metal body, a plug having an annular groove cut around the same inserted in one end of the body and soldered thereto, and pawls pivotally mounted on the plug at the inner end thereof, the pivot pins passing into the plug and to said groove, being headed in said groove to secure the pins on the plug, substantially as described.

1,455,146. SIGNAL DEVICE FOR TIRE VALVES. ALBERT NELSON, Wheaton, Minn. Filed May 19, 1922. Serial No. 562,139. 6 Claims. (Cl. 116—34.)



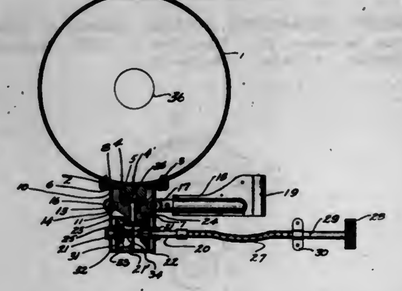
4. The combination with a wheel rim and a tire valve, projected radially loosely therethrough and being operatively connected to an inflatable tire carried by said rim, and formed with an upwardly facing annular shoulder near its top and having an air discharge valve and an actuating stem therefor, an elongated cylindrical casing carried by the rim completely enclosing the tire

valve, said casing having a soft rubber top wall, adapted to fracture under the pressure in the tire, a tubular open ended piston slidable longitudinally in said casing, the lower open end of the piston resting on said annular shoulder to form an air-tight joint therewith, means for urging the tire valve against the inflatable tire, said piston dividing the interior of said casing into an upper and lower chamber, the hollow of said piston being in



open communication with said upper chamber and adapted to receive the discharge from said discharge valve, a member carried by the piston pivotally mounted in a manner to be movable therein to actuate said actuating stem when said member is moved, a stationary member carried by the casing to engage with said member to move it during a piston movement, and a construction whereby the casing may be extended or contracted lengthwise.

1,455,147. WRENCH AND THE LIKE. WILLIAM J. O'NEILL, Oak Park, Ill., assignor to Edgar C. Guthard, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,169. 5 Claims. (Cl. 81—61.)

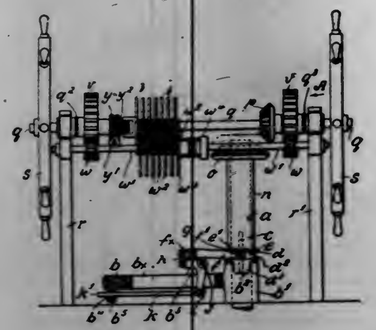


1. A tool comprising a lever provided with a head portion having a transverse aperture forming a wheel seat, a wheel rotatably mounted in said seat and having retaining bearing on parts of the head portion above the aperture, said wheel having a cylindrical peripheral friction surface, said head portion affording a dog seat adjacent the wheel seat and having a wall providing a rocker bearing, a dog mounted in said dog seat and having a journal portion in bearing engagement with the rocker bearing and an oscillatory body portion having an eccentric convexly arcuate surface in rocking engagement with the periphery of the wheel, and yielding pressure means effective to permit oscillation of the dog and maintain it in engagement with the wheel.

1,455,148. HAIR CURLER. ALBERT W. ROSSBERG, St. Paul, Minn. Filed May 18, 1922. Serial No. 561,960. 3 Claims. (Cl. 132—41.)

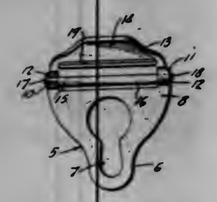
1. In a device of the class described, a main member of resilient material comprising two flat, smooth and integral arms of unequal length and normally spread apart gradually to their free ends, a second member comprising a curved extended arm of resilient material pivotally connected to the main member at the junction of its arms and adapted to be swung into coacting relation with the longer arm of the main member and engaging means on the free end of the second member for holding it in said coacting relation.

1,455,149. DIRIGIBLE LAMP. WILLIAM SCHIERDING, Spokane, Wash. Filed Feb. 18, 1922. Serial No. 537,470. 5 Claims. (Cl. 240—7.)



1. The combination in a dirigible lamp, with its fixed base plate and an arcuate rack-rib thereon, of a casing, a head in said casing and grooved to receive said rib, means for guiding said rib, a stud shaft in the head and a rack wheel thereon engaging the rack rib, and means for turning said shaft to tilt the lamp.

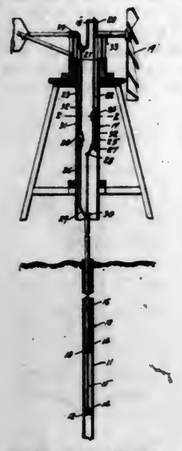
1,455,150. SPARK-PLUG CLEANER. AUGUST M. SEAVER, Grand Rapids, Mich. Filed Jan. 9, 1922. Serial No. 528,074. 1 Claim. (Cl. 15—104.01.)



A spark plug cleaner formed from a single length of material bent at its middle portion to provide two spaced apart nearly parallel legs, each of said legs at its free end portion being of rectangular cross section to provide a relatively thin blade, substantially as and for the purposes described.

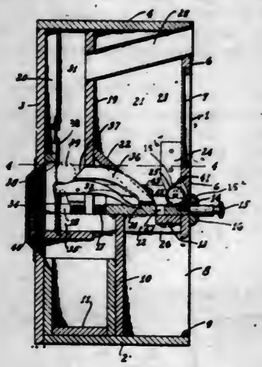
1,455,151. STEERING GEAR FOR STEAMSHIPS. JOHN T. SHAW, CHARLES ADOLPHUS WEYMOUTH, and BEN HARRY PEARSON, Huddersfield, England. Filed June 22, 1921. Serial No. 479,678. 13 Claims. (Cl. 114—146.)

1. In steering gear for steamships, a quadrant adapted to be controlled by power gear, a rudder post, means for operatively connecting the quadrant to said rudder post, and means whereby on the quadrant swinging through an arc of predetermined length in either direction it is disconnected from the rudder post.



1,455,152. BRASSIÈRE HOLDER. ROBERT C. SHEAFFER, Lancaster, Pa. Filed Nov. 2, 1922. Serial No. 598,552. 1 Claim. (Cl. 24—73.)

A brassière holder comprising a plate having a key hole slot for the reception of the stud of a corset fastener, one end portion of the plate being extended at right angles to the major portion of said plate to provide a jaw, said jaw having bearing extensions projecting therefrom, and in the plane of the jaw, a clamping lever, one end portion of said lever being extended in angular relation to and inclined toward the lever to provide a jaw, and to permit the opposite end portion of the lever to be normally disposed closely adjacent the plate in an inclined position, trunnions projecting from the ends of the jaw and adapted to engage the bearing extensions, said lever having an elongated slot adjacent the jaw thereof for the reception of a length of material, extending from that portion of the material clamped between said jaws.

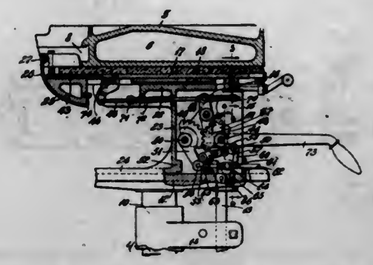


1,455,153. PUMPING APPARATUS. HENRY H. SMITH, Cherryvale, N. Mex. Filed Aug. 23, 1922. Serial No. 583,836. 2 Claims. (Cl. 103—59.)

1. The combination with a pump embodying a barrel, upper and lower pistons operating within the barrel, the upper piston having a tubular stem and the lower piston having a stem extending upwardly through the tubular stem of the upper piston, and a swivel head windmill embodying a drive shaft provided with cranks, of pump rods having swivel connection with the stems of said pistons, connecting rods connecting the pump rods with said

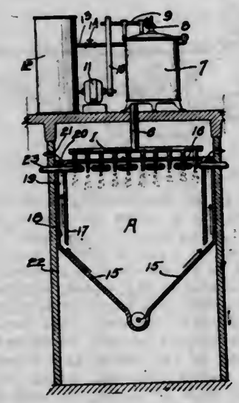
cranks, and a connection between the windmill head and pump rods maintaining a fixed axial relation therebetween.

1,455,154. VENDING MACHINE. SOLON G. THOMAS and ROCHELL E. KIGHT, Cordell, Okla. Filed Sept. 10, 1921. Serial No. 499,596. 3 Claims. (Cl. 194—57.)



1. In a vending machine, a casing, an article dispensing valve slidably mounted therein, a coin chute having an opening, a valve locking trigger pivoted in the coin chute and extended through the opening to prevent passage of a coin of proper denomination, said trigger normally preventing a discharge movement of the valve, and a plunger carried by the valve and operated in the discharge movement thereof to force a coin through said opening and throw the trigger out of locking position.

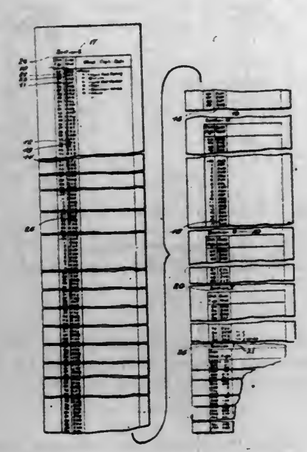
1,455,155. IRONING MACHINE. CHARLES E. WARHAM, Cincinnati, and DANA H. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Original application filed July 2, 1917, Serial No. 178,286. Divided and this application filed Nov. 13, 1917. Serial No. 201,785. 11 Claims. (Cl. 68—9.)



1. An ironing machine, comprising an ironing chest, an ironing board having movement into and out of

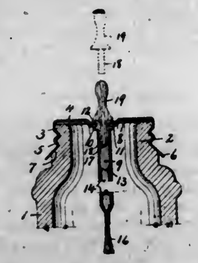
registering relation with said chest, means for producing relative ironing movement of said chest and board when in registering relation, a back yoke ironer co-operating

with said board, and means for moving said back yoke ironer into ironing relation with said board only when the latter is out of registering relation with said chest.



1,455,156. APPARATUS FOR REFRIGERATION. RUSSELL A. WILLSON, Spokane, Wash., assignor of one-half to Fred N. Martin, Spokane, Wash. Filed Oct. 11, 1921. Serial No. 507,004. 6 Claims. (Cl. 62—114.)

1. The combination with an enclosure and means therein for maintaining the atmosphere at a temperature below the freezing point, of liquid atomizers in said enclosure, means for receiving the congealed atoms from said atomizers, and spaced interior walls within the enclosure with their lower ends terminating above the bottom of the enclosure to form venting spaces.

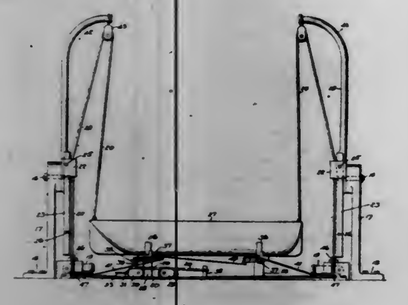


1,455,157. CODE TABLE. CHARLES F. WOOD, Chicago, Ill. Filed Feb. 2, 1921, Serial No. 441,889. Renewed Apr. 9, 1923. 7 Claims. (Cl. 283—17.)

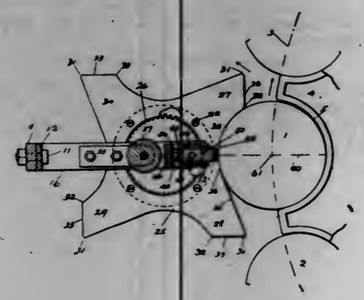
1. A code table comprising, in combination, a column of syllables divided into sections, the syllables in each section being substantially like the syllables in other sections, each syllable comprising two consonants separated by a vowel, a designating vowel for each sec-

tion and a column of arbitrary meanings one for each syllable, the meanings for like syllables in the various sections differing.

1,455,158. COMBINATION OF BOTTLE CAP AND BRUSH HOLDER. ALONZO WOODRUFF, Auburn, N. Y. Filed July 19, 1921. Serial No. 485,833. 1 Claim. (Cl. 91—67.2.)



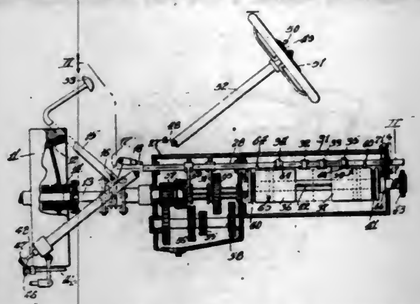
A bottle cap having a substantially flat top and a downwardly projecting marginal flange threaded for screw engagement with the mouth of a bottle, in combination with a brush holder having a tubular upper end secured co-axially in an opening in said top wholly below the upper flat face thereof, and a handle having a stem slidably engaged in the tubular upper end of the brush holder.



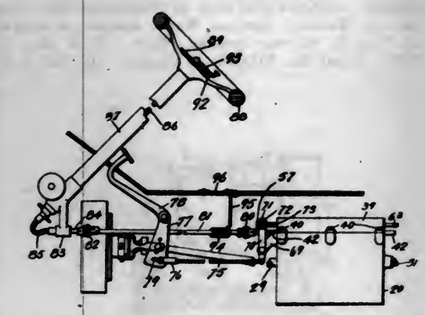
1,455,159. BOAT-LAUNCHING MECHANISM. GEORGE WRIGHT, South Orange, N. J. Filed Sept. 24, 1919. Serial No. 326,031. 6 Claims. (Cl. 9—22.)

1. A mechanism as characterized comprising a plurality of boat handling mechanisms each embodying a plurality

of suspension davits, pivots for said davits, a plurality of guide pulleys slidably mounted on said davits for adjustment at opposite sides of said pivots, and hoisting cables operatively mounted on said davits for engaging the said guide pulleys in adjusted positions.



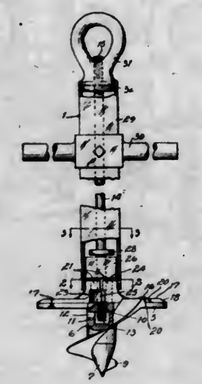
1,455,160. MARKER. BUNZUCHI YOSHINAGA, Vancouver, Wash. Filed Nov. 11, 1919. Serial No. 337,132. 5 Claims. (Cl. 101—37.)



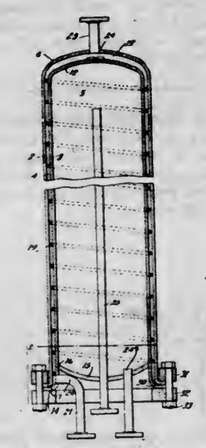
1. In a machine for the purpose described, the combination with a rotatory printing member, and horizontally disposed rotatable means for actuating the same with printing effect upon the side of each of a succession of objects, of rotative mechanism operating in a plane parallel to that of the said rotatable means to effect the constant movement of objects in regular spaced order through a fixed arcuate course intersecting that of the said rotatable means with operative impelling force against the rotatable means.

1,455,161. GEAR SELECTING AND CHANGING DEVICE. JASPER BLACKBURN, Webster Groves, Mo. Filed Sept. 2, 1919. Serial No. 321,106. 12 Claims. (Cl. 74—58.)

1. A gear selecting and changing device comprising in combination with a sliding gear transmission provided with gear shifting bars and forks, a pair of spaced apart reciprocating and rotating members, pins carried by said members, fingers mounted on the gear shifting bars, means for adjusting said rotating and reciprocating members from the steering wheel, so that certain ones of said projections may contact with and actuate certain of said fingers and the bars on which they are mounted, a foot pedal, means for preventing accidental movement of the gear shifting bars, and a rod and lever connection between said foot pedal and rotating and reciprocating members for moving them both simultaneously in the opposite direction.



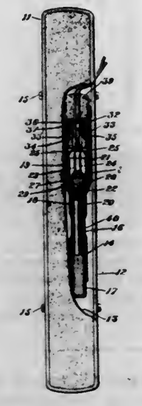
1,455,162. GEAR SELECTING AND SHIFTING DEVICE FOR MOTOR VEHICLES. JASPER BLACKBURN, Webster Groves, Mo. Filed Feb. 7, 1920. Serial No. 357,032. 15 Claims. (Cl. 74—58.)



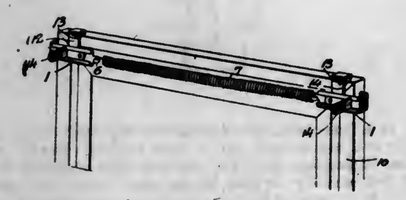
1. In a device of the class described comprising a sliding gear transmission, a casing surrounding said transmission, a second casing secured to the upper end of said first mentioned casing, a pair of sliding bars having projections mounted in second mentioned casing, a splined shaft mounted central of the second mentioned casing and between the sliding bars, sleeves slidably mounted on said shaft and rotatable therewith lugs formed on the sleeves, said lugs adapted to come in contact with the projections formed on the sliding bars a pair of rods mounted in the second mentioned casing, means interposed between the rods for moving the same in opposite directions simultaneously, means for connecting the rods and movable sleeves so as to impart motion to the sleeves, a preselecting device mounted on the steering column of an automobile, a flexible shaft connection extending from the preselecting device through the steering column and connected to the shaft, a lever mechanism for operating one of said movable rods in combination with an engine and its clutch, and means for simultaneously operating the lever by the disengagement of the engine clutch.

1,455,163. EXPANDING SCREW ANCHOR. JASPER BLACKBURN, St. Louis, Mo. Filed Feb. 9, 1922. Serial No. 535,213. 3 Claims. (Cl. 189—92.)

1. An expanding screw anchor comprising a boring member in the form of a disc, a pointed projection formed integral with the underside of said disc, a helix encircling said pointed projection and integral therewith and with said disc, an opening formed in said disc adjacent the upper portion of said helix, expanding plates pivotally secured to the upper surface of said disc, a rod secured in said disc and projection, an expanding member loosely located on said rod, means for preventing lateral movement of said expanding member, under cut projections integrally formed with the expanding plates, said under cut projections surrounding the lower portion of the expanding member, a rectangular portion formed integral with the expanding member and above the under cut projections, and a wrench for inserting said anchor into the ground and for rotating the expanding member for forcing the expanding blades outward when the anchor is sunk into the ground.

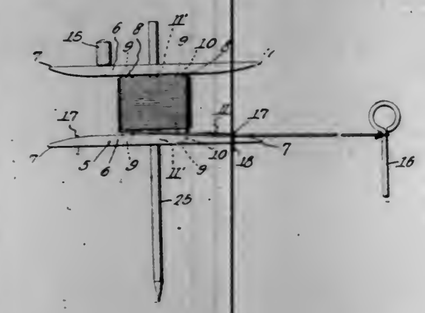


1,455,164. OIL HEATER. GARNET W. COEN, San Francisco, Calif. Filed Sept. 28, 1921. Serial No. 503,728. 6 Claims. (Cl. 257—232.)



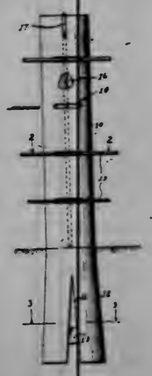
2. A heater comprising a pair of concentric cylindrical telescoping shells, said shells being interspaced to form an annular liquid flow passage between the shells, an integral head member for each shell forming a closure for the upper end thereof, said heads being interspaced, a head member forming a closure for the lower end of the inner shell and welded thereto, said head member forming an inner heating medium chamber, means for circulating a heating medium therethrough, means for admitting oil to the lower end of the annular flow passage, means for discharging the oil from the upper end thereof, an annular outwardly extending flange formed on the lower end of each shell and one disposed on top of the other, a gasket interposed between the flanges, an upper and a lower annular clamping ring engaging the respective flanges, and bolts connecting the respective clamping rings.

1,455,165. DELAY-ACTION EXPLODER. ELMER CUDNEY, Stege, Calif. Filed Nov. 3, 1920. Serial No. 421,488. 7 Claims. (Cl. 102—10.)



1. A delay action exploder including a fulminating cap, a fuse secured to one end thereof, a container for an ignition charge of explosive, a second container inclosing the first named container to form a combustion chamber, a spitter shell having one end closed inclosing said containers and secured to the fuse, electrical exploding means extending into the spitter shell and into the first named container, and a filter plug between the said containers and the closed end of the spitter shell, and means to circulate the gases of combustion from the inner container through the filter plug.

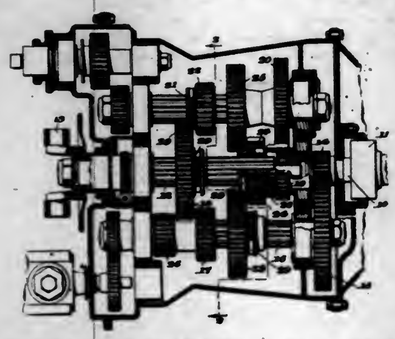
1,455,166. SHADE HOLDER. AMOS R. HINDERLITER, Falls Creek, Pa. Filed July 26, 1920. Serial No. 398,880. 1 Claim. (Cl. 156—23.)



A shade roller bracket comprising a supporting base of rectangular shape having its longitudinal edges inturned to provide guide flanges, an angle shade engaging bracket received in said guiding flanges, said base having one end reduced and bent upon itself to provide a spring engaging eye, the opposite end of said base being flanged inwardly and the flanged portion being bent at a right angle and toothed, a clamp pivotally secured to the base and having its free end bent and designed to provide gripping teeth as and for the purpose specified.

1,455,167. HAND REEL. JOHN JOSLIN, Princeville, Ill. Filed Dec. 8, 1922. Serial No. 605,659. 2 Claims. (Cl. 242—96.)

1. A hand reel comprising a frame including a pair of spaced longitudinal side members, transverse members connecting the side members and having the line wound thereon, and a resilient clamping element secured to one side member near its end, said resilient clamping element including an arm extending transversely over the edge of the side member and projecting laterally beyond the outer side face of the same for a substantial distance, the outer end portion of the arm constituting a guide for the line brought in proximity to the outer face of the side member.

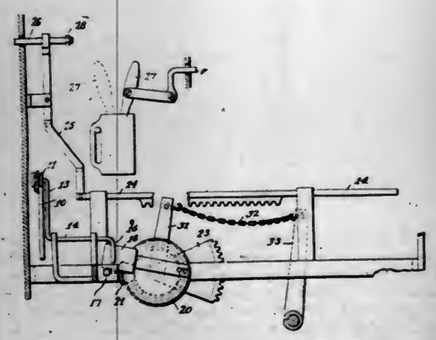


1,455,168. FENCEPOST. HENRY T. KLINE, Warsaw, Ind. Filed Jan. 11, 1922. Serial No. 436,471. 2 Claims. (Cl. 189—31.)

1. In a fence post, the combination of a shell having a slit in one end thereof, and a rigid unitary spreader of greater dimensions than the internal dimensions of the shell permanently wedged in the shell from said end thereof to be carried by the shell flaring the shell at its adjacent extremity and sustaining said extremity of the shell flared.

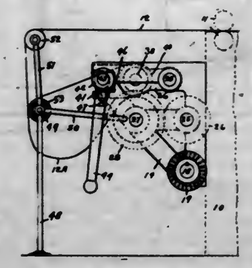
1,455,169. MOTOR VEHICLE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1920. Serial No. 356,823. 7 Claims. (Cl. 74—58.)

1. In a motor vehicle, a change speed mechanism having a drive shaft in two sections, gears on said sections a pair of counter shafts having gears thereon adapted for engagement with the corresponding gears on the drive shaft and including shiftable gears, one of said drive shaft



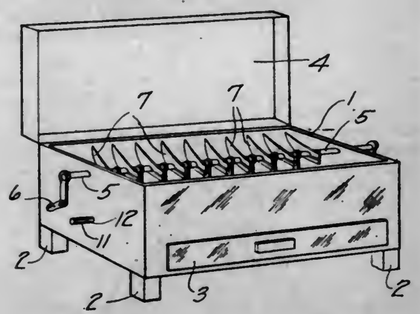
shiftable gears being movable with a gear on the other counter shaft, and shifting means operable to effect said joint operations.

1,455,170. PENCIL. WALTER R. NOE, New York, N. Y. Filed Nov. 18, 1921. Serial No. 516,105. 3 Claims. (Cl. 120—18.)



3. A pencil of the kind described comprising a barrel provided with an open ended slot and a transverse recess communicating therewith, a clip mounted upon said barrel and concealing said slot and recess, mechanism within said barrel for advancing a lead, a shoulder connected with said mechanism and located externally of said barrel at one end thereof, and a tongue operatively combined with said shoulder and movable through said slot and into said recess to resist a separation of said shoulder from said barrel, said tongue being arranged to frictionally engage said clip and being held thereby against unintentional displacement.

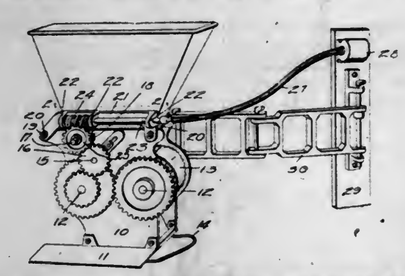
1,455,171. STOP MOTION FOR SPINNING FRAMES. CHARLES E. PEARCE, Cooleemee, N. C., assignor of one-eighth to John S. Strowd, one-fourth to Charles W. Alexander, and one-fourth to James W. Zachary, Cooleemee, N. C. Filed Feb. 9, 1922. Serial No. 535,235. 15 Claims. (Cl. 118—5.)



7. In combination with a spinning-frame, a tripping means operated by the builder mechanism, and a stopping mechanism put into action by said tripping means, said stopping means embodying devices which complete the stopping operation through the same source of power which operates the spinning-frame, said stopping mechanism embodying a continuously-running driving pinion, a mutilated driven gear, and a weight attached to said gear and normally supported by a part of the tripping means and adapted when released by the tripping means to actuate the mutilated gear into mesh with said pinion, for the purpose set forth.

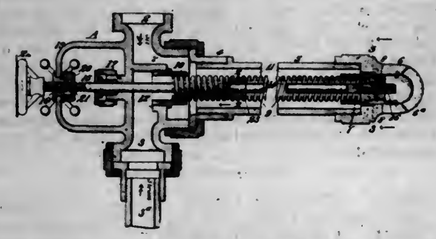
1,455,172. FOIL-EMBOSSING MACHINE. JOSEPH PAUDHOMME, Portland, Oreg. Filed May 23, 1922. Serial No. 563,169. 5 Claims. (Cl. 101—23.)

1. The combination of a cylindrical electrotype driven in unison with a printing press with an adjustable roller adapted to press foil against said electrotype and to be frictionally driven by said electrotype.



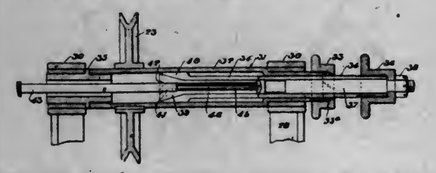
1,455,173. CHOPPING AND SLICING MACHINE. LEE W. SCARBOROUGH, Humble, Tex. Filed May 28, 1921. Serial No. 473,534. 1 Claim. (Cl. 146—11.)

A chopping and slicing machine comprising a suitable case; a knife shaft journaled medially through the case; a plurality of curved cutting knives on the knife shaft, aligned and spaced equally apart; a food holding rack vertically mounted below the knives, same including a rack rod mounted parallel to and below the knife shaft and a plurality of curved rack guards extended between the rack rod and the knife shaft, one guard between each pair of adjacent knives; and means for rotating the knife shaft.



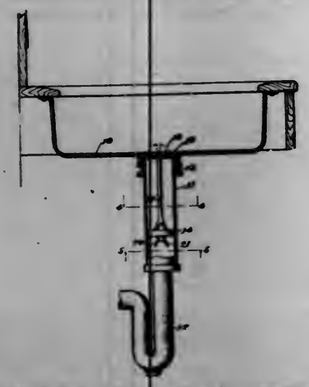
1,455,174. DOUGHNUT-MACHINE ATTACHMENT. AUGUST SCHOEL, Waterloo, Iowa, assignor to George Schoel, Waterloo, Iowa. Filed Jan. 16, 1922. Serial No. 529,535. 1 Claim. (Cl. 107—14.)

In a device of the class described, a support, an arm pivoted for swinging movement mounted on said supports, a doughnut cutting and forming machine frame having shafts journalled therein supported on said arm, gearings for operatively connecting the shafts together for driving them, an auxiliary frame having a pair of downwardly extending ears, said ears being provided with openings for mounting it on the frame of the doughnut machine, bearing members projected at right angles to the main



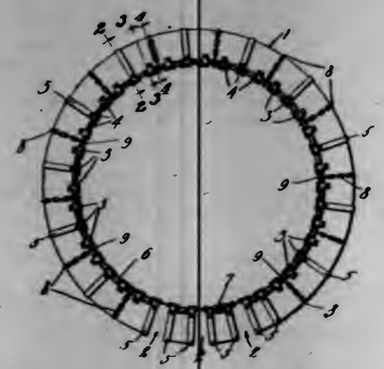
body portion of said auxiliary frame, a longitudinal shaft journalled in said bearing members, a worm wheel on one of said first shafts, a worm on said longitudinal shaft in mesh with said worm wheel, a motor on said support and a flexible shaft for operatively connecting the longitudinal with the motor for driving the last shaft.

1,455,175. BURNER. CARLYLE J. SHERWOOD, San Francisco, Calif., assignor to Coen Co., San Francisco, Calif., a Corporation of California. Filed Sept. 10, 1919. Serial No. 322,938. 13 Claims. (Cl. 236—8.)



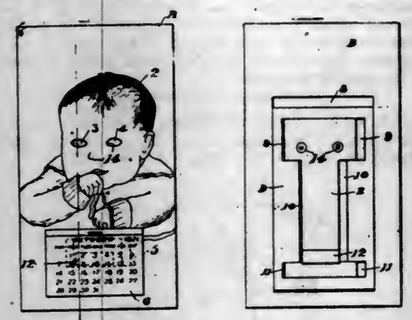
13. In a device of the character described, a casing, a corrugated tube within said casing, means for securing one end of the tube, means for delivering a liquid under pressure to the interior of the tube, and means for delivering a separate liquid under pressure to the casing, and a valve member secured to the end of the tube operable for simultaneously decreasing or increasing the flow of a liquid from the tube and casing.

1,455,176. VALVE-GRINDING MACHINE. JOHN P. SIMMONS, San Francisco, Calif. Filed June 29, 1921. Serial No. 481,236. 5 Claims. (Cl. 279—52.)



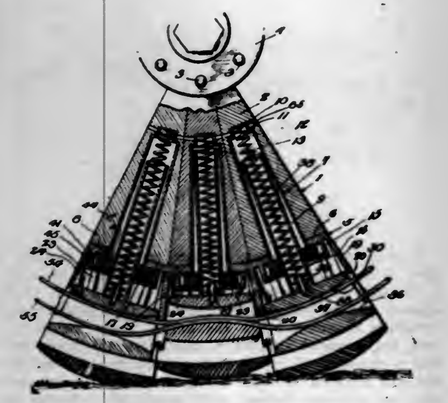
1. In a valve grinding machine a head stock having a tubular rotating mandril, a chuck structure incorporated within said mandril for receiving the end of a valve stem, means for adjusting the chuck relatively to the mandril to accommodate valve stems of varying lengths, and means for clamping the chuck onto the stem to thereafter be rotated by the mandril.

1,455,177. SEWER FLUSHER. ARCHIBALD STAFFORD, Sacramento, Calif. Filed May 10, 1922. Serial No. 559,746. 2 Claims. (Cl. 4—8.)



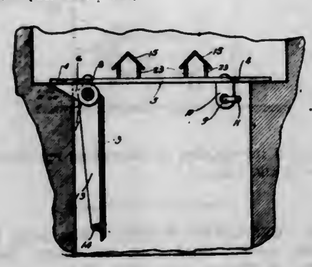
1. In combination with a sink and a sewer pipe connection therefor, of a cylinder connected at its ends to the drain opening of the sink and said pipe and interposed between the same, an expansible split ring slidably disposed in said cylinder, a plunger rod extending longitudinally within said cylinder the lower end of said rod being forked and connected to said ring in a manner to permit expansion thereof, a strainer member comprising two complementary perforated parts hingedly connected at their meeting edges to the upper end of the plunger rod whereby they may serve as a strainer for the drain opening of the sink or as a handle for said rod, a pair of hinged semi-circular flap valves carried by said ring at the under side thereof, said valves being closable upwardly when the ring is forced down and stop members carried by the ring to retain the valves at an inclination when open to insure closing by pressure when the ring is forced down.

1,455,178. ANTISKID CHAIN. WILLARD B. TERRY, Salt Lake City, Utah. Filed May 11, 1921. Serial No. 468,641. 1 Claim. (Cl. 152—16.)



In a device of the class described, a body; retainers extended around the longitudinal edges of the body to form loops; reinforcing strips extended transversely of the body and overlapped on certain of the retainers; securing elements connecting the retainers with the body, certain of the securing elements engaging the reinforcing strips; and circumferential members passing through the retainers.

1,455,179. ADVERTISING DEVICE. ALBERT F. WARD, San Francisco, Calif. Filed Nov. 2, 1921. Serial No. 512,305. 7 Claims. (Cl. 40—138.)

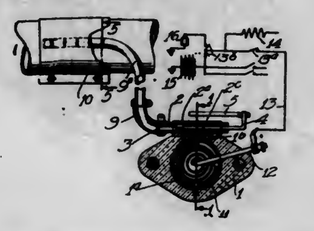


1. An advertising device of the character described comprising a front plate, an intermediate plate, a rear plate, the intermediate plate having a cut out portion forming a recess between the front and rear plates, a picture on the front plate, the front plate having openings therein registering with certain facial portions of said picture, a plate in the recess of the intermediate plate having portions of the picture printed thereon to register with the openings in the front plate, and means movable in a direction transversely of and longitudinally of the front plate and having connection with the plate in the recess of the intermediate plate whereby to impart movements in different directions to the plate in the recess.

1,455,180. RESILIENT WHEEL. SOTORIOUS D. WARNER, Kokomo, Ind. Filed May 20, 1920. Serial No. 382,735. 18 Claims. (Cl. 152—31.)

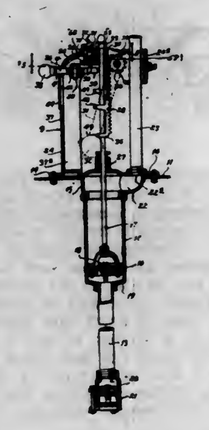
1. In a wheel of the class described, a rim having side walls, a circumferential series of radially movable cushioning members having body portions working between the side walls, the said members being free from intervening connections with one another and having circumferential play, the said walls being provided with guiding means each defining an approximately U-shaped path, and means upon the said body portions of the cushioning members coacting with the guiding means.

1,455,181. FURNACE GAS PRODUCER. CLIFFORD E. WENTZEL, Dayton, Ohio, assignor to International Clay Machinery Company, Dayton, Ohio, a Corporation of Maine. Filed Apr. 22, 1920. Serial No. 375,714. 27 Claims. (Cl. 110—31.)



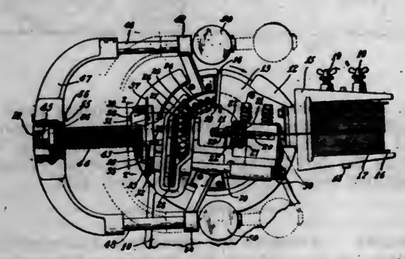
7. The combination with a furnace comprising a combustion chamber and an ash pit, of a bed plate interposed between said ash pit and said combustion chamber and having an opening therein, a structure movable into and out of a position to close said opening and adapted to support fuel and ashes in said combustion chamber, and a tuyere supported by said bed plate, extending across said opening and having outlets arranged to discharge into the fuel and ashes on said movable structure.

1,455,182. SHEET-METAL CAN. FREDERICK WESTERBECK, St. Louis, Mo. Filed Dec. 12, 1921. Serial No. 521,644. 6 Claims. (Cl. 220—24.)



1. A sheet metal can having an internal annular closure seat on the inner face of its upper edge, and a closure embracing said upper edge, said closure having an annular sealing web engaging said internal annular seat to form a seal inside of the can, said closure also having a marginal flange provided with a downturned portion engaging the outer side face of the can and an outwardly extending portion located above the upper edge of the can to receive a closure-removing tool.

1,455,183. FUEL-PREPARING APPARATUS FOR GAS ENGINES. FRANK G. WRIGHT, San Diego, Calif. Filed Aug. 3, 1920. Serial No. 400,941. 5 Claims. (Cl. 219—38.)



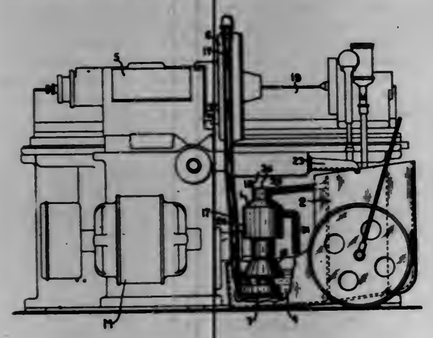
1. A fuel preparing apparatus for gas engines, including a gasket like member interposed between the carbureter and intake manifold of a gas engine provided with a plurality of air inlet ports, a valve communicating with said air inlet ports and means connecting said valve with the spark lever of the vehicle whereby said valve will remain closed while the spark is retarded for starting purposes and is opened with certain advanced movement of the spark lever.

1,455,184. LIQUID MEASURING AND DISPENSING APPARATUS. ANDREW D. WYCKOFF, Maywood, Ill., and HOWARD P. DE CORRSVONT, Chicago, Ill., assignors to Oil Products Appliance Co., Maywood, Ill., a Corporation of Illinois. Filed Jan. 5, 1921. Serial No. 435,127. 8 Claims. (Cl. 221—103.)

1. A liquid measuring and dispensing appparatus comprising a measuring cylinder having an inlet opening and a discharge opening, a plunger reciprocating in said cylinder, a plunger stem for said plunger, a bearing bracket for the upper end of said stem, a rack bar secured to said stem above said bearing bracket, and having disposed along its length, a plurality of spaced, unaligned stop shoulders, means for operating said rack bar, and oscillatory setting mechanism capable of being interposed in the path of movement of any of said stop shoulders to determine the length of stroke of said plunger, whereby various predetermined quantities of liquid may be discharged from said cylinder.

1,455,185. WINDER-BALANCING MECHANISM. HARVEY L. YOUNG, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1921. Serial No. 493,257. 14 Claims. (Cl. 117—5.)

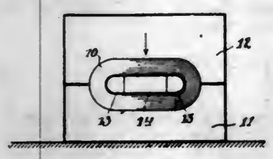
1. In a winding mechanism, the combination of a winder-ring, a reel mounted thereon, work-driving means carried by said winder-ring and adapted to be driven



during the revolution thereof for withdrawing material from said reel, a weight mounted on said winder-ring and adapted to be moved thereon to compensate loss of material from said reel, and means timed with said work-driving means for so moving said weight.

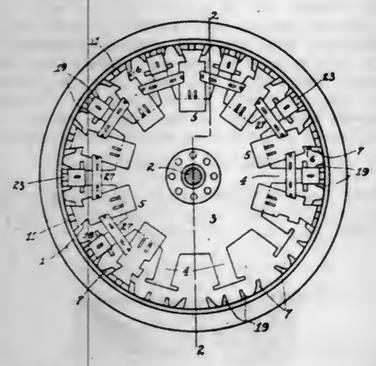
1,455,186. FURNACE FOR LIQUID FUEL. ERICH BECKER, Bad Sooden, Germany. Filed Dec. 20, 1921. Serial No. 523,793. 3 Claims. (Cl. 158—91.)

1. An improved furnace for liquid fuel in which the gasifying gutter is surrounded at all sides by air for combustion comprising in combination with the annular gasifying gutter, supports for the inner circumference of said gutter, a dome-shaped cover of said gasifying gutter, a ring-shaped grate upon said supports serving as passage for part of the air for combustion, feet of said gasifying gutter and a wall of refractory material upon the upper edge of which said gasifying gutter is mounted by means of its feet so that a gap is formed between the lower surface of said gutter and the upper edge of said wall said gap serving as passage for the remainder of the air for combustion this air being thus subdivided into two separate currents.



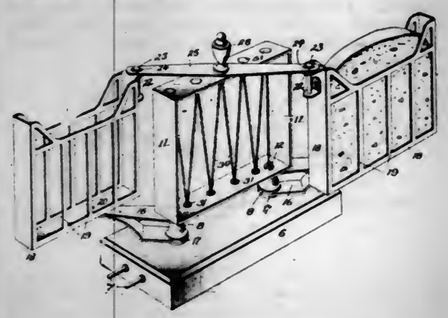
1,455,187. GRINDING-FLUID-CIRCULATING SYSTEM. GREGORY BROWN, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 31, 1921. Serial No. 457,554. 5 Claims. (Cl. 51—267.)

1. In a grindisg machine having a grinding wheel, a circulating system for continuously supplying grinding fluid to the wheel, comprising conduits and means for forcing the fluid through the conduits and centrifugally separating solid particles from the used fluid.



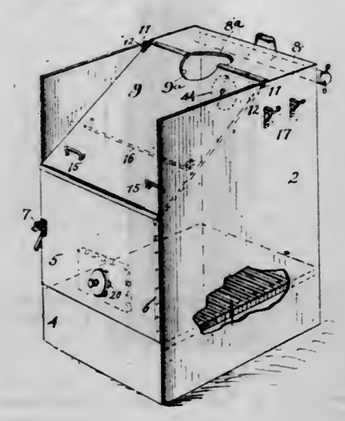
1,455,188. METHOD OF FORMING FLAT COILS. HENRY G. COX, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 23, 1919. Serial No. 306,033. 11 Claims. (Cl. 175—21.)

11. A process of forming magneto coils which includes the steps of winding the coil in cylindrical form, pressing the coil into flattened form by external and internal



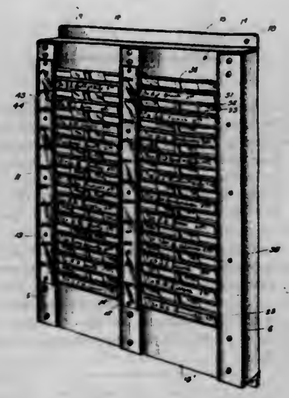
pressure, and introducing an insulating material between the loops of the coil.

1,455,189. RESILIENT WHEEL. BENJAMIN F. CRUM, Oakland, Calif. Filed Aug. 22, 1922. Serial No. 583,508. 3 Claims. (Cl. 152—28.)



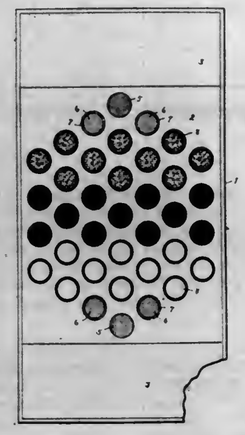
2. A resilient wheel comprising a rim, a load carrying plate adapted to be secured to the automobile axle, radial fingers on said plate, main radial spring holders straddling said plate between said fingers, said spring holders having a central bore formed therein, and a spring positioned in said bore between said rim and said plate.

1,455,190. TOASTER. WILLIAM W. DODGE, Jr., Meriden, Conn. Filed Apr. 22, 1922. Serial No. 555,996. 4 Claims. (Cl. 53—5.)



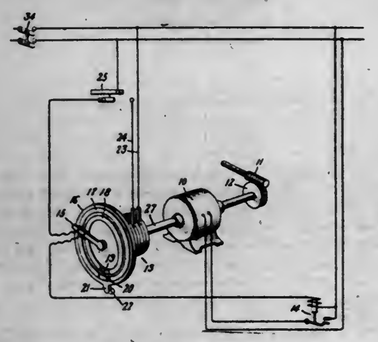
1. The combination of a heating element having opposite effective faces; a bread carrier; and supporting and guiding means serving to present said carrier to the opposite faces of said heating element by translatory movement.

1,455,191. CABINET. FRANK C. DORMENT, Cleveland, Ohio, assignor, by direct and mesne assignments, to The Mineral Bath Cabinet Company, a Corporation of Ohio. Filed May 2, 1921. Serial No. 465,961. 6 Claims. (Cl. 4—13.)



1. A cabinet, having side walls, a top extending transversely between the side members but narrower than the width of the side walls, a front wall extending between the side members but of less height than the side walls, a cover member which extends diagonally between the front wall and the top, said cover having side extending members at one end thereof which overlie the top of each of the side walls, said cover member being movable to a substantially vertical position the side extending members of the cover moving in contact with the tops of the side walls.

1,455,192. INDICIA-CARRYING RACK. JOSEPH R. DUMONT, Kansas City, Mo. Filed June 26, 1922. Serial No. 571,005. 7 Claims. (Cl. 129—16.)

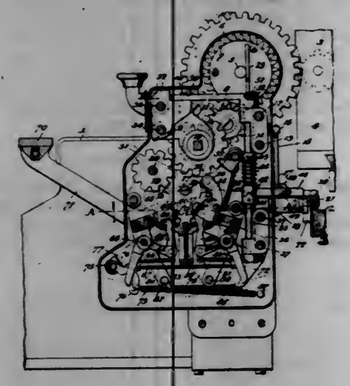


5. A rack comprising a frame, signal and card pockets in said frame, the card pockets alternating with the signal pockets and the successive pockets interengaging whereby each pocket except the first is supported by the pocket above it.

1,455,193. GAME. DUNCAN J. DUQUETTE, Duluth, Minn. Filed Apr. 3, 1922. Serial No. 549,324. 2 Claims. (Cl. 46—64.)

2. A game of the character described comprising a board having spaced checks or spots thereupon on which to play, said spots from the center of opposite ends of the board being spaced obliquely therefrom, the nearest one only of said spots to either end of the board being used as a goal, two groups of checkers of different colors to be used on the board by opponents in play and checkers of different colors representing individual values in each group, substantially as described.

1,455,194. MOTOR CONTROL. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1921. Serial No. 452,520. 4 Claims. (Cl. 172—239.)

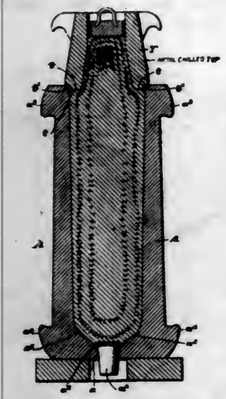


1. A controller for electric motors comprising two relatively movable contact members, the first of which is adjustable with reference to the second and the second of which is biased to one position and is normally connected to the motor to be moved thereby against its bias to a position at which the circuit through the members is interrupted, a normally deenergized electromagnetically controlled coupling connecting the motor and the second member which when energized releases the said member and permits the same to return to its biased position, and connections controlled by the said members for controlling the energization of the said motor.

1,455,195. CORE HOLDER OR SUPPORT. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Apr. 13, 1920. Serial No. 373,572. 2 Claims. (Cl. 242—68.)

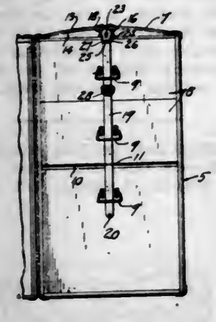
1. A core holder comprising a pair of axially apertured discs, a series of spaced resilient rods terminally secured to the discs within the peripheries thereof and bowed outwardly beyond the plane of said peripheries, whereby a core of an internal diameter corresponding approximately to the diameter of the discs will be engaged by both the disks and rods when forced upon the holder.

1,455,196. CROSS-FOOTER REGISTER FOR WRITING ADDING MACHINES. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Dec. 31, 1920. Serial No. 434,254. 11 Claims. (Cl. 235—59.)



4. In a register of the class described, the combination with a series of number wheels and carrying mechanism, of a master wheel movable across the series of number wheels, a master wheel carriage, a master wheel advancing mechanism including a shaft having two arms, one engaging the master wheel carriage and a relatively fixed part arranged to be engaged by the other arm, and a yielding safety connection between one of said arms and the shaft.

8. In a register of the class described, the combination with a series of number wheels, a series of trips and two series of carrying devices, the opposite carrying devices having tailpieces connected by motor springs, of restoring mechanism including a pair of restoring bars, a system of links having a toggle action for restoring the carrying devices, a restoring frame arranged to operate the toggle, and retracting springs for the restoring frame.

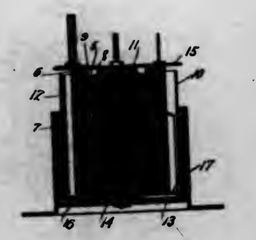


1,455,197. INGOT MOLD AND INGOT. EMIL GATHMANN, Baltimore, Md. Filed July 15, 1922. Serial No. 575,312. 16 Claims. (Cl. 22—213.)

1. An ingot mold having a metallic heat absorbing top portion adapted to form the upper part of the ingot and to be removable from the main body of the mold

and constructed to chill and thus quickly freeze the upper part of the ingot.

1,455,198. DRAWER-LOCKING DEVICE FOR TRUNKS. JOSEPH P. GIBSON, Spring Valley, Ill. Filed July 19, 1922. Serial No. 576,070. 1 Claim. (Cl. 45—94.)

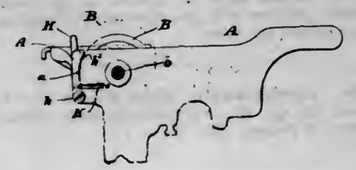


In combination with a truss for bulging the end wall of a wardrobe trunk section, said truss having its upper face longitudinally curved and having a socket in the outer side face thereof, said outer face being disposed flush with the outer walls of the drawers of said trunk section, a socket lock keeper disposed in the recess of the truss, and having ears engaged with and secured to the outer face of the truss, inwardly of the longitudinal edges of said truss, and a holding bar arranged to engage the drawers, a trunk lock secured to one end of the bar and extending beyond said end, the body portion of said lock being disposed parallel to the outer face of the truss and the outer walls of the drawers, the locking mechanism of said lock being adapted to enter the socket lock keeper.

1,455,199. COIL AND CONDENSER TREATMENT. FRANK J. GROTEN, Jr., Meriden, Conn., assignor to The Connecticut Telephone & Electric Co., Inc., Meriden, Conn., a Corporation of Connecticut. Filed Feb. 26, 1920. Serial No. 361,392. 8 Claims. (Cl. 91—70.)

1. The improvement in the art of preparing electrical elements such as coils and condensers which comprises

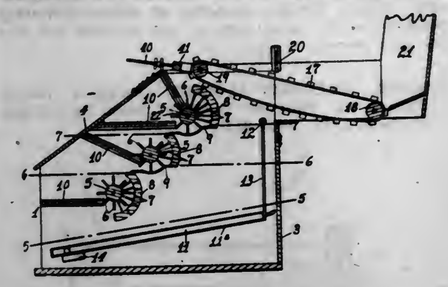
heating the element to approximately 60° C. and then impregnating it with a compound of synthetic resin and



oil at a temperature of between 125 and 140° C. draining the element and then cooling it.

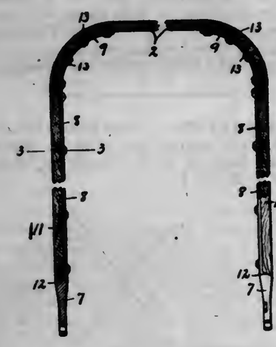
1,455,200. INSULATING COMPOSITION FOR ELECTRICAL APPARATUS. FRANK J. GROTEN, Jr., Meriden, Conn., assignor to The Connecticut Telephone & Electric Co., Inc., Meriden, Conn., a Corporation of Connecticut. Original application filed Feb. 26, 1920, Serial No. 361,392. Divided and this application filed Nov. 12, 1920. Serial No. 423,649. 7 Claims. (Cl. 106—15.)

1. An impregnating composition having a melting point of approximately 60° C. comprising a synthetic resin formed from the neutral polymers of para-coumarone, paraindene and other hydrocarbons obtained from a coal tar distillate and mixed with an oil.



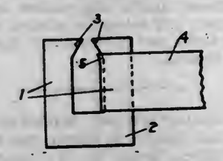
1,455,201. TYPEWRITING MACHINE. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1922. Serial No. 568,171. 11 Claims. (Cl. 197—144.)

1. In a typewriting machine, the combination with a main or cylindrical platen, of an auxiliary platen in the form of a strip of relatively hard material curved to correspond to the curvature of the main platen and mounted in supports having guiding portions curved correspondingly with the curvature of the platen and which guiding portions are arranged wholly in front of the main platen.



1,455,202. PEA-HULLING MACHINE. ARNOLD HEUCKENDORFF, Oakland, Calif. Filed May 24, 1920. Serial No. 383,745. 6 Claims. (Cl. 130—30.)

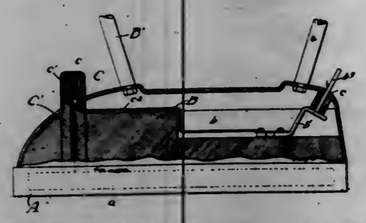
6. In a pea sheller, a plurality of rotating drums having their axes in a sloping plane, fingers on the drum, stationary fingers between which the drum fingers pass, a stationary screen under each of the drums through which the peas are forced by the drum fingers and a shaking



sieve extending under all of the fingers and adapted to receive both the peas and the hulls.

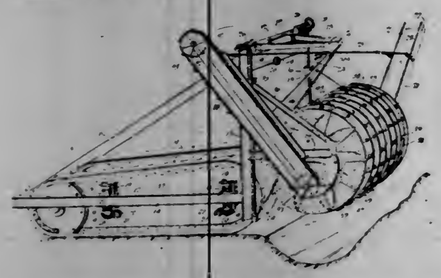
1,455,203. AUTOMOBILE TOP. ROBROY C. HOAGLAND, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Feb. 18, 1919. Serial No. 277,782. 2 Claims. (Cl. 296—118.)

1. In a socketless vehicle top, a pair of oppositely disposed slat irons having curved upper ends extending towards each other, a wooden frame member formed of high grade finished material extending from a point adjacent the lower end of the respective slat irons to a point above the lower edge of the top quarter of the top, and a bow bridging the slat irons and having its opposite end connected to the upper curved ends of said slat irons respectively, and its end portions in substantial contact with the upper end portions of the wooden frame members respectively.



1,455,204. BALE-TIE BUCKLE. ROBERT L. HORSLEY, Memphis, Tenn. Filed Oct. 4, 1922. Serial No. 592,321. 1 Claim. (Cl. 24—23.)

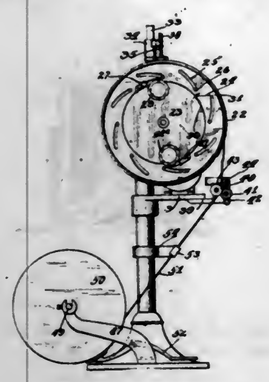
A bale tie buckle comprising band engaging members and a supporting side bar, said band engaging members leading to an open side and provided with retentive de-



vices near their free ends to prevent lateral displacement of the applied loops of a bale tie band upon the buckle, said retentive devices consisting of oblique outleaning inclines upon the inner edges of said members and near the ends thereof.

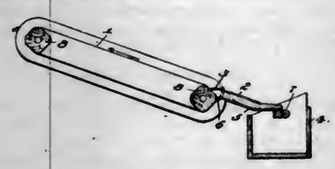
1,455,205. ELECTRIC SADIRON. RALPH J. HOVEY, Chicago, Ill. Filed Jan. 19, 1921. Serial No. 438,348. 1 Claim. (Cl. 177—311.)

A sad iron having a heating coil arranged in the body thereof with suitable terminals for electrical connection projecting therefrom, a casing fitting over the body of the iron, an insulating sleeve supported in the forward point of the iron and projecting through an opening in the casing in front of the handle of the iron, a tubular transparent member supported on said sleeve, a display coil in said transparent member, said coil having suitable electrical connections with a heating coil in the iron to carry an electric current, substantially as described.



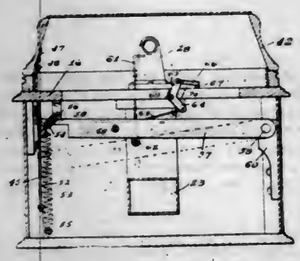
1,455,206. EXCAVATING MACHINE. WILLIAM GARFIELD HOWE, Des Moines, and FRED R. WHITE, Ames, Iowa. Filed July 16, 1920. Serial No. 396,737. 13 Claims. (Cl. 37—97.)

1. A frame mounted on traction means, a rotary excavator device adjustably mounted at one end of said frame, said excavator device comprising rotary digging members and a central drum, said digging members being adapted to cut dirt and raise it for discharging it into said drum, a conveyor for delivering dirt from said drum, a sloper device at one end of said excavator comprising an endless member mounted for travel, cutting devices on said endless member, means for supporting said endless member at different angles with relation to the main body of said excavator, and means for picking up dirt loosened by the sloper device and discharging it into said drum on the conveyor therein.



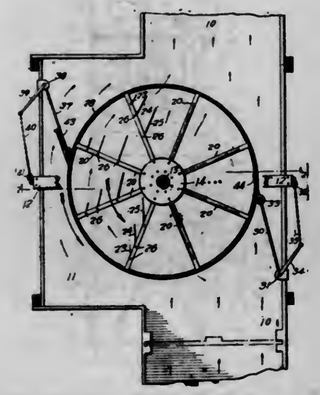
1,455,207. BEAD-FORMING MACHINE. RALPH W. HUTCHENS and SAMSON H. SMITH, Eau Claire, Wis., assignors to Gillette Rubber Co., a Corporation of Maine. Filed Sept. 8, 1919. Serial No. 322,510. 4 Claims. (Cl. 242—54.)

1. A bead forming machine of the class described comprising a power drive, an expansible wheel driven thereby, means supplying wire to said wheel, coacting forming rolls leading wire to said wheel one of said rolls having a concave edge and the other a convex one, the



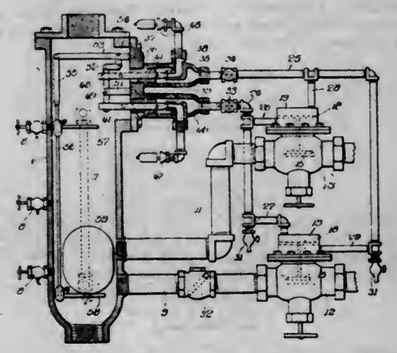
edges being adapted to compress a ribbon of braided wire between them, and means varying the diameter of the wheel according to the diameter of the bead to be formed.

1,455,208. PEA CLEANER. ANDREW JACOBSEN, Green Bay, Wis., assignor to William Larsen, Green Bay, Wis. Filed Nov. 29, 1921. Serial No. 518,522. 3 Claims. (Cl. 130—15.)



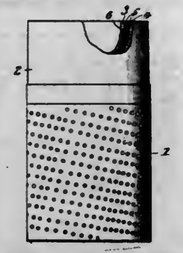
1. The combination with a container having an open top, of a screen extended over a portion of the open top of the container and swingingly connected to the ends thereof, an inclined conveyor adjacent to the container, and means operative with the conveyor for tripping the screen to agitate the same.

1,455,209. PHONOGRAPH. ISAAK KARISH and JAMES KERNES, Chicago, Ill. Filed Sept. 3, 1920. Serial No. 408,015. 4 Claims. (Cl. 274—1.)



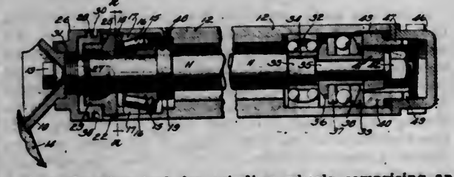
1. In a phonograph cabinet, the combination of a motor, a turn table driven thereby, a jointed tone arm, a hinged cover, means for lifting said cover including a spring actuated bell crank lever, and means acting upon the upward movement of the cover to lift the tone arm and stop the rotation of the turn-table, said means including a transversely extending arm cooperating with said bell-crank lever.

1,455,210. DRIFT AND FISH RETARDER. DANIEL W. KELLER, Hartshorne, Okla. Filed Oct. 12, 1921. Serial No. 507,286. 5 Claims. (Cl. 210—173.)



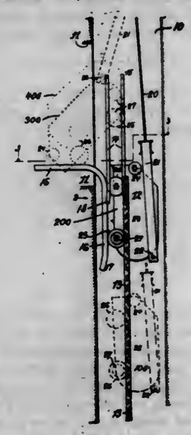
1. The combination with an inflow conduit of an offset communicating therewith, a retarding wheel journaled partly in the conduit and partly in the offset, means inherent in the wheel for converting the flow of water into rotary motion, and gates extending outwardly from the sides of the conduit and offset and yieldingly engaging the periphery of the wheel.

1,455,211. BOILER-WATER-LEVEL CONTROLLER. JOHN F. KELLY, Chicago, Ill., assignor, by mesne assignments, to Kelly Valve Company, Muskegon, Mich., a Corporation of Michigan. Filed Feb. 21, 1920. Serial No. 360,532. 10 Claims. (Cl. 137—101.)



1. In a boiler water level controller, the combination of a casing, a float therein, a water supply pipe, a water delivery pipe, valves in said pipes, steam actuated means for operating said valves, manually operable means for actuating said valves independently of said steam actuated means, valves for controlling the supply of steam to said steam actuated means, and an operative connection between said float and each of said last mentioned valves.

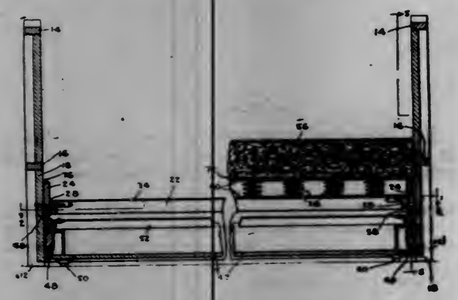
1,455,212. WICK FOR OIL STOVES. CHARLES KING, Chaffee, Mo. Filed July 21, 1921. Serial No. 486,437. 2 Claims. (Cl. 67—68.)



1. A wick of the class described comprising two layers of asbestos having their inner opposed faces coated with putty and a layer of cotton interposed therebetween.

1,455,213. DRESSING TOOL FOR GRINDING WHEELS. THUAN LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 6, 1918. Serial No. 252,961. 7 Claims. (Cl. 125—37.)

1. A dressing tool for grinding wheels comprising an open ended housing, a rotatable shaft mounted therein and having one end projecting therefrom, a cutting disk on the projecting end, means to exclude dust from the inside of the housing, adjustable radial bearings within the housing adjacent said projecting end of the shaft, radial bearings for the opposite end of the shaft, adjustable bearings for receiving end thrust only, and means for positively adjusting each set of said adjustable bearings independently of the other set to take up radial and longitudinal wear.

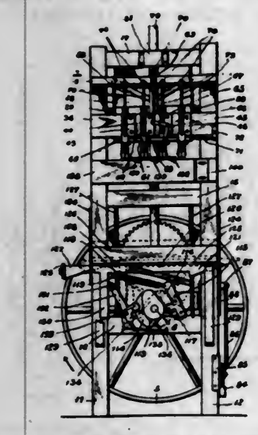


1,455,214. HOISTING APPARATUS. GEORGE G. LENDI, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,666. 6 Claims. (Cl. 214—120.)

1. The combination of a main guide, a carrier, rollers on said carrier adapted to engage the said main guide on

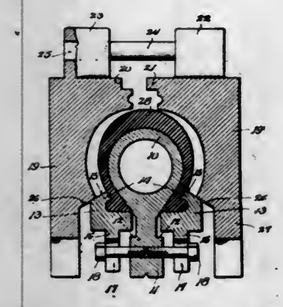
opposite sides thereof, lifting means for said carrier and means for pivoting the carrier in said lifting means to cause the said rollers to automatically engage the said main guide on the opposite sides thereof.

1,455,215. DAY-BED LOUNGE. JACOB H. LEVIN, Minneapolis, Minn. Filed July 30, 1921. Serial No. 488,562. 1 Claim. (Cl. 5—18.)



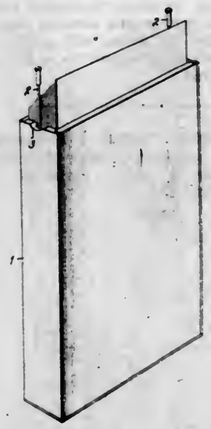
A day-bed lounge comprising a main structure having two end members, two strips lying inside of said end members, two strips lying inside of said first mentioned strips and partly below the same with the upper edges of said second mentioned strips overlappnig the lower edges of said first mentioned strips, front and rear rails connecting said second mentioned strips and having their upper surfaces in the same plane as the upper surfaces thereof, pieces of webbing stretched between the upper surfaces of said rails, intersecting pieces of webbing stretched between the upper surfaces of said second mentioned strips, a coiled spring cushion resting upon said pieces of webbing with its upper surface in the same plane as the upper surfaces of said first mentioned strips, a boxlike structure adapted to be moved in and out under said spring cushion, a mattress support at the top of said boxlike structure, a mattress adapted to be positioned on said mattress support when said boxlike structure is moved out and to be placed on said spring cushion member to form an upper cushion when said boxlike structure is retracted, a flap extension from one side of said mattress, and means for detachably securing the ends of said flap extension to the upper surfaces of said first mentioned strips whereby said flap extension will form a continuation of the upper surface of said mattress when the latter is on said mattress support and will be underneath said mattress when the latter is placed on said spring cushion member.

1,455,216. ASH-PAN LIFTER. MICHAEL LOMBARDI, Louisville, Colo. Filed May 20, 1922. Serial No. 562,309. 3 Claims. (Cl. 294—31.)



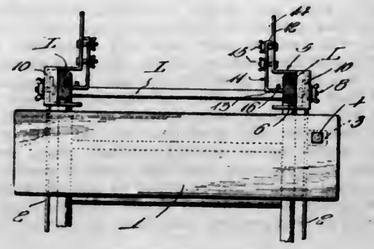
1. A pan lifter, comprising in combination, a handle member having one end bent at an angle thereto to provide a clamping jaw, a hole in said member near the bend therein, a second handle member having one end of diminished cross section and adapted to project through said opening, said end being curved upwardly and the terminal portion thereof bent downwardly so as to be substantially parallel with the jaw of said first mentioned handle member when the lifter is in operative position, and a pair of shoulders at the juncture of said last mentioned handle member and the portion of diminished cross section, said shoulders engaging the under surface of said first mentioned handle member and serving as a fulcrum.

1,455,217. BOX-NAILING MACHINE. LUKE MARSHALL, Seattle, Wash. Filed Apr. 18, 1922. Serial No. 555,087. 2 Claims. (Cl. 1—15.)



2. A table for a box nailing machine comprising a shelf, guide rods secured to the frame of the box nailing machine, lugs adapted to loosely ride on said guide rods, and secured to said shelf, supporting brackets on said shelf, plates on said frame having apertures therein, a wedge bar arranged to operatively support said shelf, wedges on said wedge bar adapted to slidably seat within said apertures, an arm on said wedge bar, a pin lever pivotally mounted on said machine, a pin on said lever, means for retaining said pin in contact with said arm, a spring secured to said wedge bar, a spring lever pivotally mounted on said machine and secured to said spring, a roller on said spring lever, and a double cam operatively mounted on said frame adapted to alternatively actuate said spring and pin levers to reciprocally cause said wedge bar to raise and lower said shelf.

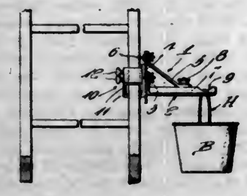
1,455,218. TIRE MOLD. ROBERT MITCHELL MERRIMAN, Akron, Ohio. Filed Apr. 18, 1922. Serial No. 555,189. 10 Claims. (Cl. 18—38.)



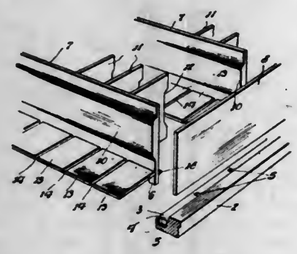
6. A tire mold including a core, contractible sectional means to engage the inner edges of a tire upon the core, side plates adapted to coact with said means for stretching the tire, and means connecting the sections of the first means with the core operating to guide the first means when contracted and locking the sections thereof against individual endwise movement.

1,455,219. CABINET. PHILIP MORINA, Washington, D. C. Filed Aug. 8, 1921. Serial No. 490,543. 2 Claims. (Cl. 211—16.)

1. A cabinet including a compartment grooved longitudinally of its inner side wall and notched at the outer terminals of the grooves, a drawer slidable within the compartment, pull rods movable in the grooves of the compartment and connected to the drawer for moving the latter inwardly or outwardly of the compartment, the outer end of the pull rod being adapted to locate at the notched terminals of the grooves when the drawer is at its innermost position within the compartment.



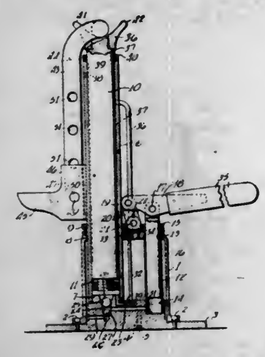
1,455,220. PLATFORM FOR LADDERS. MARTIN R. MYERS, Grand Rapids, Mich. Filed Nov. 3, 1921. Serial No. 512,557. 9 Claims. (Cl. 304—34.)



1. The combination with a ladder, of a pair of brackets adjustably connected with the stiles thereof and extending forwardly therefrom to provide supporting arms, and a platform supported on and pivotally connected with one of the arms of said brackets.

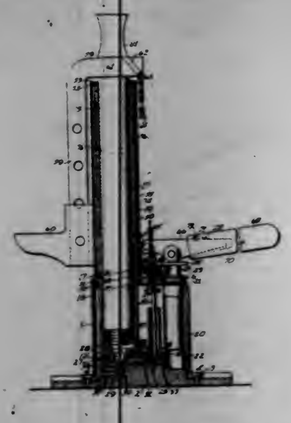
1,455,221. BUCKET SUPPORT. MARTIN R. MYERS, Grand Rapids, Mich. Filed Nov. 3, 1921. Serial No. 512,558. 2 Claims. (Cl. 248—20.)

1. An attachment for ladders comprising a bracket including a horizontally disposed arm, said arm being equipped with a notch forming a seat for reception of a handle of a bucket or the like, the arm being also formed with an opening for passage of a bolt for fastening an article holder or the like to the arm, a clamp for adjustable connection with one of the ladder stiles, and a connection between the bracket and clamp, said connection serving to permit the bracket to be reversed for supporting either a bucket or an article holder and serving to retain the bracket in either of its adjusted positions, and also serving to hold the jaws of the clamp in various adjusted positions.



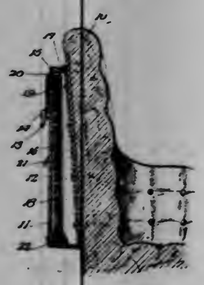
1,455,222. MOLD FOR FORMING BRICKS OR CONCRETE BLOCKS. GEORGE L. OSWALT, Clinton, Ind. Filed Apr. 4, 1922. Serial No. 549,568. 4 Claims. (Cl. 25—121.)

1. A mold for forming blocks comprising a pair of parallel supporting sills, forms comprising partitions disposed transversely between said sills and supported by the same, spaced bottom plates projecting from the front faces of the partitions at the lower edges thereof, division plates projecting from the rear faces of the partitions with their lower ends fitting in the spaces between meeting bottom plates, and side plates and end plates supported by the sills and closing the sides and ends of the spaces defined by the partitions and the division plates.



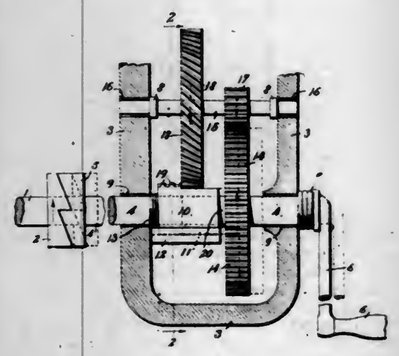
1,455,223. HYDRAULIC JACK. ARTHUR PAOLI, Hancock, Mich. Filed May 31, 1921. Serial No. 473,764. 2 Claims. (Cl. 138—9.)

1. In a device of the character described, a working cylinder closed at one end and provided with an inlet and



outlet at its closed end, a ram slidable in the cylinder and protruding from the open end of the latter, said ram being arranged at its inner end to engage the cylinder with a liquid-tight fit, means for introducing a liquid into the cylinder through the inlet, means for controlling the passage of the fluid through the outlet, whereby the ram will be moved along the cylinder away from the closed end when the outlet is closed, a by-pass conduit for conducting liquid from the cylinder when the ram has been moved a certain distance, said ram being formed with a longitudinally extending groove in its outer wall extending from a point spaced from its inner end to the end protruding from the cylinder, and means for guiding the ram in its movement in the cylinder to occasion the communication of the groove with the by-pass conduit.

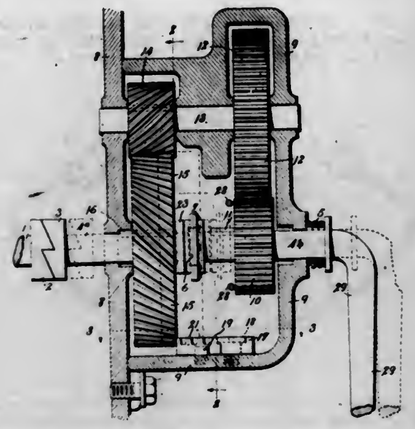
1,455,224. HYDRAULIC JACK. ARTHUR PAOLI, Hancock, Mich. Filed July 20, 1921. Serial No. 486,128. 7 Claims. (Cl. 138—9.)



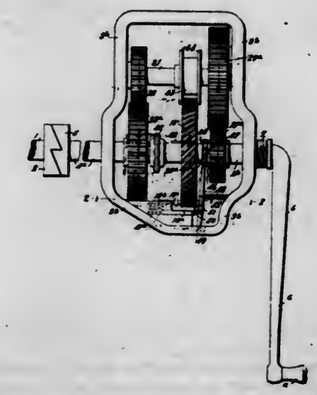
1. A device of the character described comprising a cylinder closed at one end, a movable ram projecting from the other end of the cylinder, a work-engaging member carried by the ram at its outer end, and an auxiliary work-engaging member attached to the first named work-engaging member and movable at will into alinement with the ram or laterally of the latter.

1,455,225. MIRROR ATTACHMENT FOR AUTOMOBILES. JAMES G. ROSS, Seattle, Wash. Filed Sept. 17, 1921. Serial No. 501,278. 1 Claim. (Cl. 296—37.)

In a mirror attachment for motor vehicles, the combination of a casing gradually tapered in depth toward its upper end, a mirror normally disposed within the casing, a yieldable wedge carried by the lower edge of the mirror to engage the bottom wall of the casing for cushioning the mirror when lowered into the casing, and means for elevating the mirror to project from the casing and shifting said wedge to bind between opposing walls of the casing whereby the wedge will gradually limit the mirror in its upward movement as well as steady the mirror when elevated.



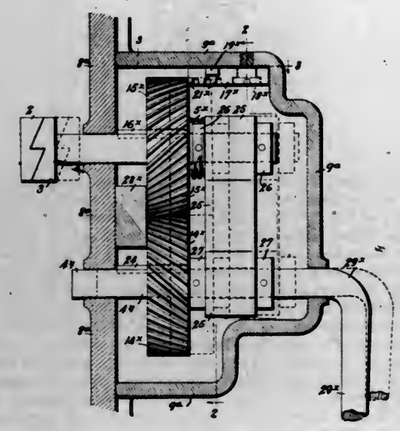
1,455,226. SAFETY CRANK. LAWRENCE RUDOLPH, Louisville, Ky., assignor to Rudy Rudolph, Pensacola, Fla. Filed Aug. 7, 1922. Serial No. 580,367. 6 Claims. (Cl. 123—185.)



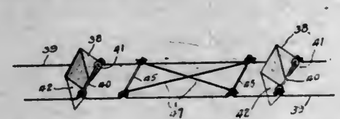
4. In apparatus of the character described, a support, a cranking shaft with clutch element for engaging a similar element on an engine shaft when said cranking shaft is moved into contact therewith, said cranking shaft being rotatably and longitudinally movable in said support, a countershaft journaled in bearings in said support, a gear train between said cranking shaft and said countershaft, a spiral gear on one of said shafts rotatable with it but fixed against movement along said shaft, a sliding block with teeth to mesh with said spiral gear, means holding said block against rotation while permitting it to slide in a direction parallel to the axis of said spiral gear, said block adapted to slide and unmesh from said spiral gear while cranking, means continuously tending to mesh said block with said spiral gear whereby when a "kick back" occurs instant meshing will take place, and provisions whereby, when said slide block is meshed with said spiral gear, it will be pulled by said spiral gear to cause motion to be imparted to said cranking shaft along its axis to disengage the same from the engine shaft.

1,455,227. SAFETY CRANK. LAWRENCE RUDOLPH, Louisville, Ky., assignor to Rudy Rudolph, Pensacola, Fla. Filed Aug. 7, 1922. Serial No. 580,368. 6 Claims. (Cl. 123—185.)

2. In apparatus of the class described, a support having shaft bearings, a two part cranking shaft journaled in said bearings, a clutch element on one of said shaft parts adapted to engage a similar element on the shaft of an engine to be cranked, gearing connecting said two shaft parts and including spiral gears, means normally holding said clutch elements disengaged, a pivoted toothed dog cooperating with one of said spiral gears, the teeth of which dog are adapted, when in alignment with the teeth of the spiral gear, to be meshed therewith, stops limiting the movement of said dog, a spring tending to hold said dog against one of said stops with its teeth out of alignment with those of said spiral gear during the cranking movement of said spiral gear, said spiral gear, when turned reversely to its cranking movement, being adapted to rock said dog to bring the teeth in alignment and effect mesh thereof, and means to be engaged by said spiral gear, when it is moved axially into engagement with said dog for moving said shaft parts to disengage the clutch.



1,455,228. SAFETY CRANK. LAWRENCE RUDOLPH, Louisville, Ky., assignor to Rudy Rudolph, Pensacola, Fla. Original application filed Aug. 7, 1922, Serial No. 580,367. Divided and this application filed Nov. 15, 1922. Serial No. 601,126. 3 Claims. (Cl. 123—185.)



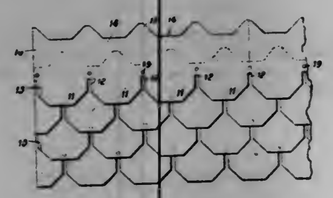
3. In apparatus of the class described, a support, a two part cranking shaft, means coupling said shaft parts together to move endwise in unison but rotate independently, a clutch element on said cranking shaft for engaging a mating clutch element on an engine shaft to be cranked, a gear train between the two parts of said cranking shaft, a spiral gear on one of said cranking shaft parts, a sliding block cooperative with said spiral gear, said spiral gear being slidable on its shaft part, a lever device operated by said sliding block for moving said cranking shaft to disengage the clutch, said sliding block having some lost motion for the purposes described.

1,455,229. SAFETY CRANK. LAWRENCE RUDOLPH, Louisville, Ky., assignor to Rudy Rudolph, Pensacola, Fla. Original application filed Aug. 7, 1922, Serial No. 580,368. Divided and this application filed Nov. 15, 1922. Serial No. 601,127. 2 Claims. (Cl. 123—185.)

1. In apparatus of the class described, a support having shaft bearings, a two part cranking shaft journaled in said bearings, spiral gears connecting said shaft parts, a yoke having bearings in which said shaft parts are journaled, means on said shaft parts cooperating with said yoke and causing said shaft parts to move axially in unison, a stop adapted to be engaged by said spiral gears, when in the cranking position, a throw out spring carried by one of said shaft parts, a clutch element on one of said shaft parts adapted to engage a similar clutch element on the shaft of the engine to be cranked, means for turning the other shaft part to impart cranking motion, a pivoted toothed dog and stops limiting the pivotal movement of said dog, said dog having teeth adapted, when said dog is in one position, to register with the teeth of one of said spiral gears, said dog normally lying in contact with one of said spiral gears and arranged whereby, when the parts are in the cranking position, the teeth of said dog will be out of register with those of said opposing spiral gear and, when said opposing spiral gear is "kicked back," it will rotate said dog to bring its teeth into meshing alignment with the opposing spiral gear for the purposes specified.

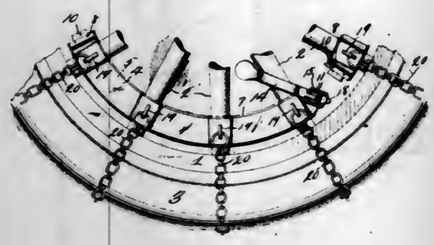
1,455,230. BOAT AND APPARATUS FOR THE PROPULSION THEREOF. VICTOR ALFRED SHAW, Brooklyn, N. Y. Filed Jan. 7, 1922. Serial No. 527,680. 11 Claims. (Cl. 170—138.)

1. In propelling apparatus for a boat, two endless flexible supports and a plurality of paddles carried by said supports, each of said paddles being free to rotate about an axis parallel to and spaced from its operative surface.



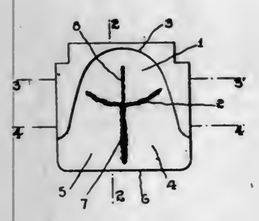
1,455,231. MANUAL SIGNAL FOR VEHICLES. JAMES SPAVENTOF, Brooklyn, N. Y. Filed Sept. 10, 1921. Serial No. 499,759. 5 Claims. (Cl. 177—329.)

1. A signalling device for use on vehicles comprising a ring of insulating material adapted to fit over one of the fingers of the driver's hand and to slip down to the base of the fingers adjacent the palm of the hand, a contact strip embedded in said ring and having a spring contact finger extending to the exterior of the ring and outwardly beyond the back of the hand, said contact finger extending substantially at a tangent to the ring and having its outer free end projecting in the path of an adjacent finger of the operator's hand moving in the direction at right angles to the plane of the palm whereby to press the free end of the contact finger toward the ring, a contact plate carried by the ring in position to be engaged by said contact finger, a lamp bulb carried by the rear portion of said ring in circuit with said contact, said lamp bulb adapted to illuminate the back of the hand and the fingers, and a battery carried at a remote point from the hand and having leads connected to said contact strip and the lamp.



5. A signalling device comprising a ring adapted to be fitted upon a finger of a vehicle driver's signalling hand, a plurality of electric lamps carried thereby having differently colored tip portions and base portions for illuminating the hand, a source of current, and separately closable contacts at opposite lateral portions of the ring for closing circuit through the lamps individually by movement of opposite fingers of the driver's hand.

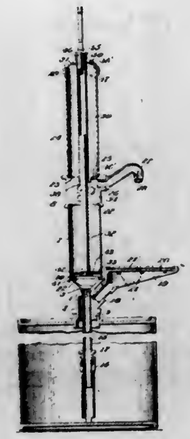
1,455,232. METHOD OF MAKING SHINGLE STRIPS. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to The Beaver Products Company, Inc., a Corporation of New York. Original application filed Nov. 12, 1919, Serial No. 337,577. Patent No. 1,412,295, dated Apr. 11, 1922. Divided and this application filed July 14, 1920, Serial No. 396,127. Renewed Oct. 9, 1922. Serial No. 593,460. 16 Claims. (Cl. 164—68.)



1. The method of producing like multiple shingle strips each having a slotted edge which consists in repeatedly cutting a sheet of the strip material upon broken lines conforming to the outline of the slotted edges of the strips, the said cuts being parallel to each other and separated by distances equal to the width of the strips and between each two consecutive broken line cuts cutting off a portion only of the fingers left projecting from the sheet by the last preceding broken line cut.

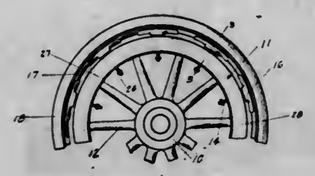
1,455,233. ANTISKID CHAIN FOR AUTOMOBILES. JOHN F. STRAUBE, Omaha, Nebr. Filed Mar. 26, 1921. Serial No. 455,881. 1 Claim. (Cl. 152—14.)

An antiskid device for automobile wheels comprising a pair of segmentally shaped plates, spaced recesses carried by said plates in registration with each other and adapted to receive the spokes of an automobile wheel, one end of one of the plates being provided with a right angled portion overlying the adjacent end of the other plate, a plurality of apertures in said right angled portion, a lug carried by the adjacent end of the other segmentally shaped plate and adapted to be received in one of the apertures according to the diameter of the spokes and means cooperating with the other adjacent ends of the segmentally shaped plates for forcing the same towards each other for securely clamping the plates against the opposite sides of the spokes.



1,455,234. CHAIR SEAT. EARL THOMPSON, New York, N. Y. Filed Mar. 17, 1922. Serial No. 544,407. 2 Claims. (Cl. 155—178.)

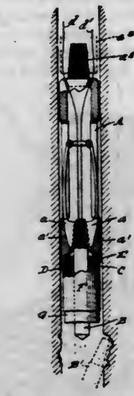
1. In a chair seat, a rearwardly disposed depressed saucer adapted to position an occupant at the rear of the seat and having a front marginal edge extending across the seat intermediate the front and rear edges of the chair seat and two shallow channels extending from the front margin of the saucer to the front edge of the chair seat.



1,455,235. DISPENSING AND DISPLAY PUMP. WILLIAM S. TOWNSEND and FRANK E. DOUGLASS, Rochester, Pa. Filed Aug. 28, 1922. Serial No. 584,809. 8 Claims. (Cl. 221—60.)

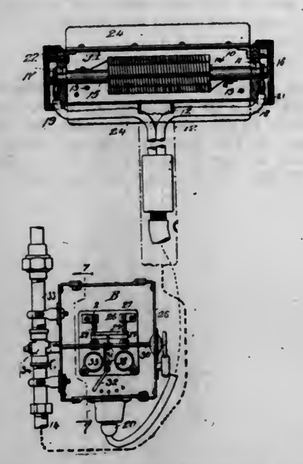
1. A liquid dispenser comprising a measuring pump, a glass liquid display container seated at its lower end upon the upper end of the pump casing in vertical alignment therewith and communicating with the pump cylinder above its piston to be filled with liquid by the pump

for display purposes, a securing cap at the upper end of said display container, and means connecting said cap with the upper end of said pump cylinder.



1,455,236. AUTOMOBILE SPRING TIRE. JAMES R. TUCKER and EUGENE M. AYERS, Baltimore, Md. Filed Apr. 22, 1920. Serial No. 375,813. 1 Claim. (Cl. 152—32.)

A spring device for a wheel comprising a socket member having an opening in the bottom thereof, the open end of the socket having attaching flanges, a bolt disposed longitudinally through the socket member and through the bottom opening thereof, the outer end of the bolt having a transverse head which is arcuate longitudinally and transversely and provided with a shoulder surrounding the bolt at its junction with the head, and a coil spring encircling the bolt, within the socket, and bearing against said shoulder and the bottom of the socket.

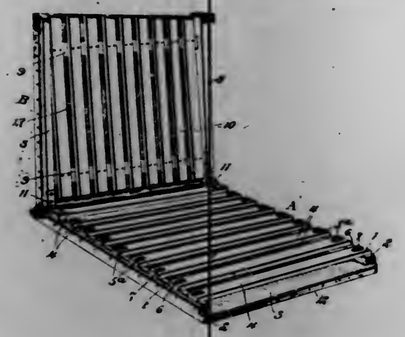


1,455,237. OIL-WELL FISHING TOOL. FREDERICK C. BONNET, Hamburg, N. Y., and RAYMOND FRANKLIN, Durant, Okla. Filed Jan. 3, 1922. Serial No. 526,676. 9 Claims. (Cl. 298—88.)

1. In a device for removing articles from wells, the combination of a slip socket and a hollow magnet secured to the lower end of the slip socket and through which an

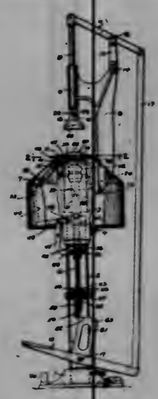
article to be removed from a well may pass to the slip socket for engagement therewith.

1,455,238. DRYING APPLIANCE. HERMAN J. BOSCH, New York, N. Y. Filed Dec. 7, 1920. Serial No. 428,848. 7 Claims. (Cl. 34—26.)



2. In a drying appliance, the combination of means for simultaneously supplying and regulating air and a heating medium, means for directing said air and heating medium to an air heating and distributing appliance remote from the source of air supply, means for heating said air in close proximity to its use, and means for directing and distributing sprays of heated air as described.

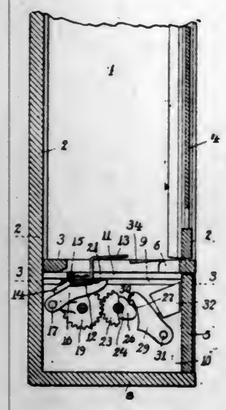
1,455,239. PORTABLE VENTILATED SEAT. HENDERSON PIERCE CHILDRESS, Memphis, Tenn. Filed Jan. 14, 1922. Serial No. 529,306. 2 Claims. (Cl. 155—131.)



1. A ventilated supplemental seat comprising a seat member and a back member, and means for hingedly connecting the two members to permit one to fold upon the other, the seat member including longitudinal side sills and transverse resilient slats resting upon and connecting the same, the back member including longitudinal

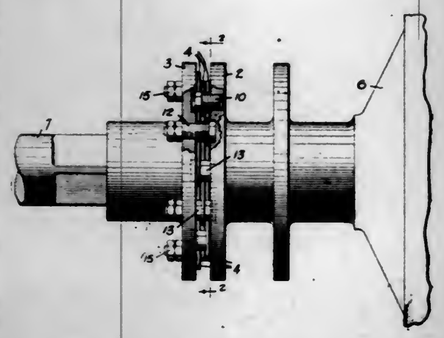
bars, transverse strips connecting said bars, and spaced longitudinal slats secured to the strips, and a continuous fabric covering at the bottom of the seat member and the rear of the back member, said covering being secured to the side sills and the side bars and loosely spanning the hinged connection and arranged across the bottom of the seat member and the rear of the back member, the

slats of the back member combining with the covering to form a plurality of air conduits, said covering being spaced from the slats at the front of the seat member to provide for the circulation of air, and serving to cling to the seat of the automobile and accommodate itself to the curved shape thereof and thereby held from shifting movement.



1,455,240. HOLLOW ARTICLE OF RUBBER OR LIKE MATERIAL AND PROCESS AND APPARATUS FOR MAKING SAME. HENRY Z. COBB, New York, N. Y., assignor to The Mechanical Rubber Company, a Corporation of New Jersey. Filed May 2, 1922. Serial No. 557,924. 35 Claims. (Cl. 18—56.)

1. In a machine for uniting the sections of hollow articles of vulcanizable material, means for joining the sections, and means coacting therewith to collapse one section under pressure against the joint to thereby compact the latter.

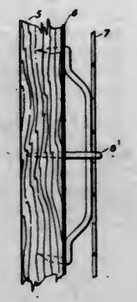


1,455,241. ENVELOPE-DELIVERY MACHINE. DOMENICO COLOSI, Boston, Mass. Filed Aug. 19, 1921. Serial No. 493,642. 4 Claims. (Cl. 211—8.)

1. An envelope delivery machine comprising a case, a support therein for a pile of envelopes flaps down, fingers for engaging the lowermost flap, and means for actuating said fingers embracing a rotative spindle having a crank arm, a dog held by said crank arm, and a sliding bar hinged to said dog and carrying said fingers,

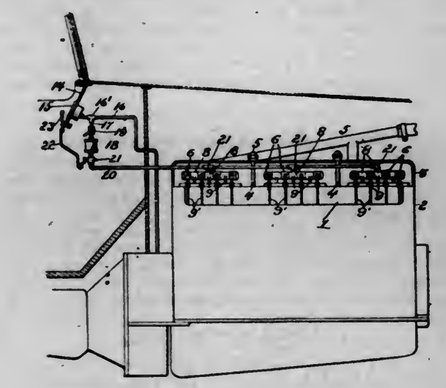
said dog being adapted to tilt the said bar and fingers upward when the latter are at the beginning of their flap-engagement stroke, but to permit their slight depression after such engagement.

1,455,242. COUPLING. JOHN CORGIAT, Jr., and JULIUS J. DUSEVOIR, Oakland, Calif., assignors to Star Motor Company of California, Oakland, Calif., a Corporation of California. Filed Dec. 28, 1920. Serial No. 433,647. 2 Claims. (Cl. 64—96.)



1. A coupling comprising spaced flange plates, and a series of flexible polygonal links, each link being separately secured at certain points to one of said flange plates and at intervening points to the other flange plate.

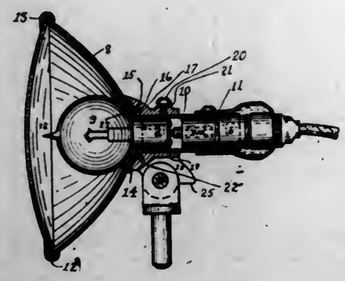
1,455,243. FURRING AND FASTENING DEVICE. ORIN T. CROWE, Hayward, Calif. Filed Mar. 28, 1922. Serial No. 547,414. 2 Claims. (Cl. 72—120.)



1. In combination, a wall sheathing, a double-humped staple of wide span adapted to be driven in said sheathing to the first hump, and wire lathing adapted to be

separately received and supported on the second hump of said staple, forming in conjunction therewith out-

standing reinforcement for stucco wall composition, the latter adapted to be spread on the sheathing surface and between and around the meshes of said reinforcement.



1,455,244. LUBRICATING SYSTEM. CHARLIE FINNELL, Alexandria, Va. Filed Dec. 19, 1921. Serial No. 523,544. 2 Claims. (Cl. 123—90.)

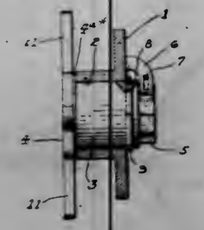
1. In a lubricating system, the combination with an automobile having an engine with valve operating means located above the cylinders thereof and an oil pipe extending to a point higher than said valve operating means, of a conduit leading from said oil pipe to the valve operating means and comprising an oil cup, connection pipes and a manually operable stop cock located between the oil cup and the engine and so disposed as to be operable from the seat of the automobile.

1,455,245. LAMP. HAROLD G. FITZ GERALD, Los Angeles, Calif. Filed Oct. 10, 1919, Serial No. 329,869. Renewed Apr. 5, 1923. 4 Claims. (Cl. 240—41.)

1. A lamp body comprising a casing in which a source of illumination may be disposed, and a cast supporting member formed thereon at the rear thereof; said casing comprising a shell having an aperture in the rearward wall thereof, the material of the casing at

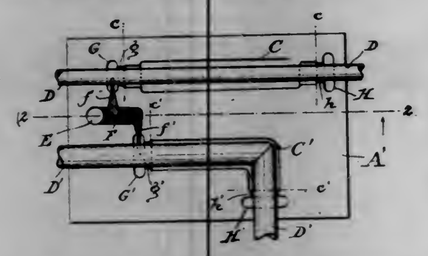
the aperture being formed into an anchor which is embedded in the cast member, and the cast member encasing said anchor both externally and internally.

1,455,246. ELECTRIC IMMERSION HEATER. MARTIN C. FURSTENAU, Philadelphia, Pa. Filed Dec. 10, 1921. Serial No. 521,312. 25 Claims. (Cl. 219—41.)



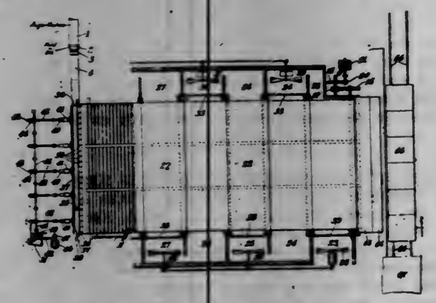
1. In an electrical resistance heater, a casing closed at one end, an insulating core disposed at the closed end of the casing and having an internal space; electrical resistance heating means within the casing and outside the core, and heat-resisting means insulating the heating unit from the remainder of the casing and closing the space in the core thereby establishing a dead air space in the heating unit; substantially as described.

1,455,247. YARN-STICK-SUPPORTING MEMBER FOR DYEING MACHINES. JOHN H. GILES and DONALD M. GILES, Philadelphia, Pa. Filed Apr. 19, 1922. Serial No. 555,566. 5 Claims. (Cl. 8—19.)



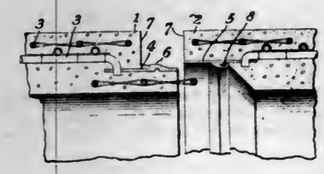
1. In apparatus of the class described, a rotary carrier provided with an outer rim portion, said rim portion being provided with a bearing, a stick supporting member having a shank removably inserted in said bearing for rotation therein, a star wheel on one end of said shank, a ratchet wheel formed integrally with

said shank and disposed at the other end thereof, said wheel projecting beyond said rim portion, a pawl on



said rim portion to engage said ratchet wheel, and means on said shank intermediate its ends adapted to engage said rim portion to hold said shank in its bearing.

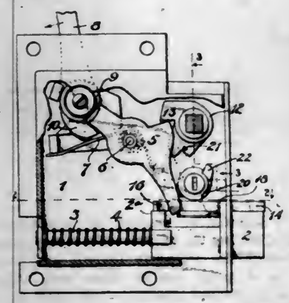
1,455,248. CASTING DIE. CHARLES M. GREY, East Orange, N. J. Filed Apr. 13, 1917. Serial No. 161,743. 42 Claims. (Cl. 22—209.)



1. A die for die casting cored articles embodying a die chamber to be filled with molten metal, a source of supply for said molten metal, a feed chamber within the die, a duct leading from the source of supply to said feed chamber in the die, and a constricted passage from the feed chamber to the die chamber, whereby the feed chamber is filled from the source of supply and hydraulic pressure is generated in said feed chamber for the purpose of forcing the molten metal, under substantially uniform pressure, through the constricted passage into the die chamber.

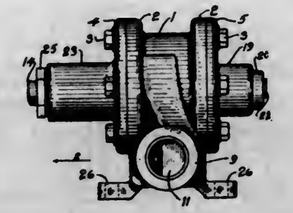
1,455,249. APPARATUS FOR THE MANUFACTURE OF HOLLOW TILE. WILLIAM LEE HANLEY, Jr., Bradford, Pa. Filed Mar. 22, 1921. Serial No. 454,590. 14 Claims. (Cl. 25—2.)

1. In a tile plant for the continuous manufacture of hollow cellular tile, the combination with means for forming a continuous cellular tile, provided with longitudinally extending cells, of means for severing the continuous tile into individual tiles, a conveyor having its upper surface movable transversely with respect to the direction of movement of the continuous tile, a drying chamber through which said conveyor passes, and devices for transferring the severed tiles to said conveyor without handling, constructed to place the severed tiles upon said conveyor with their cells disposed horizontally and transversely to the direction of travel of said conveyor.



1,455,250. PIPE JOINT. ALLAN M. HIRSH, Montclair, and JOHN C. MITCHELL, East Orange, N. J., assignors to Lock Joint Pipe Company, Ampere, N. J., a Corporation of New Jersey. Filed Apr. 18, 1922. Serial No. 554,787. 3 Claims. (Cl. 72—53.)

1. A joint for concrete pressure pipes comprising, in combination, hard metal cylinders integrally molded into the ends of abutting sections, one of said cylinders having at a given distance from its end a ridge or raised portion of a diameter to fit into the other cylinder when two sections are telescoped and assembled, and a packing or gasket adapted to be tamped in between the two cylinders in the space between the said ridge and the end of the cylinder on which it is formed to complete the joint between the opposing surfaces of the telescoped pipe sections



---

1,455,251. DOOR LOCK. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 18, 1922. Serial No. 544,848. 1 Claim. (Cl. 292—192.)

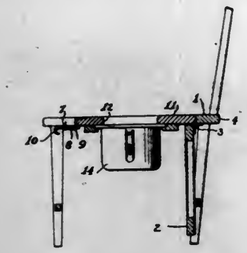
In a lock, a case, a spring latch bolt slidable therein, a dog mounted for movement upon and carried by the latch, the outer end of said dog normally projecting beyond the beveled face of the latch bolt to be engaged by a strike plate in advance of said bolt, an abutment on the inner wall of the case, the inner end of said dog being arranged to normally engage the said abutment when the bolt is projected, means for retracting the latch, said means cooperating with the inner portion of said dog to disengage the same from said abutment preparatory to retracting the latch.

1,455,252. ROTARY PUMP. HENRY ORR JACKSON, Denver, Colo., assignor to National Pump Company, a Corporation of Colorado. Filed July 15, 1921. Serial No. 484,877. 2 Claims. (Cl. 103—135.)

1. In a rotary pump having a piston chamber and a rotor mounted eccentrically therein; a ringlike casing having a circular chamber therein, said chamber being open at both ends; intake and discharge ports opening into said chamber on the opposite sides thereof; intake and discharge passages connected respectively to the intake and discharge ports, said passages being tangential to the side of said chamber and crossing within the casing, said intake passage opening on the side of the discharge port and said discharge passage opening on the side of the intake port.

1,455,253. FASTENING DEVICE FOR CASES OR SIMILAR RECEPTACLES. WILLIAM JOHN JAGGERS, Southend-on-Sea, England, assignor to J. C. Eno Limited, London, England, a Corporation of England. Filed June 1, 1922. Serial No. 565,051. 4 Claims. (Cl. 217—56.)

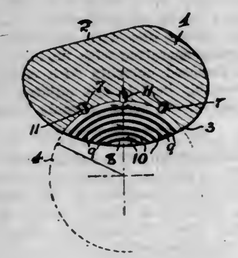
1. A fastening and sealing device, for cases and similar receptacles in which the seal is inserted through axially aligned and coinciding eyes or rings, which comprises a shank portion of straight formation having the metal at one end bent into a curved form to constitute the eye and at the other end bent at a right angle so as to be in the plane of the eyelet and formed with a pointed extremity to enable the same to be driven into the material of the case; the arrangement enabling the shank and pointed bent end to be concealed from view while the eyelet only is exposed.



1,455,254. UTILIZATION OF EDIBLE FATS. MAX KAHN, New York, N. Y., assignor to Intarvin Co. Inc., a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,321. 2 Claims. (Cl. 167—7.)

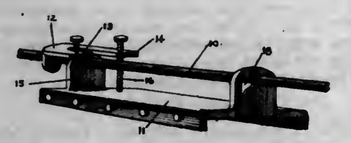
1. As an improvement in the art of treating or combating acidosis, in cases in which the use of ordinary fats is contraindicated or limited, the use of a product comprising or containing fatty acids having an odd number of carbon atoms in their molecules, as set forth.

2. As an improvement in the art of treating or combating acidosis, in cases in which the use of ordinary fats is contraindicated or limited, the use of a product comprising or containing fatty acids having an odd number of carbon atoms, from eleven to nineteen respectively, in their molecules, as set forth.



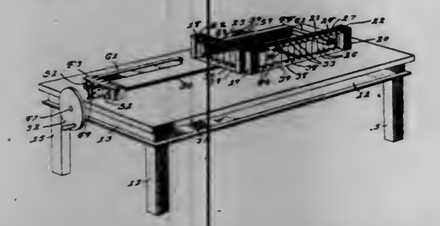
1,455,255. COMBINATION CHAIR. FELIX G. KAPELMAN, New York, N. Y. Filed Apr. 18, 1922. Serial No. 554,939. 5 Claims. (Cl. 155—31.)

1. A convertible chair, comprising a frame having a seat opening therein, a bottom secured to said frame and movable into and out of said opening, a removable bottom adapted to fit said opening, said first bottom when out of



the opening being adapted to support the removable bottom at one side of the opening, and means for supporting either of said bottoms at the opposite side of the opening.

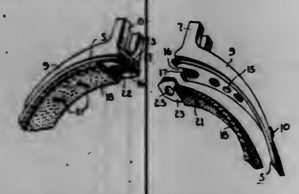
1,455,256. GOLF CLUB. ARTHUR A. KRAEUTER, South Orange, N. J., assignor to Kroydon Co., a Corporation of New Jersey. Filed Jan. 19, 1922. Serial No. 530,283. 7 Claims. (Cl. 46—4.)



1. A golf-club comprising a striking-head provided with a receiving chamber, a balancing weight fitted in said chamber, means connected with the side-surfaces of said balancing weight and cooperating with the walls of said chamber to prevent the withdrawal of said weight directly from said head, and means extending from a marginal portion of said weight and in engagement with other portions of said head to prevent rotary movement of said weight within the chamber of said head.

1,455,257. MOUNTING FOR MAKE-UP FRAMES FOR PRINTING PRESSES. HARRY B. MCBEE, St. Louis, Mo., assignor to McBee Binder Company, Athens, Ohio. Filed Sept. 26, 1921. Serial No. 505,316. 4 Claims. (Cl. 101—287.)

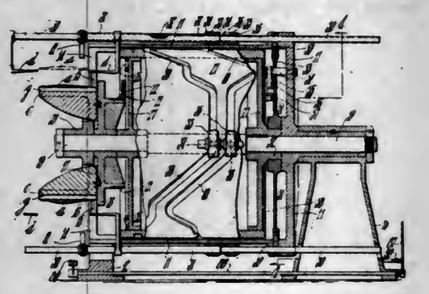
1. In a printing press, a make-up frame mounted for limited rotary movement on a carrying shaft; means on the carrying shaft for limiting the rotation of the make-up frame, said means being such as to also function for retaining the make-up frame in its rotated position, substantially as shown and described.



1,455,258. MACHINE FOR CUTTING BUTTER. RAY MCGREER and HUETT J. BELCHER, Oklahoma, Okla. Filed Mar. 6, 1922. Serial No. 541,519. 2 Claims. (Cl. 31—65.)

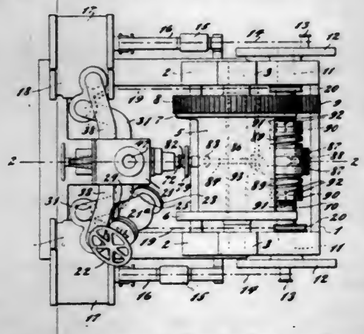
1. In a machine of the class described, a support, a rectangular table thereon, push blocks movably mounted on said table for movement at angles to each other, and independent screw means for moving said push blocks in directions at right angles to each other, said push blocks being vertically slitted, open-topped frame-holding means and dies removably held in said means having cutting wires cooperating with the slits of said blocks.

2. In a machine of the class described, a support, a rectangular table thereon, push blocks movably mounted on said table for movement at angles to each other, independent screw means for moving said push blocks in directions at right angles to each other, said push blocks being vertically slitted, dies with rectangular frames having cutting wires cooperating with the slits of said blocks, and angularly-disposed uprights with channels, the said dies being removably held in two adjacent walls thereof, one of said push blocks being movable in said frame.



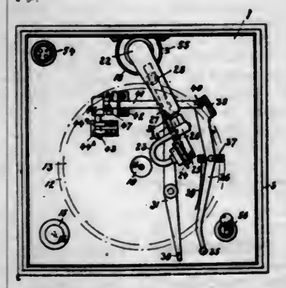
1,455,259. DETACHABLE BRAKE AND TRANSMISSION BAND LINING. WILLIAM ALLAN MCGUIRE, Turtle Creek, Pa., assignor to McGuire Band and Lining Mfg. Co., Turtle Creek, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1922. Serial No. 537,027. 5 Claims. (Cl. 188—249.)

3. The combination with an outer brake or transmission band provided with open slots at its ends, and having on each end a superposed base portion carrying a forked lug, the band being free from the base portions at each end, a pin mounted on each base portion and projecting inwardly through the open slots of the band, and a detachable lining having perforated clips secured at its ends, said clips adapted to be inserted between the slotted ends of the band and the base portions with the pins engaging the perforation in the clips, whereby the clips are locked in position between the slotted ends of the bands and the base portions.



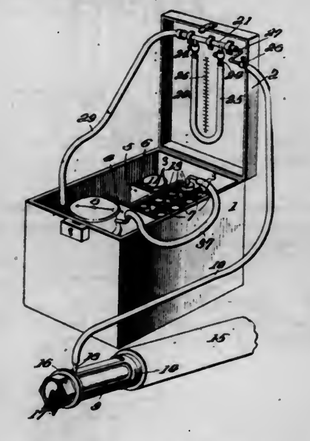
1,455,260. TIRE MANUFACTURE. THOMAS MIDGLEY, Springfield, Mass., assignor to Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 4, 1919. Serial No. 301,782. 31 Claims. (Cl. 154—10.)

1. In a device for applying extensible bands to cores in the manufacture of tire casings, means for supporting a core, means for stretching an endless band from a circumference less than to a circumference greater than that of the core at its crest, means for removing the stretched band from the stretching means and carrying



it to a position encircling the core, and means for releasing the band from the carrier so that it may contract upon the core.

1,455,261. TOWING ENGINE. THOMAS SPENCER MILLER, South Orange, N. J. Filed Sept. 9, 1918, Serial No. 253,217. Renewed Oct. 14, 1922. Serial No. 594,611. 22 Claims. (Cl. 254—172.)

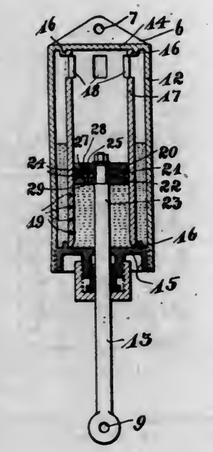


1. In a towing engine, a drum adapted to have a towing hawser wound thereon, a fluid pressure engine for operating the drum, and means whereby stalling of the engine due to balancing of engine power and hawser tension operates to control the pressure of fluid in the engine cylinder.

1,455,262. ELECTRICALLY-DRIVEN SOUND-REPRODUCING MACHINE. REINHARD MOSMANN, St. Gallen, Switzerland. Filed Mar. 1, 1922. Serial No. 540,236. 2 Claims. (Cl. 192—123.)

1. In a sound reproducing machine including a record-supporting turntable, an electromotor for operating said turntable, and a movable tone arm carrying a sound-box and a record-guided needle, adjustable automatic means for momentarily arresting the rotary machine parts, comprising a main circuit for the motor, a secondary circuit including an electromagnet, adjustable contact members below said turntable actuable by said tone arm and adapted to control said secondary circuit, a switch common to both said circuits adapted to be operated by said electromagnet upon closure of said secondary circuit, a brake acting on said turntable and operable on closure of said secondary circuit.

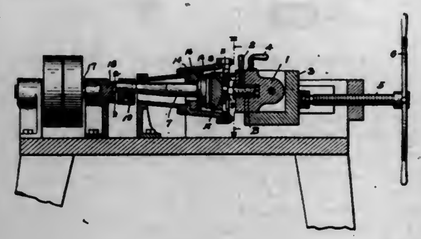
1,455,263. METHOD AND APPARATUS FOR TESTING GASEOUS MIXTURES. GEORGE G. OBERFELL, Tulsa, Okla. Filed June 11, 1920. Serial No. 388,370. 4 Claims. (Cl. 73—56.)



1. An apparatus for testing a gaseous mixture to determine the flow, specific gravity and condensable vapor content, which comprises a compact and portable case containing an orifice meter and equipment for regulating the flow, a flow meter and positive meter for use in determining the volume and specific gravity, and tubes connectable with one of said meters and filled with activated charcoal for use in determining the condensable vapor content of the gaseous mixture.

1,455,264. EASILY AND NEUTRALLY SOLUBLE DOUBLE COMPOUNDS OF 1-ALLYL-3.7-DIMETHYL-XANTHINE. ERNST PREISWERK, Basel, Switzerland, assignor to The Hoffmann-La Roche Chemical Works, New York, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,307. 4 Claims. (Cl. 260—34.)

1. As new products the double compounds of 1-allyl-3.7-dimethylxanthine which may be produced by allowing at least two molecules of an alkali salt of a benzolcarbonic acid to act upon one molecule of 1-allyl-3.7-dimethylxanthine, such products being easily soluble in water, particularly in warm water, their dilute aqueous solutions reacting neutrally and being unaltered by the addition of alkali, the addition of mineral acids to moderately dilute solutions of these products producing a white crystalline precipitate and such products, upon intense heating, leaving a solid residue of alkaline reaction.

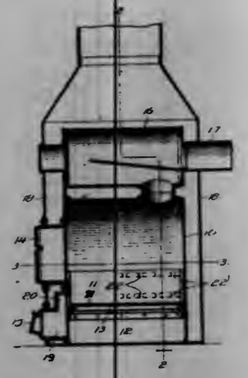


1,455,265. SHOCK ABSORBER. WILLIAM S. RABB, Los Angeles, Calif. Filed Aug. 2, 1921. Serial No. 489,175. 5 Claims. (Cl. 188—88.)

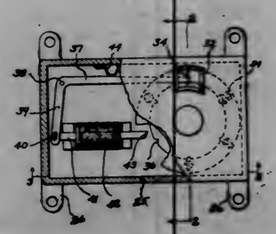
1. In a shock absorber, a piston made up of several plates having apertures to align in form of passages through the piston, the plate in one end of the piston having apertures to form valve seats, and the plate in the

opposite end of the piston having apertures of a shape not to be closed by an inserted valve.

1,455,266. MACHINERY FOR MAKING DIES. HARRY C. RICKENBACH, Pittsburgh, Pa., assignor to Jas. H. Matthews & Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1921. Serial No. 518,565. 5 Claims. (Cl. 76—4.)



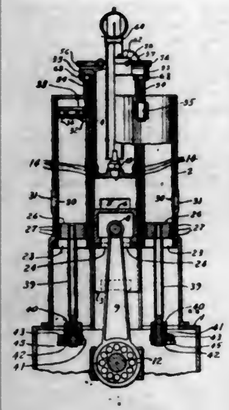
1. A machine for swedging the faces of dies, including the combination of a carrier provided with a seat for one of the two coacting bodies (blank and matrix) and with a spherical bearing surface remote from said seat, the center of curvature of said bearing surface being coincident with the center of the face of the body referred to when in place in said seat, and a frame for said carrier including a spherical socket for said bearing surface and a keeper adapted to engage said carrier adjacent the aforementioned seat therein and by such engagement, while leaving the carrier otherwise free, preventing axial rotation thereof, substantially as described.



1,455,267. HEATING FURNACE. CURTIS A. ROHN, Portland, Oreg. Filed Feb. 10, 1922. Serial No. 535,598. 3 Claims. (Cl. 126—112.)

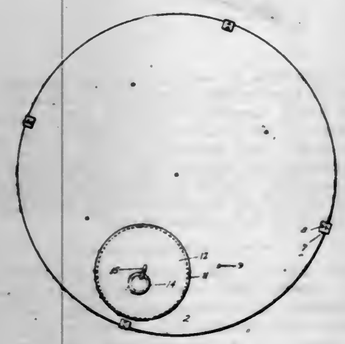
1. In a furnace including a fire chamber, ash pit, and a grate between the fire chamber and ash pit, an intake

for air leading into the ash pit, a flue providing communication between the air intake and the fire chamber, and an imperforate plate adapted to be disposed upon the grate to cut off the passage of air therethrough.



1,455,268. TELEPHONE CALL REGISTER. BENEDETTO SAPIENZA, New York, N. Y. Filed Mar. 7, 1922. Serial No. 541,748. 2 Claims. (Cl. 235—91.)

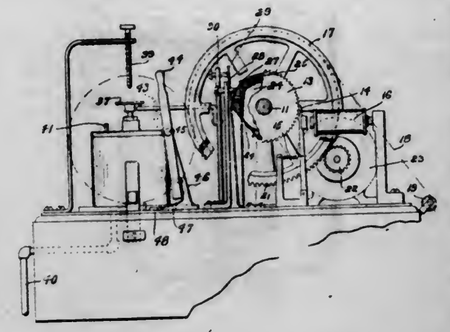
1. A call telephone register comprising a casing, a spindle rotatable in said casing, a numbered dial, and a notched disk secured to said spindle, a pivoted lever engaging the notches having an angularly extending arm, an electromagnet, a plunger slidable in said electromagnet, said plunger being connected with and adapted to release the lever from engagement with the notches of said disks to permit rotation of the same, upon its forward movement, the end of said plunger making contact with the periphery of said disc, and means for rotating the dial upon the release of said disc.



1,455,269. INTERNAL-COMBUSTION ENGINE. FRANK SCHAFER, Duluth, Minn. Refiled for abandoned application Serial No. 213,662, filed Jan. 21, 1918. This application filed Nov. 30, 1921. Serial No. 518,966. 15 Claims. (Cl. 123—65.)

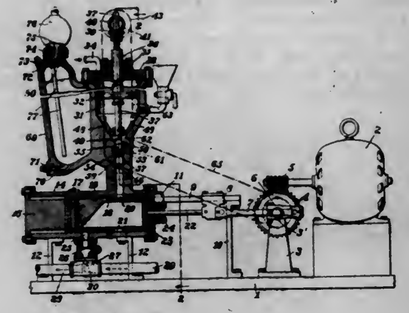
15. In an internal combustion engine, a support provided with a central bore, a tubular piston reciprocating therein; a head adjustably secured to said support and extending into the cavity of said piston so as to form in conjunction therewith an explosion chamber, said support provided with additional bores in each of which is positioned a compression cylinder arranged to reciprocate with said piston, a stationary piston fixed to said support and mounted in each compression cylinder, port opening in the walls of said piston, similar ports in first named cylinder and each of said compression cylinders,

said ports adapted to be brought in alinement for introducing an explosive charge into said chamber and means to ignite said charge.



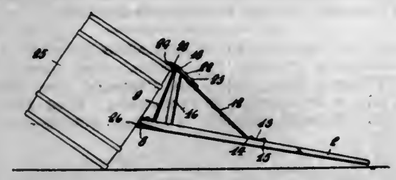
1,455,270. SHIPPING CONTAINER. AUGUST SCHILLING, San Francisco, Calif. Filed Sept. 6, 1921. Serial No. 498,803. 5 Claims. (Cl. 217—76.)

1. A container formed of a side wall and an end wall secured to the side wall, said end wall being formed of two layers of material adhesively secured together in superimposed relation, said layers being annularly cut each for its full depth affording a removable closure for the container consisting of two members of different diameters one lying within the other, said closure adapted for initial removal on the breaking of the adhesion between the cut portion of the larger member and the uncut portion of the layer surrounding the smaller member.



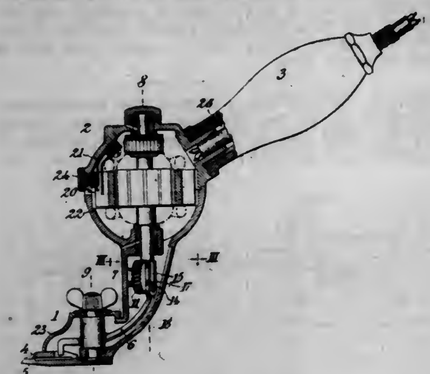
1,455,271. DAMPER CONTROL FOR HEATERS. ARTHUR E. SHARPLES, Providence, R. I. Filed Jan. 13, 1922. Serial No. 529,067. 8 Claims. (Cl. 236—46.)

1. A damper-control for heaters comprising a winding member connected to operate the dampers, an electric circuit including an electric motor for driving said winder in one direction, an electric circuit including a magnet for controlling the movement of the winding member in the other direction, and a steam-actuated piston arranged to



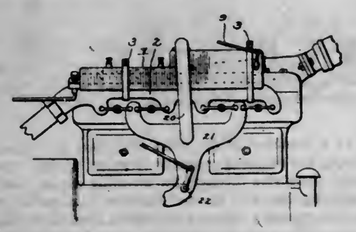
control the different electric circuits for operating said motor and magnet when the steam reaches predetermined degrees of low or high pressures.

1,455,272. LUBRICATOR. HENRY J. SHAVERS, Goldsboro, N. C. Filed Oct. 31, 1921. Serial No. 511,771. 8 Claims. (Cl. 184—37.)



6. A lubricator comprising a base, a cylinder on said base, a hollow plunger in said cylinder provided with an inlet and outlet port and an inlet and outlet port in said cylinder, a reservoir for the lubricant, a vertical shaft in said reservoir and provided with vanes at its lower end for agitating the lubricant in said cylinder, a rotatable shaft located beneath said reservoir and provided with oppositely disposed pockets for receiving and discharging the said lubricant, tubes extending into said pockets and adapted to be moved inwardly and outwardly of said pockets to regulate the capacity of said pockets, means for forcing the plunger inwardly and outwardly to draw the lubricant into said plunger, said rotatable means being connected to said means for operating the plunger so that said rotatable means and said plunger will operate in synchronism, means connected with said rotatable means and with said vertical shaft in said cylinders for operating the vertical shaft in said cylinders, said plunger on its rear stroke adapted to withdraw the lubricant from the said rotatable means into said plunger and on its forward stroke compress the air in said plunger and force the same with the lubricant from the cylinder to the parts to be lubricated.

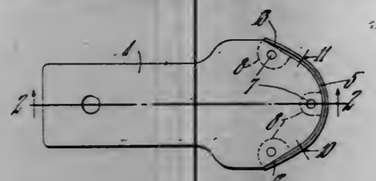
1,455,273. APPARATUS FOR HANDLING PACKAGES. FRANCIS MARION SHEEN, New Orleans, La. Filed Jan. 19, 1922. Serial No. 530,364. 3 Claims. (Cl. 294—15.)



1. In an apparatus for handling articles the combination of a lever member; an article engaging member rigid with said lever member; a strap member provided with an angle portion secured to said lever member; a stiffening member engaging said angle portion and said lever member; and an article engaging member rigid with said strap member, substantially as described.

1,455,274. POWER-DRIVEN IMPLEMENT FOR CUTTING HAIR OR THE LIKE. WILLIAM GENTRY SHELTON, New York, N. Y. Filed May 14, 1919. Serial No. 297,083. 3 Claims. (Cl. 30—1.)

1. An implement for hair-cutting comprising a motor, a cutting tool, an oscillatory tool-actuating lever and a worm and gear transmission between said motor and lever, said motor and lever turning on substantially parallel axes, said gear turning on an axis radial to the axis of said lever, and said lever having one end bent upward to a position substantially parallel with the axis of said motor, whereby said motor may be located substantially above the heel of said cutting tool.



1,455,275. GENERATOR. ERIC L. STANGELAND, East Stanwood, Wash. Filed Apr. 20, 1922. Serial No. 555,755. 3 Claims. (Cl. 48—107.)

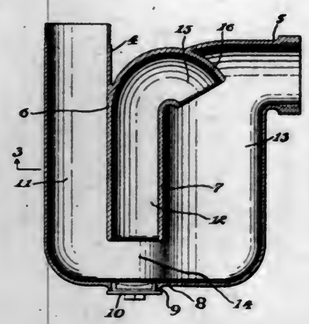
1. A vaporizer for gasoline engines, including a tank having a bottom wall adapted to be heated by the exhaust

pipe of the engine, means for delivering fuel to the tank at one end of said bottom wall, means for delivering air to the tank, a chamber arranged above the tank and having valve communication therewith, and a feed pipe leading from said chamber to the intake manifold.

1,455,276. HEELPLATE FOR SKATES OR THE LIKE. ARTHUR L. STAPLES, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Jan. 20, 1922. Serial No. 530,674. 4 Claims. (Cl. 46—51.)

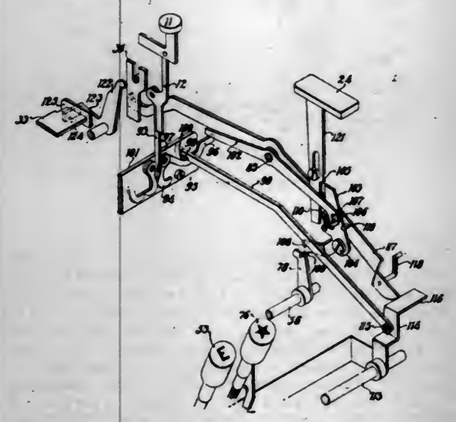
1. A heel plate for skates or the like having an upstanding heel band at the rear of the plate constructed with a centrally disposed concave portion adapted to receive the rounded contour of a shoe heel of minimum size and straight side faces diverging forwardly therefrom to provide a two-point bearing for the rounded rear ends of heels of larger sizes.

1,455,277. INDICATOR. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., and WILLIAM WESTERMAN, Detroit, Mich. Filed Oct. 8, 1920. Serial No. 415,514. 9 Claims. (Cl. 33—141.)



9. In combination, a rolling mill, a motor for driving the same, a flexible coupling between said motor and mill, an indicator adapted to be driven by said mill for indicating the amount of material passed through the mill, an electric clutch for controlling the operation of said indicator, an electric circuit for said clutch, and contact mechanism carried by said flexible coupling and adapted to be actuated to closed position by entrance of material to said mill, said contact mechanism controlling said circuit for said electric clutch.

1,455,278. MILL. AUGUST SUNDH, Hastings-upon-Hudson, N. Y. Filed Oct. 8, 1920. Serial No. 415,515. 3 Claims. (Cl. 266—3.)

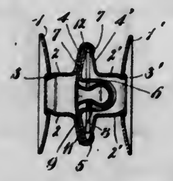


1. In a machine of the class described the combination of means for cleaning a series of metal strips, means for drawing the strips through the cleaning means, and means for splicing the end of one strip to the end of another strip, said splicing means comprising mechanism for striking up portions of the strips to be spliced to form loops therein, and means for engaging said loops to maintain one strip secured to the other.

1,455,279. TRAP FOR DRAINS AND THE LIKE. CHESTER M. SYLVESTER, Middleboro, Mass. Filed Dec. 16, 1922. Serial No. 607,312. 9 Claims. (Cl. 182—12.)

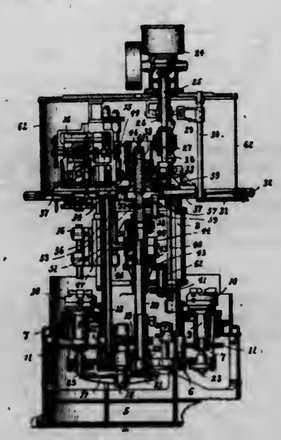
1. A trap comprising a casing having inlet, vent and outlet chambers in juxtaposition, said chambers communicating together at the base of the trap and the vent and outlet chambers having discharge openings at the same height, the capacity of the outlet chamber being greater than the combined capacities of the inlet and vent chambers whereby sufficient water is retained in the outlet chamber when the trap is subjected to heavy siphonic action to provide a seal for the trap.

1,455,280. COMBINED TYPEWRITING AND COMPUTING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1921. Serial No. 439,941. 61 Claims. (Cl. 235—60.)



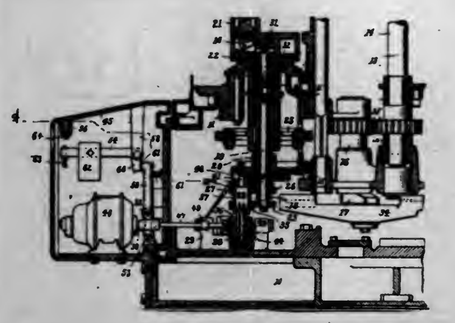
1. In combination, computing mechanism comprising numeral keys for controlling the same, a clearance key, a clearance-sign-printing mechanism controlled by said clearance key, and means whereby depression of any one of said numeral keys will prevent actuation of said printing mechanism.

45. In combination, computing mechanism comprising numeral keys, devices in which numbers may be indexed in accordance with the numeral keys depressed, and a general operator whereby numbers so indexed may be computed, general-operator-actuating means including a starting key to render the same effective, an elimination



key, elimination-key-controlled means whereby the index devices may be restored to normal condition, and means whereby depression of any one of said keys will lock the others against depression.

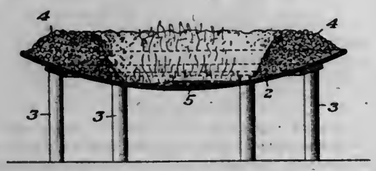
1,455,281. SNAP BUTTON. MAURICE J. BAER, Attleboro, Mass., assignor to The Baer & Wilde Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Jan. 19, 1922. Serial No. 530,327. 3 Claims. (Cl. 24—102.)



1. A snap button comprising two separable members each having a tubular shank, said shanks having interfitting male and female flanges on their inner ends, and stud and socket parts confined within the hollow shanks when the separable members are interconnected, said parts having flanges secured to said male and female flanges respectively.

1,455,282. INDEXING DEVICE. EDWARD P. BULLARD, Jr., Bridgeport, Conn., assignor to The Bullard Machine Tool Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 30, 1920. Serial No. 377,910. 8 Claims. (Cl. 29—50.)

1. A multiple spindle machine, comprising a rotatable carrier, a series of rotary work tables mounted in the carrier, a series of tool heads positioned above the operative stations of the work tables, means for indexing the carrier to move the tables a given distance during a cycle of operation of the indexing means, means for operating the tool heads and work tables, and operative connections between said indexing means and said operating means for indexing the carrier and selective means whereby the indexing means is operated through one or a plurality of cycles to index the carrier through different distances with relation to each operation of the tool heads and tables.

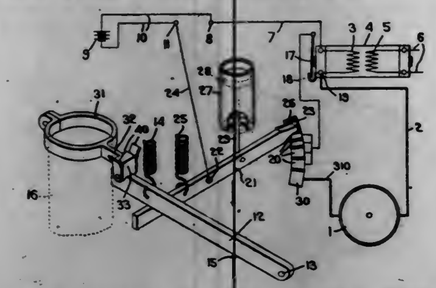


1,455,283. ELECTRIC-OPERATING CHUCKING DEVICE. EDWARD P. BULLARD, Jr., Bridgeport, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 4, 1920. Serial No. 408,243. 32 Claims. (Cl. 29—38.)

1. The combination with a rotary work carrying table having a spindle, of a series of slidable jaws mounted thereon, connections through the table spindle with the jaws for opening by movement in one direction, and closing the jaws by movement in the opposite direction and including a member fixed against longitudinal movement in said spindle and rotatable axially thereof, a spur gear on said member, a spur gear adapted to be meshed and unmeshed therewith through movement of the table, and means for driving said last mentioned spur gear in opposite directions to open and close the jaws.

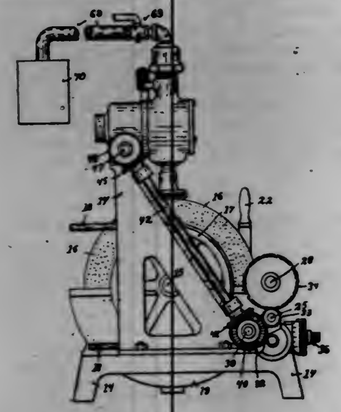
15. In a clucking device, the combination with a rotatable carrier, a series of rotary work carrying tables mounted therein, a series of chuck jaws operatively mounted in each table, means within each table spindle connected with the respective jaws for operating the same, a single electromotor power unit with which the chuck jaw operating mechanism register when brought to the loading station, manually operable means for starting the operation of the power unit, and means adapted to automatically shut off power to the electric motor at a predetermined point.

1,455,284. BURNING SULPHUR. HAROLD S. DAVIS, Pittsburgh, Pa., assignor to Texas Gulf Sulphur Company, New York, N. Y., a Corporation of Texas. Filed Jan. 21, 1922. Serial No. 530,790. 16 Claims. (Cl. 23—1.)



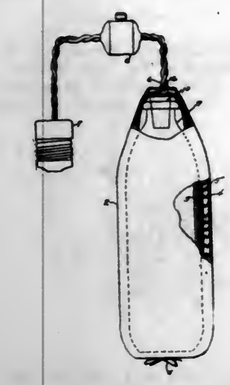
1. The improvement in the burning of sulphur which comprises maintaining the sulphur freely burning by associating with the sulphur a sulphur combustion-accelerating material.

1,455,285. TELEPHONE INDICATOR. WILLIAM H. EASTMAN, Concord, N. H., assignor of one-half to Herbert C. Whitney, Penacook, N. H. Filed June 1, 1922. Serial No. 565,172. 5 Claims. (Cl. 179—28.)



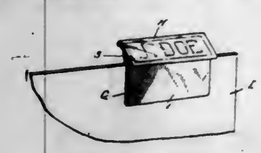
1. In a telephone, the combination with a transmitter and its local circuit, of a receiver-supporting arm which when depressed opens the local transmitter circuit and

closes the ringing circuit and when raised opens the ringing circuit and closes the local transmitter circuit, an indicating circuit connected to the local transmitter circuit, an indicator in said indicating circuit, and means operative while the receiver-supporting arm is rising after the receiver has been removed but before the transmitter circuit is closed to close the indicating circuit.



5. In a telephone, the combination with a vertically-movable receiver-supporting arm, of a receiver having a laterally-extending neck and a head at the end of the neck adapted to rest on said arm, a vertical guideway to receive the head, said guideway being constructed to permit freely downward movement of the head but to prevent upward movement thereof, and also having an opening at its lower end through which the head can be laterally withdrawn from the arm.

1,455,286. GRINDING APPARATUS. ROBERT E. FOSDICK, Cincinnati, Ohio. Filed Sept. 10, 1920. Serial No. 409,318. 8 Claims. (Cl. 51—105.)

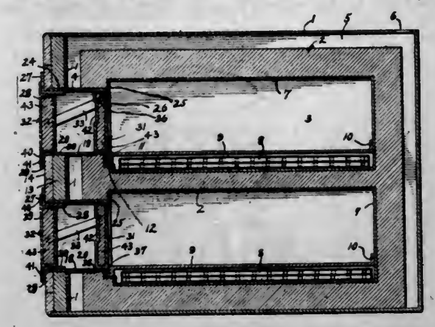


1. A grinding apparatus comprising a rotary abrasive wheel, a frame adjustable to and from said wheel and provided with a pair of centers adapted to hold a plurality of stock members to present the edges of each of said stock members to said abrasive wheel, means to rotatably feed said centers to present fresh surfaces of the stock members to the wheel until the stock members have reached predetermined dimensions, a chuck housing having a rotary adjustment and a sliding adjustment, a chuck rotarily mounted on said chuck housing and adapted to successively hold single stock members at one end thereof and adjustable to present an edge of the stock at a predetermined angle to the action of the abrasive wheel, and a driving train common to both of said chucks to rotate said chuck to feed fresh surfaces of the stock to said wheel until the stock members have respectively reached predetermined dimensions.

1,455,287. ELECTRIC HEATER. IDALE L. HADLEY, Hartford, Conn. Filed Aug. 28, 1922. Serial No. 583,705. 4 Claims. (Cl. 219—46.)

1. An article of the class described comprising a container to contain a bottle, a resistance element incorporated in the stock of the container, leads connected to the resistance element, and a plug electrically connected with the leads.

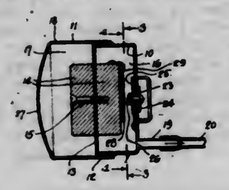
1,455,288. INDEX TAB. WINFIELD A. HARDY, Brooklyn, N. Y. Filed July 21, 1921. Serial No. 486,318. 7 Claims. (Cl. 40—28.)



1. A card index tab comprising a body part and a head part, the body part including portions to straddle the card, and a spring device formed of material different from the body part and being carried by the body part and adapted to engage the card to frictionally retain the body part connected with the card.

1,455,289. BLANK FOR EMBLEMS AND THE LIKE. GEORGE W. HEENE, Cleveland, Ohio. Filed Oct. 10, 1922. Serial No. 593,583. 6 Claims. (Cl. 40—2.)

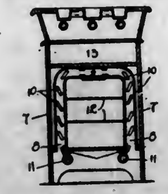
1. A blank of the character described, comprising a circular flat body, a circular row of serrations embossed along the outer surface of the face of said body, a blank annular surface adjacent to and inward of said row of serrations, a circular depression adjacent to and inward of said annular surface, and a blank circular surface inside of said circular depression.



1,455,290. ELECTRIC BAKE OVEN. JACOB HIRE, Seattle, Wash. Filed Mar. 10, 1922. Serial No. 542,607. 7 Claims. (Cl. 107—65.)

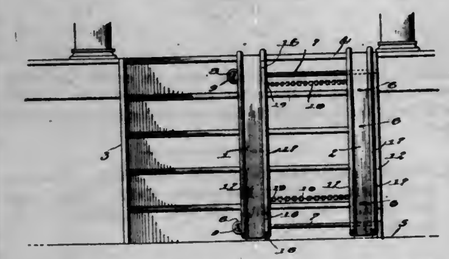
1. An oven structure comprising an inner insulation wall, an outer casing spaced around said inner insulation wall to provide an air chamber, said insulation wall having a baking chamber formed therein, a double door including an inner door member for closing said baking chamber and an outer door member connected to said inner door member for closing and opening the outer casing opposite said baking chamber, and means for assuring an air tight engagement of said inner door and said outer door member with said inner insulation wall and said outer casing, respectively.

5. An electric bake oven comprising an outer casing, an inner insulation wall structure within said outer casing with an air space provided therebetween, an inner lining within said inner wall structure to provide a baking chamber, a double door for said bake oven including an inner door member for closing a door opening in said baking chamber and an outer door member for closing a corresponding door opening in the outer casing, operative connections between said door members to cause uniform movement thereof to open and closed position, and means for assuring tight fitting of said door members when in closed position.



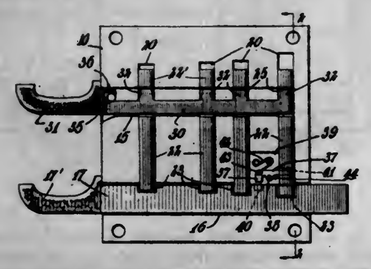
1,455,291. THERAPEUTIC VIBRATOR. PAUL W. HOFFMANN, New York, N. Y. Filed Aug. 24, 1921. Serial No. 494,819. 5 Claims. (Cl. 128—40.)

1. In a therapeutic vibrator, the combination of a casing, an elastic rubber diaphragm extending across the interior of the casing, a two-part weight supported upon opposite sides of the diaphragm and movable with the diaphragm relatively to the casing, and means acting upon the diaphragm to cause such relative movement of the weight and diaphragm in one direction, the weight and diaphragm being movable subsequently in the other direction by the resiliency of the diaphragm..



1,455,292. COOKING STOVE. JAMES DOWSON JACKSON, Manly, near Sydney, New South Wales, Australia. Filed Jan. 4, 1922. Serial No. 526,880. 1 Claim. (Cl. 126—39.)

In gas fired domestic cooking stoves of the noncontact oven type, in which the combustion gases do not contact with the food being cooked, an upwardly extending heat chamber on one side of the oven in communication with the

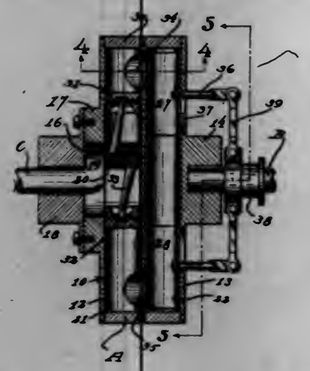


heating gases and with an escape flue and tubes within said chamber open at each end to the oven but not to the heating gases substantially as described.

1,455,293. ADJUSTABLE TRACK. HENRY C. KOLLING and WILLIAM MCGILL, Wichita, Kans. Filed May 24, 1922. Serial No. 563,218. 5 Claims. (Cl. 193—41.)

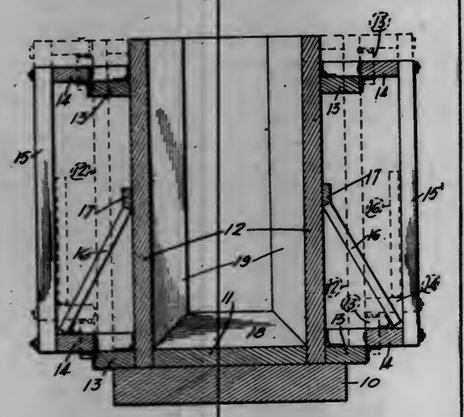
1. A track of the character described comprising a pair of longitudinal rail members, and means adjustably connecting the rails together in parallel relation and permitting of movement of one rail from a position in which it is disposed laterally of the other rail to a position in which it is superimposed upon the latter.

1,455,294. LOCK. PIOTR KONDRAD, Wilkes-Barre, Pa. Filed June 7, 1922. Serial No. 566,503. 3 Claims. (Cl. 70—76.)



2. In a lock a casing element, a bolt slidable in said casing element and having a notch and a socket formed therein, a vertical tumbler bar resting in said notch, and a latch pivoted in the said casing element and adapted to engage the said socket when the tumbler bar is lifted for a distance clear of the bolt, said latch having an arm engaging in a vertical slot in said tumbler bar to form an operative connection between the latter and the latch.

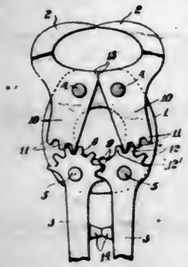
1,455,295. HYDRAULIC TRANSMISSION. CHARLES KRUSE, San Luis Obispo, Calif. Filed Oct. 17, 1921. Serial No. 508,222. 4 Claims. (Cl. 192—60.)



1. In a fluid transmission, a drive shaft, a driven shaft, a fly wheel carried by one of the shafts, a crank

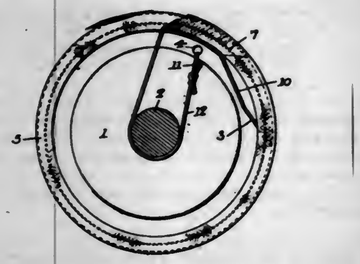
carried by the other shaft, cylindrical ways extending through the wheel, ports connecting the ends of the ways together, pistons slidably mounted in one of the ways,

means connecting the pistons with the crank, and slide valves mounted in the other way for movement toward and away from said ports for controlling the size of said ports.



1,455,296. CONCRETE-BLOCK MACHINE. FRANCIS SCOTT LINDLEY, East Bakersfield, Calif. Filed Sept. 22, 1921. Serial No. 502,348. 6 Claims. (Cl. 25—121.)

6. In a concrete block machine, a base, a plate removably positioned thereupon, upright panels adapted to be arranged about said plate and to co-operate therewith in forming a mold, horizontally disposed rails hinged to the outer faces of said panels, vertically movable frames hinged to said rails, locking means adapted to be arranged between the lower one of the frames and said panels for retaining the latter in assembeld relation, and ribs arranged on the inner faces of said panels.

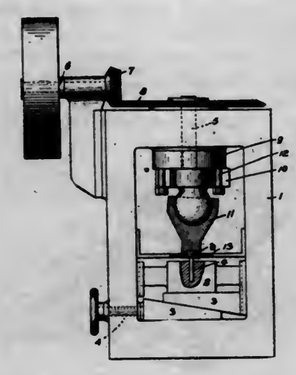


1,455,297. CUTTING TOOL. WILLIAM W. LYONS and GEORGE E. MCELROY, Newark, N. J., assignors to Heller Tool Company, Newark, N. J., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,562. 6 Claims. (Cl. 81—200.)

1. A lever operated tool of the character described, comprising a pair of fulcrumed operating levers provided with intermeshing gear segments and with gear teeth angularly positioned relatively to correspond, pivotally mounted jaw members provided with lever extensions and having segmental gears thereon in symmetrical

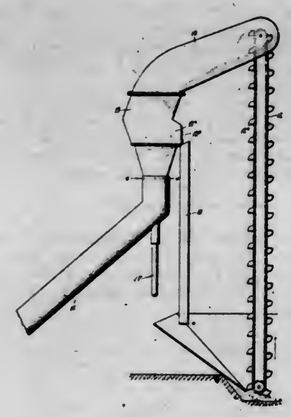
arrangement and interengaged with the correspondingly positioned gear teeth of the operating levers whereby the jaw members may be interchangeably positioned, substantially as described.

1,455,298. BURNISHING-WHEEL COVER. HARRY ALLYN MASBEY, Lima, Ohio. Filed Sept. 5, 1922. Serial No. 586,385. 2 Claims. (Cl. 51—194.)



1. The combination of a burnishing wheel having a slot cut in from its periphery and a transverse hole therethrough, with a cover formed of a unitary piece of material extending over the face of the wheel and a short distance over the sides, and having its edge portions stitched to form casings, and a draw string freely running in said casings and having a loop at one end of the cover lying in the slot in the wheel, and the draw string ends being passed, one through the hole and the other around the wheel axle, and being then fastened together.

1,455,290. METHOD OF EVAPORATING AMMONIA LIQUOR. FRANK F. MARQUARD, Clairton, and CARL W. LITTLER, Swissvale, Pa. Filed Nov. 11, 1920. Serial No. 423,288. 6 Claims. (Cl. 23—13.)

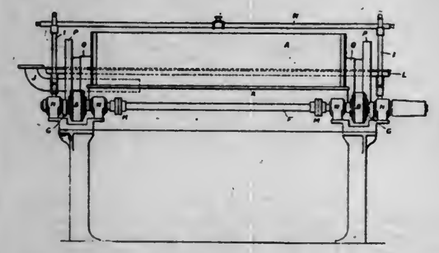


1. The method of treating crude ammonia liquor from by-product coke plants to recover the salts of ammonium chloride and other salts therein, which consists in passing such liquor down through a tower over noncorrodible baffles, and passing a counterflow of hot gas up through said tower, spraying a quantity of the liquor into the path of said hot gas and up against the lower baffles, collecting all of said liquor in the lower portion of the tower, and passing said liquor in a continuous circuit from the bottom of the tower upward through suitable conduits and spraying it down over said baffles against said counter-flow of hot gas, causing it to evaporate until the desired degree of concentration is effected.

1,455,300. METHOD OF AND MACHINE FOR SWAGING BLANKS. JAMES H. MATTHEWS, Pittsburgh, and WILLIAM R. ECKE, Emsworth, Pa., assignors to James H. Matthews & Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 29, 1920, Serial No. 369,667. Renewed Apr. 9, 1923. 7 Claims. (Cl. 76—4.)

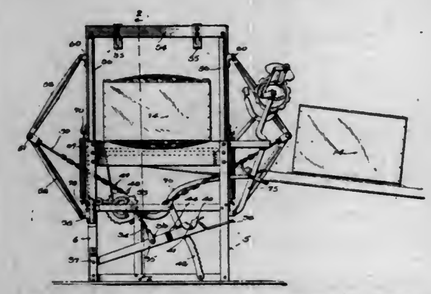
1. The herein described methods of raising upon the face of a blank the cutting edges of a die which consists in bringing the blank and a forming member provided with recesses corresponding to the desired surface elevations of the die into face to face contact, and then, while maintaining a continuous swaging pressure between them, rolling one of said parts in orbital motion upon the other.

1,455,301. GRAIN ELEVATOR. CHRISTOPH METTLER, Sr., Menno, S. Dak. Filed July 9, 1920. Serial No. 395,051. 3 Claims. (Cl. 198—43.)



1. In a grain elevator, a distributor head having a passage through which grain is adapted to flow, said distributor head being provided with an offset portion having an opening laterally spaced from the normal path of the grain through the distributor head, and means for normally closing said opening and operable by the pressure of the excessive grain accumulating in said distributor head to uncover said opening and permit discharge therethrough.

1,455,302. SUSPENDING DEVICE FOR GARMENTS. HORACE Z. NABERS, Greenville, S. C. Filed Oct. 26, 1921. Serial No. 510,455. 1 Claim. (Cl. 24—84.)

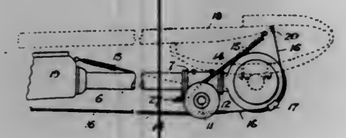


A suspending device for garments constructed from a single blank of sheet metal comprising a body U-shaped in cross section for receiving the upper edge of the garment and including an inner and an outer flat leg and an upper curved connecting portion, the outer leg and the curved connecting portion having a tongue struck out therefrom, the tongue lying above and in the same plane with the inner leg, and a hook formed on the upper edge of said tongue.

1,455,303. MACHINE FOR STRAINING PAPER PULP. JOHN PARAMOR, Watford, England, assignor of one-half to The Watford Engineering Works, Limited, Watford, Herts County, England. Filed Sept. 1, 1921. Serial No. 497,787. 3 Claims. (Cl. 92—35.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a paper-pulp strainer of the rotary drum type, the combination, with a trunnion-ended straining drum, of a cradle-arm in direct connection with an eccentric at one end, suspended or supported by means of a rigid link at its opposite end, and formed at an intermediate point with a bearing in which the drum-trunnion is carried, substantially as and for the purpose set forth.

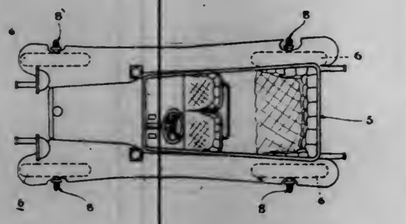
1,455,304. PRESS. JOSEPH IRWIN POGUE, Omak, Wash. Filed Mar. 30, 1922. Serial No. 548,005. 11 Claims. (Cl. 100—57.)



1. A box press comprising a frame, a tiltable platform carried thereby, a link connected to the platform, and means to periodically move said link longitudinally whereby to tilt said platform.

5. A fruit box press comprising a frame, a platform carried thereby, pivot elements connected to the platform between its longitudinal edges and horizontally pivoted to

the frame whereby the platform may swing about a horizontal axis, and a tripping device for swinging said platform about a horizontal axis, whereby the box mounted thereon may be discharged.

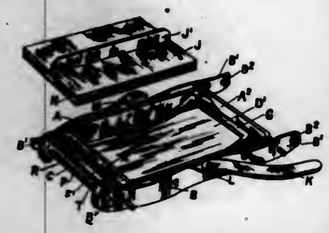


9. A fruit box press comprising a frame having guide members, rods associated with said guide members, a pressure head connected to said rods, toggle links pivoted to said frame and to said rods, flexible members connected to said toggle links for drawing the same inwardly and consequently drawing said rods and the pressure head thereof downwardly, a plurality of coiled springs connected to said frame and to said rods for normally holding the pressure head in an elevated position, operating means whereby to draw said flexible elements inwardly, a tiltable platform supported by said frame, a tripping device for said platform operated by said means, and a locking device associated with said frame.

1,455,305. MEANS FOR CONTROLLING THE REBOUND OF SPRINGS OF VEHICLES. RICHARD POPE, North Sydney, New South Wales, Australia. Filed Mar. 7, 1922. Serial No. 541,638. 4 Claims. (Cl. 267—8.)

1. In a rebound control gear for motor vehicles, in combination, a worm upon the tail shaft, a worm wheel in mesh therewith on a spindle disposed transversely to the shaft, a free wheel clutch on each end of said spindle and means for closing each clutch, on the occurrence of rebound, one through flexible connections with the front part of the car and the other through like connections with the rear part.

1,455,306. HUB CAP ATTACHMENT. CHARLES FRANCIS REILLEY and JOSEPH JAMES LUDWIG, Woonsocket, R. I. Filed June 24, 1921. Serial No. 480,254. 3 Claims. (Cl. 88—1.)

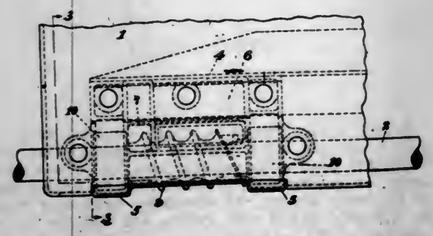


1. The combination with a vehicle having wheels provided with hubs, of cylindrical bodies extending horizontally from said hubs and having their peripheries formed with facets to reflect the light of vehicles approaching from either direction wherebw the lateral extent of the vehicle is indicated, each of said cylindrical bodies being positively rotated with the associated hub whereby the facets are successively presented to the light.

1,455,307. PROCESS OF UNITING METALS. HAROLD A. SOULIS and WILBUR T. SOULIS, New York, N. Y. Filed Aug. 27, 1919. Serial No. 320,223. 11 Claims. (Cl. 113—112.)

1. The process of uniting structural parts of unlike metals having relatively different melting points, consisting in relatively locating the parts and then immersing them in a metallic bath having a substantially constant temperature maintained slightly below the lowest melting point of the metals.

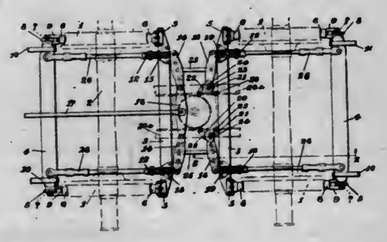
1,455,308. PRINTING FRAME FOR ROLL FILMS. ARNOLD WESLEY STANDFIELD, Sydney, New South Wales, Australia. Filed Dec. 13, 1921. Serial No. 522,088. 3 Claims. (Cl. 95—75.)



1. A photographic printing frame comprising a box-shaped body having at each end means for rotatably supporting a film spool, a sheet of glass covering one face of the body and spaced from the adjacent edges of its ends so that the film may pass behind the glass from one spool to another, guide rollers at each end of the body to protect the film from scraping contact with the latter, a mask of thin spring material having at one end a normal outward flex, a spring normally pressing the other end of the mask away from the glass, and a releasably spring-pressed back fitting in the body and pressing the mask towards the glass.

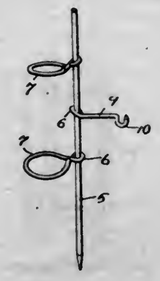
1,455,309. PROPULSIVE BLASTING EXPLOSIVE. ARCHIBALD JACKSON STRANE, St. Paul, Minn., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed June 7, 1922. Serial No. 566,555. 5 Claims. (Cl. 52—10.)

1. A propellent blasting explosive consisting of a mixture of black blasting powder and suitably colloided nitrocellulose powder, each in granular form and in which mixture each individual grain is either all black blasting powder or all colloided nitrocellulose powder.



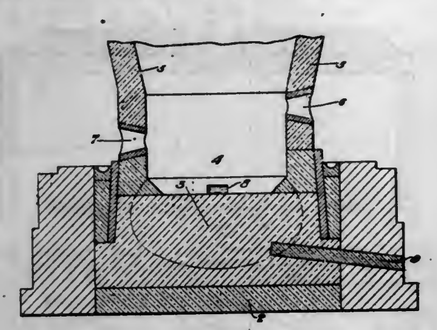
1,455,310. DOOR-OPERATING MECHANISM. JOHN F. STREIB, Avalon, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 6, 1920. Serial No. 422,200. 5 Claims. (Cl. 105—301.)

1. The combination with a hinged discharge door, of a member rigidly secured to the under side of said door,



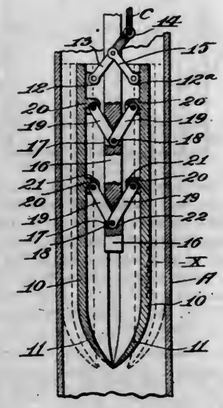
said member having integral spaced shoe portions, a shaft arranged to be moved into and out of the path of said door, a drum on said shaft having spaced rollers, each of said rollers being adapted to engage one of said shoe portions, and a flexible connection from said member to said drum.

1,455,311. BRAKE. JOHN F. STREIB, Avalon, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 8, 1921. Serial No. 443,373. 20 Claims. (Cl. 188—193.)



4. In a brake rigging for railway cars, the combination with a car body and a truck, said truck having a plurality of pairs of wheels, of brake beams at both sides of each pair of wheels, the brake beam at one side of one pair of wheels being on a higher horizontal plane than the beam at the opposite side of said pair of wheels, a lever pivotally mounted on the first mentioned beam, a brake head and shoe pivotally mounted on said lever below said beam, said lever above said beam being connected with said truck.

1,455,312. COOKING APPARATUS. NETTIE V. TURNER, New Smyrna, Fla. Filed May 17, 1920. Serial No. 381,845. Renewed July 3, 1922. Serial No. 572,678. 3 Claims. (Cl. 126—30.)

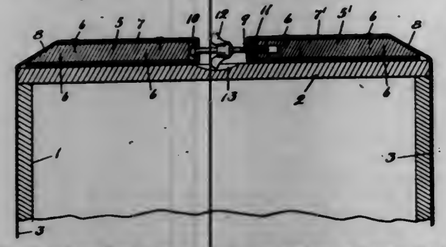


1. A utensil supporting device adapted to be mounted on a stake and comprising a single strand of material having one end bent to provide a utensil support, one end of the strand forming the utensil support being directed laterally of said portion and in the same plane therewith to provide a shank, and the other end of the shank being bent to provide a loop which is disposed at an angle to the plane of the utensil support and shank and which is slightly larger in diameter than the stake.

1,455,313. REMOTION OF BLAST-FURNACE SALAMANDERS. GEORGE W. VREELAND and GEORGE E. WISENER, Steubenville, Ohio. Filed Sept. 1, 1921. Serial No. 497,494. 5 Claims. (Cl. 266—42.)

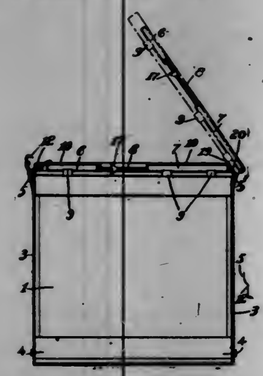
1. In the remotion of blast furnace salamanders, the step which consists in draining the metal forming the salamander from the furnace hearth through a breach formed in the hearth wall for that purpose before the molten salamander has cooled to solidification.

1,455,314. COMBINED FISHING AND SWAGING TOOL. ALBERT B. WATKINS, Alhambra, Calif. Filed Mar. 17, 1922. Serial No. 544,451. 6 Claims. (Cl. 294-93.)



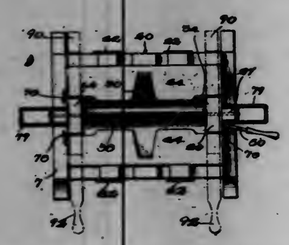
1. In a combined fishing and swaging tool, a pair of elongated channel shaped members arranged parallel with each other and the lower ends of said members being curved inwardly toward each other, and an inclined bail which is directly connected with one of said channel-shaped members and linked to the other of said channel-shaped members.

1,455,315. COMBINATION REINFORCEMENT AND FASTENER. THOMAS CLIFFORD WENTWORTH, Cornish, Me. Filed May 13, 1921. Serial No. 469,161. 2 Claims. (Cl. 217—66.)



1. A band fastener consisting of a pair of oppositely disposed spaced bearing blocks, to which ends of the band are fastened, covering for said blocks, a bolt having its

head lodged between the covering of one of said blocks and the block itself and having its opposite end entered through the covering of and into the opposite block and a

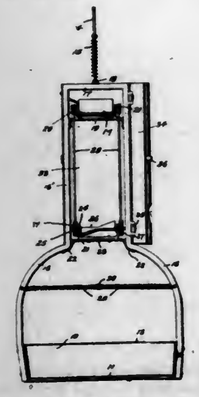


nut on said bolt disposed in the space between said blocks for drawing said blocks towards each other to tighten the band.

1,455,316. COVER FASTENER. THOMAS C. WENTWORTH, Cornish, Me. Filed July 3, 1922. Serial No. 572,628. 8 Claims. (Cl. 217—56.)

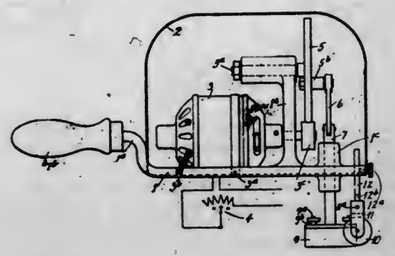
1. A cover fastener for a shipping case, comprising a pair of anchoring portions rigidly attached to the sides of the case adjacent the seat for the cover, and an adjustable clamping connection carried by the cover and hinged at one end to one of said anchoring portions to provide a hinge for the cover and adapted to be detachably connected at its opposite end to the other anchoring portion, and means whereby said connection may be adjusted to clamp the cover upon its seat.

1,455,317. CONCRETE-BLOCK MACHINE. WILLIAM A. WHITFIELD, Asheville, N. C. Filed Nov. 22, 1921. Serial No. 517,080. 3 Claims. (Cl. 25—41.)



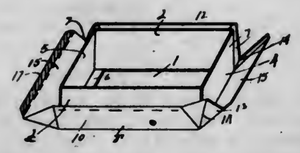
1. A machine for manufacturing concrete blocks comprising a frame having a platform, a pallet mounted on said platform and having a slot, a center plate movable through said slot and having a vertically movable shaft, an operating lever connected intermediate its ends to said shaft and at its forward end to said frame, side and end walls having posts hinged at their lower ends to said frame, collars arranged on said shaft, links establishing connection between said posts and said collars, means carried by said side walls for holding said end walls against outward movement, and a coiled spring mounted on said shaft and providing a yieldable connection between said shaft and the end walls.

1,455,318. COMBINED FORD PRIMER AND CARBURETOR CONTROL. RICHARD THURWALD WOODHEAD, St. Paul, Minn. Filed Mar. 9, 1922. Serial No. 542,459. 2 Claims. (Cl. 137—139.)



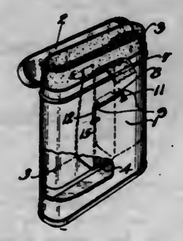
1. The combination of an automobile and an engine, of a carburetor for the engine, an air valve and a fuel regulating valve in said carburetor, a single operating lever adapted to operate both of said valves simultaneously or to operate either valve independently, a member pivotally connected to said lever near one end and provided with separated forwardly extending points at its opposite end adapted to cooperate with the fuel valve to actuate the same upon a rotation of the lever, a casting having a body portion and off set arms extending at right angles thereto provided with apertures receiving said lever by means of which the casting is attached to the lever, said casting having an elongated slot in the body thereof intermediate its ends, a bell crank lever projecting in said slot, and pivotally connected to said body intermediate the ends of the slot therein, and a connection between said bell crank lever and the carburetor air valve.

1,455,319. FLOUR SIFTER. WILLIAM ADELMANN, New York, N. Y. Filed Nov. 27, 1922. Serial No. 603,544. 7 Claims. (Cl. 83—38.)



1. In a flour sifter, the combination of a sieve and a holder for the sieve, of means to agitate the sieve, such agitating means including a frame connected to the holder, an eccentric weight journaled in the frame on an axis substantially parallel to the sieve, and means carried by the frame for rotating the weight at relatively high speed.

1,455,320. CHIROPRACTIC ADJUSTMENT MACHINE. ERNEST H. ASHLOCK, San Diego, Calif., assignor of one-fourth to William H. Sweetland and one-fourth to Walter Rittenhouse, both of San Diego, Calif. Filed June 8, 1921, Serial No. 475,874. Renewed February 3, 1923. 7 Claims. (Cl. 125—52.)

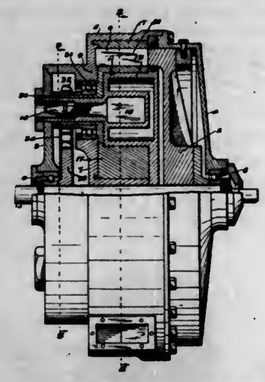


1. A device of the class described, including a supporting frame, a motor mounted on said supporting frame, a friction wheel revolubly mounted on said supporting frame and adapted to engage the drive wheel of said motor, a crank arm extending from said wheel, a connecting rod with one end connected to said crank arm, a plunger reciprocably mounted in said frame and its one end extending below the same and its opposite end pivotally connected to said connecting rod, and a resilient contact member secured to the lower end of said plunger member.

1,455,321. METHOD OF MAKING LOOSE-WRAPPED FOLDING BOXES. GEORGE W. CASE and JOHN WM. ROBERTS, Passaic, N. J. Filed Sept. 23, 1922. Serial No. 589,978. 4 Claims. (Cl. 93—40.)

1. The process of forming a loose wrapped folded box consisting of enclosing a folded box within a wrapper, attaching certain edges of said wrapper to said box and unfolding and refolding said box for the transfer of certain folds in the wrapper from one position to another relative to the sections of the box.

1,455,322. CONTENTS EJECTOR FOR RECEPTACLES. ROBERT W. CHARLTON, Pineville, La., assignor of one-half to August F. Klumpp, Pineville, La. Filed May 18, 1921. Serial No. 470,596. 6 Claims. (Cl. 206—56.)

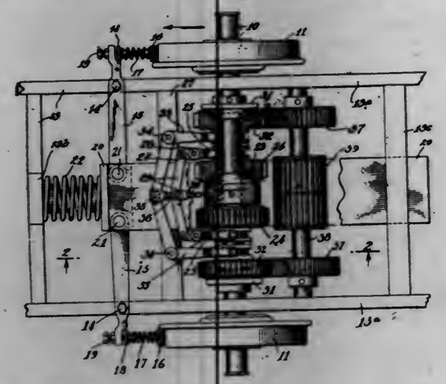


1. The combination with a receptacle, of a carton therein, means passing beneath the carton for lifting the same, and means separate from the lifting means arranged to be positively actuated by a return movement thereof for locking said lifting means in contact with the receptacle in a predetermined elevated position of the carton.

1,455,323. PITTER. HERBERT L. CUMMINS, Owensmouth, Calif. Filed Aug. 25, 1922. Serial No. 584,274. 2 Claims. (Cl. 146—6.)

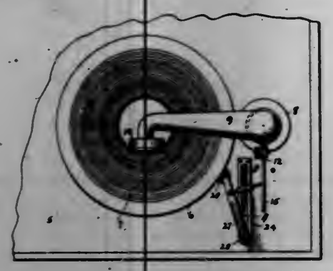
1. A pitter comprising a shank, blades pivoted on the shank and having free ends of arcuate form with their inner edges sharpened to provide cutting edges, and finger receiving members carried by the blades for actuating the latter.

1,455,324. ROTARY GAS ENGINE. TRAV. CUSHMAN, Anaheim, Calif. Filed Sept. 3, 1920. Serial No. 407,031. 1 Claim. (Cl. 123—13.)



An internal combustion engine including a casing forming an annular chamber, a rotor having a piston movable in said chamber, abutments traversing said chamber and shiftable to permit said piston to pass, inlet and exhaust ports at opposite sides of one of said abutments, the other of said abutments being rotatable, hollow, and provided with a transverse chamber having a port adapted to communicate with said annular chamber at opposite sides of the piston as said abutments shift, and a firing means within said transverse chamber, the latter being arranged to communicate with said annular chamber at its respective ends through successive alinement of said ends with said port in the hollow abutment, so as to permit the passage of a charge contained in said annular chamber from one side of said hollow abutment to the other.

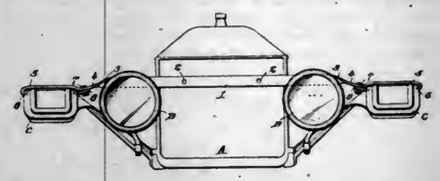
1,455,325. MOMENTUM-OPERATED BRAKE. JOAQUIM COUTINHO DA NOBREGA, New York, N. Y. Filed Sept. 1, 1921. Serial No. 497,557. 4 Claims. (Cl. 188—144.)



1. The herein described momentum operated brake, in combination with a rotating axle and wheel connected thereto, the brake comprising a friction shoe co-operating with the wheel, a clutch cone fixed to the axle, a clutch member normally loose upon the axle adjacent to the cone, manual means to cause the loose clutch member to engage the cone, the clutch member being provided with spur teeth, an actuator rack lying transverse to and above

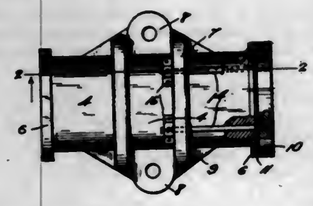
the axle and having its teeth meshing with the teeth of the clutch member whereby when the clutch member is rotated from the axle the actuator will be moved in a predetermined direction, auxiliary means adapted to act upon the rack to cause it to move in the same predeter-

mined direction when the wheel and axle are rotated in the opposite direction from that first indicated, and lever means between the actuator and the friction shoe to cause the latter to engage the wheel with the force proportional to the force applied to the actuator irrespective of the direction of movement of the machine.



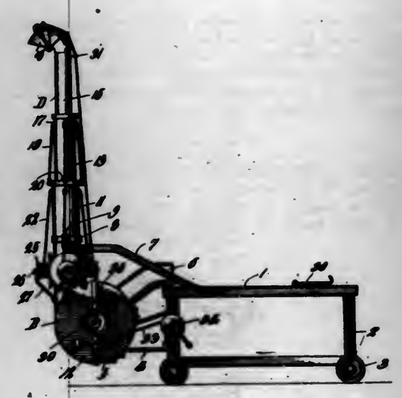
1,455,326. AUTOMATIC STOP FOR PHONOGRAPHS. GEORGE W. EICHELBERGER, Jr., Goose Creek, Tex. Filed Oct. 13, 1921. Serial No. 507,480. 3 Claims. (Cl. 192—121.)

1. In a talking machine brake in combination with the tone arm of a phonograph, a split clamp and a vertically adjustable slotted arm carried thereby detachably connected to the tone arm, a resiliently held lever arm pivotally connected to the slotted arm, a pivoted brake member adapted to frictionally engage the periphery of a turntable and a slidably adjustable push rod interposed between the lever arm and the brake member, whereby the braking operation is affected by the movement of the tone arm in timed relation with a phonograph disk.



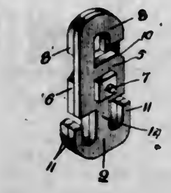
1,455,327. FENDER BRACE. CARL J. FANGEL, McAlester, Okla. Filed May 8, 1922. Serial No. 558,908. 1 Claim. (Cl. 280—152.)

A fender brace comprising an elongated bar including an intermediate body portion and curved fender engaging terminals, the extremities of the intermediate body portion being inclined to dispose the terminals on a plane below the plane of the intermediate body portion, the inclined portion being twisted to lie in a plane at right angles to the intermediate body portion, and normally curved, spring metal plates pivotally mounted on the



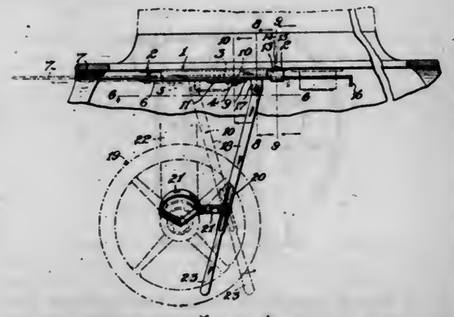
inclined portion and engageable beneath the inner edges of the fenders, said plates being channeled to embrace the inclined portion.

1,455,328. ADJUSTABLE BEARING. ELMER L. FEESE, Plevna, Kans. Filed Jan. 5, 1922. Serial No. 527,140. 3 Claims. (Cl. 64—55.)



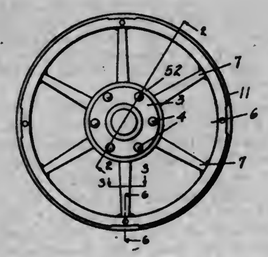
1. A bearing section comprising a body portion having a passage opening at one end into the end of the body and at its opposite end into the periphery of the body, a face plate associated with an end of the body and having an opening therein to aline with the passage in the body, and a bolt extended thru the passage in the body and opening in the face plate and having its head arranged at the periphery of the body.

1,455,329. BLOWER FOR SILOS. ELMER G. FIPPENGER, Nekoosa, Wis. Filed Feb. 17, 1922. Serial No. 537,340. 2 Claims. (Cl. 302—17.)



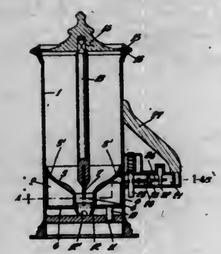
1. In combination, a fan casing comprising a pair of sections, a support, one of said sections fixed to said support, a discharge pipe, the other of said sections fixed to said discharge pipe, and means whereby said discharge pipe may be rotatably mounted on said support in the manner and for the purpose specified.

1,455,330. CABLE HANGER. RILEY FORDYCE, Dixon, Ill. Filed Aug. 29, 1922. Serial No. 584,070. 3 Claims. (Cl. 24—242.)



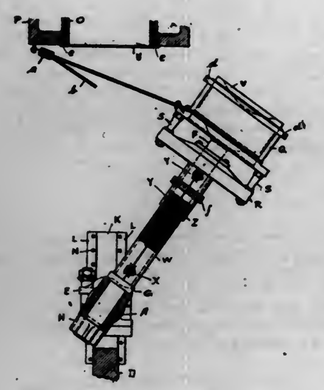
2. A cable hanger of the class described comprising a pair of superimposed identically constructed hook members, pivoted intermediate their ends, each of said members comprising a substantially square shaped body portion, a J-shaped hooked member integrally connected to one side of said body member, and a T-shaped member made integral with the other end of said body member.

1,455,331. DIRECTION INDICATOR FOR VEHICLES. RAFFAELE FRANCO and GIUSEPPE ESTER, Newark, N. J. Filed July 21, 1922. Serial No. 576,426. 3 Claims. (Cl. 116—50.)



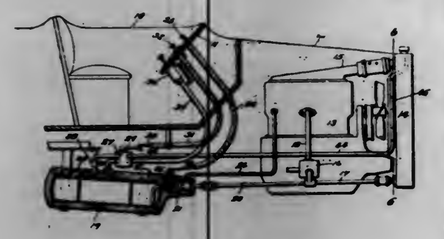
1. In a vehicle signal, the combination of an indicator adapted to be projected laterally from a vehicle, an operating lever, means for fulcruming said lever upon the inclined steering post of a vehicle so as to swing in a horizontal plane with one end of itself adjacent the lower part of the rim of the steering wheel, and means connecting the other end of the lever to said indicator to project and retract the same as the lever is swung.

1,455,332. DISK WHEEL. WILLIAM A. GIBSON, Detroit, Mich. Filed May 27, 1922. Serial No. 564,084. 3 Claims. (Cl. 301—64.)



1. In a disk wheel, the combination of a hub with suitable flanges, a web for the wheel made up of sheet metal sections, seamed joint members therebetween formed of sheet metal with an inturned and outturned portion to form grooves at each side to retain and engage the edges of the said sections, filler disks between the hub flanges to embrace the inner ends of the said wheel, and a fixed rim riveted to the outer flange of the said wheel, all substantially as described.

1,455,333. RECEPTACLE FOR MUSTARD AND OTHER CONDIMENTS. ALFRED JOHN GREAVES, Peckham Rye, London, England. Filed Feb. 27, 1922. Serial No. 539,704. 5 Claims. (Cl. 65—20.)



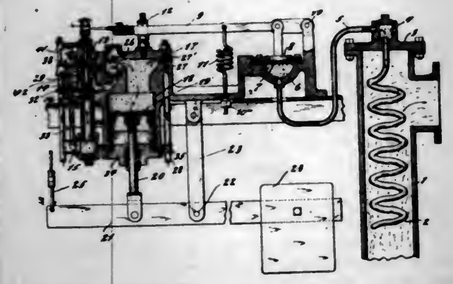
1. A receptacle for mustard and other condiments having a mixing chamber provided with orifices and located in the receptacle and means for simultaneously introducing by suction and ejecting quantities of mustard into and from the chamber through the said orifices.

1,455,334. CROSSHEAD DESIGN FOR RECIPROCATING ENGINES. REINHARD HILDEBRAND, Webster Groves, Mo., assignor of one-half to George D. Pogue, Philadelphia, Pa. Filed Apr. 8, 1919. Serial No. 288,618. 1 Claim. (Cl. 121—194.)

In a machine of the character described, a cylinder, an extension at the lower end of said cylinder detachably connected to same, a piston that operates in said cylinder, a reciprocating cross head, a piston rod that rigidly connects said cross head to said piston, parallel guides arranged adjacent the opposite ends of said cross head, slide shoes in said guides, said crosshead being pivotally mounted on said slide shoes, and a removable means mounted on said piston rod for sustaining said cylinder extension after it has been disconnected from the cylinder.

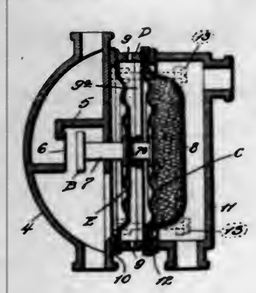
1,455,335. THERMO SYSTEM FOR INTERNAL COMBUSTION ENGINES. WALTER B. INGRAM, St. Louis, Mo. Filed Sept. 13, 1919. Serial No. 323,514. 6 Claims. (Cl. 123—174.)

6. In combination with a motor vehicle provided with an engine having a cooling system embodying a radiator, said motor vehicle being also provided with a dashboard, a storage tank, a pump for the cooling fluid, said pump being connected with the radiator and also connected with the storage tank, a valve for closing the connection between the pump and storage tank, a second connection between the radiator and tank to permit the discharge of vapors from said radiator, a pump operated from the dashboard and having a connection with the tank, and a controlling valve operated from said dashboard, said controlling valve operating to control the circulation of air from the pump said controlling valve further operating to control the circulation of vapor from the radiator.



1,455,336. CONVEYER MECHANISM. RICHARD S. JACOBSEN, Chicago, Ill., assignor, by mesne assignments, to Webster Mfg. Co., a Corporation. Filed Mar. 12, 1919. Serial No. 282,094. 12 Claims. (Cl. 83—56.)

1. In a conveyer mechanism, the combination of two superposed substantially horizontally disposed conveyer receptacles, means for simultaneously reciprocating said receptacles in different directions with a non-uniform movement, and separate compartments rigidly connected with said conveyer receptacles for conveying the refuse pickings in opposite directions.

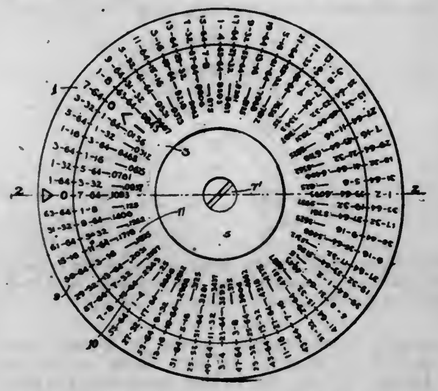


1,455,337. REGULATING DEVICE. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Dec. 14, 1916, Serial No. 136,832. Divided and this application filed Sept. 4, 1918. Serial No. 252,551. 12 Claims. (Cl. 236—86.)

8. In a device of the class described, a valve, a pressure-actuated device, connections between the valve and said device arranged to open the valve when the pressure on said device has reached a predetermined amount, means to hold the valve on its seat, and valve closing means independent of the means to hold the valve on its seat and operative only when the valve is open, to exert

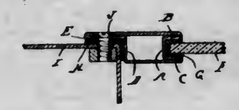
a closing pressure on said valve substantially equal to the frictional resistance of the connections between the valve and the pressure-actuated device.

1,455,338. HEATING SYSTEM. EDWIN A. JONES, St. Louis, Mo. Filed May 21, 1920. Serial No. 383,153. 4 Claims. (Cl. 236—40.)



1. A heating system, comprising heat radiating elements, each of which is provided with an inlet and an outlet, a packless valve associated with the inlet of each heat radiating element, a heat operated governing device associated with the outlet of each heat radiating element and combined with said valve in such a way as to form a unitary structure, means actuated by said governing device for positively actuating the movable part of the valve that controls the supply of the heating medium to the heating element, and means for preventing said heat operated governing element from being affected by the heat of the heating medium supplied to the heat radiating element through said inlet.

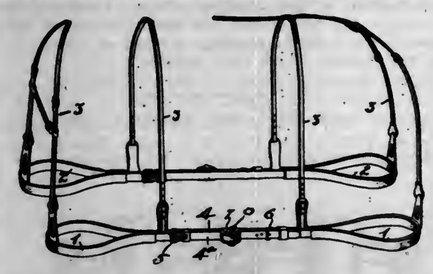
1,455,339. CIRCULAR SLIDE RULE. JOSEPH F. KELLER, New York, and FRANCIS J. BADGE, Woodhaven, N. Y., assignors to Keller Mechanical Engraving Co., Brooklyn, N. Y., a Corporation of New York. Filed July 1, 1920. Serial No. 393,346. 5 Claims. (Cl. 235—88.)



1. A device of the character described, comprising a flat rim having a portion of reduced thickness along its inner edge, two disks having their peripheral portions out of mutual contact and rotatably seated on opposite faces of said reduced rim portion, the exposed faces of said peripheral portions being substantially flush with the outer portions of said rim, the central portions of said disks being offset toward each other and in mutual contact, and the exposed faces of the disks being formed with central depressions or sockets, finger pieces seated in said sockets and themselves provided with repressions or recesses in

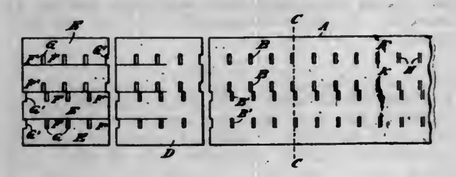
their exposed faces, and a clamping center pin comprising a headed tubular internally threaded member extending centrally through said disks and finger pieces, and a

headed screw fitted into said tubular member, the heads of said member and of said screw being located in the recesses of the respective finger pieces.



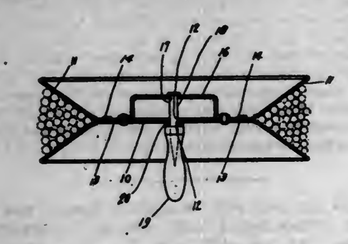
1,455,340. WINDOW FRAME. HOMER G. KELLOGG, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 5, 1921. Serial No. 449,665. 1 Claim. (Cl. 296—93.)

A window frame for motor vehicles comprising side and end rails, each of said rails being formed from sheet metal and having a longitudinally extending portion for receiving an edge of a transparent element, said longitudinally extending portion being U shape in cross-section, each rail also having rearwardly extending portions bent close upon the sides of said longitudinally extending portion and forming spaced parallel walls, one of said walls having a portion bent at right angles and abutting the other wall intermediate the ends thereof, the first mentioned wall also having a portion extending at right angles from the angular extending portion aforesaid and extending longitudinally of the other wall to the end thereof in contacting relation, the longitudinally extending contacting portions being provided with registering apertures for the passage of devices for securing the body of said vehicle to said frame.



1,455,341. HOPPLE. JOSEPH B. KOPF, Rockville Center, N. Y. Filed July 12, 1922. Serial No. 574,513. 2 Claims. (Cl. 54—71.)

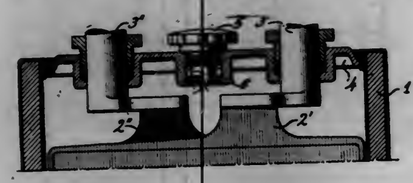
2. In a hopple harness, two leg loops with a two-part adjustable strap connection between the front and rear leg loops and including at least one buckle to permit said strap connection to be lengthened or shortened, and clamping means located intermediate the length of said two-part strap connection for pinching said two parts of said connection tightly together in the event of heavy strain thereon, to relieve the strain on that part of said strap connected to said buckle, said clamping means comprising a loop having an intermediate cross bar, through which loop and over which bar one part of said strap is passed, and a swinging U-shaped member pivoted to said loop, the other part of said strap being secured to said member, whereby excessive strain tending to slide one part of said strap on the other will cause said U-shaped member to



swing toward the loop, to press the two parts of said strap connection into tight surface engagement for the purpose described.

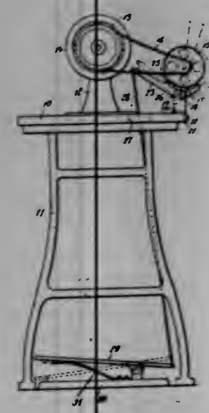
1,455,342. METHOD OF MAKING SHINGLE STRIPS. SAMUEL M. LANGSTON, Wenonah, N. J. Filed May 31, 1922. Serial No. 564,682. 9 Claims. (Cl. 164—17.)

1. The method of forming a plurality of non-symmetrical substantially identical shingle strips, each strip having a row of tabs or projections along one longitudinal edge and of uniform width and adapted to simulate individual shingles and separated by open-ended slots, one of said tabs or projections having a side edge at one end edge of the strip and one of said slots being open at its side at the other end of the strip, which method consists in performing in a suitable order the steps of slotting the sheet, slitting it lengthwise and cutting it transversely, the distance between the longitudinal slits being equal to the width of the strip, the distance between the transverse cuts being equal to the length of the strip, each transverse cut being straight and extending the full width of the sheet and the slots being so positioned transversely of the sheet that each slot has one end registering with a lengthwise slit in the sheet and the slots being so positioned lengthwise of the sheet that one or more of the slots lie at one side of and open into a transverse cut and one or more other slots lie at the opposite side of and open into the same transverse cut.



1,455,343. WASHLINE REEL. GEORGE J. LEBER, Cleveland, Ohio. Filed July 15, 1921. Serial No. 484,916. 10 Claims. (Cl. 242—100.)

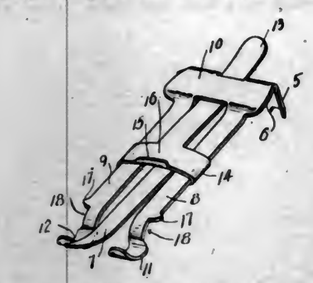
4. A clothes line reel comprising two members, each member consisting of a base portion and an inclined an-



nular flange portion, said members being oppositely disposed with their bases abutting, means for securing the base portions of said members together, a bail rigidly secured to the face of the base portion of one of said members and a handle rotatably mounted on the face of the base portion of the other member.

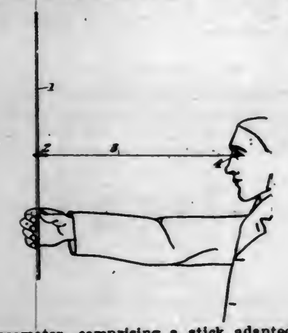
1,455,344. VENT PLUG FOR STORAGE BATTERIES. LAMAR LYNDON, New York, N. Y. Filed Sept. 7, 1921. Serial No. 499,052. 13 Claims. (Cl. 204—29.)

1. In an enclosed storage battery having a filler opening, venting means, including a solid vent plug and an expansion chamber between the surface of said filler opening and said vent plug.



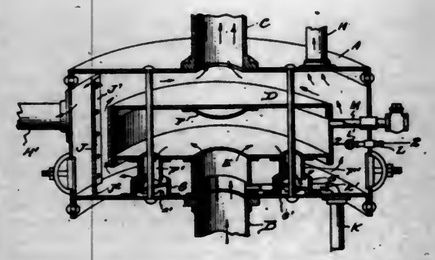
1,455,345. MOUNTING FOR SEWING-MACHINE MOTORS. HYMAN MAIMIN, New York, N. Y. Filed Jan. 8, 1920, Serial No. 350,243. Renewed Oct. 6, 1922. Serial No. 592,845. 10 Claims. (Cl. 64—52.)

1. In a sewing machine mounted upon a table and provided with a driving wheel, the combination of a support adapted to be selectively attached to either face of the table, a motor mounted to swing about an axis on the support and be held in operative relation to the wheel of the machine by its own weight in either position of the support, and means mounted on the support and adapted to be brought into engagement with the motor in either position thereof to lift it out of operative relation to the wheel of the machine.



1,455,346. GAUGE PIN. EDWARD L. MEGILL, New York, N. Y. Filed Oct. 5, 1921. Serial No. 505,479. 4 Claims. (Cl. 101—415.)

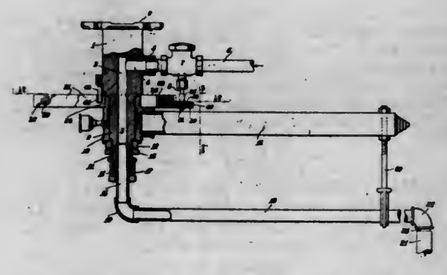
4. In a work positioning member for printing presses, an elongated support, a tongue slidably mounted on said support for projection to various extents over the work, said tongue being provided with laterally extending hook



members for engaging the lateral edges of the support, and said tongue member being bowed between said hook members for the purpose described.

1,455,347. HYPSOMETER. ROBERT G. MERRITT, New York, N. Y. Filed Feb. 11, 1913. Serial No. 747,755. 1 Claim. (Cl. 33—64.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A hypsometer, comprising a stick adapted for use in vertical position and having marked upon it graduations, the distance between any two of which is the same, and a device for determining the proper distance at which the instrument is to be held from the observer when in use, comprising a ring to be slipped over the stick and a cord attached at one end to said ring and having a knot at a predetermined distance from its other end.

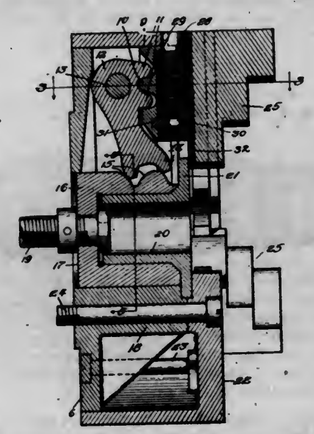


1,455,348. OIL SEPARATOR. HENRY E. MOFFAT, Highland Park, Mich., assignor of one-sixth to George W. Marshall, one-sixth to George L. Marshall, and one-sixth to Gaylord L. Marshall, all of Dayton, Ohio. Filed Oct. 31, 1921. Serial No. 511,658. 4 Claims. (Cl. 183—5.)

1. In an oil separator, a casing having an exhaust steam inlet and outlet, and oil separating means within

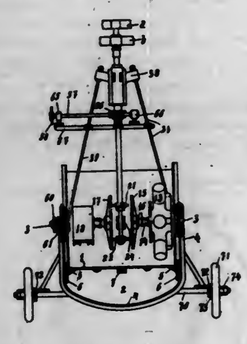
said casing, said casing having a cylindrical wall and a live steam pipe entering said casing and having a head within the casing discharging at an acute angle against said wall whereby the curved surface of said wall deflects the steam without detrimental effect upon said wall.

1,455,349. VEHICLE WASHER. EDWARD MULLER, North Bergen, N. J. Filed May 17, 1919. Serial No. 297,720. 16 Claims. (Cl. 209—81.)



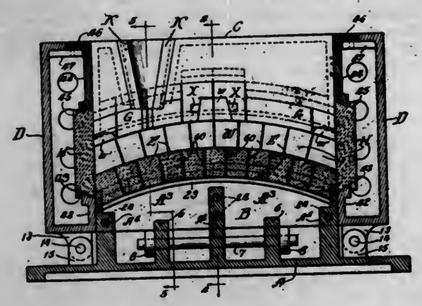
1. The combination with a support having a valved water supply and a movable delivery pipe, of a valve-controlling member movable with said delivery pipe for a part only of the full extent of the movement of the latter to open and close the valve of the water supply.

1,455,350. CLEANING COMPOSITION. MORRIS Y. NEEDLE, Washington, D. C., assignor of one-half to MAX MOSKOWITZ, Washington, D. C. Filed Nov. 16, 1921. Serial No. 515,593. 3 Claims. (Cl. 87—5.)



1. A cleaning composition comprising zinc oxide, aqua ammonia, magnesium carbonate, and neat's-foot oil.

1,455,351. CHUCK. JOHN A. OLSON, Chicago, Ill., assignor to The S-P Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 20, 1918. Serial No. 235,629. 12 Claims. (Cl. 279—119.)

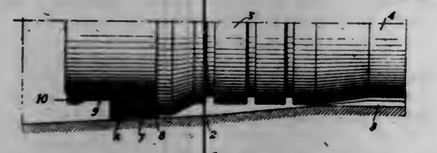


1. A chuck comprising a solid back plate having a central apertured projection, pairs of radially arranged ribs extending outwardly from said projection, a longitudinally slidable cam member mounted in said aperture, bell-crank levers pivotally mounted between the ribs and having their inner ends engaging with the cams on said cam member, guideways formed in said ribs, and slidable clamping members mounted in said guideways and engaging with the opposite ends of said levers and adapted to be reciprocated thereby.

1,455,352. HELICOPTER. ALBERTUS OVERBEEK, Weltevreden, Java, Dutch East Indies. Filed Dec. 1, 1921. Serial No. 519,116. 4 Claims. (Cl. 244—19.)

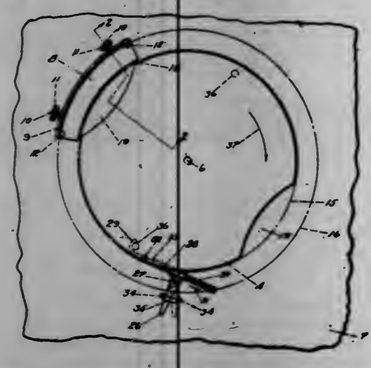
1. In a helicopter having two propellers rotating in opposite direction and arranged one above the other on concentric shafts for giving the hull ascending as well as horizontal propelling movement, friction discs mounted directly on the propeller shafts, a single friction disc for engaging and driving the discs on the said shafts, means for adjusting the relative positions of the discs during the rotation to vary their relative speeds, and means whereby the propeller shafts can be inclined in the forward and the rearward direction of the apparatus.

1,455,353. CASTING MOLD. CLIFTON D. PETTIS, New York, N. Y. Filed Mar. 2, 1923. Serial No. 622,262. 32 Claims. (Cl. 22—136.)



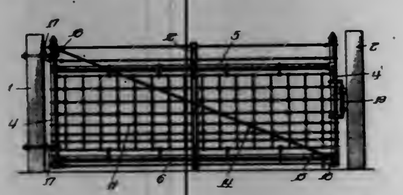
1. A casting mold having a molding receptacle comprising a plurality of blocks of refractory material, said blocks being spaced apart to permit the expansion of the blocks, the spaces between the blocks being of such width as to prevent the passage of molten metal therethrough while allowing for the escape of gases from said metal.

1,455,354. PROJECTILE. WINFIELD P. PORTER, New York, N. Y. Filed May 28, 1918. Serial No. 237,021. 9 Claims. (Cl. 102—40.)



2. A projectile having the usual rotating band surrounding the same, a sealing ring of relatively soft elastic

material surrounding the body of said projectile and disposed rearwardly of said rotating band, said sealing ring

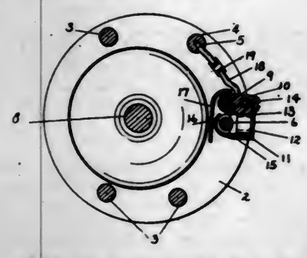


being movable along the body of the projectile into engagement with or away from said rotating band.

1,455,355. PHONOGRAPH TURNTABLE. JOHN J. REINHOLD, Marietta, Pa. Filed Apr. 6, 1922. Serial No. 550,237. 6 Claims. (Cl. 274—1.)

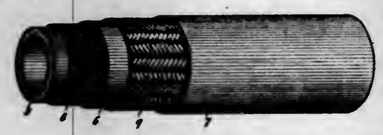
1. In combination with a phonograph turn-table, a center pin on the turn-table, and a gauge fixed stationary near the rim of said turn table and adapted to guide a record to engage with said pin.

1,455,356. ADJUSTABLE GATE. RIAL T. ROLFE, deceased, late of Harvey, Ill., by Olive Rolfe, executrix, Harvey, Ill., assignor to Rolfe Iron Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1921. Serial No. 484,810. 2 Claims. (Cl. 39—80.)



1. A gate construction including post members and tubular rail members, the latter having their ends bifurcated to form parallel arms engaging opposite sides of the post members, connection members having parts embracing tubular portions of the rails and paralell portions overlying and contacting said parallel arms, fastening means rigidly connecting the connection members to said tubular portions of the rail members and pivot bolts seated in the post members and passing through the parallel arms and the overlying portions of the connection members, said bolts serving as connections for the rail and post members and cooperating with said fastening means to maintain the connection members in contact with the parallel arms of the rail members.

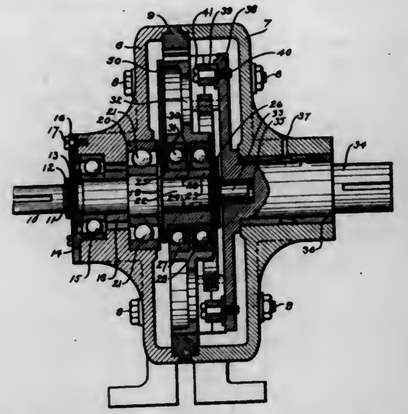
1,455,357. BUTTON. FREDERICK N. ROSS, Detroit, Mich., assignor to Button Attaching Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 26, 1922. Serial No. 596,964. 6 Claims. (Cl. 24—90.)



1. The method of constructing a button of the type specified, comprising the forming of a shallow cupped metal back and punching the centre, the forming of a wire eye with the ends passed through the centre opening and turned over against the inside of the back of the metal shell and the spreading and flattening of the ends by the use of pressure in the presence of relatively great heat.

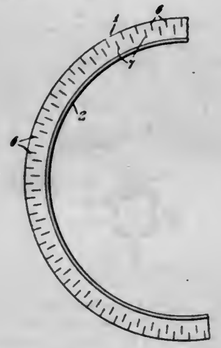
1,455,358. FISHING REEL. SAMUEL G. RUSSELL, Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Dec, 12, 1921. Serial No. 521,744. 6 Claims. (Cl. 242—84.4.)

3. In a fishing reel, the combination of a frame, a spool, a traversing shaft, a carriage slide rod disposed adjacent and parallel to said traversing shaft, a line guide carriage slidable on said rod and provided with a pawl socket open at its outer end, a pawl disposed in said socket to coact with said shaft, a clip member mounted on said carriage to retain said pawl in said socket and provided with an arm projecting at the rear of the traversing shaft but normally out of contact therewith, and a line guide member on said carriage.



1,455,359. HOSE. ERNEST SCHULTHESS, South Orange, N. J. Filed Sept. 28, 1921. Serial No. 503,936. 2 Claims. (Cl. 137—90.)

1. A hose comprising an inner layer of vulcanized rubber and an outer layer of vulcanized rubber, layers of seamless circular woven and seamless braided fabrics between said inner and outer vulcanized rubber layers, respectively, and a cushioning layer of vulcanized rubber between said layers of fabrics.



1,455,360. REDUCTION GEARING. WILLIAM E. SHARKEY, Middletown, Ohio. Filed Oct. 10, 1921. Serial No. 506,592. 4 Claims. (Cl. 64—89.)

1. In a reduction gearing, the combination with a rotatable gear member having blocks thereon, of a power transmission ring having notches wherein said blocks are positioned, anti-friction rollers between the blocks and the sides of said notches, said ring also having other notches therein, a driven shaft having a yoke provided

with engaging blocks positioned in the last mentioned notches, and anti-friction rollers between the last mentioned blocks and the sides of the last mentioned notches.

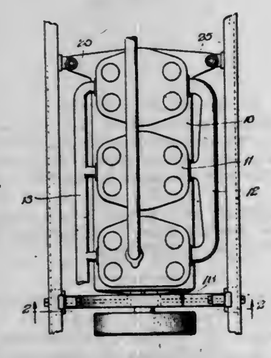
1,455,361. SOLID ELASTIC TIRE FOR ROAD VEHICLES. JOHN F. SIPE, New York, N. Y. Filed Jan. 2, 1923. Serial No. 610,090. 10 Claims. (Cl. 152—1.)

2. A solid elastic tire provided with a multiplicity of radial cuts or incisions all around the tire and beneath the tread surface thereof, the cuts or incisions extending outwardly far enough to divide the tire into tread sections after its original tread portion has worn off.

1,455,362. NECKTIE. JOHN A. SODERSTROM, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,803. 5 Claims. (Cl. 2—82.)

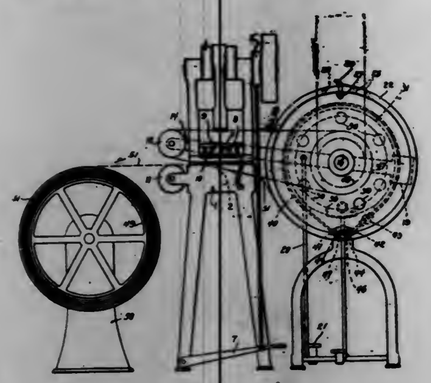
1. In a neck tie the combination with a body portion of cloth and a metallic foundation comprising a rigid member and an elastic spring member, means for securing the said rigid and elastic spring members together, means for retaining the body portion of the tie in position on the foundation, and means for detachably connecting the free extremities of the tie body to the free ends of the elastic member of the foundation.

1,455,363. PROCESS OF PURIFYING WATER. ARTHUR C. SPENCER, Washington, D. C., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1916. Serial No. 130,230. 7 Claims. (Cl. 210—24.)



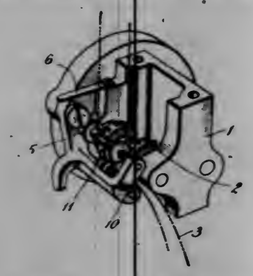
1. The process of purifying water which comprises passing such water through a granular bed comprising greensand until the activity of such greensand is diminished, thereafter revivifying said bed by passing therethrough a solution adapted to react upon the impurities removed in the first operation, washing the bed and once more employing it for the treatment of water.

1,455,364. METHOD OF MANUFACTURING INNER TUBES. RALPH E. STEPHENSON, Indianapolis, Ind., assignor to G. & J. Tire Company, a Corporation of Indiana. Filed Sept. 3, 1921. Serial No. 498,286. 2 Claims. (Cl. 154—14.)



1. A method of making inner tubes for pneumatic tires which consists in forming a tube from vulcanizable rubber composition, rolling a sheet of vulcanizable rubber composition about a pole, making a laminated reinforcing valve-base of superposed plies of fabric successively varied in size to form a skived margin, aperturing the reinforcing valve-base centrally, securing the reinforcing valve-base to the formed composition tube with its widest ply outermost, introducing a flanged sleeve in the opening in the reinforcing valve-base and holding it in place, curing the tube thus formed, removing the flanged sleeve and splicing the ends of the tube.

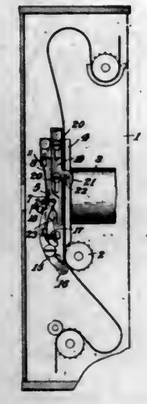
1,455,365. AUTOMOBILE ENGINE SUSPENSION. CHARLES A. TILT, Chicago, Ill. Filed Apr. 27, 1921. Serial No. 465,055. 7 Claims. (Cl. 180—64.)



1. In combination, an engine base, a frame member, a bracket attached to said frame member, a trunnion rotatably and slidably engaging said bracket, and means for forming a pivotal connection between said trunnion and said engine base.

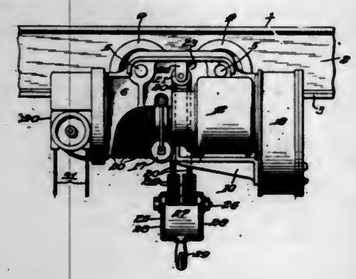
1,455,366. CUTTING AND LENGTH-GAUGING MACHINE. GEORGE TILTON and ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignors to Morgan & Wright, a Corporation of Michigan. Filed Sept. 22, 1920. Serial No. 411,916. 10 Claims. (Cl. 164—49.)

1. In a cutting and gauging machine, in combination, shearing mechanism, a rotatable drum, means on the drum for securing one end of the strip to be cut, and means for holding the drum with the secured end of the strip a predetermined distance from the shearing mechanism.



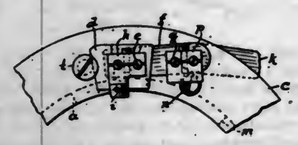
1,455,367. FILM GUIDE FOR MOTION-PICTURE MACHINES. THEODORE F. UHLEMANN, New York, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 3, 1920. Serial No. 386,145. 4 Claims. (Cl. 88—17.)

1. In a motion picture apparatus, the combination of a film-feeding sprocket below the projector aperture, and a pair of freely rotatable disks supported in position to engage the edges of the film at the point where the sprocket teeth enter the holes in the film, said disks being spaced apart a distance equal to the width of the film and yieldingly held against lateral displacement to maintain the sprocket holes in alinement with the path of movement of the sprocket teeth.



1,455,368. TENSION DEVICE FOR MOVING-PICTURE MACHINES. THEODORE F. UHLEMANN, Glen Morris, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed July 2, 1920. Serial No. 393,604. 9 Claims. (Cl. 88—17.)

1. In a tension device for moving picture machines the combination of an aperture plate having a film-guiding surface, a cooperating member mounted for movement toward and from said surface, tension shoes carried by said member engaging the film at the aperture, an intermittent sprocket adjacent said aperture plate for advancing the film through the machine, a guide for holding the film in contact with the sprocket, said guide being supported on said cooperating member, and means

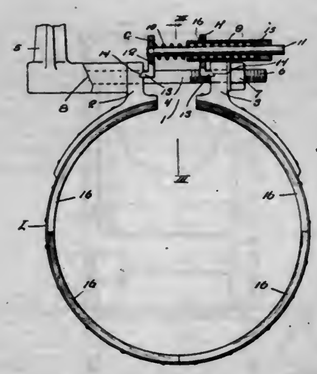


for holding said guide out of engagement with the sprocket until said gate is moved into closed position and subsequently causing it to engage the sprocket.

1,455,369. HOIST. HERBERT S. VALENTINE, Philadelphia, Pa. Filed Jan. 31, 1922. Serial No. 532,985. 6 Claims. (Cl. 212—131.)

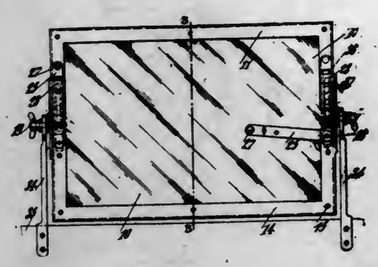
1. In a mono-rail hoist the combination of an overhead mono-rail track, a carriage depending therefrom and adapted to travel on the lower flange thereof, a load-block and means mounted on said carriage to raise and lower said block in a vertical path directly under said track to and from a position wherein the top of said block is immediately below but out of contact with the under side of said track, no rigid part of said carriage or the parts carried thereby depending below said track a distance substantially greater than the height of said block.

1,455,370. CIRCULAR-KNITTING MACHINE. ROBERT W. WALTON, Philadelphia, Pa. Filed Sept. 17, 1921. Serial No. 501,316. 7 Claims. (Cl. 66—22.)



7. In a circular knitting machine, means for knitting a loose course comprising a movable stitch cam and an arm for depressing said stitch cam, a movable guard cam, and a cam on said arm for depressing the guard cam when the stitch cam is depressed.

1,455,371. HOOD LATCH. JOHN F. WHITE, Chicago, Ill., assignor to White Products Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,859. 19 Claims. (Cl. 292—60.)



1. In a device of the character described, the combination with a frame portion and an engine hood movable thereto, of an axially reciprocal hood latch pivotally attached to the outside of the hood and projecting obliquely downwards through an aperture in the same into the interior thereof, an operating handle provided on the latch adjacent the exposed upper extremity of the same, and a keeper fixedly secured in the interior of the hood to said frame portion and adapted to cooperate with the lower extremity of the hood latch.

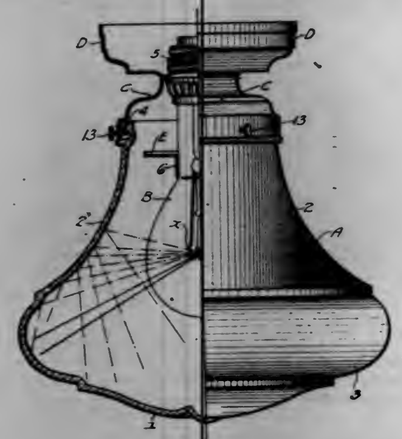
1,455,372. BRAKE-BAND-CONTROL MECHANISM. ROBERT WICK, Woodridge, N. J. Filed Apr. 9, 1921. Serial No. 459,823. 9 Claims. (Cl. 188—249.)

5. In a device of the class described, the combination with a brake band having the usual ears thereon, and having an operating rod extending between said ears for drawing said ears together, of a coil spring for urging said ears apart, said spring extending longitudinally in substantially the same direction as said operating rod, and being of greater length than the distance between said ears, and means operatively connecting said spring with said ears.

1,455,373. FRAME FOR SUPPORTING TRANSPARENT PLATES. AUGUST WOLFF, New York, N. Y. Filed Mar. 21, 1922. Serial No. 545,549. 4 Claims. (Cl. 296—90.)

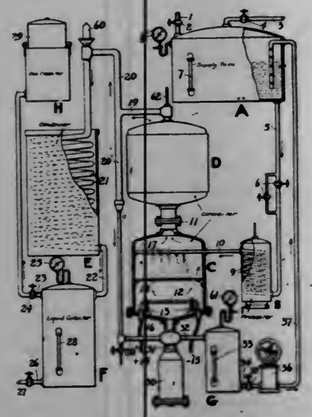
1. In a wind shield, the combination with a sectional frame, of a plate of flexible material engaged within said frame, a pair of hinges extended obliquely outward from the shorter sides of said frame whereby the sections may be folded, and levers secured to said frame sides adapted to hold the frame rigidly when in an extended position.

1,455,374. DENTAL LANCET FOR SURGICAL TREATMENT OF PYORRHEA. WILLIAM ZIESEL, Philadelphia, Pa. Filed Aug. 4, 1921. Serial No. 489,027. 1 Claim. (Cl. 32—10.)



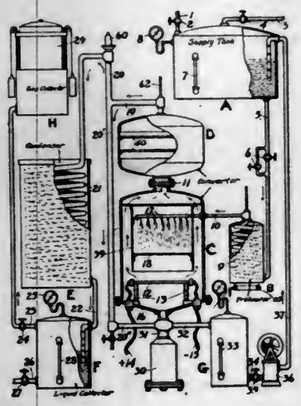
An instrument for the purpose described, consisting of a blade formed of tempered spring steel and a handle therefor, said blade being deflected from said handle at a suitable angle thereto and having a sharp double cutting edge terminating in a thin paper-like flat point adapted to cut or divide the tissue in two opposite directions at one and the same time automatically or in either direction at the will of the operator and being thin and elastic throughout the length of said edge, regaining its shape instantly and automatically upon release of pressure.

1,455,375. LIGHTING FIXTURE. HARRY C. ADAM, St. Louis, Mo. Filed Aug. 30, 1920. Serial No. 406,800. 1 Claim. (Cl. 240—78.)



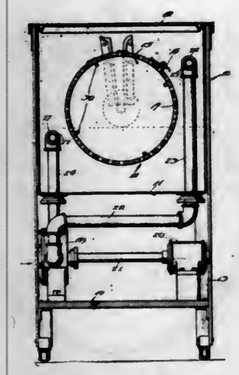
A lighting fixture, comprising an electric lighting unit, and a light reflecting and diffusing member surrounding said lighting unit and composed of a substantially bell-shaped translucent upper portion whose lower end terminates below the horizontal plane in which the filament

of the lighting unit lies, a translucent bottom portion arranged under the lighting unit, and a translucent band



or belt portion of substantially concavo-convex shape in vertical cross section arranged between said upper and bottom portions and integrally connected to same.

1,455,376. PROCESS OF CONVERTING OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed Dec. 29, 1917. Serial No. 209,475. 9 Claims. (Cl. 196—25.)

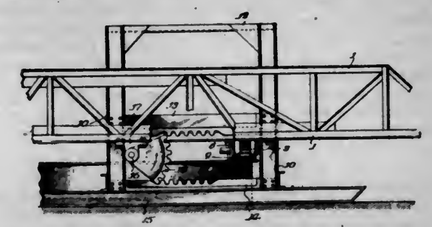


5. A continuous process of the nature disclosed for transforming high boiling hydrocarbon oils into lower boiling products consisting in preheating oil to a temperature below vaporization, continuously atomizing and spraying it downwardly under pressure into a chamber and against an element in said chamber heated to a cracking temperature, spraying superheated steam into said chamber continuously towards said heated element, passing the vapors generated upward through an enlarged vapor dome whereby unconverted portions will flow back to the vicinity of said heated element, passing vapors from said dome through a condenser in open communication therewith and maintaining substantially the same superatmospheric pressure throughout the operation in said chamber, dome and condenser.

1,455,377. OIL-CONVERTING APPARATUS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed Dec. 29, 1917. Serial No. 209,476. 14 Claims. (Cl. 196—3.)

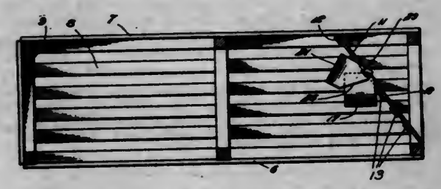
1. In an oil treating apparatus, the combination with means for spraying oil in atomized or finely divided form into a closed chamber under pressure, means disposed outside said chamber for preheating the oil to a comparatively high temperature below vaporization, a heating member within the chamber adapted to subject the compressed atomized oil to a cracking temperature, and means for condensing converted vapors under superatmospheric pressure.

1,455,378. WASHING MACHINE. OGLESBY ALLEN, Jr., Chicago, Ill. Original application filed Mar. 14, 1919. Serial No. 282,585. Divided and this application filed July 21, 1919. Serial No. 312,176. 5 Claims. (Cl. 68—18.)



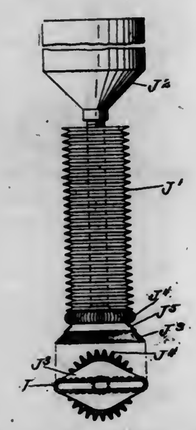
1. A washing machine comprising a tub, a perforated clothes drum therein mounted to turn on a horizontal axis, with means to operate it, and means to forcibly discharge wash water against the drum and through the clothes therein and to forcibly withdraw the wash water from the drum and to again direct it against the drum, said means embracing a pump and a discharge and an intake head connected to said pump and located respectively on opposite sides of the drum and in different horizontal planes, the discharge above and the intake below the level of the axis of said drum.

1,455,379. GOLF CLUB. WILLIAM S. ALLEN, Chicago, Ill. Filed Mar. 5, 1921. Serial No. 449,627. 13 Claims. (Cl. 46—4.)



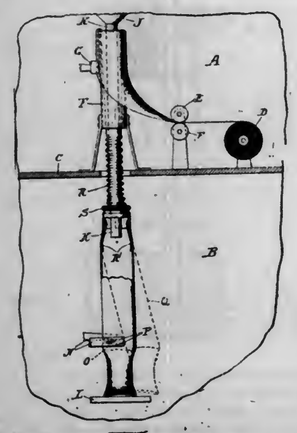
1. A golf club head having a tapered recess extending through said club and to the rear thereof, a tapered weight extending through said recess, means for effecting an interlocking wedging engagement therewith, and means for securing said weight in said recess.

1,455,380. WALKING MOTION, PROPELLING APPARATUS. VINCENT G. ANDERSON, Kenosha, Wis., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Apr. 22, 1918. Serial No. 229,945. 9 Claims. (Cl. 180—9.)



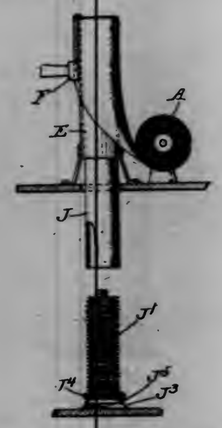
1. A walking motion propelling apparatus, comprising a main supporting frame, an auxiliary frame mounted for vertical movement with respect to said main frame, a rotary actuating member on the main frame, and spaced sections on the auxiliary frame adapted to be alternately engaged by said actuating member, engagement of one of said sections serving to successively lift the auxiliary frame to a substantial height above the ground, shift it horizontally forward and lower it again onto the ground, and engagement with the other section serving to similarly control the main frame to accomplish a forward step movement thereof.

1,455,381. LOBSTER TRAP. ANTHONY A. AXIOTES, Newport, R. I. Filed Dec. 22, 1922. Serial No 608,438. 5 Claims. (Cl. 119—66.)



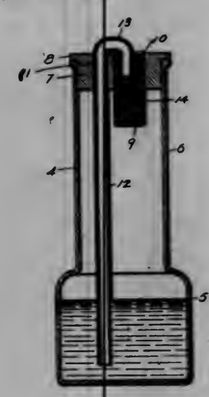
1. In a lobster trap, a case provided with an opening, a reversely arched induction plate in the opening supported by the case, and an arched induction plate eccentrically pivoted to the first plate and provided with inclined edges adapted to rest upon the first plate.

1,455,382. BAG-FORMING-TUBE PACKAGE. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Original application filed Oct. 3, 1919, Serial No. 328,311. Divided and this application filed Apr. 12, 1920. Serial No. 373,102. 20 Claims. (Cl. 226—47.)



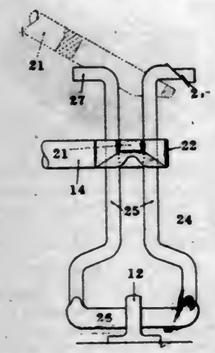
1. As a new article of manufacture, a bag forming tube package comprising a storage spool relatively short and small in cross section and having enlargements at its two ends, with a bag forming tube of relatively great length and large cross section collapsed longitudinally and threaded onto said spool between the enlarged ends.

1,455,383. PROCESS FOR MAKING AND FILLING BAGS. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Oct. 3, 1919. Serial No. 328,309. 27 Claims. (Cl. 225—53.)



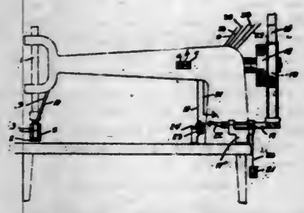
1. The method of producing a filled bag from a bag tube, which consists in supporting a portion of the tube from above, closing its lower end, inserting through the tube and against its closed end, while so supported, a charge of material with such momentum as to feed the bag forming portion of the tube forward, and closing and severing the tube above such charge to form the filled bag.

1,455,384. PROCESS OF FORMING AND PREPARING BAG TUBES FOR USE IN MAKING FILLED BAGS. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Oct. 3, 1919. Serial No. 328,311. 7 Claims. (Cl. 226—47.)



1. The method of forming and preparing bag fabric tubes for use in bag making and filling which consists in forming a bag fabric tube of relatively great length and progressively as it is formed folding the same in a longitudinally collapsed condition onto a storage piece of relatively short length and of a cross section much less than that of the distended tube.

1,455,385. INHALER. EDWARD W. BLACKWOOD, St. Louis, Mo. Filed Feb. 9, 1921. Serial No. 443,697. 1 Claim. (Cl. 128—186.)

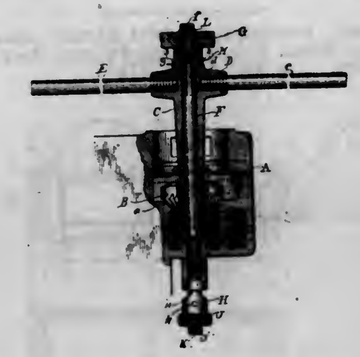


An inhaler, comprising a container having an enlarged bottom portion and a smaller neck portion, a closure having a flange seated in the neck portion, a hollow closure seated in said first mentioned closure and extending therethrough, the bottom end of said hollow closure being closed and the upper end open, a tube inserted through the first mentioned closure and having its lower end located adjacent the bottom of the container, said tube being provided with a goose-neck the lower end of which being located in the upper end of the hollow closure and projecting downwardly therein, a body of medicated air filtering material located in the hollow closure and around the downwardly projecting portion and open end of said goose-neck, and a mouth-piece provided with a flattened end and its opposite end being inserted through the first mentioned closure.

1,455,386. COUPLER-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Apr. 6, 1921. Serial No. 458,888. 4 Claims. (Cl. 213—170.)

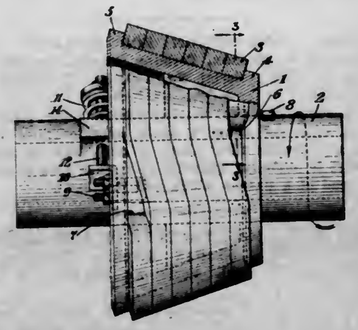
1. In a device of the class described, the combination with a coupler locking pin provided with an eye, of an operating rod provided with a vertical eye, a link connecting said parts and composed of two arms passing through the rod eye and connected at their lower ends by an elongated loop engaging with the eye of the locking pin and forming a stop for the rod, said arms being spaced apart to permit insertion of the link in the pin eye, said link having a head of greater dimension than the smallest dimension of the rod eye.

1,455,387. STOP FOR SEWING MACHINES. HENRY Z. COBB, New York, N. Y., assignor to New York Belting and Packing Company, a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,512. 3 Claims. (Cl. 112—219.)



1. In a sewing machine, stitch forming mechanism including a needle, a presser bar, means for stopping the machine including a solenoid, means carried by the presser bar for closing a circuit through said solenoid and including a pair of spring contact points, means for bringing said contact points together including a spring carried by the presser bar and a pin interposed between said spring and one of the contact points, and a roller carried by said spring disposed above the work and adjacent to but slightly in rear of the normal path of the thread from the work to the needle.

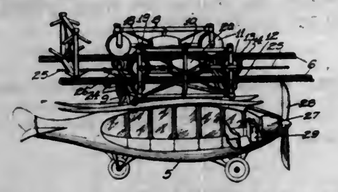
1,455,388. VALVE-SEATING TOOL. GEORGE J. S. COLLINS, St. Louis, Mo. Filed Aug. 25, 1921. Serial No. 495,238. 5 Claims. (Cl. 90—12.5.)



1. In a valve seating tool, the combination with a rod, of a body revoluble and adjustable upon the rod and

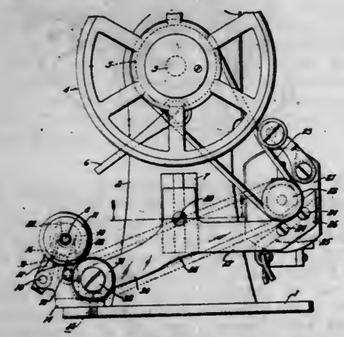
provided with a cutter, and a member secured to the lower end of the rod against rotary movement on the

rod, the said member having a sharpened portion for biting into the end of a valve stem guide or the like to hold the said rod against rotation.



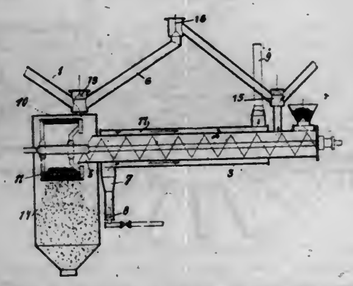
1,455,389. FRICTION DRIVING ELEMENT. WILLIS S. CRANDELL, Elsmere, N. Y., assignor to Albany Paper Mill Machinery Company, Inc., Albany, N. Y., a Corporation of New York. Filed July 10, 1922. Serial No. 573,902. 2 Claims. (Cl. 74—26.)

1. A friction driving element comprising an annular supporting core having an aperture therein, a covering over said core comprising a strip of friction material having an end projecting inwardly through said aperture, means for exerting tension on said inwardly projecting end of the strip comprising an angle piece secured to said end, a rod slidable with regard to said core and extending from said angle piece, and a spring urging said rod to maintain the strip taut over the core.



1,455,390. AERIAL RAILWAY FOR AMUSEMENT PURPOSES. ALPHONSO DAVINO and FREDRICK P. SCHOENELL, Los Angeles, Calif. Filed June 29, 1922. Serial No. 571,828. 7 Claims. (Cl. 104—63.)

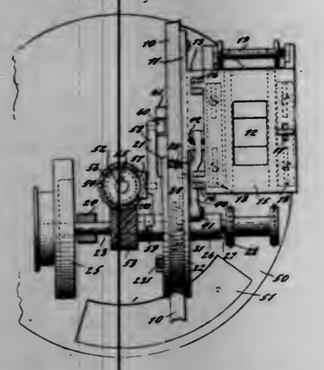
2. In an apparatus of the class described, a flexible supporting structure, a substantially straight line of track frequently interrupted by sharp curves and abrupt inclinations suspended from said supporting structure, a flexible wheel carriage monted on said track and suspended therefrom, a passenger carriage resiliently suspended from said wheel carriage, an electrical conductor suspended from said supporting structure, motors mount-



ed on said wheel carriage communicating with said electrical conductor and driving means connecting said motors with said track.

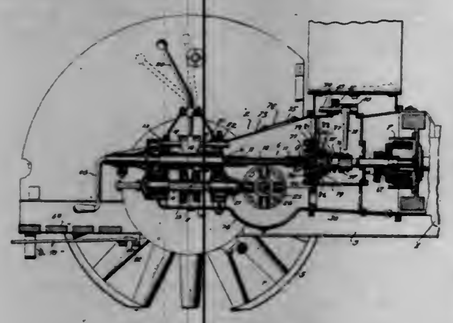
1,455,391. SEWING-MACHINE-MOTOR BRACKET. FREDERICK DIEHL, Elizabeth, N. J., assignor to Diehl Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 6, 1922. Serial No. 559,109. 6 Claims. (Cl. 242—20.)

1. A sewing machine driving attachment comprising a bracket adapted to be secured to the usual attachment seat on the goose-neck of a sewing machine, and a sewing machine driving motor and bobbin-winder pulley mounted in spaced relation on said bracket and adapted to be connected together for transmission of power from said motor to said pulley.



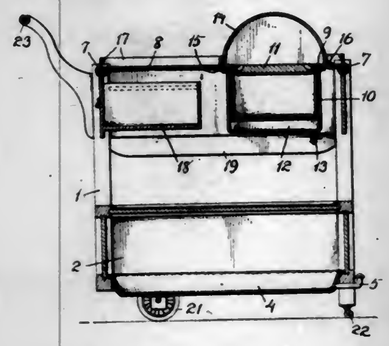
1,455,392. APPARATUS FOR DRYING CHARGES FOR SHAFT FURNACES. ERNST DIEPSCHLAG, Breslau, Germany. Filed Sept. 19, 1921. Serial No. 501,808. 1 Claim. (Cl. 34—7.)

Apparatus for preparing fuel for introduction into the smelting zone of shaft furnaces comprising a chamber, a drying cylinder extending into the chamber, a conveyor in the drying cylinder for feeding forward the material, a disintegrator positioned in the chamber to receive the



fuel from the drying cylinder and discharging the same into the chamber, and means for passing furnace waste gases through the chamber and drying cylinder to dry the fuel and heat the disintegrator.

1,455,393. MOTION-PICTURE MACHINE. JOHN DOHERTY, New York, N. Y., assignor to Superior Projector, Inc. Filed Jan. 27, 1921. Serial No. 440,254. 6 Claims. (Cl. 88—17.)



1. In a motion picture projecting machine, a vertically movable film support adapted to hold a portion of the film opposite the exposure opening, an intermittently operated sprocket to draw the film step by step through the support, a driving shaft supported in fixed bearings in the machine frame, broken gearing between the driving shaft and the sprocket, means to move the support in relation to the exposure opening, and means to move the sprocket bodily around the axis of the driving shaft and to maintain its relation to the support substantially constant as the support is moved.

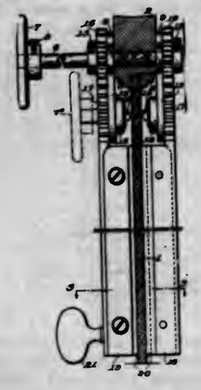
1,455,394. TRACTOR. GEORGE W. DUNHAM, New York, N. Y., assignor to Graham Brothers, Evansville, Ind., a Corporation of Indiana. Filed Jan. 30, 1920. Serial No. 353,155. 14 Claims. (Cl. 180—70.)

1. The combination with an engine, of drive wheels, transmission connected to said drive wheels, a clutch for operatively connecting said engine to said transmission, means for operating said clutch, power take-off mechanism adapted to be driven from said transmission, a clutch for operatively connecting said power take-off to said transmission, and a starting crank for said engine at the rear of said transmission and at the side of said clutch operating means.

1,455,395. PORTABLE SERVING TABLE. MARY E. EXUM, Wilson, N. C. Filed Aug. 31, 1921. Serial No. 497,439. 2 Claims. (Cl. 45—17.)

1. A portable serving table, having an upper portion provided with an ice chamber and a lower portion having a heater chamber adapted to contain food dishes and spaced vertically from said ice chamber and having skeleton connections with said upper portion whereby the space between the heater and ice chambers is open upon all sides to the outer air.

1,455,396. COMPOSITION FOR TOBACCO PIPES. WILLIAM W. HESSON, Toronto, Ontario, Canada. Filed Aug. 9, 1918. Serial No. 249,190. 2 Claims. (Cl. 106—4.)



1. A composition for making tobacco pipes, comprising, ground corn cob about 4 parts, asbestos fibre about 1 part, a vegetable fibre about ½ part, and an adhesive material in sufficient quantity to form a plastic moldable mass and of a nature which will dry hard.

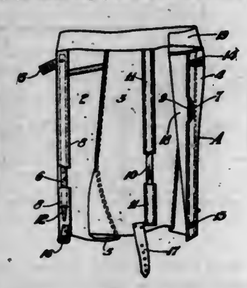
1,455,397. MANUFACTURE OF LOW-ALCOHOLIC BEVERAGES. HERMAN HEUSER, Evanston, Ill. Filed Jan. 12, 1920. Serial No. 350,954. 15 Claims. (Cl. 195—1.)

1. The process of producing a low alcoholic beverage from a dealcoholized fermented beverage which consists in supplying in the dealcoholized beverage a nitrogenous yeast food which promotes flavor and taste producing yeast propagation, and producing a secondary limited yeast fermentation therein.

1,455,398. WINDOW-CLEANING DEVICE. JOSEPH J. HILLER and ERNEST R. STRENGER, Philadelphia, Pa., assignors of one-third to Louis J. Venuto, Philadelphia, Pa. Filed Aug. 3, 1920. Serial No. 400,955. 1 Claim. (Cl. 15—256.)

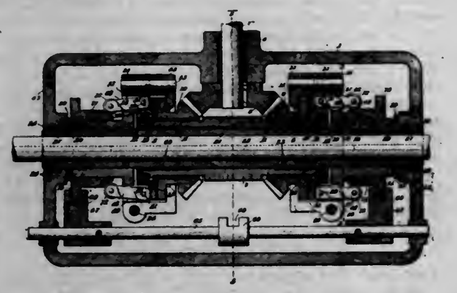
A window-cleaning device, comprising a pair of plates having aligned apertures, said plates adapted to be positioned upon the opposite sides of a window frame, means to removably attach each of said plates to said frame independently of the other of said plates, each of said plates having a depending portion, a rod extending through said frame and through the aperture in each plate and forming the only connection between said plates, a pair of gears carried by said rod upon the opposite sides of said plates, means also carried by said rod to permit direct manual rotation thereof, a gear pivotally carried by the depending portion of each of said plates and meshing with said first gears, and cleaning members forming extensions of each of said gears and

adapted to be oscillated across the opposite surfaces of a pane supported by said frame by means of the oscillation of said rotating means.



1,455,399. FLUSH WALL RECEPTACLE PLATE. WILLIAM R. KRAVANEY, Waterbury, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Mar. 13, 1920. Serial No. 365,392. 1 Claim. (Cl. 247—23.)

The combination with a flush-wall receptacle-plate formed with a service-opening, a rectangular clearance-notch leading out of the upper end of the said opening, and an integral pintle extending between the side walls of the said notch and positioned therein to form a clearance space between it and the upper wall of the said notch, of a door for the said opening formed at its upper end with a hinge-leaf closing the said notch and having the upper portion of its rear face cut away to substantially half the thickness of the said door, to permit the said leaf to be bent rearwardly and downwardly to embrace the said pintle, which is set back from the rear face of the said plate for a distance equal to the thickness of the main portion of the door and the lower portion of its hinge-leaf.

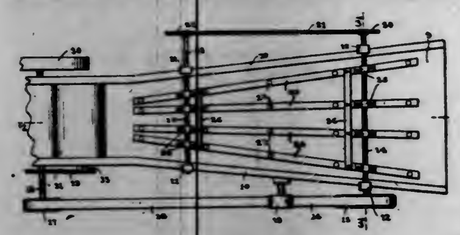


1,455,400. LEGGING. EDWIN C. KREES, Elyria, Ohio. Filed Aug. 6, 1921. Serial No. 490,311. 1 Claim. (Cl. 36—2.)

A legging comprising a leg covering portion open at one side, and an integral vamp portion, said legging being composed of split stock leather, a single reinforcing steel secured along each of the longitudinal edges of said leg portion, the lower end of one of said steels being adapted to fit within a socket on the other of said steels to secure the lower end of said legging together, a third reinforcing steel extending longitudinally from top to bottom of said legging at a point approximately intermediate the longitudinal edges of said legging, means for adjustably securing the upper end of said legging together, a flap secured to the inner face of said legging along its one longitudinal edge an appreciable distance so as to protect the leg of the wearer along said opening, and a non-elastic top rim-like portion secured to the inner face of said leg portion adjacent its upper edge

and extending upwardly beyond said leg portion an appreciable distance, said rim-like portion having its upper edge contracted to a considerable less diameter than the top edge of said leg portion so as to snugly engage the limb of the wearer and prevent the entrance of foreign matter such as hot metal and sparks between the legging and the limb of the wearer, substantially as shown and described.

1,455,401. REVERSING MECHANISM HAVING STATIONARY SLEEVE. DAVID C. KLAUSMEYER, Hyde Park, Cincinnati, Ohio, assignor to Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 13, 1921. Serial No. 461,144. 17 Claims. (Cl. 74—59.)



1. A motion-reverser combining a frame; a stationary sleeve rigidly supported thereby; a shaft translatably extending through said sleeve; a bevel-gear facing said sleeve; two oppositely-arranged bevel-gears meshing with said first gear and each journaled to rotate on the respective ends of said sleeve and out of contact with said shaft; two clutches operatively connected to said shaft and each arranged adjacent the outer ends of said gears, respectively; and means for alternately engaging either clutch with its associated gear.

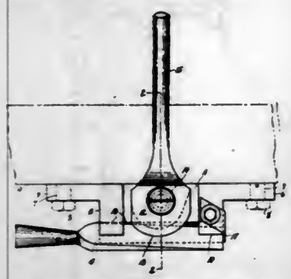
1,455,402. SELF-FEEDER FOR FEED CUTTERS. FRANK KOLARIK, Manitowoc County, Wis. Filed Dec. 9, 1922. Serial No. 605,877. 2 Claims. (Cl. 146—134.)

2. The combination with a feed cutting machine having a cutting member and a pair of coacting feeding rolls, of means for positively feeding material to said rolls, comprising a trough having converging side walls adapted to receive the material to be fed; crank members

mounted in different horizontal planes upon the sides of said trough; inclined converging ridge bars spaced to extend substantially the full width of said trough, and all in substantially the same horizontal plane carried by said crank members, and provided with angularly disposed pins for engaging the material to be fed; and

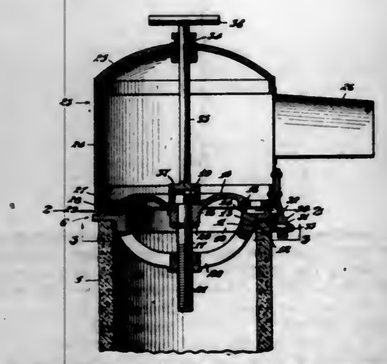
means for rotating said cutting member, said feed rolls, and said crank members simultaneously, whereby the latter members may cause said bars and pins to engage and feed said material forward to said rolls, and to then disengage themselves and return to their initial positions.

1,455,403. CAR SEAL. MARTIN J. LINS, St. Paul, Minn. Filed June 9, 1922. Serial No. 567,228. 6 Claims. (Cl. 292—323.)



1. A car seal comprising a band, a housing at one end provided with a socket having notches in its walls and a tongue at the other end of said band to enter said socket, said tongue having a notch therein, a link having one end fitting within a slot in the end walls of said socket and normally resting at its other end within the notch in said socket, said link being forced out of said slot by the engagement of the tongue therewith, said link when forced out of said slot, dropping into the notches in said socket and tongue, and a spring finger overhanging the slot in said socket and yielding outward to permit the exit of said link and thereafter preventing the return of said link to said slot.

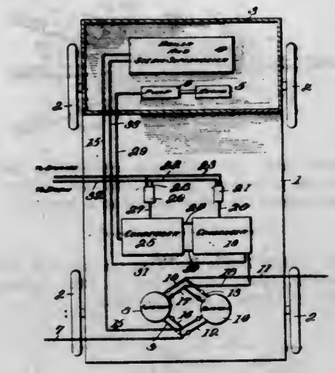
1,455,404. TOY VEHICLE. FRANK MULVENY, Fall River, Mass. Filed Feb. 20, 1922. Serial No. 538,027. 2 Claims. (Cl. 208—30.)



1. A toy vehicle of the class described comprising a tapered body, a cranked rear axle for the same, a front axle, wheels carried by the axle, said body having guide slots in the sides of its narrow part, a pair of longitudinally extending rods having their rear ends connected with the cranks of the rear axle and the front ends bent and passing through the slots and pedals on said bent ends.

1,455,405. FIXTURE FOR GRINDING BEVELED CHISELS. JAMES F. NAGLE, Southington, Conn., assignor to The Peck Stow & Wilcox Company, Southington, Conn., a Corporation. Filed Sept. 9, 1922. Serial No. 587,167. 2 Claims. (Cl. 51—218.)

1. In a fixture for grinding the edges of beveled chisels, the combination with a frame formed with an inclined chisel-receiving groove and with a recess intersecting the same between the ends thereof, of a pivotal chisel-clamp located in the said recess and having its clamping-edge beveled to correspond to the inclination of the outer wall of the said chisel-receiving groove which is outwardly inclined with respect to the said recess.

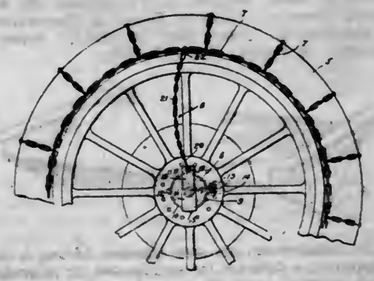


1,455,406. PORTABLE HEAD FOR IRRIGATION RISERS. VICTOR E. NICOLAIDES, Lancaster, Calif. Filed July 29, 1920. Serial No. 399,792. 3 Claims. (Cl. 137—18.)

1. The combination of a stand-pipe, a rim carried by the stand-pipe, spaced projections on said rim extending outwardly from the stand-pipe, a valve seating on said rim for closing the stand-pipe, a hydrant adapted to seat on said rim, means on said hydrant for operating said valve, and a series of cams on said hydrant engageable with the underside of projections on said rim for detachably connecting the hydrant on said rim, said cams being adapted to be passed through the spaces between the projections whereby the cams will be positioned on a plane below the projections in positioning the hydrant on said rim, said hydrant being adapted to be turned to dispose the cams beneath the projections.

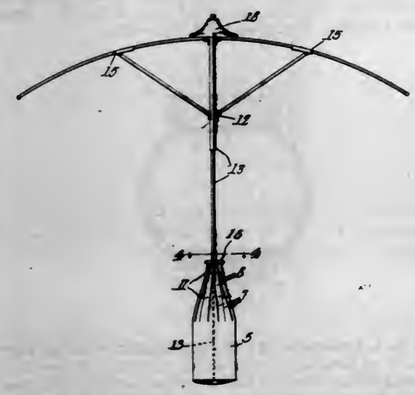
1,455,407. PORTABLE APPARATUS FOR THE EXTRACTION OF VAPORS FROM GASES. GEORGE G. OBERFELL, Tulsa, Okla., and GEORGE A. BURRELL, New York, N. Y., assignors to Gasoline Recovery Corporation, a Corporation of Delaware. Filed Aug. 2, 1920. Serial No. 400,592. 2 Claims. (Cl. 196—1.)

1. A portable apparatus for the extraction of vapors in commercial quantities from gases comprising a portable platform, an absorber unit permanently mounted on said platform containing activated charcoal and provided with means for admitting vapor containing gases to the same, and an outlet for the denuded gas, a con-



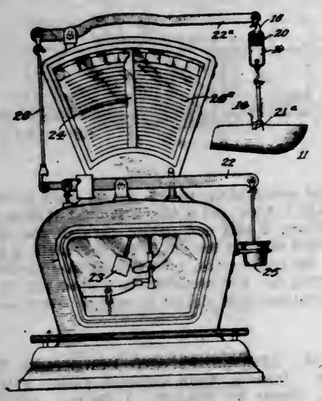
denser mounted on the platform and communicating with said unit for receiving vapors distilled from the same, and a boiler permanently mounted on the platform for furnishing steam to said absorber unit.

1,455,408. NONSKIDDING DEVICE. ADOLPH W. OLSON, McIntosh, Minn. Filed Mar. 1, 1922. Serial No. 540,250. 2 Claims. (Cl. 152—14.)



1. A nonskidding device comprising side members and tread members connecting said side members, each of said tread members comprising a single length of material provided with a coil at its central portion to overlie the central portion of the tread of the tire when the device is in applied position.

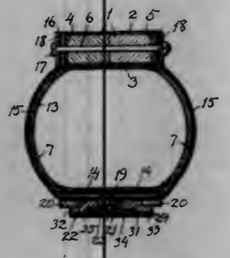
1,455,409. SAFETY FASTENING DEVICE FOR NONSKID CHAINS. LEON POLI, Walsenburg, Colo. Filed Mar. 28, 1921. Serial No. 456,362. 1 Claim. (Cl. 152—14.)



A safety device for tread chains having a detachable hub engaging clamp provided with an arm extending from adjacent the margin of the clamp toward the center of the hub, a swivel pin on said arm disposed in axial alignment with the hub with which the clamp is engaged, and a safety element having a swivel connection with said pin and provided with means for engaging a tread chain.

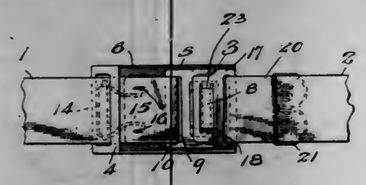
1,455,410. COLLAPSIBLE UMBRELLA. OTTO W. F. POSSELT, New York, N. Y. Filed Mar. 1, 1922. Serial No. 540,207. 5 Claims. (Cl. 135—25.)

5. An umbrella including a tubular casing formed of light resilient material and provided with a plurality of longitudinal slits thereby affording resilient arms, a collapsible umbrella supported within the casing and capable of being entirely housed within the same and adapted to be withdrawn therefrom, resilient bands secured to the inner face of the arms and a closure carried by the umbrella and adapted to engage the upper end of the casing when the umbrella is enclosed therein.



1,455,411. COUNTING SCALE. CHARLES E. RIEDEL, Detroit, Mich., assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Mar. 23, 1921. Serial No. 454,635. 6 Claims. (Cl. 265—49.)

1. In a combination counting the weighing scale in combination a support for the articles to be weighed, a graduated weight indicating chart, an indicator traversing the chart, means connecting said support with said indicator to actuate the latter, a main scale beam con-

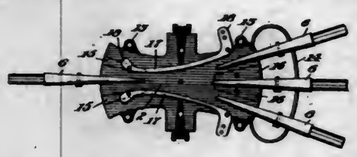


nected with the support and provided with means for alternately receiving an article carrier, or a swinging poise, said beam when connected to said swinging poise reacting through the connections to cause the indicator to stand at zero on the chart, said beam when connected to an empty article carrier reacting through the connections to cause the indicator to assume a predetermined position away from zero on the charts.

1,455,412. ARMORED PNEUMATIC TIRE. CHARLES SCHEUNER, Chicago, Ill. Filed Jan. 17, 1922. Serial No. 529,887. 5 Claims. (Cl. 152—16.)

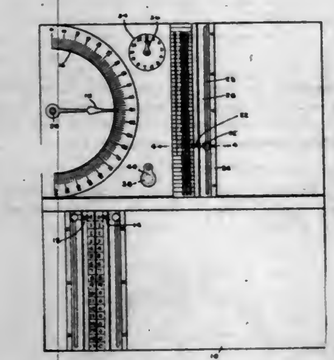
3. In a pneumatic tire, the combination with an inner tube, of an annular tubular casing composed of two annular longitudinal concavo-convex halves meeting along their outer circumferential edges and provided each with annular circumferential spaced ribs and annular grooves therebetween, resilient springs adapted to take a portion of the strain of the load and related to each of said halves, and connecting means for said halves including an outer tread composed of arcuate sections having spaced ribs and an annular groove therebetween engaging the inner of the ribs and the grooves of said casing halves, said tread having annular marginal portions resting upon the outer of the ribs of the casing halves.

1,455,413. BELT BUCKLE. MARY STARMER, Newport News, Va. Filed Dec. 30, 1921. Serial No. 525,887. 3 Claims. (Cl. 24—77.)



1. The combination with a buckle plate having a rear plate and a hook and a slot fashioned therein, a slotted guide plate, a belt end passed through the guide plate and looped through the slot in the rear-plate, a supporting bar in the guide plate, a barbed-fastener carried by said supporting bar and securing the looped end of the belt, and a coupling link slotted to engage said hook.

1,455,414. ABSORBING AND PURIFYING COMPOSITION. JOHN C. TATE, Oakland, Calif. Filed Apr. 6, 1922. Serial No. 550,206. 4 Claims. (Cl. 183—118.)

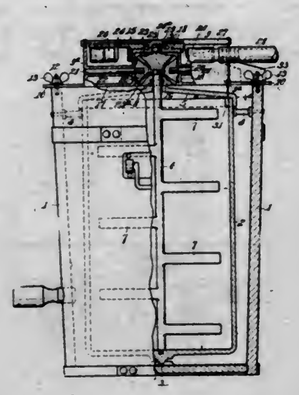


1. A composition for purifying waste gaseous products of combustion comprising a vegetable material and a binder capable of absorbing and retaining moisture, gases and the disagreeable odors resulting from the combustion of animal and vegetable matter.

1,455,415. CONDUCTOR CONNECTION. JOHN T. TIGHE, Scranton, Pa. Filed Jan. 14, 1921. Serial No. 437,230. 10 Claims. (Cl. 191—38.)

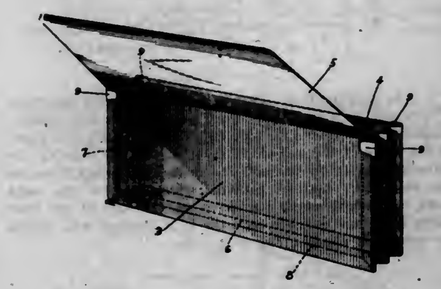
5. A wear plate for conductor connections, having a portion of the plate including a section removable to constitute an opening for the reception of a runner.

1,455,416. CARD-GAME SCORER. ARTHUR D. WALKER, Minneapolis, Minn. Filed Oct. 4, 1920. Serial No. 414,397. 1 Claim. (Cl. 235—90.)



A card game scorer comprising a sheetlike member, a strip of flexible material secured along one of its edges to said sheetlike member, the body of said strip being curved to provide a spring member in spaced relation to said sheetlike member, a pointer resting upon said sheetlike member, a curved rib upon the rear of said pointer engaged by the curved portion of said strip, and a stem extending out from said rib, said stem passing through a longitudinal slot in the curved portion of said strip whereby said pointer may be slid for the purpose of bringing it into register with anyone of a succession of numbers placed adjacent said strip.

1,455,417. HEAT DEFLECTOR. FRED ERNEST WHITE, Gardner, Mass., assignor to The Central Oil & Gas Stove Company, Gardner, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1922. Serial No. 529,959. 3 Claims. (Cl. 126—275.)

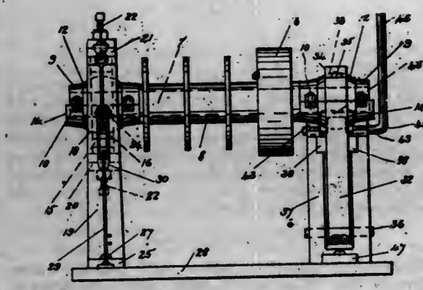


1. In combination, an oven chamber having a heated air entrance, a deflector for said heated air in proximity to said entrance, including an enclosed dead air space whereby the heated air is deflected and freely circulated by said deflector into said oven chamber.

1,455,418. ICE-CREAM FREEZER. ROBERT M. WOODS, Wheeling, W. Va. Filed July 7, 1922. Serial No. 573,406. 6 Claims. (Cl. 259—51.)

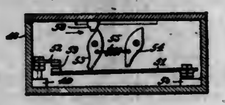
1. In a device of the character described, a container having a cover, a stirrer rotatable within said container and having its upper end projected above said cover, and a motor for driving said stirrer, said motor being superposed over said container and comprising a casing having a bottom and provided with a detachable cover, a housing located centrally with respect to said casing, said housing having its upper end closed, a water actuated rotor above said end of said housing, and means intermediate said rotor and the projecting end of said stirrer whereby rotation of the former is imparted to the latter.

1,455,419. ENVELOPE. EUGENE FREDRICK AHLQUIST, Minneapolis, Minn., assignor to Security Envelope Company, South Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 21, 1921. Serial No. 516,727. 4 Claims. (Cl. 229—68.)



1. An expansion envelope having front and back members, a gusset to form the sides and bottom of the envelope, marginal flanges provided along both edges of the gusset whereby the gusset may be secured to the marginal portions of the front and back members and a tab provided on a marginal flange of the gusset and adapted to be folded over the edge of an adjacent member and secured to the face thereof whereby the envelope is strengthened.

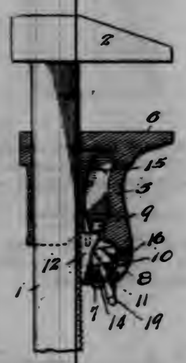
1,455,420. DROP BOARD FOR DROP PRESSES. BYRON ALLEN, Southington, Conn. Filed Mar. 31, 1922. Serial No. 548,551. 1 Claim. (Cl. 78—29.)



A composite drop-board for drop-presses, consisting of a plurality of pre-hardened strips or units having their condensed or hardened faces abutted and secured together.

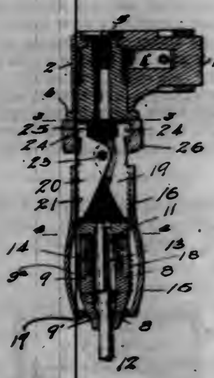
1,455,421. LEVER MECHANISM. NORMAN AYERS, New Straitsville, Ohio. Filed July 24, 1922. Serial No. 577,127. 3 Claims. (Cl. 64—52.)

1. In a lever mechanism, the combination, with a support, and a shaft having one end portion journaled therein; of a stationary standard, a lever having its lower part pivoted to the said standard and having at its upper part a spherical socket provided with a bearing for the other end portion of the said shaft, said socket being rigidly secured to the lever and the said bearing being free to rock in the socket and being normally arranged directly over the pivot of the lever, and means for oscillating the said lever on its pivot to vary the position of the said shaft.



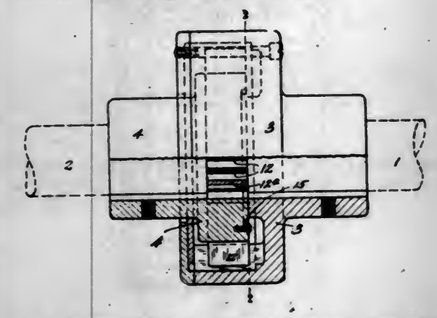
1,455,422. DIRECTION INDICATOR FOR MOTOR VEHICLES. SAMUEL H. BOITNOTT, Roanoke, Va. Filed Apr. 18, 1921. Serial No. 462,318. 3 Claims. (Cl. 177—337.)

1. In a motor-vehicle direction-signal system wherein the signal is electro-mechanically operated to set position and automatically reset by the return of the steering



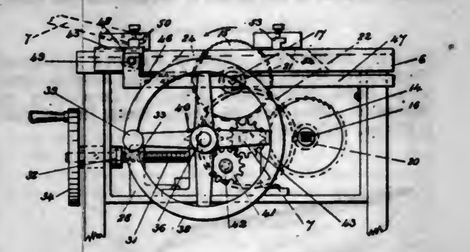
mechanism to normal position, a cam-actuating member adapted to be moved by the steering mechanism, a pair of cams positioned to be actuated by the movement of said member, and a normally-closed circuit breaker adapted to be actuated to open position by either one of said cams when said member returns to normal position by the straightening of the steering wheels, said cams being pivotally supported and normally held in inactive position.

1,455,423. WRENCH. COMMODORE P. BROWN, Ronceverte, W. Va. Filed Mar. 23, 1922. Serial No. 545,975. 1 Claim. (Cl. 81—143.)



The combination with a shank and fixed jaw, of a slidable jaw and frame, a bifurcated extension on said frame having an inner cam face, a spring pressed sliding-catch having a complementary cam face and retained within the frame, a key located between said cam faces, cam faces on opposite sides of said key for engagement with the first mentioned cam faces, and a lever on the key guided in the bifurcated extension.

1,455,424. BIT CLAMP. COMMODORE P. BROWN, Ronceverte, W. Va. Filed Apr. 6, 1922. Serial No. 550,193. 3 Claims. (Cl. 279—35.)

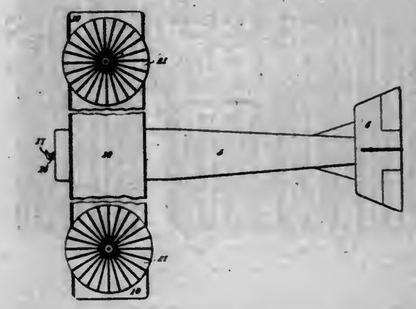


1. A bit clamp comprising a bit stock and clamping jaws carried thereby, a clamping sleeve for the jaws having interior threads, a pair of pivotally mounted dogs having complementary exterior threads to engage the sleeve to hold said sleeve against sliding movement and permitting rotary movement, a cam ring surrounding said stock and adapted to force the threads of the dogs into engagement with the threaded sleeve, and means engaging the dogs to disengage the latter from the sleeve when the dogs are released by the cam ring.

1,455,425. FLEXIBLE COUPLING. ELLIS E. BROWN, Springmont, Pa. Filed Aug. 30, 1922. Serial No. 585,155. 3 Claims. (Cl. 64—26.)

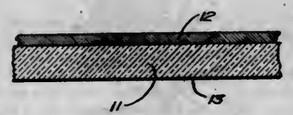
1. A flexible coupling comprising driving and driven members, one of which is formed with circularly spaced tooth recesses, and the other of which is provided with engaging teeth some of which are of resiliency yielding structure and other of relatively rigid structure, the latter being adapted to engage only after determined flexure of the resilient teeth.

1,455,426. CIRCULAR-SAW MACHINE. CLEMENT D. CHARLES, New York, N. Y. Filed Dec. 8, 1921. Serial No. 520,973. 2 Claims. (Cl. 29—70.)



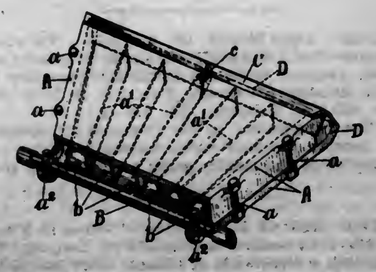
1. The combination, with a supporting table provided with a slot, of a bell-crank lever pivoted to a non-slidable support below the table top, two circular saws journaled in the arms of the bell-crank lever, means for moving the bell-crank lever to project the saws alternately through the said slot, toothed pinions which revolve the said saws, a toothed wheel journaled on the axis of the bell-crank lever and gearing into the said pinions, and means for revolving the said toothed wheel.

1,455,427. AEROPLANE. JOSEPH CHOCHOL and MICHAEL DYKAS, Chicago, Ill. Filed Aug. 4, 1921, Serial No. 489,753. Renewed Jan. 31, 1923. 1 Claim. (Cl. 244—15.)



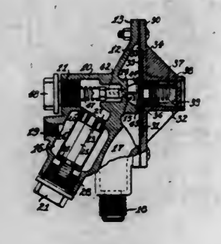
In combination with a fuselage having superposed planes at the forward end thereof and extending from opposite sides of the same, an engine in the forward end of said fuselage having rearwardly and forwardly extending shaft portions, a screw propeller for causing forward movement of the aeroplane fixed upon the forwardly projecting portion of the engine shaft, a bevel gear fixed upon the rearwardly extending portion of the engine

shaft, a transverse shaft arranged in a horizontal position at each side of the fuselage and terminating adjacent the outer ends of the planes between the latter, bevel gears slidably keyed upon the inner ends of said last named shafts adapted to mesh with the first named bevel gear, manually operable means to connect or disconnect either one or both of the last named bevel gears



from said first named bevel gear and including a pair of horizontal rearwardly extending levers arranged within the fuselage rearwardly of the engine, vertical shafts journaled near the outer ends of the planes and rotatably geared to the outer ends of said last named shafts, and lifting propellers fixed upon the upper ends of the vertical shafts above said plane.

1,455,428. MOTION-PICTURE FILM. CLARENCE J. COBERLY, Los Angeles, Calif. Filed Feb. 8, 1917. Serial No. 147,505. 5 Claims. (Cl. 95—9.)

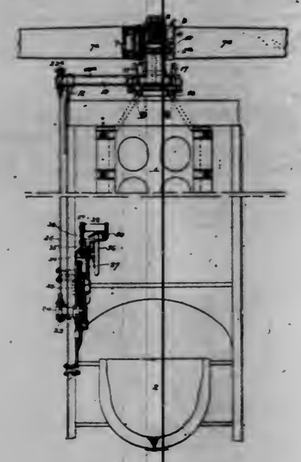


2. A motion picture film having a layer of material which is hygroscopic in atmospheres of seventy percent relative humidity or below.

1,455,429. FURNACE OF STEAM BOILERS. THOMAS COLLIER, Colne, England. Filed Sept. 23, 1922. Serial No. 590,126. 2 Claims. (Cl. 110—69.)

1. A Bunsen blower, adapted to be secured under the dead plate of a furnace, comprising a fan-shaped body open at each end and divided by partitions into a series of compartments which are wider at their outlets than at their inlets, the bottom of the outlet end portion of the body being inclined upwardly beyond the rear ends of the compartments, a deflecting plate secured over the inclined end portion and arranged at a steeper angle than it, and a steam pipe arranged crosswise of the open inlet end of the body and having a series of nozzles which project into the air inlet openings of the compartments.

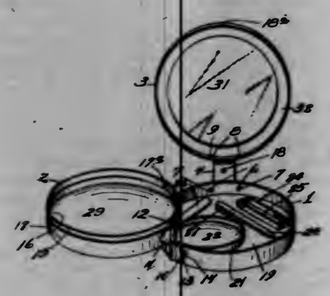
1,455,430. EXPANSION VALVE. EDWARD R. DE LUIZ, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 1, 1920. Serial No. 385,501. 8 Claims. (Cl. 50—23.)



1. In a pressure reducing valve, a casing having therein an elongated valve chamber and a diaphragm chamber, a partition between said chambers and having an aperture therein, said casing also having a passageway leading downwardly from each of said chambers, the passageway which communicates with the diaphragm chamber constituting an outlet and the other passageway constituting a filtering chamber, removable closures for said valve chamber and filtering chamber, a filtering cell comprising a pair of spaced heads and a screen connecting them, one of said heads being apertured and seated in the orifice which establishes communication between said last mentioned chambers, means including the closure of said filtering chamber for holding said cell in place, the wall of said filtering chamber being formed with an inlet opening, a valve in said valve chamber adapted to close said first aperture, and having a stem projecting through that aperture, a spring for closing said valve, a diaphragm traversing said diaphragm chamber and adapted when deflected to displace said stem, a cover plate on the opposite side of said diaphragm from said casing, and an adjustable spring carried by said cover plate and tending to move said diaphragm against the tension of said first spring.

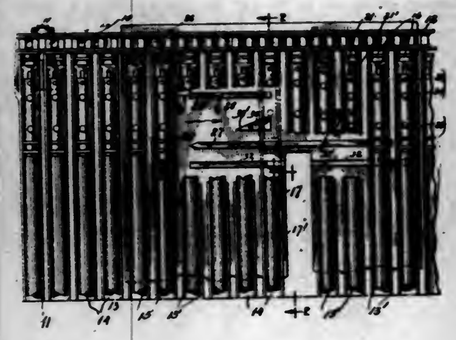
5. In a pressure regulating valve, a casing therein a horizontal valve chamber and a depending chamber communicating therewith through a narrowed orifice, a filter cell located in said second chamber and having a pair of spaced heads, surrounded by a screen, one of said heads being apertured and received tightly in said orifice, a post connecting said heads inside said screen, a removable closure for the end of said second chamber which is opposite said orifice, and a spring interposed between said closure and the adjacent end of said cell.

1,455,431. CONTROL MECHANISM FOR PROPELLERS. THOMAS A. DICKS, Pittsburgh, Pa., assignor to Standard Steel Propeller Company, Pittsburgh, Pa. Filed June 30, 1921. Serial No. 481,600. 10 Claims. (Cl. 244—25.)



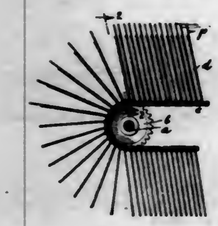
1. In control mechanism for propellers, the combination with a propeller having adjustable blades, and adjusting means connected with said blades, of a shaft, a forked lever secured to said shaft and connected with

said adjusting means, a walking beam lever secured to said shaft, a control lever, a second walking beam lever,



gearing between said last-mentioned lever and said control lever, and rods connecting the respective walking beam levers.

1,455,432. VANITY CASE. CARROLL E. DODSON, Kansas City, Mo., assignor, by mesne assignments, of one-half to Union Pharmacal Company, a Corporation. Filed July 5, 1922. Serial No. 572,767. 2 Claims. (Cl. 132—83.)

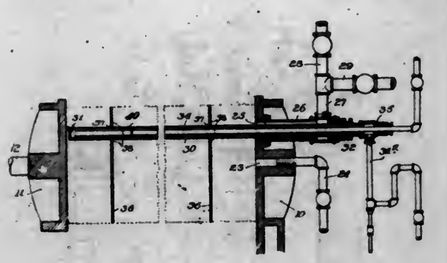


2. A vanity box comprising a bottom member, a hinge plate projecting upward from said member, a lid member having a hinge plate hinged to the first-named hinge plate and adapted for movement in a vertical plane, and an intermediate member pivoted to the bottom member and adapted for horizontal swinging movement to expose the interior of said bottom member or to cover said member; said first-named hinge member and the wall of the intermediate member having a cavity and a protuberance for engagement when the intermediate member is occupying a position upon and covering the bottom member.

1,455,433. CONVEYER. MAX ELLRICH, Jersey City, N. J., assignor, by mesne assignments, to Marie Christensen, Brooklyn, N. Y. Filed Nov. 5, 1920. Serial No. 421,841. 9 Claims. (Cl. 198—179.)

1. In a conveyer of the character described, the combination with tubular containers open at their ends, of laterally movable members adapted to enter the open ends of said containers to retain them in position.

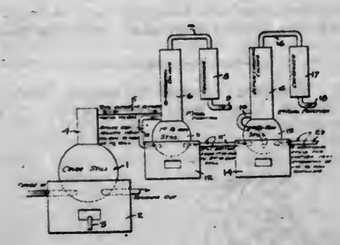
1,455,434. FASTENING OF TRAYS TO CONVEYERS. MAX ELLRICH, Jersey City, N. J., assignor, by mesne assignments, to Marie Christensen, Brooklyn, N. Y. Filed Nov. 5, 1920. Serial No. 421,842. 3 Claims. (Cl. 198—134.)



1. In a conveyer of the character described, the combination with a roller chain, of wire trays removably carried by said chain and the ends of which are looped around the ends of the pins of adjoining links.

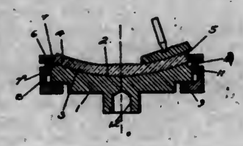
1,455,435. TREATMENT OF SEWAGE. THOMAS H. FAIRBROTHER and ARNOLD RENSHAW, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Feb. 19, 1923. Serial No. 620,014. 6 Claims. (Cl. 210—1.)

1. The improvement in the treatment of sewage by tank aeration processes which consists in adding coloring matter of the oxazine series to the sewage sludge.



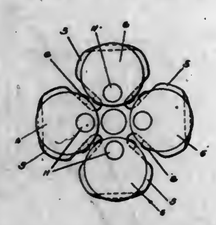
1,455,436. ART OF FILTRATION. GEORGE H. FIFIELD, Culver, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Nov. 5, 1920. Serial No. 421,859. 25 Claims. (Cl. 210—191.)

1. In wax filtering apparatus, in combination, a filter surface, means for forcing chilled oil through said surface, thereby depositing wax therefrom, and a heat conductor extending transversely through said filter surface



whereby heat may be applied to the wax deposited thereupon.

1,455,437. PETROLEUM-DISTILLATION PROCESS. VINCENT T. GILCHRIST, San Francisco, Calif., assignor to Superior Process Refining Company, San Francisco, Calif., a Corporation of California. Filed July 9, 1918. Serial No. 244,032. 3 Claims. (Cl. 196—25.)

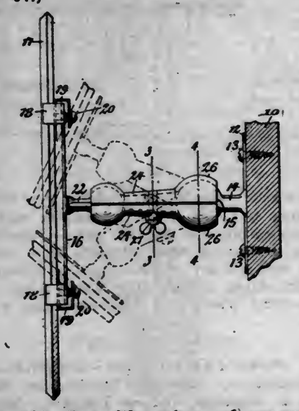


1. The process of distilling petroleum consisting in heating the same; flowing the distilled vapor derived therefrom through a suitable refractionating column; directing said vapor into a condenser; reheating and revaporizing the reflux condensate from the refractionating column; flowing the resulting vapor back into the said column; and directing said resulting vapors into said condenser.

1,455,438. LENS BLOCK. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 23, 1920. Serial No. 426,005. 4 Claims. (Cl. 51—217.)

1. A lens block comprising a lens supporting member having a seat to receive the lens slightly more concave centrally than the curve of the lens to be mounted thereon, a lens engaging annulus slidably but nonrotatably carried by the seat and projecting thereabove, and a clamp ring interlocking with the annulus and having a portion engaging the opposite face of the lens supporting member for clampingly drawing the annulus in the direction of the lens seat.

1,455,439. LENS HOLDER. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 23, 1920. Serial No. 426,006. 4 Claims. (Cl. 51—217.)

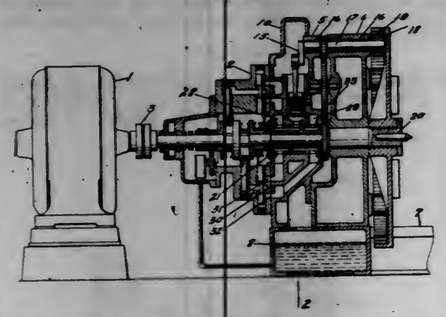


2. A device of the character described including a plurality of lens seats having rigid lens engaging members at their outer sides and resilient lens engaging members at their inner sides.

1,455,440. PROCESS OF MANUFACTURING FLUTES. FLORENT HOFINGER, Brussels, Belgium. Filed Feb. 16, 1922. Serial No. 537,074. 3 Claims. (Cl. 29—169.5.)

1. A process for the manufacture of flutes formed of metal consisting in first forming oblong holes in the body tube of said flute, then pressing up the metal of the edges of said oblong holes so as to form conical nozzles, and then pressing the said conical nozzles into cylindrical nozzles with inwardly turned flanges integral therewith and substantially at right angles to the said cylindrical nozzles so as to provide a flat annular surface on which the keys can rest.

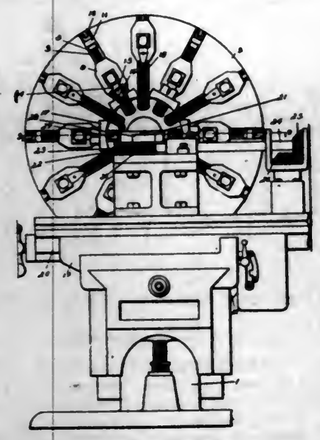
1,455,441. BRACKET FOR SUPPORTING MIRRORS AND THE LIKE. WILLIAM LA HODNY, Buffalo, N. Y. Filed May 3, 1920. Serial No. 378,407. 3 Claims. (Cl. 45—97.)



3. The combination with a mirror, of cooperating holding members engaging opposite edges of said mirror and having cooperating rounded portions forming a ball, and a supporting clamp adjustably engaging said cooperating rounded portions.

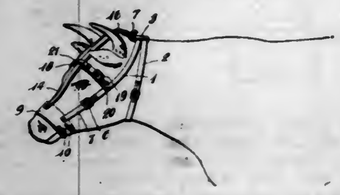
1,455,442. PROPELLER FOR AERIAL MACHINES. ROBERT LEPARMENTIER, Bordeaux, France. Filed Feb. 16, 1922. Serial No. 537,052. 3 Claims. (Cl. 170—162.)

1. An aerial machine, a motor connected therewith, a motor-shaft leading from the motor, a variable-load propeller turnably secured to the motor-shaft and comprising blades pivoted upon studs projecting at right angles from the motor-shaft, and means mounted on said studs for maintaining the blades at an acute incident angle relatively with said studs.



1,455,443. BALANCED HYDRAULIC PUMP OR MOTOR. WALDEMAR F. MAYER, Philadelphia, Pa., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Nov. 12, 1919. Serial No. 337,418. 3 Claims. (Cl. 121—121.)

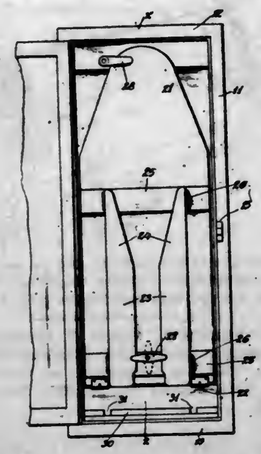
1. A hydraulic motor having a plurality of cylinders, a valve having two sets of fluid channels, and annular service channels at each end, the annular channels communicating alternately with alternate fluid channels of respective sets, one set of fluid channels delivering fluid to a predetermined number of cylinders while the other set is receiving fluid from a corresponding number of cylinders.



1,455,444. TORIC-LAP FORMER. ALBERT E. MAYNARD and WILLIAM A. GUNNING, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed June 5, 1920. Serial No. 386,760. 4 Claims. (Cl. 82—12.)

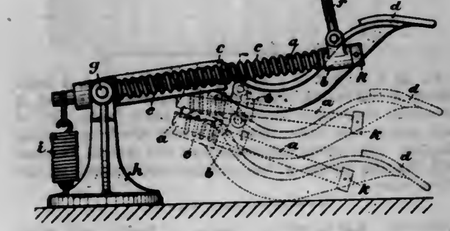
1. In a device of the character described, the combination with a rotatable work holding wheel having a plurality of guide ways formed in one face thereof, of work holders having portions slidable in said guide ways,

and having projecting tool receiving studs and means for locking the work holders in adjusted position in the guide ways.



1,455,445. HALTER. JAMES B. MINER, Bend, Oreg. Filed July 6, 1922. Serial No. 573,161. 1 Claim. (Cl. 119—130.)

A halter of the character described comprising a substantially U-shaped body portion having the side straps thereof arranged in a manner to extend longitudinally of the opposite sides of the head of an animal and its basal portion to be engaged over the head of such animal, a throat encircling strap connected intermediate its end to said body portion adjacent its basal part, a muzzle encircling strap consisting of a widened band, straps connected to the upper marginal portions of said muzzle encircling strap adapted to be adjustably connected to the lower ends of said longitudinal side straps, another longitudinal strap connected to the upper marginal portion of said muzzle encircling strap intermediate said first straps having its upper end disposed for adjustable connection with the basal portion of said body portion, adjustable transversely disposed means connected to said longitudinal side straps and slidably receiving said last mentioned longitudinal strap therethrough, and means upon the opposite ends of said muzzle encircling strap for effecting circumferential adjustment of the same.

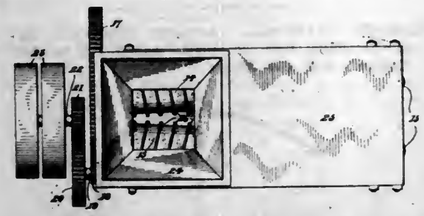


1,455,446. IRONING BOARD AND CABINET. GEORGE W. MONTGOMERY, Des Moines, Iowa. Filed July 27, 1921. Serial No. 487,964. 2 Claims. (Cl. 68—10.)

1. The combination of a cabinet and an ironing board, said ironing board fitting closely within said cabinet, a beam secured across the back of the cabinet and hinges connecting said beam and said ironing board, supporting members for the ironing board running longitudinally on the under side thereof, said supporting members being hinged to the ironing board and adapted to lie flat thereon in one position and stand out perpendicularly thereto

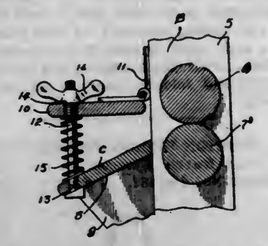
in another position, and guides for said supporting members at the bottom of said cabinet adapted to secure the supporting members in said perpendicular position.

1,455,447. HAND OR PEDAL LEVER WITH AUTOMATICALLY VARIABLE RATIO OF TRANSMISSION. WERNER OCHS, Bad Liebenstein, Germany. Filed May 17, 1922. Serial No. 561,766. 4 Claims. (Cl. 74—81.)



1. A hand- or pedal-lever for the operation of machine tools, in which the tool or the work piece has to make an idle stroke before the working stroke proper, comprising in combination a pivotal lever, means for depressing said lever, a sleeve movable upon said lever, a connecting rod between said sleeve and the machine tool, a spring upon said lever acting upon said sleeve in the sense of lengthening the lever arm, said lever adopting, after the idle stroke, such a position that the component of the transmitted power directed towards the fulcrum of the lever shifts the sleeve in the sense of the shortening of the lever arm so that the working stroke proper is executed in this position.

1,455,448. PROCESS OF MANUFACTURE OF DIPHENYLENEDIKETONES FROM ANTHRACENE COMPOUNDS. GUSTAV PETERS, Worms, Germany. Filed Aug. 9, 1921. Serial No. 491,023. 6 Claims. (Cl. 260—57.)



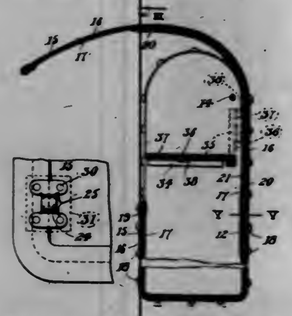
1. Process for manufacturing diphenylene diketones which comprises, heating anthracene compounds with free oxygen in the presence of an organic solvent and a relatively small quantity of an oxygen carrier.

1,455,449. NUT-CRACKING MACHINE. MAXWELL F. RIDDLE, Ravenna, Ohio. Filed Nov. 20, 1919, Serial No. 339,429. Renewed Nov. 11, 1922. Serial No. 600,474. 5 Claims. (Cl. 146—3.)

1. A nut-cracker comprising tapered rolls journaled upon parallel axes adapted for revolution toward each other, and teeth surrounding the rolls in continuous spiral lines with the adjacent convolutions of the spiral relatively close together standing in planes radially thereof.

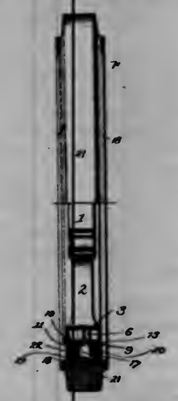
1,455,450. SAFETY DEVICE FOR MOTOR-DRIVEN WRINGERS. FREDERICK SCHAU, Hammond, Ind. Filed Dec. 20, 1921. Serial No. 523,712. 2 Claims. (Cl. 68—32.)

2. In a clothes wringer, the combination with the side standards and the upper and lower wringer rollers thereof, of a guard for the wringer rollers including a transversely extending inclined guard plate, side brackets engaging the lower surface of the guard plate and connecting the guard plate with the standards, said plate terminating at a point adjacent to the meeting faces of the rollers, an upper plate arranged adjacent to and spaced from the guard plate, means hingedly connecting the inner edge of the upper plate to the side standards, and means connecting the forward edges of said plates for holding the same in spaced relation to each other and varying the distance between the forward edges of said plates.



1,455,451. AIR-HOSE COUPLING. HARRY G. SCHOWE and HENRY J. HANSEN, Cleveland, Ohio, assignors to The Rex Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 8, 1921. Serial No. 459,639. 2 Claims. (Cl. 285—164.)

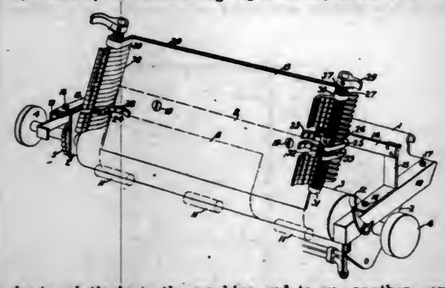
2. A coupling comprising a head having a socket in its front end, a packing ring fitting in the socket, a sleeve



confining the packing in the socket and having a rearwardly extending stop projection, and a screw cap connecting the head and the sleeve and having a pin cooperating with said projection to limit the turn of the cap.

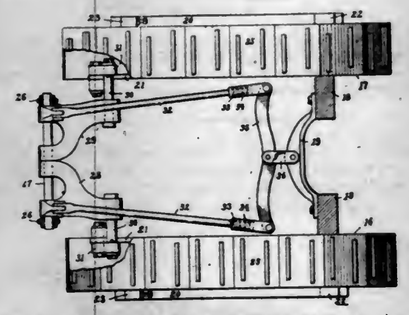
1,455,452. SATCHEL. ANTHONY SEMENICK, Buffalo, N. Y. Filed Feb. 27, 1922. Serial No. 539,663. 4 Claims. (Cl. 190—51.)

1. In a satchel of the class described, an outer casing having end walls, ledges fixed on the inner faces of said end walls opposite each other, and a shelf hinged to the end walls and resting normally on said ledges and consisting of a main shelf member to which said hinges are attached, and a shelf flap hinged to the front edge of the main member and foldable over to lie on top of the main member.



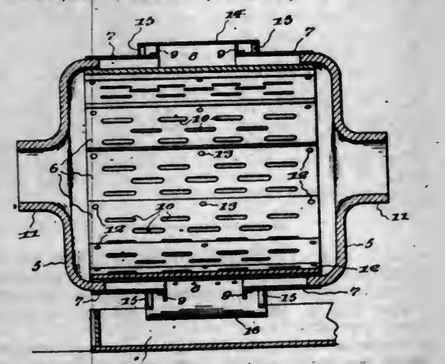
1,455,453. CUSHION WHEEL FOR MOTOR VEHICLES. BURNS LYMAN SMITH, Syracuse, N. Y. Filed July 16, 1921. Serial No. 485,157. 9 Claims. (Cl. 152—36.)

8. In combination, hub, spokes and a rim, a cushioning element mounted on said rim having a plurality of air chambers therein, means for providing restricted air passages from said air chambers to the spokes of said wheel, and a tire mounted on said cushioning element.



1,455,454. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 24, 1920. Serial No. 391,320. 20 Claims. (Cl. 197—140.)

1. In a typewriting machine, the combination of a line-spacing platen, a front collating table above the platen at the delivery side thereof and having a side-edge gage, and a universal paper-gage mounted along a side of the table and extending in the direction of the travel of the work-sheets, for facilitating repeated adjustments of the

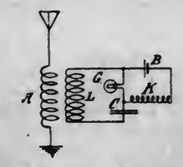


sheets relatively to the machine and to one another, comprising a multiplicity of gaging elements at line-space intervals and movable into positions to grip the work-sheets.

1,455,455. TRACTOR. HENRY J. STEGEMAN, Fairfield, Conn., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Nov. 8, 1918. Serial No. 261,615. 18 Claims. (Cl. 305—9.)

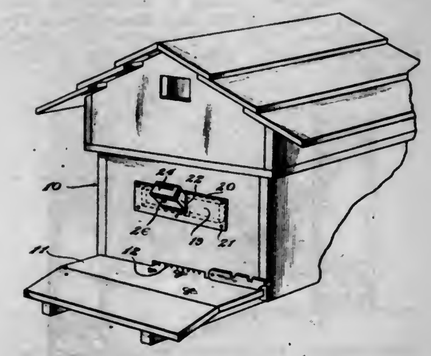
17. In a tractor of the self-laying track type, a main frame, a self-laying track unit at each side thereof, a four-point suspension means for the main frame, two of said points, one cooperating with each track unit, being floating, and means for equalizing the weight between said floating points at all relative inclinations of the track units.

1,455,456. BALL MILL. LEWIS L. SWEET and MIKE MORLEY, Wallace, Idaho. Filed Dec. 7, 1922. Serial No. 605,519. 8 Claims. (Cl. 83—9.)



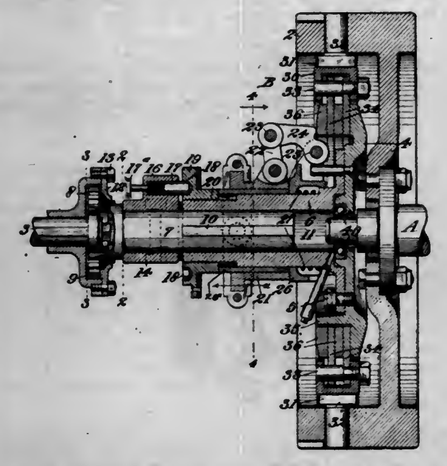
1. In a ball-mill, a drum, perforated liner plates in the drum, said drum having a side outlet extending completely around the same and spanned by the liner plates, and a housing enclosing the drum at the site of the outlet and having a discharge opening.

1,455,457. TRIAL LENS. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 5, 1919. Serial No. 321,925. 17 Claims. (Cl. 88—22.)



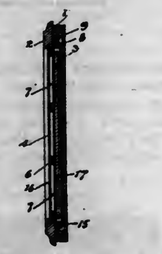
1. A compound lens eye testing set, including two related series of lenses each of a different power, the curve on one side of all lenses of one series being the same and the several curves on the opposite side being selected to give correct central power and reduced marginal astigmatism.

1,455,458. MEANS FOR DETECTING SMALL ELECTRIC CURRENTS. JOHN SEALY EDWARD TOWNSEND, Oxford, England. Filed Oct. 15, 1918. Serial No. 258,287. 7 Claims. (Cl. 250—25.)



7. The method of receiving and detecting small electric currents, which consists in superimposing such currents upon a battery current passing through a filament contained in an evacuated bulb, maintaining the filament near the point of incandescence, and observing the existence of such currents by variations in the point of incandescence of the filament.

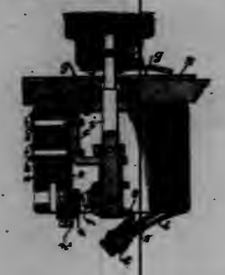
1,455,459. FEED BOX FOR BEES. BIAGIO TROILO, Oneida, N. Y. Filed Aug. 21, 1922. Serial No. 583,312. 1 Claim. (Cl. 6—5.)



The combination with a bee hive having an aperture in one of its walls; of a feed box therefor comprising a receptacle fitting snugly in said aperture, open across its upper end providing an entrance for bees, a filling hopper attached to one side of said receptacle, passages provided between the receptacle and the hopper above the bottom of said receptacle for food supply, said hopper having inclined top and bottom walls, a frame formed on one side of the receptacle adapted for attachment to the bee hive.

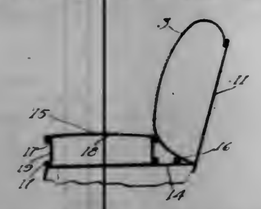
1,455,460. MASTER CLUTCH. WILLIAM TURNBULL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed May 25, 1918. Serial No. 236,522. 6 Claims. (Cl. 192—69.)

6. In combination with driving and driven shafts in alignment, the driving shaft carrying a fly-wheel, of a frictional disk clutch assembly interposed between the driving and driven shafts, a member carrying the driving disks of the clutch, interlocking and slidable connections between the rim of the fly-wheel and said carrying member, a telescopic member connected to the driven disks of the clutch for transmitting motion of the latter, and an interlocking and slidable connection between said telescopic member and the driven shaft, said interlocking connections being engageable when the telescopic member is extended and disengageable when retracted, whereby to permit removal of the clutch assembly without disturbing the position of the driving and driven shafts.



1,455,461. PICTURE OR ADVERTISING EXHIBITOR. BERNARD WATERS, Winnipeg, Manitoba, Canada. Filed Apr. 27, 1920, Serial No. 377,093. Renewed Nov. 22, 1922. Serial No. 549,475. 1 Claim. (Cl. 40—96.)

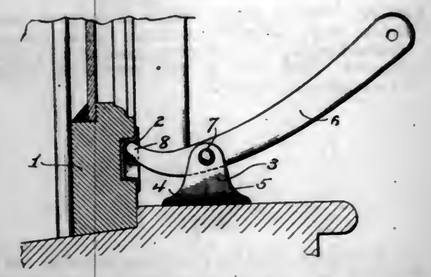
The combination of a casing having a transparent wall, a mat provided with a series of vertically spaced picture exhibiting openings supported directly behind said trans-



parent wall in contact therewith, a partition within the casing spaced a slight distance behind said mat, said partition being of sufficient length to extend above and below the openings in the mat, an endless picture exhibiting band encircling said partition and having the forward run thereof guided between the partition and the mat, the rearward run thereof being guided between the partition and the wall of the casing opposite the transparent wall, a pair of upper rollers supported above the upper end of the partition and engaging opposite sides of said band, a lower roller supported beneath the lower end of said partition and engaging the band as it passes therebeneath, and means for simultaneously rotating both of said upper rollers to actuate the band.

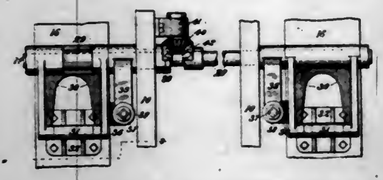
1,455,462. ELECTRIC RESISTANCE. OTTO WEEBER, Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Apr. 10, 1918. Serial No. 227,817. 5 Claims. (Cl. 219—63.)

1. In a device of the class described, in combination, a plurality of concentric, spaced, ring-shaped members wound with resistance coils, said members being concentrically arranged about a common axis, corresponding portions of said members being free from wire, supporting means for said members, an axle carrying a contact member for cooperation with said coils, and means for attaching said coils to said support, said attaching means cooperating with those portions of the ring shaped members which are free from wire.



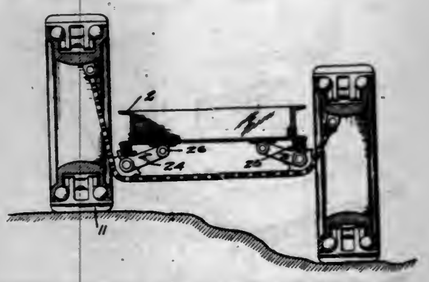
1,455,463. MEANS FOR MOTHPROOFING FURNITURE. ISSAC J. WEINBERG, Chicago, Ill. Filed July 24, 1922. Serial No. 577,110. 2 Claims. (Cl. 155—1.)

1. A reenforcing and moth proofing material for cloth covered articles comprising two pieces of cloth, a chemically treated reenforcing member forming a part of the seams of the cloth, stitching securing said member to said cloth, said member adding more material through which the stitching extends, thereby reenforcing the seam.



1,455,464. WINDOW-OPERATING DEVICE. LOUIS WELKER, Jr., Williamsport, Pa. Filed June 6, 1921. Serial No. 475,298. 1 Claim. (Cl. 254—131.)

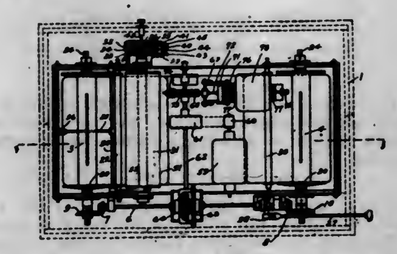
A sash-lifting jack comprising a support to rest upon a window sill and a lever pivoted near one end to said support, the shorter arm of said lever being curved upwardly and having its free end portion shaped to engage and conform approximately to the under face of the projecting lip of a sash lift and to also firmly engage



the upper wall of a recessed sash lift, whereby force applied upwardly by the engaging end of the lever will be imparted to the sash lift close to the vertical plane of the inner face of the sash.

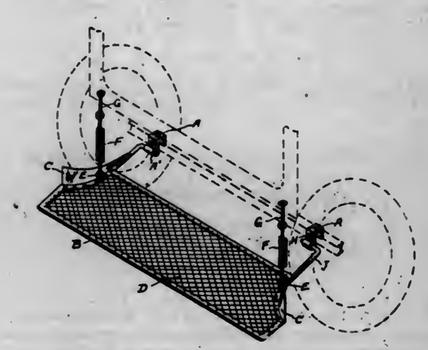
1,455,465. FRAME SUSPENSION FOR TRACTION ENGINES. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 13, 1918. Serial No. 249,611. 10 Claims. (Cl. 305—9.)

5. In a four-point support track laying tractor, means for equalizing the strains on the track laying units comprising an axially rotatable transversely disposed member provided with oppositely rotating operative members adapted to co-act with the traction units and transmit vertical motion of one unit to the other.



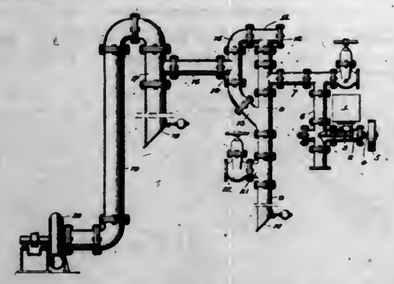
1,455,466. TRACTOR. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed May 26, 1920. Serial No. 384,344. 5 Claims. (Cl. 305—9.)

1. In a tractor, a main frame, a self-laying track unit at each side thereof, including a truck frame pivotally



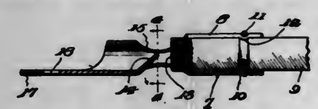
connected to the main frame for rocking movement in a vertical plane, and an equalizing suspension means between each truck frame and the main frame, comprising a flexible member connected to opposite truck frames and passing slidably beneath the main frame.

1,455,467. STREET INDICATOR. WALTER ALEXANDER WILSON and SYDNEY WILSON, Vancouver, British Columbia, Canada. Filed July 15, 1921. Serial No. 484,984. 22 Claims. (Cl. 40—53.)



1. In a street indicator, a casing having a display opening, a band bearing street names, mechanism for moving said band past the display opening including a brake drum, an electric motor for operating said mechanism, a band operated roller having one end provided with three spaced metallic rings in metallic connection with each other, the periphery of each ring being designed to form an electrical current path one continuous and the remaining two interrupted by the insertion therein of a vulcanite portion, a suitably supported contact arm for each ring forming circuit terminals bearing respectively on the continuous path and the interrupted ones, a magnetically operated brake band associated with said brake drum, and an electrical circuit in which said rings, said arms, said motor, and the brake magnet are disposed.

1,455,468. AUTOMOBILE FENDER. JOHN ALLEN, Detroit, Mich. Filed Aug. 28, 1922. Serial No. 584,768. 1 Claim. (Cl. 293—44.)

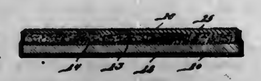


An automobile fender comprising a frame having a netting mounted thereon, a pair of fulcrum brackets adapted to be secured upon the forward portion of an automobile, removable side arms secured to the frame and adapted to pivot within the fulcrum brackets, supporting springs engaging the frame intermediate its extremities, and guard plates secured to the sides of the frame.

1,455,469. METHOD OF AND APPARATUS FOR SEPARATING COAL AND LIKE SUBSTANCES AND IMPURITIES MINGLED THEREWITH. WILSON D. ALTHOUSE, Philadelphia, Pa. Filed Aug. 22, 1922. Serial No. 583,629. 7 Claims. (Cl. 83—54.)

4. Apparatus for separating coal and impurities mingled therewith, comprising a pipe system or conduit having a plurality of vertical chambers with discharge openings at their lower ends and of successively larger cross section; closures for said discharge openings, adapted to open under weight of predetermined accumulation of material in the chambers; means for causing a continuous flow of air through the conduit and chambers; and means for introducing into the first chamber of the series a continuous stream of mingled coal and impurities, the conduit connecting the several chambers and serving to carry from each to the next the product less the impurities already removed.

1,455,470. SPARK INTENSIFIER. IRVING J. AMATO, Pittsfield, Mass., assignor of one-half to Raymond D. Tufts, Pittsfield, Mass. Filed Dec. 22, 1919. Serial No. 346,577. 6 Claims. (Cl. 175—183.)



1. A spark intensifier including a cylindrical cable receiving body having an exterior annular groove forming an interior annular shoulder adapted for gripping the cable, a locking device seated in said groove for contracting said body, and a post carried by said body.

1,455,471. METHOD OF PREPARING PULP. CARL BACHE-WIIG, Portland, Me.; Bertha M. Bache-Wiig executrix of said Carl Bache-Wiig, deceased. Filed Apr. 27, 1918, Serial No. 231,204. Renewed Dec. 22, 1919. Serial No. 346,769. 3 Claims. (Cl. 92—11.)

1. The method of treating straw, cornstalks and other cellulosic substances for the preparation of pulp for paper which consists in two successive treatments, first, treating the material with sodium chloride to soften but not destroy the ligneous matter, and second, cooking the treated mass with a bisulphite pulp forming liquor of such strength that the fiber will not be destroyed.

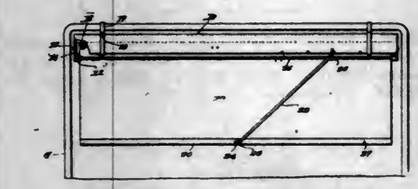
1,455,472. STAMP-INKING PAD. WILBUR BELL, Marengo, Iowa. Filed Jan. 9, 1922. Serial No. 528,032. 1 Claim. (Cl. 91—54.5.)

An inking pad comprising a containing receptacle provided with a cover, a base of rigid material mounted

within the receptacle, a sheet of blotter mounted upon the top of the base, a rubber sponge disposed upon the blotter, a sheet of absorbent felt disposed upon the top of the sponge, and a fabric covering for the sponge, felt and base.

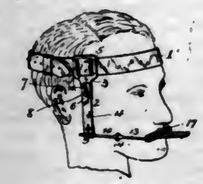
1,455,473. TOY. GEORGE J. BOLTON, Sayre, Pa. Filed Mar. 11, 1922. Serial No. 543,066. 1 Claim. (Cl. 46—49.)

The combination with a metallic receptacle having an open top covered by a sheet of glass, of a plurality of figures within the receptacle and attracted by the glass upon static charging of the same, and elements tethered to the figures and limiting the movement thereof to prevent flat engagment of the figures with the glass, said elements being provided with a metallic coating.



1,455,474. SIGN. FRANK EARNEST BROWN, Seattle, Wash. Filed June 16, 1922. Serial No. 568,888. 2 Claims. (Cl. 40—133.)

1. An illuminated sign comprising a casing, a transversely curved back and side walls connected to the back, a guide member applied to the forward side of said casing, a supporting body slidable through said guide member and consisting of inner and outer spaced pieces of screen, characters detachably applied to the outer piece of screen, a transparent filling applied to the inner piece of screen, and a source of light arranged within the casing, the casing being provided on its inner side with reflecting means and a coat of coloring.

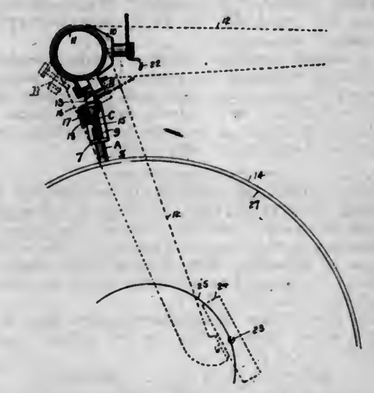


1,455,475. WINDSHIELD SHADE. HERMON H. BULLOCK, Walden, N. Y. Filed Apr. 10, 1922. Serial No. 551,143. 1 Claim. (Cl. 296—97.)

A wind shield attachment comprising a housing adapted to be supported by the wind shield, a shade roller journaled in the housing, a shade adapted to be wound about and wound from said roller, a rod having one end pivotally associated with the lower edge of said shade, means carried by the opposite end of said rod and designed to engage the adjacent wall of said housing, to hold the shade in a lowered position, said rod being adapted to be arranged in parallel relation with the lower edge

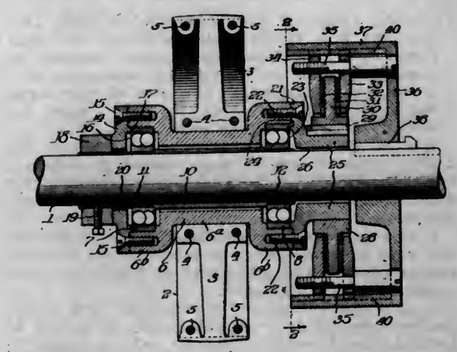
of the shade to hold the lower edge of the curtain in inactive position, means carried by the curtain for supporting said rod in its inactive position for the purpose specified.

1,455,476. HOLDING OR SUPPORTING MEANS FOR RADIUM-APPLYING MEANS. WILLIAM H. CAMERON, Pittsburgh, Pa., assignor to Radium Chemical Company, Pittsburgh, Pa. Filed Feb. 21, 1922. Serial No. 538,172. 7 Claims. (Cl. 174—89.)



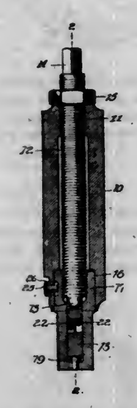
1. Means for supporting a radium-carrying device in the treatment of mouth and throat affections, comprising a holder, adjustable means for supporting said holder in front of the mouth of a patient, means for attaching said supporting means to the head of a patient, an applicator having laterally adjustable connection with said holder, means for adjustably connecting a radium-carrying device with said applicator, and flexible means connected with said applicator for effecting yielding pressure of the radium-carrying device to the affected part.

1,455,477. STONE-CUTTING WHEEL. ELROY ALBERT CHASE, Northfield, Vt. Filed June 13, 1921. Serial No. 477,005. 5 Claims. (Cl. 51—209.)



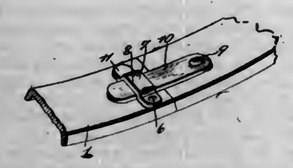
1. A wheel for dressing stone having, in combination, a rotatable supporting structure and a plurality of work engaging members disposed in an outwardly extended series of curved paths on the lower face of said supporting structure, said members providing a working face for said wheel formed of a succession of relatively short flat stone-engaging surfaces separated by recesses extending upward from the working face toward the supporting structure and having the rearward portion of the top of each recess gradually approaching the plane of the working face of the wheel.

1,455,478. AUTOMATIC STARTING AND STOPPING ATTACHMENT FOR DISK-TYPE TALKING MACHINES. WALTER LOCKHART COWEN and CLIVD ALFRED FRIEND, Sydney, New South Wales, Australia, assignors to Leopold Rogaly, Sydney, New South Wales, Australia. Filed Dec. 15, 1921. Serial No. 522,693. 8 Claims. (Cl. 192—124.)



1. An improved automatic starting and stopping attachment for disk type talking machines comprising a slidably mounted plunger having at one end a friction brake shoe and the other end a helical groove, a coil spring controlling said plunger, said plunger being provided with a notch, a pawl depending from the producer arm neck adapted to engage said helical groove, a hinged spring controlled detent adapted to engage said notch and an adjustable finger attached to the reproducer arm and adapted to engage said detent substantially as and for the purpose herein set out.

1,455,479. PULLEY AND SIMILAR CONSTRUCTION. WILLIAM F. DAGGETT, Chicago, Ill. Filed Oct. 14, 1920. Serial No. 416,885. 9 Claims. (Cl. 64—36.)

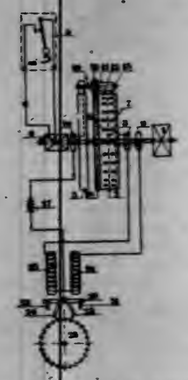


6. A device of the class specified comprising a pulley device having a central hub member provided with enlarged ends, a split pulley mounted on the central part of said hub device, ball bearings within the enlarged ends of said hub member, a sleeve within said hub member and having reduced ends on which the ball bearings are mounted, closures for the opposite ends of said hub member, said closures being secured to the hub member by screws and one of said closures having an extension extending longitudinally of the rotary shaft on which the device is mounted, said extension having a bore of greater diameter than said shaft, a supplemental device mounted on said extension, and a collar provided with an adjustable screw to secure said inner sleeve to said shaft, said supplemental device comprising a friction drive having friction members mounted on said extension and keyed thereto and a rim member mounted on the shaft and keyed to the same.

1,455,480. HOLDER FOR REAMERS. JOHN DLESK, Berwyn, Ill., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 12, 1920. Serial No. 380,823. 4 Claims. (Cl. 77—58.)

1. A holder for a rectangular shaped reamer body having oppositely disposed cutters comprising a transversely slotted member closed at one end, a centrally located projection in said closed end adapted to engage a central opening in the reamer body, a tubular member enclosing the open end of said slotted member and a screw threaded into the open end of said slotted member and bearing upon said reamer body.

1,455,481. SPLIT DEMOUNTABLE RIM. HUGH E. GEIVER, Wessington, S. Dak. Filed Aug. 9, 1920. Serial No. 402,200. 1 Claim. (Cl. 301—32.)



The combination with a pair of rim sections, of means for hingedly uniting said sections, said rim sections having separable abutting ends, a fastening lever pivoted to the inner surface of the rim adjacent one of said abutting ends and adapted to assume a position in alignment and concentric with the rim and overlying the other abutting end when the two ends adjoin, a clasp operatively carried on the inner surface of the rim near one edge and adjacent said other abutting end, said clasp being constructed of spring metal and provided with an angular recess to correspond to and receive the fastening lever transversely, said clasp assuming a position transversely of the rim and overlying the lever, whereby upon springing the free end of the clasp inwardly of the rim, said lever may be moved laterally on its pivot to separate the abutting ends.

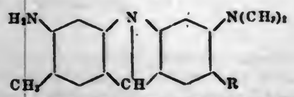
1,455,482. INDICATOR FOR TIMEPIECES. DORA P. GLEASON, Cincinnati, Ohio. Filed June 11, 1921. Serial No. 476,928. 2 Claims. (Cl. 58—57.)

1. In a device of the class described the combination of a band adapted to be mounted on a time-piece and a pointer hingedly mounted on the band adapted to assume a position over the face of the time-piece and a position spaced from the face of the time-piece.

1,455,483. ELECTROMECHANICAL DIFFERENTIAL GOVERNOR. ROBERT B. GOLDSCHMIDT and RAYMOND BRAILLARD, Paris, France. Filed May 24, 1920. Serial No. 383,920. 5 Claims. (Cl. 172—293.)

1. Electro-mechanical differential governor means comprising in combination a first organ, constant speed rotating means therefor, a second rotating organ operated by the machine to be controlled and comprising two series of electric contacts upon which are adapted to slide respectively two levers controlled by the constant speed organ, two electro-magnets excited by an electric source of current, the said electro-magnets acting upon a pivoted rotor which is provided with two reversely arranged pawls respectively engaging two toothed wheels which act in different direction upon the regulating organ of the machine to be controlled.

1,455,484. IRON REST AND CLEANER. LORENZ D. GRENDA, Chicago, Ill. Filed Aug. 11, 1921. Serial No. 491,420. 1 Claim. (Cl. 68—27.)



A device of the character described comprising a frame consisting of a plate formed with a depending marginal flange and with an upstanding marginal flange, a sheet of asbestos superposed on the plate and engaging at its edges with the upstanding flange, and cleaning and polishing means superposed on the asbestos sheet and having a friction-tight fit with the inner walls of the upstanding flange, said means comprising a filler and a fabric cover therefor, said filler and said fabric cover being impregnated with a substance having waterproofing, polishing, and rust-preventing qualities.

1,455,485. MEDICAL COMPOUND. WILLIAM C. GROVE, Basic, Va. Filed July 26, 1922. Serial No. 577,747. 3 Claims. (Cl. 167—7.)

1. A medical compound including a liquid preparation of *Tephrosia virginiana* and a lithia salt in solution, the *Tephrosia virginiana* being in such proportions as to cause the *Tephrosia virginiana* to reduce the sugar content in and insipidity of the urine and the lithia salt to activate as a solvent and diaphoretic.

1,455,486. DYES OF THE ACRIDINE SERIES AND THEIR MANUFACTURE. HEINRICH GRÜNHAGEN, Berlin-Karlshorst, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed July 29, 1916, Serial No. 112,130. Renewed Sept. 10, 1920. Serial No. 409,494. 8 Claims. (Cl. 260—36.)

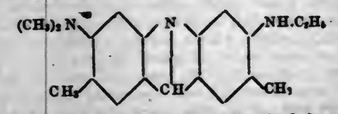
1. As new articles of manufacture, new dyes of the acridine series corresponding to the general graphic formula:

in which formula R indicates a univalent alkyl radical.

5. As a new process for manufacturing dyes of the acridine series the process which consists in heating a formyl derivative of a C-alkylated meta-diamine of the benzene series with a salt of a C-alkylated and N-alkylated meta-diamine of the benzene series.

6. As a new process for manufacturing dyes of the acridine series the process which consists in heating a formyl meta-toluylene-diamine with a salt of an N-alkylated meta-diamine of the benzene series.

8. As a new process for manufacturing dyes of the acridine series the process which consists in heating formyl-meta-toluylene-diamine with the hydrochloride of 4-amino-2-dimethylaminotoluol.

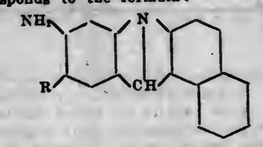


1,455,487. DYES OF THE ACRIDINE SERIES AND PROCESS FOR THEIR MANUFACTURE. HEINRICH GRÜNHAGEN, Berlin-Karlshorst, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed July 29, 1916, Serial No. 112,131. Renewed Sept. 10, 1920. Serial No. 409,495. 6 Claims. (Cl. 260—36.)

1. As a new process for manufacturing dyes of the acridine series the process which consists in heating a formyl-derivative of an N-alkylated meta-diamine of the benzene series with a salt of a meta-diamine of the benzene series.

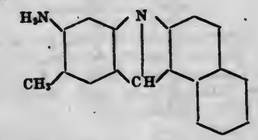
4. As a new process for manufacturing dyes of the acridine series the process which consists in heating 4-formyl-amino-2-dimethylaminotoluene with an N-alkylated meta-toluylenediamine-hydrochloride.

5. As a new process for manufacturing dyes of the acridine series the process which consists in heating 4-formyl-amino-2-dimethylaminotoluene with 4-amino-2-ethylaminotoluene-hydrochloride.



6. As a new article of manufacture the new acridine dye corresponding to the formula:

which dye in the dry state when pulverized forms a red-brown powder dyeing leather clear and deep yellow tints.

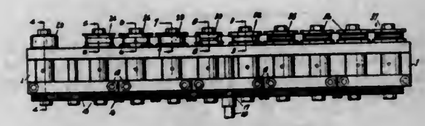


1,455,488. DYES OF BENZENE-NAPHTHALENE-ACRIDINE SERIES AND THEIR MANUFACTURE. HEINRICH GRÜNHAGEN, Berlin-Karlshorst, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed July 29, 1916, Serial No. 112,197. Renewed Sept. 10, 1920. Serial No. 409,496. 6 Claims. (Cl. 260—36.)

1. As new articles of manufacture new dyes of the acridine series the underlying general graphic formula of which corresponds to the formula:

in which R represents hydrogen or an alkyl group.

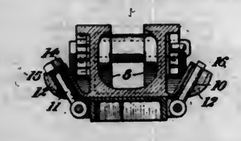
2. As a new article of manufacture a new dye of the acridine series the constitution of which corresponds to the formula:



which in the dry state and pulverized forms a brown powder and dyes leather clear and deep yellow tints.

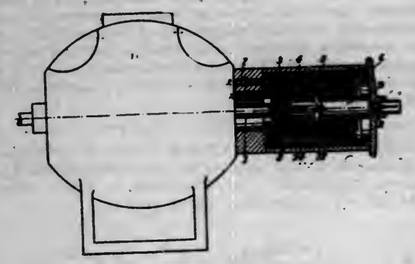
4. As a new process for the manufacture of new dyes of the acridine series the process which consists in heating a formyl derivative of a C-alkylated meta-diamine of the benzene series with a salt of a beta-naphthylamine in equimolecular proportions.

5. As a new process for the manufacture of new dyes of the acridine series the process which consists in heating a formyl derivative of meta-toluylenediamine with a salt of a beta-naphthylamine in equimolecular proportions.



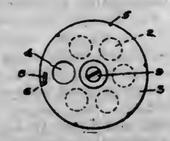
6. As a new process for the manufacture of a new dye of the acridine series the process which consists in heating formyl-meta-toluylenediamine with beta-naphthylamine-hydrochloride in equimolecular proportions.

1,455,489. FORMING MACHINE. JAMES A. HENRY and THADDEUS S. WAIT, Sturgis, Mich. Filed Jan. 9, 1922. Serial No. 528,107. 8 Claims. (Cl. 153—54.)



1. In a structure of the class described, the combination of feed and forming rollers arranged in coacting pairs one above the other, shafts therefor, connecting gears for each pair of shafts, connecting gears for the several pairs of gears, spaced supporting plates for said shafts having bearing member openings for the upper shafts, one of said plates having inverted T-shaped slots disposed between and with the cross portions of the slots opening into adjacent bearing member openings, bearing members for said upper shafts having eccentric portions disposed in said bearing member openings whereby the shafts may be adjusted to adjust the rollers, and screws engaging the slotted portions of said plate to clamp the same upon the said bearing members whereby they are secured in their adjusted positions.

1,455,490. REMOVABLE GROUSER FOR TRACK LINKS. PLINY E. HOLT, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed May 20, 1918. Serial No. 235,644. 7 Claims. (Cl. 305—10.)



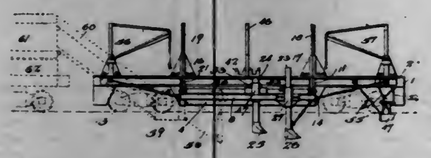
1. In combination with a track-link having a permanent shoe formed with a comparatively smooth and even tread surface, with its inner and outer sides formed with upstanding portions, means for converting the smooth tread surface of the shoe into an irregular surface, comprising a detachable grouser to fit over the tread surface of the shoe, and means carried at opposite ends of the grouser to grip the upstanding portions of the shoe for retaining the grouser in place.

1,455,491. ELECTRIC CLUTCH COUPLING FOR USE IN DENTAL TECHNICS. EMILE HUET, Brussels, Belgium. Filed Aug. 11, 1921. Serial No. 491,642. 3 Claims. (Cl. 192—84.)

3. In a dental machine, the combination of an electric motor having a shaft, a flexible shaft having one end connected with a dental tool and the other end in alignment with the motor shaft, a solenoid having an axial bore disposed in axial alignment with the motor shaft and electrically connected for energization with the motor, a pair of clutch members mounted in the axial bore, one member being rigid on the motor shaft and the other member mounted on the flexible shaft, and means for normally disengaging said members, whereby upon the operation of the motor the solenoid is energized for moving the clutch members into cooperative relation, and said means disengages the members when the solenoid is de-energized.

1,455,492. DETONATOR MAGAZINE. ARTHUR M. JAMES, Johnstown, Pa. Filed Apr. 8, 1922. Serial No. 550,745. 3 Claims. (Cl. 206—3.)

1. A detonator magazine including a body having spaced circumferentially arranged pockets for detonators, a closure pivotally secured to the body and having a single opening therein designed, when turned to certain

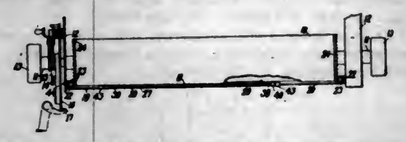


positions to register with the respective detonator pockets, and when brought to another position, to be brought out of register with any of the compartments, means engaging the closure for locking the same in its last mentioned position, and said means also latching the closure in any of its first mentioned positions.

1,455,493. DRAWBAR AND POWER ATTACHMENT FOR TRACTORS. NOAH O. JOHN, Marshall, Okla. Filed July 17, 1922. Serial No. 575,514. 4 Claims. (Cl. 180—14.)

1. The combination with a tractor having a drive shaft and a housing therefor, of a drawbar for a trailing implement rigidly secured to said housing, a revoluble member mounted in said drawbar and having positive connection with said drive shaft, flexible means connecting said member with the actuating shaft of said implement, said means including a clutch at the adjacent end of said actuating shaft, and a telescopic shaft having a knuckle joint at each end one of said knuckle joints being inserted between said member and said telescopic shaft, a bearing bracket on said implement and a stub shaft mounted in said bearing bracket and having slidable connection with said clutch.

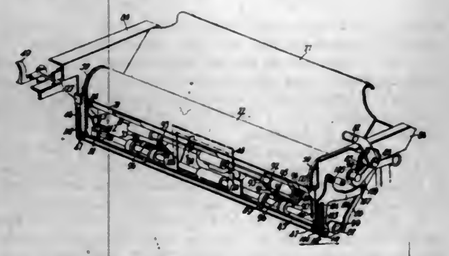
1,455,494. DITCHING MACHINE. JOHN H. JOHNSON, Charleston, S. C., assignor of one-fourth to Thomas Marks, Charleston, S. C. Filed June 14, 1922. Serial No. 568,102. 6 Claims. (Cl. 37—105.)



1. The combination with a supporting vehicle, of a longitudinally extending, hinged side frame and means on the side of the car for supporting said frame in working position, means for raising and lowering said hinged frame, a bracket-holder longitudinally adjustable on said frame, and a vertically adjustable plow beam supported in said bracket-holder.

1,455,495. MERCURY DERIVATIVES OF AROMATIC COMPOUNDS AND PROCESS OF MANUFACTURING SAME. AUGUST KLAGES, Magdeburg-Südost, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Feb. 4, 1915, Serial No. 6,062. Renewed Dec. 9, 1919. Serial No. 343,641. 8 Claims. (Cl. 260—13.)

1. The hereindescribed process of preparing mercury derivatives of phthaleins, which consists in boiling neutral solutions of alkali salts thereof with a large excess of a mercuric salt solution.

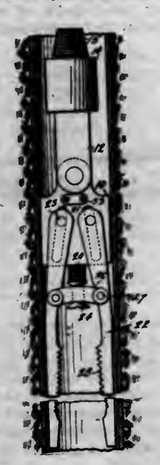


8. As a new article of manufacture, a tetrabrom fluorescein mercuric derivative, insoluble or only slightly soluble in the usual organic solvents, excepting glacial acetic acid in which it is sparingly soluble, soluble in solutions of sodium carbonate and caustic alkalis forming a solution having a red color.

1,455,496. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 26, 1919. Serial No. 313,431. 25 Claims. (Cl. 197—135.)

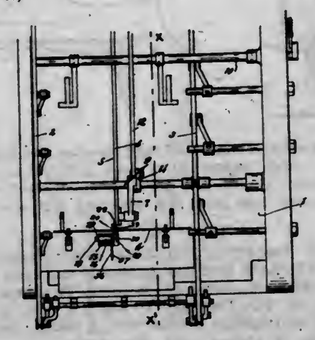
1. In a front-strike typewriting machine, the combination with a revoluble platen, of a card-holding frame, crown gears at the ends of the platen and substantially flush with the periphery thereof, racks lying substantially within a plane tangent to the periphery of the platen and meshing with said gears and forming the ends of the frame, and a card-holding cross-bar forming a part of the frame and connecting said racks.

1,455,497. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 30, 1919. Serial No. 320,866. 28 Claims. (Cl. 197—135.)



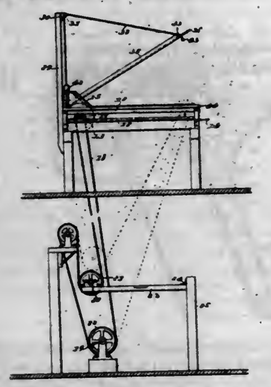
1. In a front-strike typewriting machine, the combination with a platen and a paper-table adapted to guide sheets around beneath the platen, of a line-spacing mechanism, front feed-rolls to run upon the platen, a card-holding device at the front of the platen and connectible to rise at a line-spacing operation, and a finger-piece shiftable to connect the card-holding device to the line-spacing mechanism, and adapted to move the feed-rolls rearwardly out of the way of the card-holding device.

1,455,498. COIN BANK. ISIDOR J. KUSEL, Chicago, Ill., assignor to Stronghart Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1920. Serial No. 349,466. 6 Claims. (Cl. 232—4.)



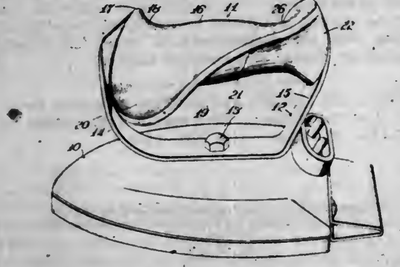
1. A coin bank having a coin slot the edges of which extend downwardly, spring coin engaging slips arranged in rows along opposite edges of the coin slot, said clips extending substantially to the middle portion of the slot and being normally in contact with the lowermost part of the edges of the coin slot, whereby the clips yield downwardly to permit insertion of a coin between the rows of clips and are held by the edges of the slot against movement upwardly from their normal position.

1,455,499. WELL FISHING TOOL. CHARLES E. LANG, Wichita Falls, Tex. Filed Mar. 5, 1921. Serial No. 450,044. 7 Claims. (Cl. 294—116.)



1. In a fishing tool, a head having diverging slots, grabbing members having upper portions engaging in said slots, whereby said members are swung when moved vertically, a spring pressed plunger carried by said head relatively between said slots and to which said grabbing members are pivoted intermediate their ends, and means for holding said members retracted under tension of the spring pressed plunger arranged to automatically release said members and said plunger and to automatically latch when said parts are returned to their normal position.

1,455,500. REGISTER FOR PRINTING MACHINES. JOSEPH LEWIS, Winnipeg, Manitoba, Canada. Filed May 3, 1919. Serial No. 294,447. 1 Claim. (Cl. 235—98.)

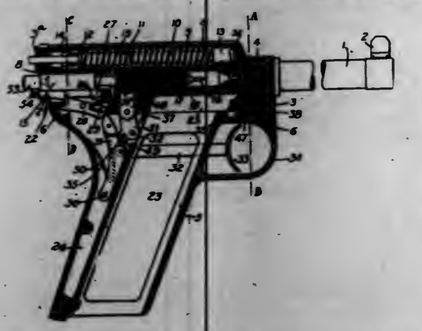


In a folding press, the combination with a paper delivering means, a counter, and a moving paper folding member, of a controlling lever connected to the counter and normally engaging the folding member and adapted to follow the movement thereof to effect the operation of the counter and a self-setting trip lever normally engaging and locking the controlling lever against movement and provided with a foot piece extending into the path of the delivered paper and adapted to be actuated thereby to release the controlling lever and permit it to follow the movement of the folding member.

1,455,501. CLOTH-CUTTING MACHINE. CHARLES J. MCGEE, Osceola, Ark. Filed June 2, 1921. Serial No. 474,342. 1 Claim. (Cl. 164—77.)

In a cutter for cloth in superimposed layers, a table, guides transversely arranged in spaced relation to each other under the table, a carriage mounted for movement on the guides, a shaft rotatably mounted in the carriage, a cutter on the said shaft, a belt operating over the shaft for driving the same, pulleys over which the said belt is operative, a hingedly mounted pulley engaging the said belt, means for moving the carriage in one direction and elevating the hingedly mounted pulley, the said pulley being operative to return the carriage to its normal position.

1,455,502. IMPLEMENT HANDLE. LEWIS H. MEATZ, Chicago, Ill. Filed Jan. 16, 1922. Serial No. 529,495. 3 Claims. (Cl. 68—26.)



1. An implement handle comprising a smooth body portion for the palm of the hand formed with a web extending continuously along one side of and around the front and rear ends of the handle having a smooth surface for the fingers, said web projecting downwardly and laterally from the body at the front end and being formed with a thumb depression.

1,455,503. AUTOMATIC FIREARM. ROBERTO MUSITELLI, Brescia, Italy. Filed Oct. 12, 1916. Serial No. 125,181. 1 Claim. (Cl. 42—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

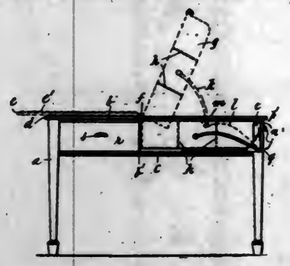
An automatic firearm, comprising in combination, a body portion, a breech block support mounted thereon having an opening in one side wall thereof, a breech block slidable in said support and having a longitudinal recess in the side wall thereof remote from the opening in the support, a firing pin slidable in the breech block, trigger-operated means for controlling the operation of said firing pin, and a stop pivotally mounted in

a lateral aperture in the other side wall of the breech block support in position to engage and eject a cartridge through said opening, said stop normally working in the

recess in the breech block but movable to extend transversely of said recess to prevent the return movement of the block.

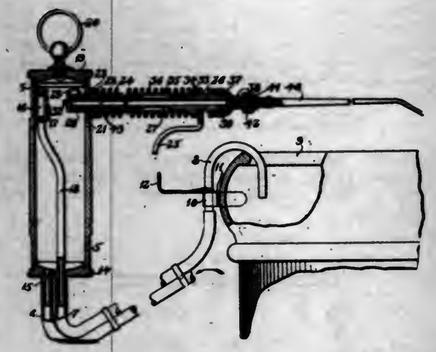
1,455,504. BRUSH. DANIEL E. ODOM, Bennettsville, S. C. Filed Feb. 20, 1922. Serial No. 537,963. 5 Claims. (Cl. 274—1.)

1. A cleaning device for a sound reproducing record comprising a housing, a cleaning element movable into and out of the housing, said element when positioned outwardly of the housing being in position to engage the record to be cleaned, and means carried by the housing and coacting with the cleaning element when said element is moved to cleanse said cleaning element.



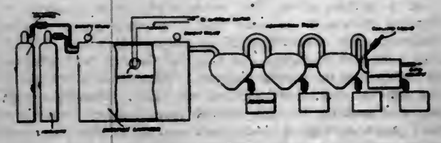
1,455,505. FILTERING APPARATUS. WILLIAM PATERSON, London, England. Filed Sept. 9, 1922. Serial No. 587,185. 3 Claims. (Cl. 210—145.)

2. Filtering apparatus of the type referred to comprising a main collecting and distributing header having a plurality of apertured bosses along its upper surface, a T-piece loosely inserted into each of said apertures, apertured pipes secured to the lateral parts of the head of each T-piece, and clamping means for holding said T-pieces in position, the limb of each T-piece extending into the header and provided with a vent hole arranged within the header.



1,455,506. TABLE ADAPTED TO BE USED AS COOKERY CABINET. ERNEST PATEY, Norbury, England. Filed Feb. 13, 1922. Serial No. 536,348. 1 Claim. (Cl. 45—17.)

In a combined table and cookery cabinet, the provision of a table frame having a top formed in two portions, one of which is fixed to the table frame, the other being hinged thereto and movable, and a box or cabinet hinged to the table frame and adapted to be moved with the movable portion of the table top, means for locking the box or cabinet to the movable portion of the table top to enable the two to be drawn up together until the cabinet is in a vertical position, said movable portion of the table top being then capable of being unlocked from the said box or cabinet and folded back up on to the fixed

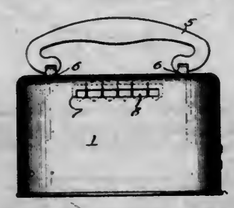


portion of the table top to form a working space, means for holding the box or receptacle in its vertical position when the table is open, and means for locking the movable portion of the table top and with it the box or receptacle to the table frame when the same are closed, the whole being constructed and arranged so that the same amount of leg room is available beneath the table frame as with ordinary tables at present in use.

1,455,507. SYRINGE. WILLIAM A. PERVIER, Allston, Mass., assignor to Charles E. Parkhurst, Somerville, Mass. Filed Aug. 11, 1921. Serial No. 491,599. 17 Claims. (Cl. 128—229.)

1. A syringe comprising a fluid chamber forming a hand grip, a nozzle supported by and communicating with the chamber, a normally open outlet, and selective means for diverting fluid from said outlet to said nozzle.

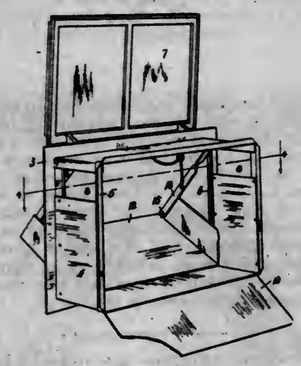
1,455,508. PROCESS OF MAKING THE CHLORINATED PRODUCTS OF METHANE. ERNST HERMANN RIESSENFELD, Freiburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Oct. 4, 1918. Serial No. 256,929. 4 Claims. (Cl. 260—166.)



1. In a system for the production of chlorinated products of methane from a mixture of chlorine and methane,

the improvement which consists in installing devices which prevent a sudden release and stoppage of the flow of gas to and from reaction chambers.

1,455,509. METHOD OF REFINING MIXTURES OF CHLORIDES OF NAPHTHALENES SERVING AS SUBSTITUTES FOR ROSIN. KARL RÜCKER, Berlin-Marienfelde, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Nov. 14, 1918, Serial No. 262,628. Renewed Feb. 9, 1923. 2 Claims. (Cl. 260—161.)

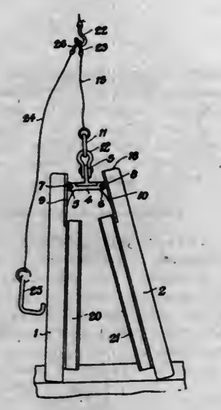


2. Method of refining mixtures of chlorides of naphthalenes serving as substitutes for rosin, consisting in a current of indifferent gases being sent through the said mixture after the same has been melted and heated to a temperature of 215° C.

1,455,510. SMALL SAVINGS BANK. ELI A. RUSSELL, Chicago, Ill., assignor to Stronghart Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1921. Serial No. 483,444. 18 Claims. (Cl. 232—4.)

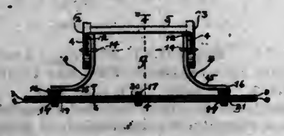
1. A small bank having inner and outer coin slots and means for protecting the inner slot.

1,455,511. WINDOW CHUTE. JAMES M. TRIGGS, Huntington, Ind., assignor to The Majestic Company, Huntington, Ind., a Corporation of Indiana. Filed Jan. 19, 1922. Serial No. 530,296. 2 Claims. (Cl. 189—46.)



1. A chute frame of the class described, comprising inner and outer edge frames and a casing connecting the edge frames and having openings near the tops of the chute frame sides between the edge frames, the edge frames having flanges projecting outward from the casing to cooperate therewith to form vertical channels to receive a cementitious anchoring material when the frame is mounted in a wall opening.

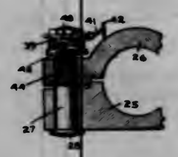
1,455,512. OPHTHALMIC MOUNTING. GEORGE L. TULLY, Southbridge, and WILLIAM H. BOUTELLE, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 24, 1922. Serial No. 556,158. 3 Claims. (Cl. 88—53.)



1. In a device of the character described, the combination with an end piece, of a temple, means for pivoting the temple to the end piece, a cap member interlocking with the pivot, and means for detachably securing the cap member in interlocked position.

1,455,513. SHIP'S HATCH. EDWARD ELIAS VON TELL, Gottenborg, Sweden. Filed Jan. 13, 1923. Serial No. 612,392. 5 Claims. (Cl. 114—201.)

1. Construction of ships' hatches, comprising the combination with a pair of hatch members, of a beam, hinges connecting the adjacent edges of the hatch members to the beam arranged to allow the hatch members to fold downwards when the beam is lifted, but not to allow the hatch members to fold upwards above the closed position of the hatch members, and means for enabling a lifting device to engage with the beam for lifting, removing, and lowering the hinged pair of hatch members to open and close the hold of the vessel.



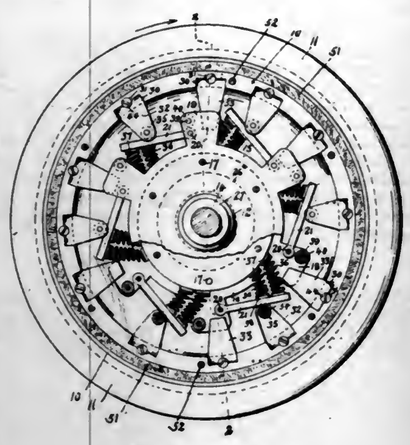
1,455,514. AUTOMOBILE BUMPER. EDWARD V. ALLEN, Waukegan, Ill. Filed Nov. 4, 1921, Serial No. 512,774. Renewed Mar. 19, 1923. 6 Claims. (Cl. 293—55.)

6. The combination with an automobile frame, of a bumper consisting of a pair of bars formed with upward

and downward curves, the downward curves of one bar meeting the upward curves of the other bar intermediate of the ends of said bars, said ends being oppositely inclined at an upward and downward angle, respectively, means for clamping said bars together at their meeting portions, a pair of supporting arms having loops or eyes at their outer ends adapted to be engaged by said clamping means, and means for clamping together said arms and the side-rails of said frame.

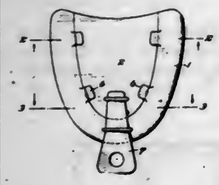
1,455,515. ATTACHMENT FOR BEARINGS. JOHN ALBERT ANDERSON, Geneseo, Ill. Filed Sept. 9, 1920. Serial No. 409,202. 3 Claims. (Cl. 85—32.)

1. In a device of the class described, a bolt and a nut having cooperating threads; a rotatable member; means for supporting said member on the bolt for rotation independently of the threads of the bolt; means independent of the nut and bolt for holding said member releasably against rotation; and a torsion spring connecting the rotatable member and the nut.



1,455,516. ATTACHING DEVICE. GEORGE SAMUEL ANDRES, Chicago, Ill. Filed Oct. 6, 1919. Serial No. 328,871. 2 Claims. (Cl. 292—250.)

1. An attaching device including a pivoted shackle, a pawl pivotally mounted thereon and a boss cast integral with one of the members to be fastened, said pawl having two flat surfaces tangent to circles with centers at the axis of the pawl, said surfaces making an angle of approximately ninety degrees and engaging in the locked position with complementary surfaces on the boss.

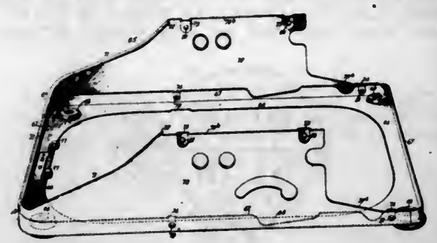


1,455,517. RESILIENT WHEEL. ARNOLD JUCUM ARNOLDSON, Elsinore, Utah. Filed May 12, 1922. Serial No. 560,414. 3 Claims. (Cl. 152—28.)

1. A wheel of the class described comprising an annular rim, a plurality of stop members in spaced relation and extending inwardly from said rim, each alternate stop having a bearing roller, a hub member rotative with an axle, a plurality of bearing bars swinging relative to said hub member and bearing respectively against said bearing rollers, springs supporting said swinging bars

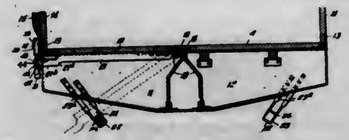
in yieldable engagement with said bearing bars, stop rollers carried by said hub member and extending into the paths of the other alternate stop members.

1,455,518. DENTAL TRAY. LOUIS BALTER, New York, N. Y. Filed Mar. 3, 1922. Serial No. 540,683. 2 Claims. (Cl. 32—6.)



1. A dental impression tray, comprising an inner member arranged to hold moulding material in taking impressions of the palatal arch and upper jaw, a separable outer member surrounding said inner member on all sides except at the back thereof, a flange formed on the inner side of said outer member, a flange formed on the outer side of said inner member, the edges of said flanges being arranged to abut and form a sharp edged ridge of a shape approximating that of a set of teeth, and a handle having a portion arranged to co-operate with means formed on the bottoms of said tray members to hold the same together when in use.

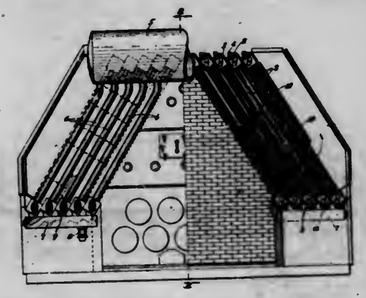
1,455,519. TYPEWRITING MACHINE. JOHN H. BARR, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 8, 1922. Serial No. 559,119. 16 Claims. (Cl. 197—186.)



1. In a typewriting machine, the combination of an inner sheet metal frame on which working parts of the machine are supported, and an outer surrounding sheet metal frame detachably fixed to said inner frame, said outer frame comprising two sheet metal members fixedly

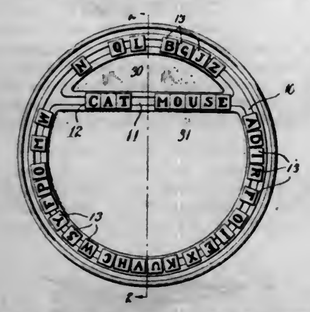
united and each formed from a single piece of sheet metal, one member being in the nature of a rectangular

frame substantially L-shaped in cross section, and the second member being outside of the first mentioned member and surrounding it on three sides.



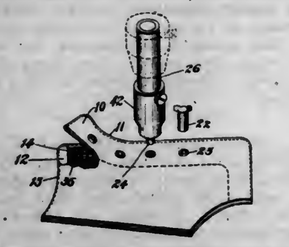
1,455,520. DUMP CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1922, Serial No. 532,734. Renewed Feb. 16, 1923. 12 Claims. (Cl. 105—244.)

1. A dump car having a flat bottom, the said flat bottom on each side of the center having alternated floor doors and fixed floor sections, the doors on one side of the car being transversely opposite the fixed floor sections on the other side of the car.



6. In a dump car, the combination with an underframe comprising a center sill and cross-members; of a side dump floor door, pivoted along its inner edge at the center sill; and means for limiting the opening movement of said door, including, a bar beneath the door and extending lengthwise of the car from one cross member to the next adjacent cross member.

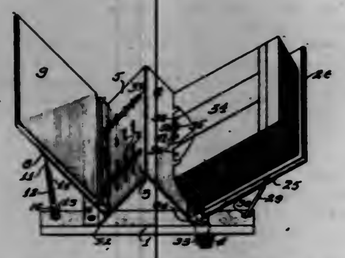
1,455,521. WATER-TUBE BOILER. DAVID E. G. CLARKE, Bayonne, N. J. Filed Mar. 13, 1918. Serial No. 222,073. 2 Claims. (Cl. 122—324.)



1. In a steam generating system, a water circulating system for the generation of steam comprising a horizontal, elongated drum adapted to be filled partly with water when in use, a plurality of horizontal, upper headers extending at right angles to said drum with one end of each header adjacent the side of said drum and connected therewith below the water level of said drum and with the series of ends extending side by side along said drum, a plurality of horizontal, lower headers spaced apart from and below and corresponding in number to said upper headers but so arranged that straight lines drawn between corresponding upper and lower headers will form a series of inverted V's to provide a space for the heating medium, downcomers connected to said drum below its water level and to said lower headers, and a plurality of tubes connecting corresponding upper and lower headers to form therewith a complete separable unit, whereby the heating medium will pass from the inverted V formed by said tubes through said tubes and heat the water therein so that it will circulate from said tubes through their upper headers, the drum, the downcomers, the lower headers, and again into the tubes.

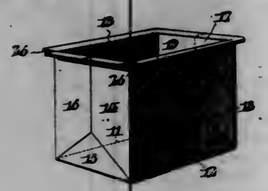
1,455,522. EDUCATIONAL DEVICE. HORATIO G. CRESS, Troy, Ohio. Filed Sept. 28, 1922. Serial No. 591,066. 8 Claims. (Cl. 35—9.)

1. A device of the character described, comprising a supporting plate having a facing plate attached thereto and cooperating therewith to provide channels and a hollow bead formed in part by the marginal portion of one of the plates, said bead extending around the device and outside said channels.



1,455,523. ART OF SHOEMAKING. HENRY T. DOULETT, Brockton, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 13, 1914, Serial No. 871,990. Patent No. 1,434,356, dated Oct. 31, 1922. Divided and this application filed Mar. 1, 1915. Serial No. 11,201. 9 Claims. (Cl. 218—29.)

1. In the manufacture of boots and shoes, that method which consists in permanently securing together the leather and lining parts of an upper in the relation which they are to have in the finished shoe, punching a hole through both parts, passing an upsetting surface



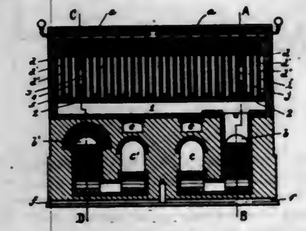
through the hole in the leather part to locate it between the two parts and inserting the barrel of an eyelet through the lining part, and finally clenching the eyelet barrel against the upsetting surface and upon the lining part.

1,455,524. LOOSE-LEAF-BINDER SUPPORT. CHARLES R. FARGO, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Co., Chicago, Ill., a Corporation of Illinois. Filed July 12, 1918. Serial No. 244,531. 2 Claims. (Cl. 45—57.)

1. In a loose leaf binder support, oppositely inclined end members each having a plurality of vertically spaced slots, side members having projecting spurs adapted for detachable pivotal engagement with said slots, and adjustable braces for supporting said side members.

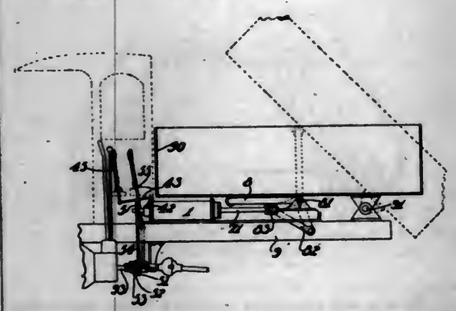
1,455,525. METHOD OF MANUFACTURING SHEET-METAL RECEPTACLES OR CONTAINERS. HENRY B. FINLEY, Chattanooga, Tenn. Filed Jan. 27, 1922. Serial No. 532,236. 1 Claim. (Cl. 113—112.)

The method of constructing a receptacle which consists in providing a rectangular sheet metal blank centrally in opposite edges with two adjacent V-shaped notches, bending the blank perpendicularly along parallel lines extending respectively across the vertices of each pair of notches and also along lines at right angles, meeting the vertices of respectively opposite notches without intersecting the sides of the latter, with production of the bottom and four sides of the receptacle having sharp corners, bending the perimetrical edges of the blank outwardly in opposite directions to form flanges defining square recesses at the ends of the flanges, inserting rectangular filling pieces in said recesses, and welding together the edges of the blank, and the filling pieces to the flanges to form an integral structure having a single continuous flange.



1,455,526. REAR-SIGNAL DEVICE FOR AUTOMOBILES. STANLEY A. FLOWERS, Pittsburgh, Pa., assignor of one-third to J. Lewis Palley and one-third to John Heaton, both of Pittsburgh, Pa. Filed Apr. 3, 1922. Serial No. 548,911. 3 Claims. (Cl. 116—45.)

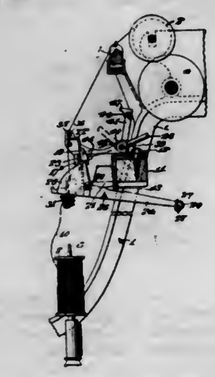
1. A combination tail light and rear signal device for motor vehicles consisting of a lamp casing adapted to contain a lamp and provided with a glass wall, said wall being diametrically divided into two portions, one portion being of solid color to produce the customary tail light effect while the other portion is provided with an illuminable cautionary signal, a shutter of proper size to cover one portion of said glass at a time, said shutter being swingingly mounted in front of said glass wall in such a manner that its axis is in substantially the same plane as the line of demarcation between the two portions of said glass wall and being arranged to swing



through half a circle, and means convenient to the operator for swinging said shutter whereby when said shutter is in one position the customary tail light is exposed and the cautionary signal is covered but when the shutter is swung to its opposite position the tail light is covered and the cautionary signal is exposed.

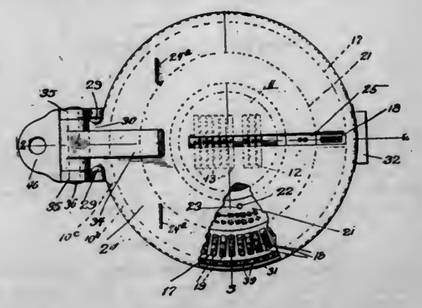
1,455,527. COKE OVEN. PAUL GOFFART, Brussels, Belgium, assignor, by mesne assignments, to Belgian American Coke Ovens Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 10, 1920. Serial No. 364,645. 3 Claims. (Cl. 202—9.)

2. In a coke oven, a heating wall with upright flues arranged in independent pairs, the two flues of the same pair being connected at different distances from one end of such pair by openings, and with ducts located in each flue at the other end for the admission of air and for the exit of combustion gases, and means for supplying fuel to the first mentioned end of such pair.



1,455,528. HYDRAULIC HOIST FOR TRUCKS. ARTHUR E. HANSEN, Seattle, Wash., assignor to Young Iron Works, Inc., Seattle, Wash., a Corporation of Washington. Filed June 27, 1921. Serial No. 480,712. 13 Claims. (Cl. 298—22.)

1. A hydraulic hoist for automobile trucks comprising, in combination, a cylinder, a piston movable therein,

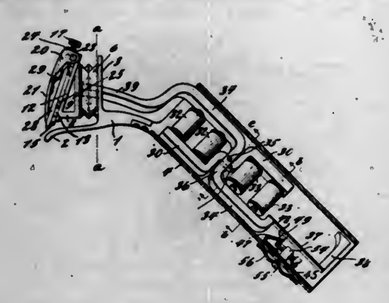


hoisting apparatus operable by the movement of said piston, a pump casing forming one head of said cylinder and connected thereto through self-contained passages, a rotary pump within said casing, and driving means adapted to connect said pump with a power source.

1,455,529. THREAD-BREAKING DEVICE FOR SPINNING MACHINES. FERDINAND Q. HARTMAN, Danville, Pa. Filed Apr. 14, 1920. Serial No. 373,750. 3 Claims. (Cl. 117—29.)

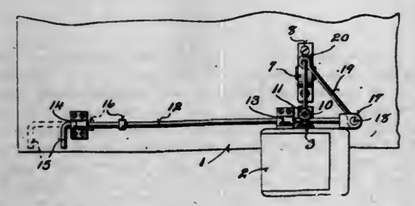
1. The combination with a thread breaking mechanism for spinning machines comprising, a counterbalanced thread breaker, of a coil carried by said thread breaker arranged to be swung by the breaker into the path of the thread to catch and break the thread.

1,455,530. PRODUCTION RECORDING DEVICE. MORRIS J. HOFFMAN, Chicago, Ill. Filed Sept. 8, 1921. Serial No. 499,312. 15 Claims. (Cl. 234—41.)



1. A production recording device, comprising a base, a plurality of type carriers rotatively mounted thereon, certain of which are free to rotate and others locked against rotation, means for advancing one freely rotatable type carrier solely in a step by step manner, an impression making bar, and a lock controlled cover for enclosing said type carriers.

1,455,531. ALLOY. ARTHUR S. HYMAN, Newark, N. J. Filed Aug. 4, 1922. Serial No. 579,750. 1 Claim. (Cl. 75—1.)

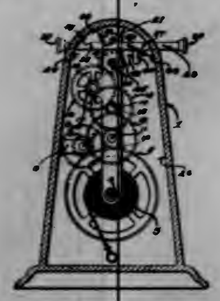


An alloy containing substantially 58½% silver, 16½% copper, 16½% zinc and 8½% nickel.

1,455,532. SAFETY RAZOR. JOHN N. JOHNSON, Albuquerque, N. Mex. Filed May 22, 1920. Serial No. 383,373. 15 Claims. (Cl. 30—12.)

1. A safety razor comprising a support having a forward guard and a wall portion, stationary guides on said wall portion, a frame provided with guides co-operating with the stationary guides for movement along the same, a blade carried by the frame and disposed at an acute angle with respect to the plane of the guides, means on the frame for adjusting the blade toward and from the plane of the guides, means on the support for causing movement of said frame and blade upon the stationary guides, and a cover for the blade carried by the frame and acting as a rear guard.

1,455,533. PIN LIFTER. JOHN R. JONES, Milwaukee, Wis. Filed Sept. 6, 1922. Serial No. 586,458. 2 Claims. (Cl. 213—162.)

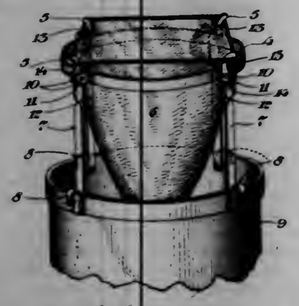


2. A coupling pin lifter for railway cars comprising a lever adapted to engage said pin, a support pivotally carrying said lever, a longitudinally slidable rod having a manipulating handle at one end, and a slanting link pivotally joined to said rod and to an intermediate portion of said lever and lying in a plane at right angles to the plane of said lever, whereby when said rod is slid longitudinally, said lever is elevated, thereby raising said pin.

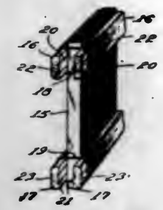
1,455,534. SPRING-MOTOR-DRIVEN FAN AND STOP THEREFOR. ALFRED O. LARSON, Rio, Wis. Filed Nov. 25, 1921. Serial No. 517,646. 1 Claim. (Cl. 188—69.)

In combination with a motor operated fan including a casing and having a motor driven shaft therein, said shaft having a fan thereon and provided with a laterally extending lug, said casing having openings in its opposite side walls, one opening being larger than the other and provided with a tooth, a bar mounted in said opening and adapted to be moved transversely, spring tensioning means for said bar, said bar having a lug to cooperate with the lug of the motor driven shaft adapted to stop the shaft, one end of the bar having a pair of notches, one of which is designed to hold the bar with its lug in contact with the lug of the shaft, to hold the shaft against rotation,

the other notch adapted to engage the tooth of the larger opening to hold the bar in another position with its lug out of engagement with the lug of the shaft to permit the shaft to rotate, said larger opening constituting means to permit the bar to be lowered at the same time it is pulled in one direction, so that the lug of the shaft may ride upon the bar to allow the shaft to gradually stop until its lug contacts with the lug of the bar.

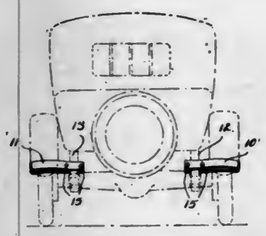


1,455,535. VENTILATED WATERPROOF SHOE. LEONE LAZZARI, Greenville, N. J. Filed Mar. 14, 1922. Serial No. 543,718. 1 Claim. (Cl. 36—3.)



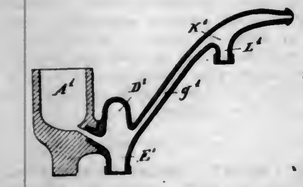
A ventilated shoe comprising an outsole, an insole formed with a plurality of apertures, and a ventilating sole of resilient material, an air chamber being formed between the latter soles and the ventilating sole being provided with teats passing into the apertures of the inner sole and extending substantially to the upper surface thereof and serving to lock the two soles against lateral movement and being formed with longitudinal apertures providing communication between the upper surface of the inner sole and the air chamber below the said sole.

1,455,536. BAG SUPPORT. HARRY J. LEBHERZ, Frederick, Md. Filed Feb. 7, 1923. Serial No. 617,526. 4 Claims. (Cl. 83—26.)



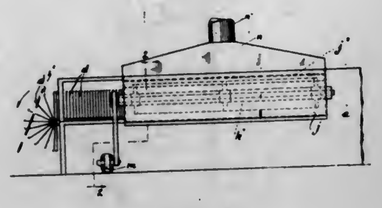
1. In a bag support, a series of segments assembled in hoop form, each segment having laterally-projecting end lugs, bag engaging members mounted on and projecting above the segments, and a plurality of legs of flat strip metal having their upper ends frictionally embraced by and pivoted to the paired lugs of adjacent segments, each of said legs being twisted below the lugs to position its flat surface at right angles to the plane of the lugs.

1,455,537. REED FOR WEAVING WIRE CLOTH. HAMILTON LINDSAY, Cleveland, Ohio, assignor to The Liberty Reed Company, Cleveland, Ohio, a Corporation of Delaware. Filed Apr. 14, 1922. Serial No. 552,774. 7 Claims. (Cl. 139—87.)



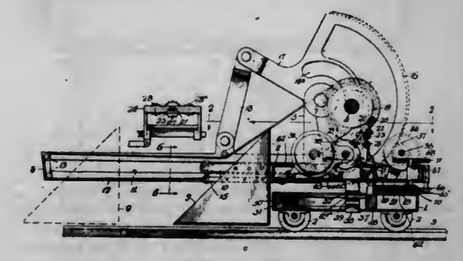
1. A reed for a loom comprising in combination, a plurality of dents placed side by side, a non-metallic binding strip extending transversely thereof, and a metallic insert in said strip adjacent said dents.

1,455,538. FENDER PROTECTOR. EDGAR S. LUDLOW, Cleveland Heights, Ohio. Filed Aug. 28, 1922. Serial No. 584,803. 7 Claims. (Cl. 293—55.)



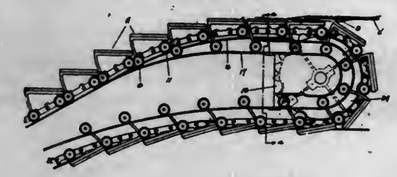
6. An automobile bumper comprising a one-piece strap having a recurved end portion and having substantially parallel side portions, and means for securing the ends of the side portions to a chassis side bar.

1,455,539. TOBACCO-SMOKING PIPE. WILLIAM P. MCCOY, Yonkers, N. Y. Filed Feb. 5, 1920. Serial No. 356,367. 2 Claims. (Cl. 131—12.)



2. A tobacco smoking pipe comprising a bowl having a channel extended downwardly from the bottom of the bowl cavity, and a stem, there being an expansion chamber communicating with said channel exteriorly and adjacent the bowl, the passage through the stem curved upwardly from said expansion chamber, a bit chamber intermediate the mouthpiece and said expansion chamber, a trap in the bottom of the expansion chamber, and a trap at the bottom of said bit chamber.

1,455,540. DRYING OVEN FOR PRINTED METAL SHEETS. CHARLES E. MCMANUS, New York, N. Y. Filed Dec. 29, 1921. Serial No. 525,806. 12 Claims. (Cl. 34—12.)



5. A drying oven for printed metal sheets embodying therein an elongated housing, an endless carrier adapted to receive low speed traverse therethrough and including a sequence of racks closely juxtaposed and adapted to receive at spaced intervals, coated metal sheets, an enclosed heating unit within said housing, means withdrawing the products of combustion from said heating unit and discharging them externally of said housing, whereby contact of the products of combustion with the coated sheets is prevented, an offtake duct adjacent the top of said housing and communicating therewith at different points through a plurality of openings, and a suction pump communicating with said duct, whereby fumes developed in the oxidation of the coating material upon said sheets are removed from adjacent the sheets and from within the oven, and a continuous circulation of fresh, heated air is maintained about the sheets.

1,455,541. EXCAVATING MACHINE. JAMES A. MACKILLICAN and FRANK L. LIPCSEY, Hibbing, Minn. Filed Mar. 16, 1921. Serial No. 452,875. 16 Claims. (Cl. 214—132.)

1. An excavating machine, comprising a truck, a deck above the same, power actuated excavating means carried by the deck, and means pivotally connecting the deck with the truck at two points, one adjacent each side of the truck so that the deck may be swung horizontally to carry the excavating means to either side of the truck on the pivotal point nearest the side of the truck beyond which the excavating means is swung.

1,455,542. ENDLESS CONVEYER. SAMUEL G. MARGLES, Brooklyn, N. Y., and CHARLES W. E. NIENDORFF, Jersey City, N. J., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 23, 1921. Serial No. 502,825. 5 Claims. (Cl. 198—18.)

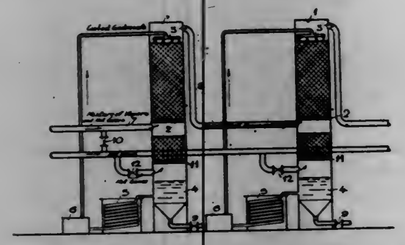
1. In an endless conveyer, comprised of transporting sections, having carrying wheels at the front and rear of the sections on either side thereof, driving chains and sprocket wheels for the sections at the end of the way, one track in alignment with and ending at the sprocket wheels, and the other track extended along the sprocket wheels and beyond the first mentioned track.

1,455,543. SPARK PLUG. SAMUEL P. MILLER, Chicago, Ill. Filed July 14, 1919. Serial No. 310,613. 6 Claims. (Cl. 123—169.)

1. A spark plug having a pair of electrodes; a sleeve secured to one end of each of said electrodes, there being a space formed between the free end of each sleeve and the adjacent end of the electrode to which secured; and spherical terminals loosely mounted in said spaces, substantially as described.

1,455,544. RUBBER OR RUBBER-COATED ARTICLE. LOUIS MINTON, Manchester, England. Filed Aug. 26, 1921. Serial No. 495,847. 2 Claims. (Cl. 18—53.)

1. In the manufacture of moulded rubber goods applying an adhesive coating to the inner faces of the moulds, with which is incorporated, by dusting powdered mica, and afterwards moulding the rubber and vulcanizing same, substantially as herein set forth.

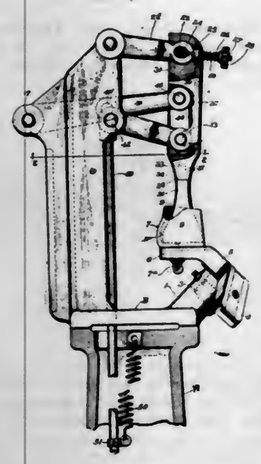


1,455,545. BELT BUCKLE. ERNEST MONAHAN, Milwaukee, Wis. Filed July 22, 1922. Serial No. 576,700. 1 Claim. (Cl. 24—163.)

In a device of the class described, the combination of a pair of side members, means thereon for retaining the end of a belt, a pivot connecting said members, a plate,

flanges on said plate rotatable on said pivot, said flanges extending inwardly of said pivot, a loop secured to the other end of said belt, said side pieces having indentations therein adjacent said pivot to receive said loop and prevent outward movement thereof, said loop operating in said indentations to prevent movement of said flanges, whereby said plate is maintained in closed position.

1,455,546. PROCESS OF TREATING BITUMEN OR CELLULOSE-CONTAINING SUBSTANCES. IGNACY MOSCICKI, Lwow, Poland. Filed Aug. 25, 1921. Serial No. 495,286. 5 Claims. (Cl. 196—5.)



1. The process of separating vapors into their component elements, which consists in leading said vapors upwardly through a dephlegmation column adapted to partially condense said vapors and separate out a single element thereof, collecting the condensate in said column, cooling a comparatively large portion of said condensate slightly below its condensation temperature, and forcing said cooled condensate into the upper part of the column.

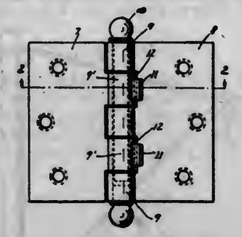
1,455,547. CARRIER FOR PNEUMATIC-DISPATCH TUBING SYSTEMS. JOHN T. NEEDHAM, North Plainfield, N. J. Filed July 9, 1921. Serial No. 483,458. 15 Claims. (Cl. 243—35.)

14. A carrier comprising a tubular body part, a movable indicator device mounted on one end thereof, a retaining device mounted wholly within the carrier and adapted to retain the contents of the carrier, and means carried by the retainer to lock the movable indicator device when the retainer is in its closed or retaining position.

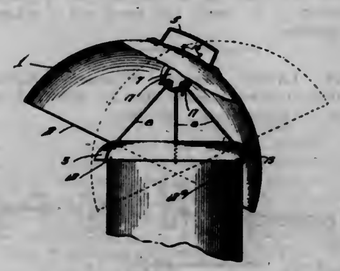
1,455,548. COUNTERTURNING MACHINE. FRED A. REARDON, Bridgeport, Conn., assignor to Hamel Shoe Machinery Company, Bridgeport, Conn., a Corporation of Massachusetts. Filed Oct. 6, 1920. Serial No. 415,087. 12 Claims. (Cl. 12—57.)

1. In a turning machine, a cup having side walls and a rear wall of non-circular curvature from top to bottom, and a plunger movable into said cup and backwardly toward the rear wall thereof.

1,455,549. AUTOMOBILE BODY ATTACHING TOOL-HOLDING CASE. JAMES E. ROBISON, Denver, Colo. Filed Aug. 2, 1921. Serial No. 489,179. 7 Claims. (Cl. 224—29.)



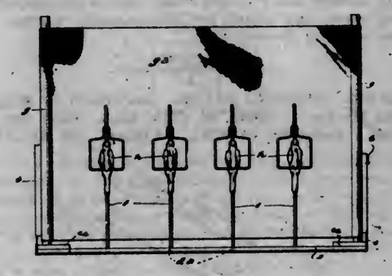
1. A tool holding case containing two independent tool holding compartments, one of which is adapted to be secured to the left hand part of the body of a Ford car adjacent to its steering wheel, each of said compartments being arranged and adapted to receive and hold a variety of different kinds of hand operating tools in separated portions from each other, and means including slides and slideways on the respective compartments, whereby they may be quickly connected one with the other or as quickly separated.



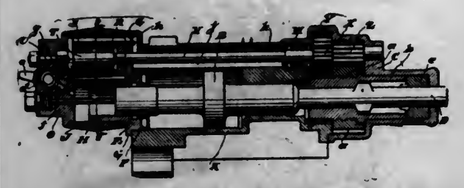
1,455,550. DOORSTOP. ADOLPH RODELL, Chicago, Ill. Filed July 14, 1921. Serial No. 484,623. 4 Claims. (Cl. 16—191.)

4. The combination of a pair of hinge leaves pivotally connected together, of a stop member; and a plurality of

aligned bores in the knuckle of one of said leaves whereby said stop member may be adjustably mounted for limiting the desired pivotal movement of said leaves, substantially as described.

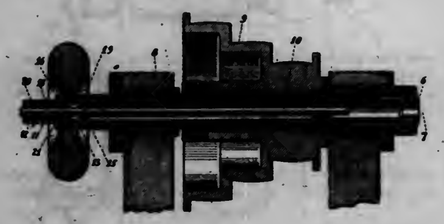


1,455,551. HEAT-DEFLECTION SHIELD. GEORGE E. RYAN, East Taunton, Mass. Filed Apr. 7, 1922. Serial No. 550,438. 4 Claims. (Cl. 126—58.)



1. A heat deflection shield of the character described, comprising a ball, means for mounting it on a heating unit, a hood, and means attached to the hood for gripping the ball, and holding the hood in any desired position.

1,455,552. GAME. WILLIAM F. SCHMIDT, Wyandotte, Mich., assignor to All Metal Products Company, Wyandotte, Mich., a Corporation. Filed Mar. 30, 1922. Serial No. 547,980. 2 Claims. (Cl. 124—15.)

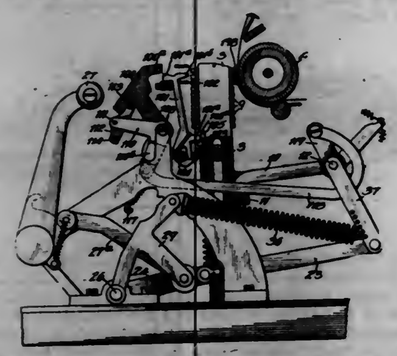


1. The combination of the body *a* with a reinforcing strip *d* therein, said reinforcing strip being provided with vertical apertures, rods adapted to removably engage in said apertures and being bent over at their upper ends, supports pivotally engaging the overturned ends of said rods and depending therefrom, and displaceable figures upon said supports.

1,455,553. MOTOR ROTATION FOR ROCK DRILLS. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 5, 1922. Serial No. 558,777. 3 Claims. (Cl. 121—7.)

3. An independently rotated fluid actuated rock drill of the hammer type comprising a cylinder and reciprocating piston, a cylinder back extension extending into the cylinder and having a flange and a rearwardly extending reduced portion forming a prolongation of the cylinder bore, a motor casing open at front and back and having a chamber for the motor and a sleeve portion adapted to be sleeved over the said reduced portion of the cylinder back extension, whereby the said flange forms the front head of the motor casing, and a back head fitted to the motor casing and forming a common head for both the bore of the cylinder and the motor chamber in the said motor casing.

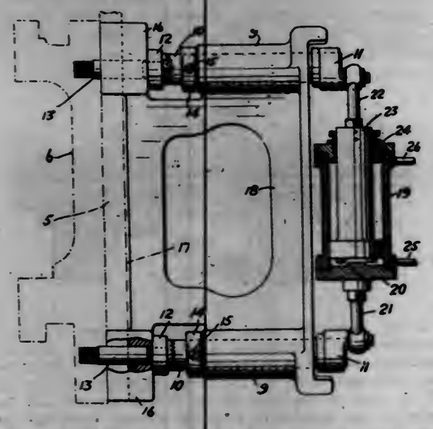
1,55,554. METAL-WORKING MACHINE AND ATTACHMENT THEREFOR. PROSPER STERCKLEN, Frankfort-on-the-Main, Germany, assignor to George Fussner, Menominee, Mich. Filed Nov. 11, 1920. Serial No. 423,477. 16 Claims. (Cl. 82—28.)



2. An adjustable stop for metal working machines, comprising in combination, a stop rod and a compound gripping member surrounding said rod and constructed and arranged to be set for firmly gripping the exterior of the rod at any part of the length thereof and for gripping the interior of a hollow element upon the machine for the purpose of mounting said stop into operative position.

1,455,555. ADDING MACHINE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed July 24, 1916. Serial No. 110,823. 49 Claims. (Cl. 235—60.)

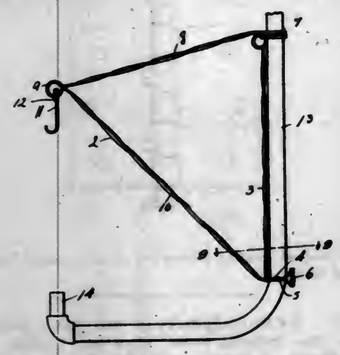
2. A printing mechanism having, in combination, a plurality of carriers each having a plurality of types, a hammer for each carrier, energy-transmitting members between the hammers and the carriers, arms actuated in the movement of the carriers for moving said members into operative position, and a projection on each arm underlying the next adjacent arm for moving into operative position all of the members located at one side of a given member.



46. In an adding machine, the combination of printing mechanism, printing disabling means, addition disabling means, and operating means including a reciprocatory

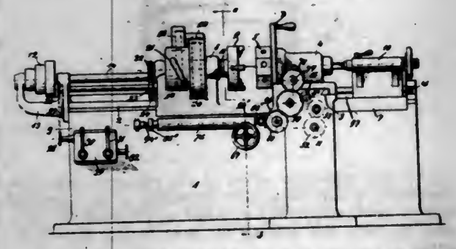
operating member, and means operable during the return stroke only of the operating member to effect the operation of said printing mechanism, said disabling mecha-

nisms being operable after the completion of the forward stroke of said operating member and before the return stroke thereof.



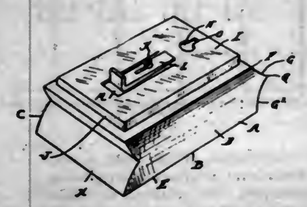
1,455,556. CLAMPING MECHANISM FOR MACHINE TOOLS. WILLIAM H. THORNE, Philadelphia, Pa., assignor to William Sellers and Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 20, 1921. Serial No. 486,229. 3 Claims. (Cl. 90—37.)

3. A clamping device of the character described comprising a fixed screw, a movable clamping member on the screw, a nut on the screw for engaging the clamping member, a rock shaft in axial alignment with the screw, a bearing for said shaft, a crank on said shaft at one end of the bearing arranged to prevent endwise movement of the shaft in one direction, annularly arranged interconnecting teeth on the other end of the shaft and one face of the nut, said teeth being arranged to permit the shaft to be adjusted circumferentially with relation to the nut, and a collar secured to the shaft at the end of the bearing opposite the crank to prevent endwise movement of the shaft in the other direction when the collar is secured thereto.



1,455,557. RECEPTACLE-SUPPORTING BRACKET. JOHN TYDINGS, Philadelphia, Pa. Filed Apr. 27, 1921. Serial No. 465,054. 2 Claims. (Cl. 248—30.)

1. In a device of the character stated, an upright having a socket at its lower end which opens out or away from said upright, feet formed with said socket, a second socket at the upper end of the upright opening inward toward the upright or in opposition to the first mentioned socket, a reach projecting from the upper end of



the upright, a strut connecting the lower end of the upright with the outer end of the reach, an eye formed at the junction of the reach and strut and a hanger connected thereto.

1,455,558. LATHE. ARTHUR WORMSER, Offenbach-on-the-Main, Germany. Filed May 10, 1916. Serial No. 96,726. 3 Claims. (Cl. 29—39.)

1. In a lathe, the combination of a bed having guide ways disposed at right angles to each other, a work carrying slide provided with head and tail stocks movable as a unit on one guide way, a tool carrying slide movable on the other guide way, said work carrying slide and tool carrying slide being so arranged that the axes of the immediate supports for work and tool are substantially directly above a supporting edge of the respective guide ways, and means for independently moving the slides on their guides.

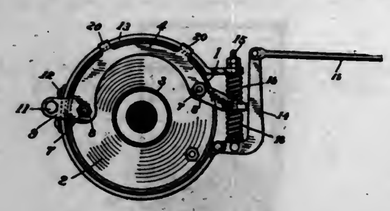
1,455,559. RUBBING BLOCK. ARCHIBALD F. WRIGHT and WALTER A. STONE, St. Clair, Mich. Filed Oct. 31, 1921. Serial No. 511,671. 2 Claims. (Cl. 51—187.)

1. A rubbing block comprising a body portion having a plane rubbing surface and edge portions varying in contour, a clamping plate for engaging the surface of

said body opposite said plane rubbing face, said clamping plate being formed of pressed sheet metal having depending marginal flange and a depressed central portion, a clamping wedge for engaging said depressed central portion, and a cooperating headed fastener secured to said body.

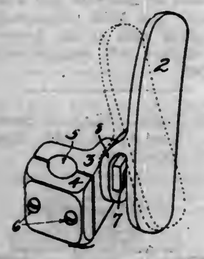
1,455,560. GASKET-MAKING MACHINE. WILLIAM P. ZOMMER and GEORGE F. MAGDHARZ, Chicago, Ill., assignors to Illinois Gasket Co., Des Plaines, Ill., a Corporation of Illinois. Filed Jan. 31, 1921. Serial No. 441,272. 27 Claims. (Cl. 29—1.)

1. An automatic gasket making machine comprising die and punch mechanisms for forming channel gasket rings with one operation, core die and punch mechanisms for punching core rings and seating the same within the channel gasket rings, a movable ejector member for moving the channel gasket rings into position to receive the core rings, and finishing die and punch mechanisms for forming the channel gasket rings around the core rings to form cored gaskets.



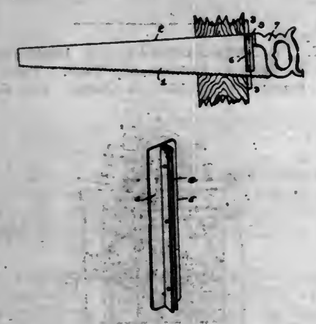
1,455,561. CROP-DUSTING MACHINE. CARL G. ALLGRUNN, Middleport, N. Y., assignor to Niagara Sprayer Co., Middleport, N. Y., a Corporation of New York. Filed Oct. 25, 1921. Serial No. 510,405. 3 Claims (Cl. 221—130.)

1. In a machine of the class described, a hopper having a plurality of discharge openings in its bottom wall, a plurality of toothed wheels so mounted with respect to said discharge openings that the teeth of said wheels overlie said discharge openings, a shaft extending through said hopper, and gears carried by said shaft for driving said wheels; as and for the purpose set forth.



1,455,562. OUTSIDE BRAKE BRACKET. FRANK J. ANDEL, Cleveland, Ohio. Filed May 22, 1922. Serial No. 562,789. 3 Claims. (Cl. 188—77.)

1. A bracket of the character described, having forwardly and rearwardly projecting arms at its respective ends, one of said arms adapted to be connected to a brake band, a laterally projecting perforated lug on the



other arm adapted to guide a rod connecting the ends of the brake band, and means on the bracket for preventing lateral movement of the brake band.

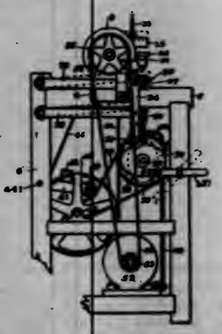
1,455,563. BRAKE-LEVER HANDLE GUARD. JOSEPH BRSCH, Albany, N. Y. Filed Aug. 11, 1921. Serial No. 491,566. 1 Claim. (Cl. 74—30.)

The combination with the brake lever of an automobile of a guard member attached thereto so as to interpose between the handle of said lever and the limbs of a passenger occupying the seat alongside of the driver.

1,455,564. COMBINATION TOOL. BENJAMIN J. BIDDLE, Montville, N. J. Filed Apr. 18, 1922. Serial No. 554,863. 3 Claims. (Cl. 7—13.)

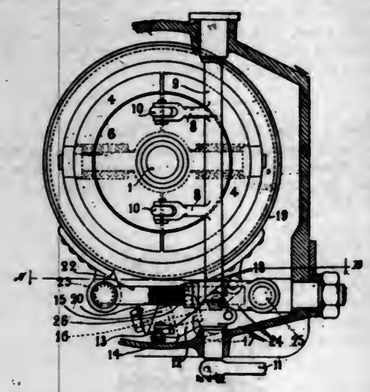
2. A device of the kind described, consisting of a U-shaped strap adapted to straddle a saw blade, each arm of said strap having a right-angular flange forming a short arm of a carpenter's square, and means whereby said strap may be fixed to said blade, whereby said short arms may coact with the straight edge of said blade to form said square.

1,455,565. PHONOGRAPH RECORD FILE. EUGENE C. BRIGGS, Norwood, Mass. Filed Mar. 2, 1921. Serial No. 449,169. 2 Claims. (Cl. 211—16.)



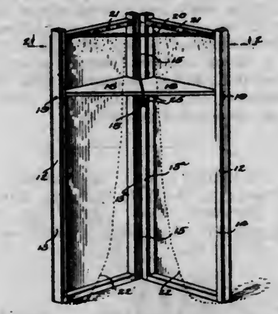
1. A phonograph cabinet comprising a slide drawer open at its front equipped with a horizontally extending bar at the top and also at the bottom of the back thereof, said bars perforated at intervals, and a series of pockets adapted to receive and hold phonograph record discs equipped with pintle rods at the inner sides thereof, the extremities of said rods engaged with the perforations of said bars.

1,455,566. FUSE PLUG. WILLIAM PENN BRIGGS, New Bedford, Mass. Filed Apr. 4, 1922. Serial No. 549,560. 5 Claims. (Cl. 200—129.)



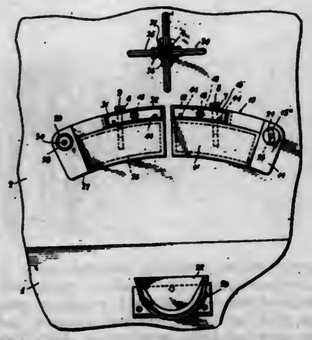
2. In a fuse plug of the character described, a cut-out provided with a base having a pair of up-standing posts spaced apart, a contact carried by the base on each side of each of said posts, a covering plate connected with said base and provided with slots accommodating said posts, said slots being longer than the posts so as to provide openings adjacent said contacts.

1,455,567. SAFETY-RAZOR-BLADE BESHARPENER. DAVID B. BROWN, Bellingham, Wash. Filed Oct. 5, 1921. Serial No. 505,555. 1 Claim. (Cl. 51—115.)



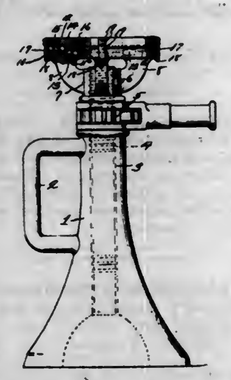
In combination, an abrasive-disk shaft mounted for revolution, a plurality of abrasive disks mounted fixed at spaced distances on said shaft, a countershaft mounted for revolution parallel with said disk shaft, power connections between said disk shaft and said countershaft, a cam shaft mounted for revolution parallel with said disk shaft, a bar mounted for transverse oscillations and longitudinal reciprocation parallel with said disk shaft, controllable frictional power connections between said countershaft and said cam shaft, one of a pair of cam disks mounted fixed on each end of said cam shaft, connections between each of said cam disks and said bar whereby said bar is caused to oscillate as said cam disks are revolved, a cam wheel mounted fixed on said cam shaft, power connections between said cam wheel and said bar whereby said bar is caused to reciprocate as said cam wheel revolves, a plurality of blade holders each mountable for oscillation with a holder handle about an axis parallel with the jaws of said holder, a plurality of blade-holder handles each mounted for oscillation on said axis between each two facing abrasive disks and also mounted for longitudinal reciprocation whereby said oscillations will cause a blade held in said holder to first bear against one of said facing abrasive disks and then against the other facing disk and said reciprocation of said holder will cause said blade to move longitudinally while bearing on said disks, resilient power connections between said movable bar and said handle whereby said handle is caused to oscillate on its axis when said bar reciprocates longitudinally and power means to revolve said abrasive disk shaft.

1,455,568. GOVERNOR FOR STEAM ENGINES. MAURICE BRUNET, Liege, Belgium, assignor to Maison Detilleux, Société Anonyme, Liege, Belgium. Filed Aug. 17, 1921. Serial No. 493,107. 3 Claims. (Cl. 102—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



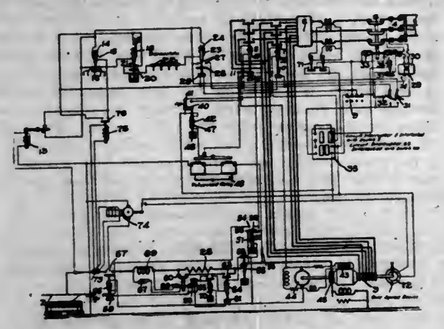
1. In a governor for steam engines, of the type wherein a centrifugally operated band-brake acts directly on the crank-shaft, said brake having one end of the brake band adjustably secured to the engine casing, a bar slidably mounted in a bearing of the engine casing, and having at one end a link connection with the other end of the brake-band, a cylindrical fixed cam and a cylindrical rotatable cam mounted end to end on said bar between a nut on the other end thereof and the aforesaid bearing and having their contacting surfaces in a plane passing diagonally through the longitudinal axis of such bar, a brake-operating rod rotatably mounted in bearings of the engine casing at right angles to the crankshaft, and an operative crank and pivoted link connection between said rod and the aforesaid rotatable cam, in combination with: a hub keyed on the crank-shaft and having a pair of radial arms, a pair of opposed semi-circular jaws slidably mounted on said arms, compression springs between the free ends of said arms and the jaws, exerting a radial pressure towards the hub on said jaws, a circular sloping surface in one side of said jaws, formed by the inner periphery of a circular groove of suitable cross-section, a spring-pressed dish-shaped crown slidably mounted on the aforesaid hub and having an inclined peripheral flange in operative facial engagement with said circular sloping surface, and means for causing the aforesaid brake-operating rod to be rotated by the movement of the said crown along the hub, substantially as described.

1,455,569. ARTICLE OF FURNITURE. PHILIP CAMINONI, Jr., Brooklyn, N. Y. Filed Oct. 14, 1922. Serial No. 594,613. 6 Claims. (Cl. 45—118.)



1. A collapsible article of furniture including, in combination, three vertical frames comprising a central back frame and two side frames, each connected to each side of the back frame for movements of the side frames about vertical axes relative to the back frame, and a combined auxiliary hinge means and shelf structure, said shelf structure including two substantially multi-part triangular structures each pivotally connected to one side frame and the back frame and each including a pair of triangular sub-structures pivotally interconnected along a side of each sub-structure, the three pivotal connections mentioned for each shelf structure being along separate but converging lines when the back frame and the associated side frame are in various converging planes.

1,455,570. MOTOR AND STEERING CONTROL FOR AUTOMOBILES. PASQUALE CASSARA, Bethlehem, Pa. Filed Oct. 11, 1922. Serial No. 593,790. 13 Claims. (Cl. 74—81.)

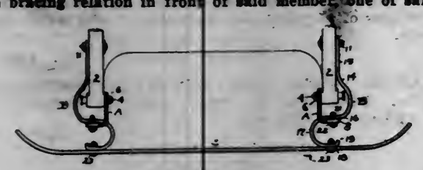


1. Control mechanism for auto-vehicles comprising a rotatable steering rod, foot operated motor controls arranged adjacent said steering rod having positions of elevation and depression and means engageable by the foot for turning said steering rod located adjacent the positions of elevation and depression of said motor controls.

1,455,571. SCREW JACK. ALEX CLELAND, New Orleans, La. Filed Sept. 22, 1921. Serial No. 502,407. 2 Claims. (Cl. 254—98.)

1. The combination with a jack having a movable screw, of an article engaging member carried by said screw, said member comprising a pair of spaced annular members, one of said annular members being provided with radially disposed ball bearings disposed in radially disposed pockets of one of said annular members, the other annular member being provided with raceways engaging said ball bearings.

1,455,572. ELECTRICAL SYSTEM. CHARLES S. COOK, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1916. Serial No. 128,434. 23 Claims. (Cl. 171—312.)

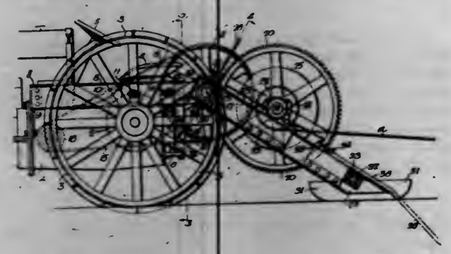


1. The combination with a direct-current circuit and a rotary converter, of a resistor, means for connecting the resistor between the converter and the circuit, and means responsive to the current traversing the resistor for controlling the effectiveness of the resistor.

1,455,573. SPRING BRACKET AND FENDER. WILLIAM G. COX, Cleveland, Ohio. Filed Feb. 6, 1923. Serial No. 617,272. 10 Claims. (Cl. 293—55.)

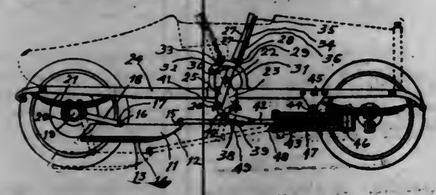
1. A spring bracket for a vehicle fender, comprising a pair of attachment sections adapted to be affixed on oppo-

site sides of a vehicle frame member and interconnected in bracing relation in front of said member, one of said



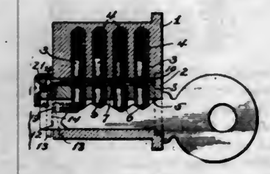
sections having a spring supporting extension for an impact member.

1,455,574. CARBON REMOVER. HERBERT W. EASTMAN, Cedar Rapids, Iowa. Filed May 11, 1920. Serial No. 380,497. 1 Claim. (Cl. 87—5.)



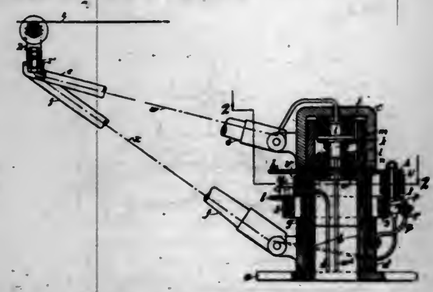
A carbon removing composition consisting of 80 gallons of alcohol, 15 gallons of acetone, 4 gallons of sulphuric ether, 100 gallons of stronger ammonia water, and 4 gallons of chloroform.

1,455,575. ROPE-DRUM ATTACHMENT FOR TRACTORS. HAROLD I. EATON, Ventnor, and FREDERICK A. REILEY, Atlantic City, N. J. Filed Apr. 19, 1921. Serial No. 462,690. 2 Claims. (Cl. 254—166.)



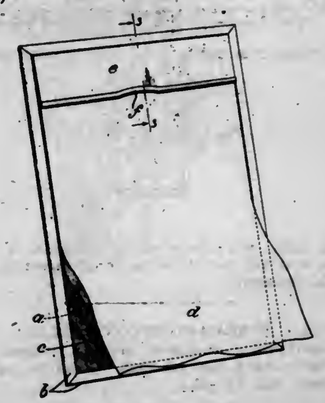
1. The combination of a tractor, a frame mounted thereon, beams carried by the frame having bearings, a shaft mounted in the bearings, a drum supporting frame pivoted to the shaft and extending diagonally towards the ground, a shoe pivotally mounted on the lower end of the frame, stakes on the frame arranged to penetrate the ground; shaft bearings on the frame, a drum shaft mounted on the bearings, a drum thereon, a gear wheel on said shaft, a pinion on the first mentioned shaft meshing with the gear wheel, a clutch for throwing the pinion in engagement with the shaft, a belt wheel on the intermediate shaft, a belt wheel driven by the motor of the tractor and a belt passing around both wheels so that motion will be imparted to the belt and gearing through the drum.

1,455,576. EMERGENCY BRAKE. AUREN C. ELLIOTT, Los Angeles, Calif. Filed May 12, 1920. Serial No. 380,833. 1 Claim. (Cl. 188—5.)



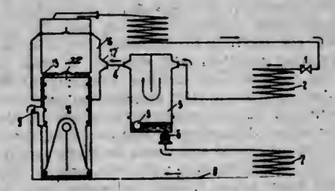
The combination with an automobile chassis including a frame and front and rear axles, of a brake shoe adapted to contact with the ground, clamps on the rear axle, links connecting the brake shoe with the clamps on the rear axle and mounted so that the shoe swings to operative position slightly forward of the rear axle, piston rods connected to the shoe and extending relatively forward thereof, piston cylinders pivotally mounted relative to the frame, pistons on said piston rods and working within said cylinders, springs interposed between the pistons and the cylinder heads, bearing members fixed to the frame, a transverse shaft journalled in the bearing members, rock-levers fixed to the transverse shaft, and having relatively long arms and short arms, said long arms being pivotally connected to said piston rods, a rod connecting the extremities of the short arms, a transversely extending shaft journalled in said bearing members and extending above the first-named transverse shaft, a manually manipulated lever for actuating the last-named transverse shaft, lever arms fixed to the manually manipulated shaft and having slotted ends in engagement with the transverse rod connecting the rock levers, a notched segmental rack adjacent to the manual lever, and a spring actuated plunger mounted on the manual lever and adapted to engage with the notches in the segmental rack to maintain the brake shoe in operative and inoperative positions.

1,455,577. CYLINDER LOCK. ELI EPSTEIN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Jan. 26, 1923. Serial No. 615,098. 2 Claims. (Cl. 70—47.)



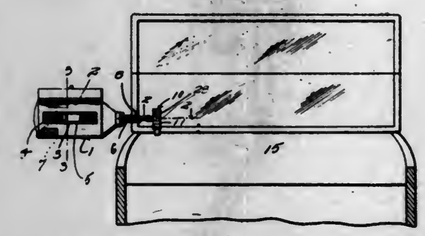
1. In a pin tumbler lock, the combination with a shell or casing, a plug and pin tumblers, of a lever carried by the plug, and adapted to lie normally in locked engagement with the shell or casing, a slide cooperable with said lever and with the pin tumblers, and a spring device carried by the plug and normally tending to move the lever out of locked relation to the shell or casing.

1,455,578. TROLLEY COLLECTOR. PAUL TRANGOTT JULIUS ESTLER, London, England. Filed May 2, 1922. Serial No. 557,914. 2 Claims. (Cl. 191—57.)



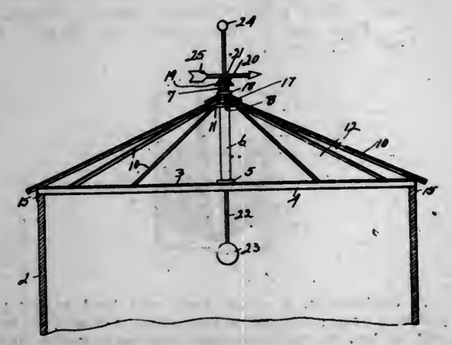
1. In combination, a trolley collector body, a cap and a sleeve both rotatably mounted on said body and a second sleeve fixed to said body an upper trolley pole carried by said rotatable cap and a lower trolley pole carried by said rotatable sleeve both said trolley poles having pole heads electrically insulated from said poles for contact with overhead electric conductors, electric conductors leading from and to said pole heads, movable contact members carried by said rotatable cap and said rotatable sleeve, fixed contact members carried by the trolley collector body, and electric insulating means mounted on said rotatable cap and trolley collector body, and also on said rotatable and fixed sleeves.

1,455,579. WRITING AND DRAWING SURFACE. DANIEL EVANS, Highbury, London, England. Filed Apr. 12, 1920. Serial No. 373,413. 6 Claims. (Cl. 35—10.)



1. A writing and drawing surface from which writing, drawings and other markings thereon can be instantaneously obliterated and caused to disappear without the use of india rubber or other erasing means and upon which such matter can be preserved, said writing and drawing surface being adapted for repeated use without renewal and comprising a colored base including a relatively soft plastic substance adapted to receive impressions from a drawing and writing instrument, and a writing and drawing surface proper associated with and disposed above said base and being free to be lifted therefrom and being sufficiently transparent to permit the colored base to show through it, the material of the base and writing surface being adapted to adhere at points of pressure of the writing instrument.

1,455,580. REFRIGERATING SYSTEM. GEORGE FERGUSON, Apeldoorn, Netherlands, assignor to Apeldoornsche Machinefabriek en Metaalgieterij voorheen Loog Landaal, Apeldoorn, Netherlands, a Limited Liability Company of Netherlands. Filed Apr. 24, 1920. Serial No. 376,406. 3 Claims. (Cl. 62—115.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

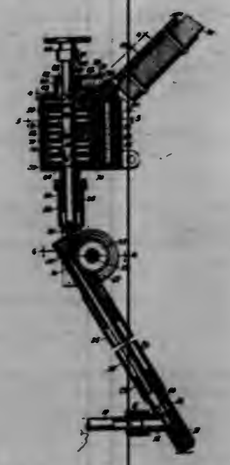


1. In a compression refrigerating system, a high pressure evaporator and a low pressure evaporator for the refrigerating liquid, a chamber connected to the outlet of the high pressure evaporator and to the inlet of the low pressure evaporator to receive the liquid and gas resulting from evaporation in the high pressure evaporator, and a valve controlling the flow of liquid from said chamber to the low pressure evaporator, said valve being operable either by the level of the liquid in said device or by an excessive difference between the pressures existing in said high pressure evaporator and said low pressure evaporator.

1,455,581. AUTOMOBILE DIRECTION INDICATOR. PAUL M. FLACK, Ogdensburg, N. Y. Original application filed Mar. 25, 1920, Serial No. 368,573. Divided and this application filed June 17, 1921. Serial No. 478,350. 3 Claims. (Cl. 74—39.)

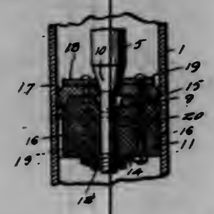
1. A direction indicator comprising a base, a shaft carried by said base for operating an indicator having direction characters, a semi-cylindrical vertically arranged scale board secured to said base, a controlling lever secured to the shaft and associated with the scale board, and means to positively lock said controlling lever in alignment with any one of the characters on the scale board.

1,455,582. METAL COVER FOR TANKS. WILLIAM W. FORD, Philadelphia, Pa. Filed Apr. 17, 1922. Serial No. 553,843. 4 Claims. (Cl. 108—32.)



1. A metal covering comprising in combination, a king post, a perforated collar having threaded connection with said king post, ribs of T-iron having hooked inner ends connected with said collar through the medium of the hooks entering the perforations thereof, plates located between said ribs and underlying the oppositely projecting arm flanges of said ribs, said plates having their side edges bent inwardly to form flanges coacting with the body flanges of the ribs, means for fastening said plates to said ribs, a frusto-conical hood loosely mounted upon the king post and overlying the upper ends of the ribs and plates, means for threaded connection with the king post to engage the hood and thereby hold said parts together, and a cap mounted on the upper end of the king post.

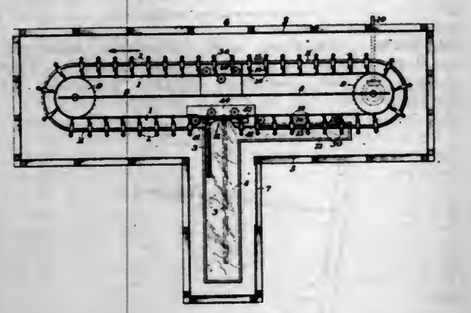
1,455,583. AUTOMOBILE LOCK. JOHN P. GERAGHTY, Jersey City, N. J. Filed May 12, 1920. Serial No. 380,765. 3 Claims. (Cl. 70—53.)



1. In a locking mechanism for automobiles and other power driven vehicles, a lock casing, a spindle slidable in

the lock casing, tumblers in the casing and coacting with the said spindle to lock the spindle against sliding movement at the time the tumblers are in locking position, a hinge connecting the casing with a fixed part of the ve-

hicle, the hinge having a pintle provided with a reduced portion, a spring-pressed bolt slidable in the casing and adapted to engage the said reduced pintle portion, and an arm pivoted on the spindle and adapted to engage the said bolt.

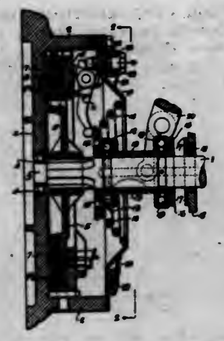


1,455,584. TIRE PUMP. HOWARD GRAHAM, Knippa, Tex. Filed Aug. 3, 1921. Serial No. 489,495. 1 Claim. (Cl. 230—27.)

In combination, a piston head, said head having a pocket, a washer disposed in said pocket, a wear plate on said washer, tie means securing said head, washer and plate together, said head having a peripheral groove in communication with said pocket whereby compression may reach said washer, said rod having a conical seat engageable by said head, washer and plate, said rod having an extension of reduced diameter extending from the frustum of the seat, said extension having a side portion reduced in cross-sectional area, said plate, washer and head being slidable away from said seat, an element screw threaded on said extension to limit the latter movement, the side portion serving to provide an opening through said element.

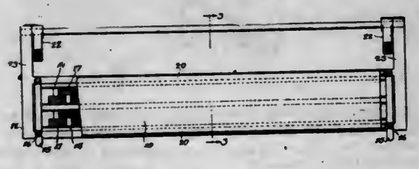
1,455,585. DIPPING MACHINE. BENJAMIN M. GRIFFITH, Pittsburgh, Pa., assignor to National Casket Company, Pittsburgh, Pa., a Corporation of New York. Filed Dec. 2, 1921. Serial No. 519,424. 7 Claims. (Cl. 91—46.)

6. A machine for dipping rods, comprising a dipping tank, a conveyor, holders on the conveyor, each holder comprising a part fixed to the conveyor and an arm pivoted thereto and arranged to normally hold the rod in a vertical position, and means at the dipping station for causing the pivoted part of the holder to drop and to turn the rod into a horizontal position and immerse it in the



dipping tank, and thereafter to withdraw it from the dipping tank and turn it to an upright position, substantially as described.

1,455,586. STREAM-FLOW-CONTROLLING INSTRUMENTALITY. VLADIMIR HAJEK, Prague, Czechoslovakia. Filed Apr. 12, 1923. Serial No. 631,577. 3 Claims. (Cl. 61—25.)

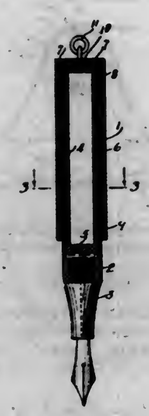


1. In the formation of dams, wherein the flow-controlling instrumentality is shiftable between channel-closing and channel-open positions, an instrumentality for this purpose including a shiftable element having a face member adapted to serve as a breast wall of the dam, said wall being shiftable toward and from the bottom of the channel to permit water flow therebeneath at will, and a support-formation projecting normal to said face member in the direction of stream flow and movable with said member during shifting movement between such positions, said face member and support formation being rigidly connected, with the point of connection intermediate the upper and lower edges of the member and closer to the lower than the upper edge of such member to produce a greater projection of the member above than below the point of connection when the element is in its channel-closing position, and a stationary sustaining formation located at the bottom of the channel beyond the element, said support formation and the sustaining formation co-operating to maintain the element in its channel-closing position, said element, in such position, having its face member inclined upwardly to the horizontal and vertical in the direction of stream flow, a cross-section of the instrumentality presenting the upper and lower edges of the member and the point of contact of support formation and sustaining formation as relatively located in correspondence with the apices of an approximate right angle triangle of which said face represents the hypothenuse of the triangle, said support formation and the sustaining formation having relative fulcruming configurations to permit the element to shift so as to pass the face member from its inclined plane position to an approximately horizontal plane while maintaining removable contact between the support and sustaining formations, the element having its movements about the approximate point represented by the apex of the right-angle of the triangle.

1,455,587. CLUTCH. ALEXANDER P. HAMILTON, Troy, Ohio, assignor to Powell Evans, Philadelphia, Pa. Filed Nov. 11, 1919. Serial No. 337,163. 9 Claims. (Cl. 192—111.)

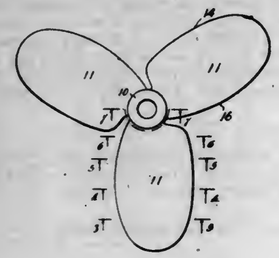
4. The combination in a clutch of a casing; coacting clutch elements therein; means including levers for controlling the operation of said elements; and means for adjusting the levers to compensate for wear of the clutch elements, the same including a ring rotatably adjustable on the outside of the casing having portions of varying thickness for determining the adjustment of the levers in lines parallel with the axis of rotation of the casing.

1,455,588. PRINTING DEVICE. MORRIS J. HOFFMAN, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 601,974. 10 Claims. (Cl. 101—97.)



1. In a printing device, a base, spaced, parallel, and connected type carrier bars removably supported therein and spaced groupes of type wheels removably secured on said bars.

1,455,589. ALLOY. HENRY C. KIRK, Roland Park, and GEORGE H. DUMLER, Baltimore, Md. Filed Mar. 5, 1921. Serial No. 450,011. 2 Claims. (Cl. 75—1.)

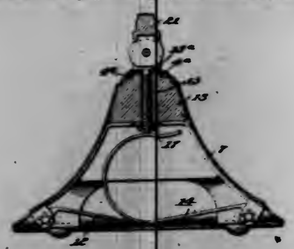


1. A copper alloy substantially in the proportions of 10% iron, 1% nickel, the balance being copper.

1,455,590. FOUNTAIN PEN. DONALD LA RUE EASTMAN, Olean, N. Y. Filed Oct. 25, 1921. Serial No. 510,240. 3 Claims. (Cl. 120—47.)

1. In a fountain pen, a barrel having an open upper end, an elongated cylindrical-plunger movable in the barrel through the open end thereof, a sleeve secured to the upper end of the plunger and surrounding and spaced from the same and between which and the plunger the barrel is adapted to telescope with the plunger tightly fitting the barrel throughout its length, and means for removably securing the lower end of the sleeve to the upper end of the barrel.

1,455,591. MARINE PROPELLER. GEORGE W. LAWSON, New York, N. Y. Filed Oct. 7, 1920. Serial No. 415,317. 1 Claim. (Cl. 170—159.)

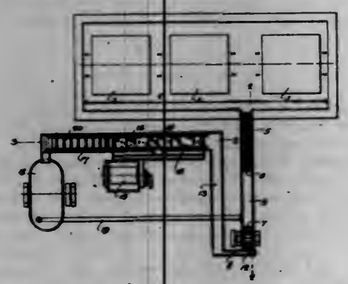


A propeller comprising a hub, and a series of radial blades helically arranged thereto, each of said blades having a compound pitch, the leading edge of each of said blades being convex and extending in advance of the forward end of the hub and the tip of the blade, each of said blades being so formed that the greatest convexity of the entering edge is located approximately at the greatest width of the blade, and the greatest pitch of the blade initiates at the greatest width of the blade and increases therefrom to the following edge thereof.

1,455,592. PORTABLE LAMP. WILMAR F. LENT, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 24, 1921. Serial No. 455,336. 4 Claims. (Cl. 240—81.)

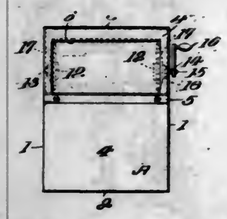
1. In a device of the class described, the combination with a lamp base, of a weight located in the upper por-

tion of said base, a lamp pivoting member on said base, means on said lamp pivoting member engaging the base



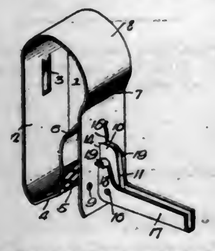
and weight to prevent relative rotation of said parts, and a single fastening member for securing the several parts together.

1,455,593. LIQUID-DISPENSING APPARATUS. JOSHUA AARON LEWIN and GEORGE PILCHER BARTLETT, Durban, Natal, South Africa. Filed Apr. 24, 1920. Serial No. 376,370. 6 Claims. (Cl. 221—94.)



1. Means of the kind described comprising a liquid container air-tight at all points except where the discharge aperture or member providing it is placed, an inverted cone-shaped member attached to said container below the lowest level of the liquid, a discharge passage through said inverted cone-shaped member and a cup or receptacle of corresponding shape to the aforesaid member arranged beneath and around the outlet orifice of said member.

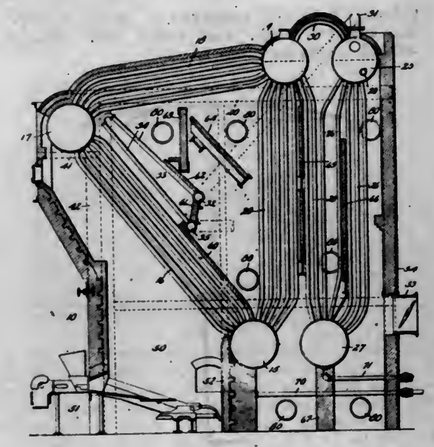
1,455,594. PROCESS OF TREATING PAPER STOCK. FRANK P. MILLER, Downingtown, Pa. Filed Feb. 17, 1920. Serial No. 359,221. 5 Claims. (Cl. 92—20.)



1. The process herein described of reducing paper stock to pulp, said process consisting in first treating the raw paper in a digester so as to soften the pulp and paper, then subjecting the material discharged from the digester to the action of a jet of water under pressure, then allowing the pulp to flow with the water through a screen, separating the coarse from the fine stock, then removing the strings and other particles from the coarse stock, allowing it to mix again with the fine stock, passing the stock over a screen, allowing the fine particles that flow through the screen to pass to a stuff chest and the coarse particles to flow to a beating engine, then reducing the coarse stock in the beating engine and allowing it to be screened and to flow to a stuff chest.

1,455,595. DOOR CONSTRUCTION. HENRY MOECKER, Jr., and THEODORE THOMPSON, Harvey, Ill., assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 27, 1921. Serial No. 524,976. 7 Claims. (Cl. 126—191).

1. The combination with an oven or the like, of a swinging door with rearwardly extending edges, hangers for the door carried by said rearwardly extending edges, stub-shafts carried by the hangers intermediate their ends, and means for rotating the door to open the same.

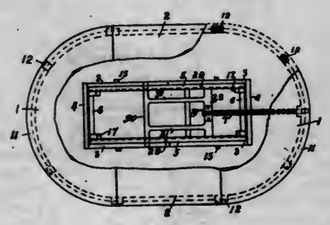


1,455,596. TOGGLE. CHARLES S. MORRISON, Elkins Park, Pa., assignor to Proctor & Schwartz, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 16, 1922. Serial No. 607,334. 8 Claims. (Cl. 24—258.)

1. The combination in a toggle, of a body portion having a tongue at each end and bent so that one tongue overlaps the other tongue; a post pivoted to one tongue and extending through the other tongue; and a lever pivoted to the post, said lever, when turned causing the tongues to move towards each other and clamp material between them.

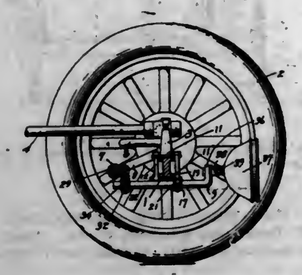
1,455,597. WATER-TUBE BOILER. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to Casey Hedges Co., Chattanooga, Tenn., a Corporation. Filed Apr. 15, 1920. Serial No. 374,129. 2 Claims. (Cl. 122—301.)

1. In a water tube boiler, a main boiler section and a feed water section, the main boiler section having a mud drum, a front upper drum, a rear upper drum in a higher plane than the front drum, a set of upwardly and forwardly inclined tubes connecting the mud drum with the front upper drum, a set of upwardly and rearwardly inclined tubes connecting the front and rear upper drums, a set of vertical tubes connecting the rear upper drum with the mud drum, the feed water section having an upper receiving drum in rear of and in the same horizontal plane as the rear upper drum of the boiler section, a connection for steam only between the tops of the rear upper drum of the boiler section and the upper receiving drum of the feed water section, a lower feed water drum in rear of the mud drum and disconnected therefrom, a set of vertical tubes connecting the upper receiving drum of the feed water section with the feed water drum of said section, a set of vertical tubes connecting the upper rear drum of the boiler section with the feed water drum, and a plurality of angularly arranged baffle plates in the



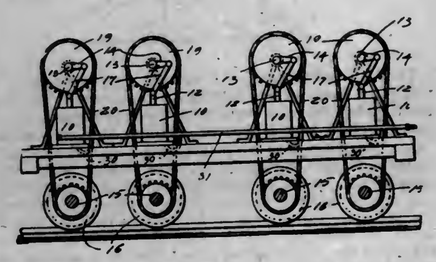
space bounded by the tubes connecting the drums of the boiler section, a baffle between the tubes of the upper drum and the mud and feed water drums, and a baffle in the tubes connecting the receiving drum with the feed water drum.

1,455,598. AROMATIC HYDROCARBON CEMENT. WILLIAM SWANTON BARRIE and LAWRENCE CHADWICK, Selwyn, via Townsville, Queensland, Australia. Filed Mar. 8, 1921. Serial No. 450,634. 5 Claims. (Cl. 87—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



4. A cement comprising the products resulting from heating tar-like material having a specific gravity of about 1.1 and sulphate salt material.

1,455,599. EXTENSIBLE TABLE. ISAAC COOKLIN, Liverpool, England. Filed May 23, 1922. Serial No. 563,137. 1 Claim. (Cl. 45—9.)

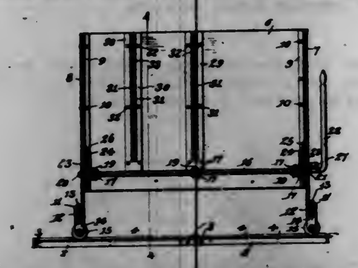


An extension table, including end frames and a central frame carrying table top portions, loose leaves carried between the frames having projections thereon, said central frame having projections to cooperate with the projections on the leaves, links pivotally mounted on the end frames having a limited sliding connection with the adjacent loose leaf, and operating means for relatively moving the frames, whereby the links will move the leaves to cause a cooperation of the projections for raising the leaves into top forming position in one operation of the frames, and the projections will cooperate in a subsequent operation to stow the leaves.

1,455,600. SELF-ADJUSTING HEADLIGHT. WILLIAM H. CORNWELL, Oakland, Calif. Filed Nov. 7, 1921. Serial No. 513,494. 4 Claims. (Cl. 240—62.)

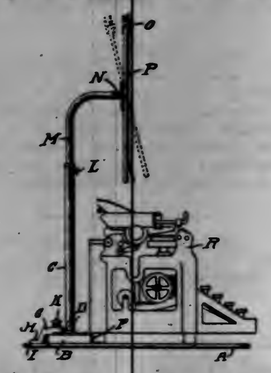
1. For a vehicle having a front axle and a steering rod supported in spaced relation thereto, a headlight mounting comprising an upwardly toeing channel pivotally supported underneath the axle, a perforation in the rear arm of the same, a clamping member on the steering rod, a vertically yielding connection between the rear arm and the clamping member, and means for supporting the headlight on the front end of the channel.

1,455,601. AIR-COMPRESSING ATTACHMENT FOR ENGINES. CICERO A. COX, Ragland, Ala. Filed Jan. 9, 1920. Serial No. 350,372. 1 Claim. (Cl. 230—32.1.)



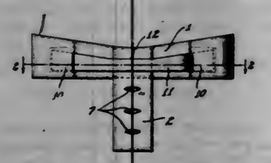
In an air compressing attachment for a locomotive, in combination with a wheel-driven shaft and a base located above and projecting at each side outwardly beyond the wheels on said shaft, a bearing rising from said base substantially equidistantly from the wheels, a driven shaft disposed transversely of the base and journaled in said bearing, driving gearing extending from the first mentioned shaft to the second mentioned shaft through said base and on opposite sides of said bearing, a plurality of air compressors on said base one adjacent each end thereof and equidistantly from said bearing and driving connections adjacent the ends of said first mentioned shaft for said air compressors, whereby the structure is equalized.

1,455,602. DUMPING APPARATUS. GEORGE A. CURLEE, Childress, Tex. Filed Nov. 2, 1922. Serial No. 598,666. 2 Claims. (Cl. 105—250.)



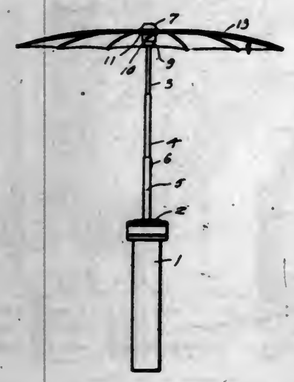
1. An apparatus for the purpose set forth comprising a portable earth carrier in the form of a hopper element

provided with a dumping bottom, a releasable means for actuating said bottom, disks carried by said means and



arranged at each end of said bottom, and a protective element for each of said disks.

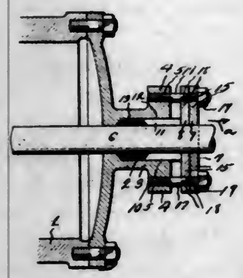
1,455,603. STENOGRAPHER'S TRANSCRIPT RACK. JAMES W. DANDRIDGE, Garrison, W. Va. Filed Apr. 18, 1921. Serial No. 462,412. 1 Claim. (Cl. 120—28.)



In a stenographer's copy holding rack comprising a rest board and clip for holding the copy secure thereon, the combination of a supporting frame composed of two upright pipes held in spaced relation on a supporting base, two telescoping pipes supported in and vertically movable in said upright pipes, both sets of pipes being respectively braced by cross bars which are fastened to and extend between the said upright pipes and between the two telescoping pipes to firmly hold each set respectively in fixed relation, a foot plate resting on and hinged to the supporting base and forming a seat for the two upright pipes, a lever or clamp pivoted to the supporting base and provided with an overhanging head or neck to fit over the foot plate and provided with a set screw for clamping the foot plate in position, all substantially as described.

1,455,604. NECKTIE HOLDER. NEWTON J. DARDEN, Washington, D. C. Filed Oct. 7, 1922. Serial No. 593,058. 5 Claims. (Cl. 24—56.)

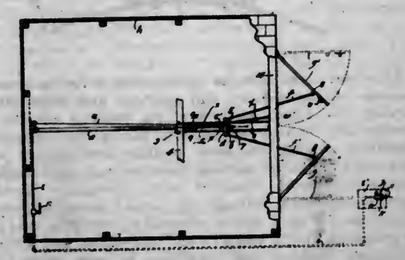
1. A tie holder comprising a plurality of components, one component including a body portion provided with a pocket thereon; a securing tab associated with the body portion and provided with means for attaching it in place; and another component comprising a tie carrying member adapted to be disposed in the pocket and provided with means for securing a tie or the like thereto.



1,455,605. FOLDING UMBRELLA. RULON H. DAVIS, Salt Lake City, Utah. Filed June 1, 1922. Serial No. 565,074. 5 Claims. (Cl. 135—25.)

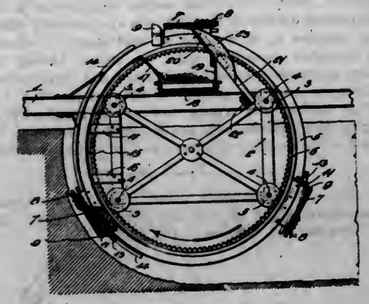
1. A folding umbrella, having a collapsible stick and frame, a plug at the lower end of the stick, and a handle adapted to receive the stick and frame when collapsed, the open end of the handle being closed by said plug in either position of the parts.

5. In a folding umbrella, a stick, a retainer at the outer end of the stick having its peripheral portion flared, a ring attached to the stick adjacent the retainer and provided with a thimble, ribs pivotally connected to the ring, and a collar loose on the thimble and having spiral connection therewith and provided at its upper end with an outer flange formed in its upper side with radial grooves in which the inner ends of the ribs are seated and which are clamped between the flared portion of the retainer and the flange of the collar.



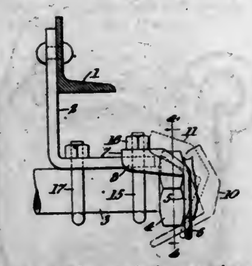
1,455,606. STUFFING-BOX GLAND. MAURO DI LORENZO, Landisburg, W. Va. Filed Dec. 16, 1919. Serial No. 345,226. 1 Claim. (Cl. 286—33.)

The combination with a stuffing box having a reciprocating piston rod therein, of a bushing for said stuffing box formed in two sections, said sections being formed from segmentally shaped sleeve sections having flanges, said flanges at their ends being oppositely cutaway in relation to the flanges of the other section, thereby forming a complete flange of uniform thickness when the sections are brought together, the engaging edges of the semicircular sleeve sections and the flanges extending radially



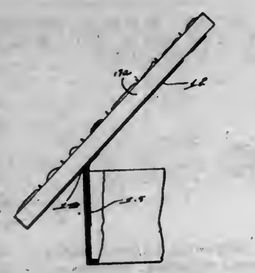
in relation to lines at diametrically opposite locations on the inner side of the sleeve and the engaging edges of the flanges of the sections being acutely disposed in relation to each other and diverging from said lines.

1,455,607. HYDRAULIC DOOR-OPENING MECHANISM. CHARLES L. DU BOIS, Portland, Oreg. Filed Jan. 14, 1921. Serial No. 437,248. 2 Claims. (Cl. 268—9.)



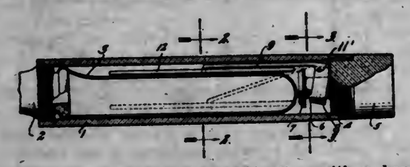
1. In a hydraulic door opening device, a hydraulic cylinder and piston therein connected with the door, a connecton between the cylinder and a head of water, a valve in said connection controlling the admission, and drainage of the water, into and from, the cylinder, automatic means for positioning the valve to permit the water to flow into the cylinder, means for holding the valve in closed position, a latch for locking the door, and means operatively connected with the piston for releasing the latch when the water pressure moves the piston.

1,455,608. EXCAVATING WHEEL. JOHN DUDER, Salt Lake City, Utah, assignor of one-half to Howard S. Brown, Oasis, Utah, and one-fourth to Samuel W. Stewart, Salt Lake City, Utah. Filed May 26, 1921. Serial No. 472,735. Renewed Mar. 24, 1923. 2 Claims. (Cl. 37—97.)



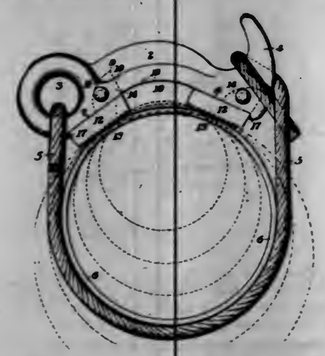
1. In an excavator, a rotatable wheel having spaced side rings, open ended buckets carried by the side rings, a stationary bottom strip extending between the side rings adjacent their inner peripheries for a portion of the circumference of the wheel, side strips extending circumferentially of the wheel and conforming to the position and length of the bottom strip, doors for the rear ends of the buckets hingedly mounted at the sides for opening outwardly and provided with lever arms extending for engaging said side strips and holding the doors closed while the buckets are moving upwardly along the bottom strip, and a scraper for passing through the buckets, the arms moving out of engagement with the side strips and the doors moving to an open position as the scraper passes through the buckets, and the rings limiting outward movement of the doors.

1,455,609. ANGLE-COCK HOLDER. CLEON M. HANNAFORD, Richmond, Va. Filed Aug. 22, 1922. Serial No. 583,657. 7 Claims. (Cl. 248—31.)



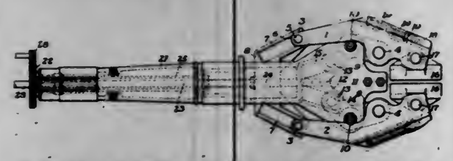
1. An angle cock holder, made in one piece and having a front portion divided to straddle the angle cock between the hex and body of the angle cock, and having separate rearward extensions at the top of the front portion and integral therewith to engage a support fixed on the car and also having portions to engage the adjacent faces of the hex of the angle cock to prevent the angle cock from turning, the holder being applicable to the angle cock from below by an upward tilting movement rearwardly from in front of the hex on the angle cock.

1,455,610. DISPLAY DEVICE. ALFRED T. HASKELL, Newtonville, Mass. Filed Feb. 21, 1921. Serial No. 446,627. 2 Claims. (Cl. 206—44.)



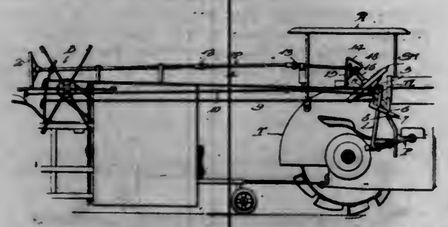
1. A candy box having a top display layer of candy disposed upon a plate of a degree of stiffness to hold the candy pieces intact as it is removed, said plate equipped with means adapted to engage an edge of the box and hold said plate bearing the display layer in predetermined position with reference to the box.

1,455,611. FOUNTAIN-PEN FILLER. PAUL S. HAUTON, Elizabeth, N. J., assignor to The Hauton Corporation, a Corporation of Delaware. Filed Mar. 18, 1920, Serial No. 366,793. Renewed Apr. 15, 1921. Serial No. 461,680. 8 Claims. (Cl. 120—46.)



1. In a fountain pen the combination with a barrel with a collapsible bag therein of collapsing means for said bag, and a rotatable screw member for operating said collapsing means, said screw member having a predetermined dead motion in moving in both directions whereby the screw member must be rotated a number of times after the bag has become distended and thereby allow sufficient time for the filling action to take place.

1,455,612. PIPE GRIP. CHARLES M. HEETER, Butler, Pa. Filed June 8, 1921. Serial No. 476,056. 1 Claim. (Cl. 81—64.)

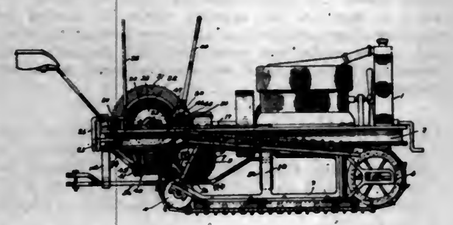


A device of the character described, comprising a rigid body portion having a plurality of gripping sections maintained in fixed relation thereon, each gripping section having a plurality of gripping teeth in operative position, there being an eye adjacent one of said sections and a horn adjacent another of said sections for cooperation with a gripping cable, adjacent sections providing a space therebetween for the reception of a portion of the material being operated upon.

1,455,613. TONGS. SAMUEL B. HEPPENSTALL, Pittsburgh, Pa. Filed Aug. 6, 1921. Serial No. 490,377. 17 Claims. (Cl. 294—115.)

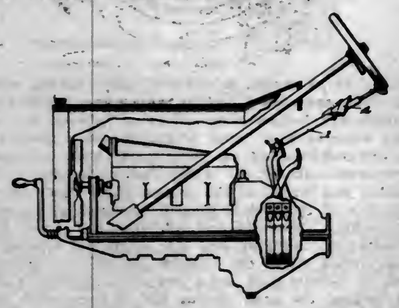
1. Tongs comprising gripping members, each having a separate pivotal mounting, and means for simultaneously moving said mountings laterally to vary the operating range of the tongs, substantially as described.

1,455,614. TRACTOR ATTACHMENT. FRED T. HEUER and GEORGE D. LATTA, Princeton, Ill.; said Latta assignor to said Heuer. Filed Nov. 5, 1920. Serial No. 422,069. 2 Claims. (Cl. 74—39.)



1. The combination with a tractor provided with a clutch pedal and a trailer connected to the tractor; of a bell-crank-lever detachably connected to the pedal, an operating rod pivotally connected to said lever, extending rearwardly to and being operable from the trailer, a shoulder on said tractor, a trip-lever carried by said first lever and being engageable with the shoulder, and an operating member extending rearwardly from the trip-lever to the trailer, being likewise operable from the latter.

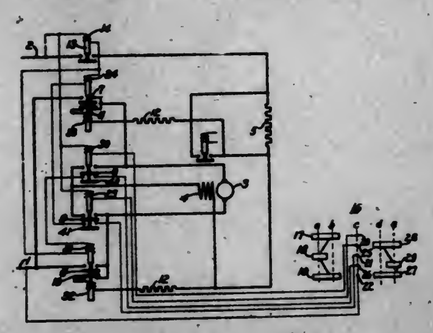
1,455,615. AUTOMOBILE TIRE. EUGENE L. HODGE, Far Rockaway, N. Y. Filed May 12, 1922. Serial No. 560,327. 2 Claims. (Cl. 152—8.)



1. A cushioning shell for tire casings including arcuate sections having reduced end portions and slots therethrough, the larger portions of the sections adapted to overlap said reduced portions and having lugs depending therefrom through the slots, springs connected to said lugs and to adjacent sections by other lugs, said sections having additional elongated slots, fastenings on the sections extending through the second mentioned slots, blocks one for each section adapted to engage a rim and be embraced by the beads of the tire casing, and springs interposed between and supported by said blocks and said sections.

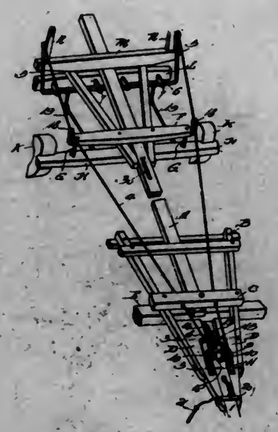
1,455,616. TRACTOR. FRANK HODGKISS, Oakland, Calif. Filed May 10, 1921. Serial No. 468,338. 4 Claims. (Cl. 180—17.)

1. In a tractor, a transmission comprising a longitudinal shaft driven by the motor, a transversely disposed clutch adapted to be rotated by said shaft, a transverse shaft mounted co-axially with the clutch having transmission gears thereon, a longitudinal rod terminating in a transverse rod rearwardly of the clutch with a foot pedal at its free end, and a fork in the longitudinal rod engaging the transmission gears causing the same to be engaged with the clutch when the foot pedal is actuated.



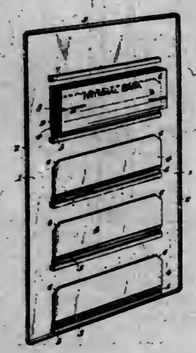
1,455,617. AUTOMOBILE TOOL. FRANK W. JACKSON, Tompkinsville, N. Y. Filed July 20, 1921. Serial No. 486,305. 5 Claims. (Cl. 180—77.)

1. An automobile repair tool comprising a tubular member adapted to serve as a support, a ratchet member



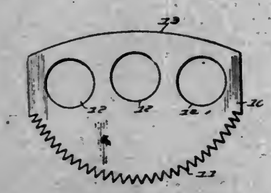
telescoping the tubular member and having a yoke at one end adapted to receive a steering wheel rim or periphery, said tubular member or support adapted to engage or bear upon a pedal and a spring-controlled member fulcrumed upon said support and equipped with an appliance carried by tubular formations on said ratchet support and adapted to engage said ratchet.

1,455,618. MOTOR-CONTROL SYSTEM. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Mar. 18, 1920, Serial No. 365,467. Divided and this application filed Aug. 22, 1922. Serial No. 583,506. 13 Claims. (Cl. 172—179.)



1. The combination with an electric motor having a series field magnet winding, of a dynamic braking resistor and means for connecting the resistor and field-magnet winding in shunt relation during dynamic braking.

1,455,619. BRAKE-OPERATING MECHANISM FOR VEHICLES. JOE JOHNSON, Enterprise, Oreg., assignor of one-half to J. A. Burleigh, Enterprise, Oreg. Filed Mar. 2, 1921. Serial No. 448,966. 5 Claims. (Cl. 188—120.)

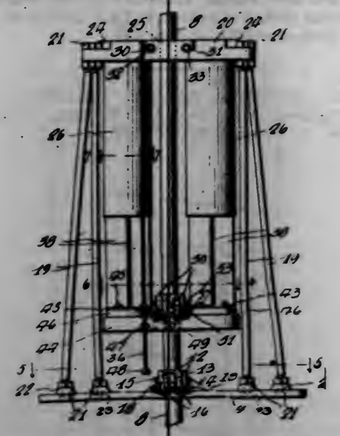


1. Brake operating mechanism embodying a tongue to be slidably mounted on a vehicle, a rotary drum mounted on the vehicle for cooperation with the tongue, a brake operating cable passing over the drum and connected with the inner end of the tongue, and means controlled by the rearward sliding movement of the tongue for limiting said sliding movement and for locking the drum against further rotation at this time.

1,455,620. CHECK-PAD HOLDER. CHARLES W. JONES, New Hampton, Mo. Filed Aug. 31, 1922. Serial No. 585,486. 6 Claims. (Cl. 40—124.)

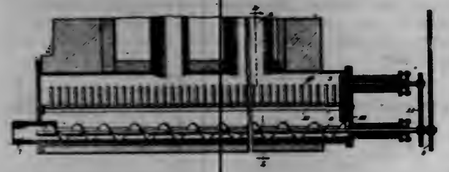
1. A check pad rack comprising a body portion, and a series of spaced pad holding members secured to the outer face thereof and each consisting of a polygonal shaped base and a holding arm projecting upwardly therefrom, said arm inset at its point of joinder with said base.

1,455,621. SURGICAL SAW. WILLIAM H. JOYNER, East Bernstadt, Ky. Filed June 22, 1921. Serial No. 479,595. 1 Claim. (Cl. 128—317.)



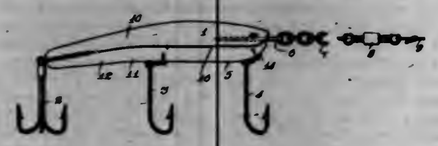
A saw for the purpose indicated having a substantially elliptical blade provided with an arcuate cutting edge of an extent approximately one-half the circumference of the blank between the extremities of the long diameter thereof, the blade being provided with a convexed smooth or back edge opposite the cutting edge and forming a suitable rest for the hand of the operator, the blade being further formed with a plurality of holes for insertion of the fingers to constitute a grip in connection with the convexed back edge.

1,455,622. LIFTING JACK. OTHA B. KIRACOFE, Churchville, Va. Filed Oct. 5, 1921. Serial No. 505,517. 3 Claims. (Cl. 254—93.)



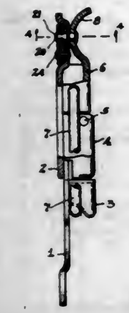
1. A lifting jack having a lifting section provided with a base, a mounting member on which said base is slidable, a second base, said second base being slidable with said mounting member, means on said bases to permit

sliding movement thereof in one direction and to resist sliding movement thereof in the opposite direction, a



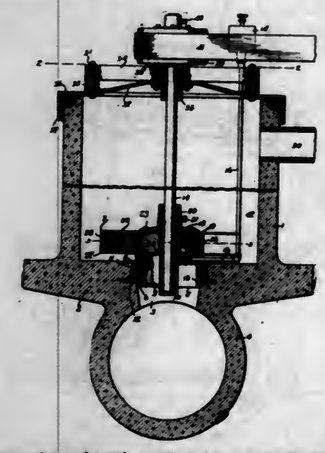
cooperating piston and cylinder supported, respectively, on said bases, and means operable to supply a power fluid to the cylinder.

1,455,623. CLEANING DEVICE. JAY B. KIRK, Iola, Kans. Filed Feb. 16, 1921. Serial No. 445,566. 2 Claims. (Cl. 196—4.)



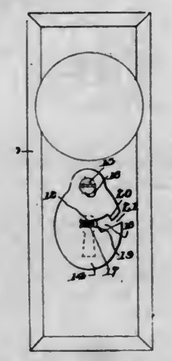
1. A cleaning device including a trough, a conveyor adjacent the base of said trough, and centrally positioned within the same, shafts arranged within said trough and above said conveyor, said shaft being disposed to the sides of the center of said trough, cleaning means carried by said shafts, and means for actuating said shafts and said conveyor.

1,455,624. SUBSURFACE FISH BAIT. WILLIAM E. KOCH, New Rochelle, N. Y. Filed Oct. 18, 1920. Serial No. 417,621. 3 Claims. (Cl. 43—46.)



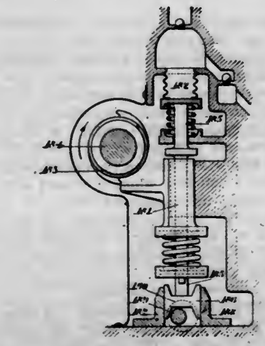
1. A fish lure comprising a body having a straight forward section and a straight rear section depending from the forward section in such a manner that the entire body appears substantially as an arc when looked at from the side, the lower surface of said body from the front to the rear being substantially V-shaped and said surface being rounded at the front to produce a round blunt end merging into the side of the bottom, means for connecting hooks to the bottom of the bait on a central line and to the rear end of the body near the center, and a flexible pulling member connected to the front of said body, said flexible pulling member permitting freedom of the body and said rear depending section acting against the water to throw the body on its side and thereby point the head from a straight course.

1,455,625. FASTENING DEVICE. JACOB F. LANGENAU, Cleveland, Ohio, assignor to The Langenau Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed May 28, 1920, Serial No. 384,809. Divided and this application filed Oct. 23, 1922. Serial No. 596,192. 3 Claims. (Cl. 292—247.)



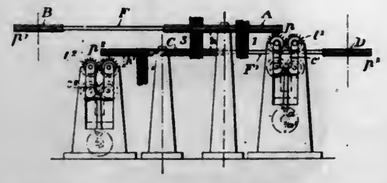
1. In a fastening device of the character described, the combination with two plates designed to be secured in abutting relation on the parts to be fastened together, a hook-like projection rigidly mounted on one of said plates, a member pivotally attached to the other plate, and a link carried by said member and adapted to engage said projection to lock said plates together, said member being provided with a necked stud adjacent its free end; of a resilient member secured on the corresponding plate adapted to engage such stud and thus to retain said member against accidental movement.

1,455,626. WATER PUMP. WALFRID LARSON, Kingsburg, Calif. Filed Sept. 17, 1921. Serial No. 501,434. 5 Claims. (Cl. 103—103.)



3. A water elevating structure comprising a well formed with a base and an inlet member acting as a lower compartment, a stationary bearing formed substantially as a sleeve and provided with an inner annular shoulder, a second bearing provided with an outer annular shoulder engaging the first mentioned shoulder, said second bearing having a bearing sleeve, an impeller resting on said bearing sleeve, means for interlocking said impeller and said bearing sleeve when the impeller is lifted out of the well, a shaft secured to said impeller and rotatably mounted in said sleeve, and a power member connected with said shaft for rotating the same.

1,455,627. KEY FASTENER. ALFRED ALEXANDER LAWSON, Windsor, Ontario, Canada. Filed May 5, 1922. Serial No. 558,583. 1 Claim. (Cl. 70—7.)

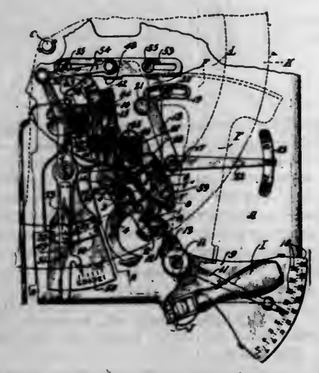


The combination with a plate having a key-hole slot, of a key fastener comprising a plate pivoted on the first mentioned plate for swinging movement, the movable plate having a compound slot opening at one side thereof, and adapted to receive the shank of the key when the latter is positioned within the slot of the first mentioned plate, a shoulder defined by the compound slot and arranged to prevent the movable plate from being removed from the key incident to the swinging movement of the plate in one direction, and said movable plate having an elongated slot for the reception of the pivot therefor, whereby said plate is permitted to be moved vertically to move said shoulder out of the path of said key as and for the purpose specified.

1,455,628. FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. JULES LEROY, Paris, France. Original application filed July 10, 1920, Serial No. 395,338. Divided and this application filed Jan. 9, 1922. Serial No. 528,116. 3 Claims. (Cl. 123—139.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An improved pulsator pump for internal combustion engines for insuring by injection the delivery of the fuel, comprising a flexible wall and a sliding rod for actuating said flexible wall, means for imparting to said rod its suction stroke, comprising a cam acting upon said rod through the intermediary of a spring, and means for varying the length of the said suction stroke of said rod whereby to control the quantity of fuel injected.

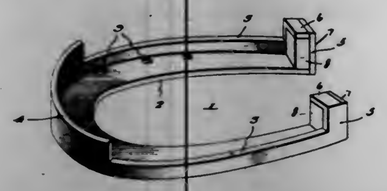
1,455,629. TEXTILE MACHINE FOR FLAX AND LIKE TEXTILE SUBSTANCES. CHARLES FRANÇOIS LESAGE, Pont-Remy, Somme, France. Filed Mar. 22, 1921. Serial No. 454,407. 5 Claims. (Cl. 19—14.)



1. A scutching machine for flax or like substances comprising in combination two sets of rotary pulleys having peripheral grooves, each set comprising a main pulley against the periphery of which the handfuls of material are adapted to be clamped, endless members engaging into said grooves in order to clamp the handfuls of materials against the periphery of said pulleys, the two main rotary pulleys occupying in plan view substantially tangential positions, two sets of scutching devices, each set being situated below the corresponding set of rotary pulleys and embodying two scutching drums adapted to receive a rotary motion, and means imparting to said scutching devices a reciprocal vertical movement.

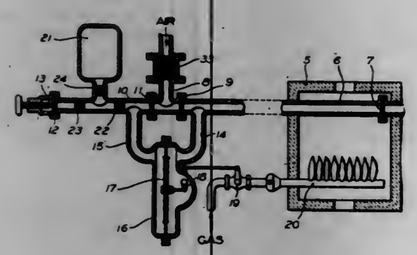
1,455,630. PREPARATION OF STARCH AND SULPHURIC ACID. JOHN ALEXANDER LLOYD, Coventry, England, assignor to Courtaulds Limited, London, England. Filed Mar. 31, 1922. Serial No. 548,529. 1 Claim. (Cl. 18—54.)

The method of obtaining a preparation for use in setting baths for viscose, which comprises the step of dissolving starch in sulphuric acid of substantially from 50 to 65 per cent concentration at a temperature of substantially from 35° C. to 75° C.



1,455,631. CONTROLLING MECHANISM FOR SOUND-REPRODUCING MACHINES. THOMAS H. LOY, Bellaire, Ohio. Filed Dec. 28, 1920. Serial No. 433,709. 51 Claims. (Cl. 274—15.)

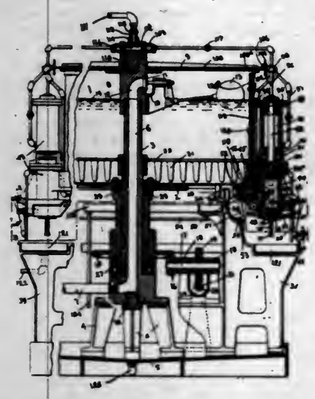
1. In control mechanism for sound reproducing machines having a record support and a reproducer, the com-



bination of a brake member, latch means for holding said member in non-braking position, means operable synchronously with the playing movement of the reproducer into position for actuating the latch means to unlatch said brake member, and means controlled by said latch means for interrupting the unlatching movement aforesaid and reversing the reproducer.

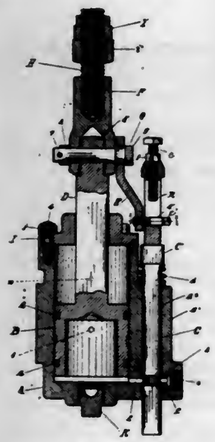
1,455,632. HORSESHOE. CALVIN L. LUALLEN, Coal Creek, Tenn., assignor of two-thirds to Horace M. Madden, Coal Creek, Tenn. Filed May 24, 1921. Serial No. 472,160. 1 Claim. (Cl. 168—24.)

A horseshoe constructed from a strip of sheet metal, a continuous flange depending from the perimeter of the shoe and being integrally formed therewith, an arcuate toe extension formed on the flange and being of a height approximately equaling the width of the shoe at the toe portion, heel projections formed on the flange and having their outer ends bent laterally and inwardly, extensions formed on the projections and being bent inwardly against the end of the shoe and the projections respectively, said projections and extensions forming pockets, filler blocks designed to fill the pockets, and said toe portion being weightier than the heel extension, for the purpose specified.



1,455,633. PYROMETER. IVAR LUNDGAARD, Rochester, N. Y. Filed Apr. 28, 1921. Serial No. 465,313. 8 Claims. (Cl. 297—1.)

5. A pyrometer comprising: two chambers having a common connection, through restricted passages, with a source of compressed air, each chamber having also a restricted outlet and one chamber being subjected, between its inlet and its outlet, to the temperature to be measured: and a device subjected, in opposite directions, to the respective pressures in the two chambers and movable in response to differences between said pressures.

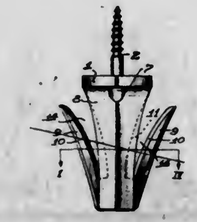


1,455,634. MACHINE FOR MOLDING ARTICLES FROM PLASTIC MATERIAL. FRED W. MCARDLE, Boston, Mass. Filed May 2, 1919. Serial No. 294,286. 22 Claims. (Cl. 92—54.)

1. A machine for forming articles from plastic material comprising forming devices; ducts connecting the forming devices with a source of supply; the forming devices and ducts being movably related to means for opening and closing the ducts; to independent means for

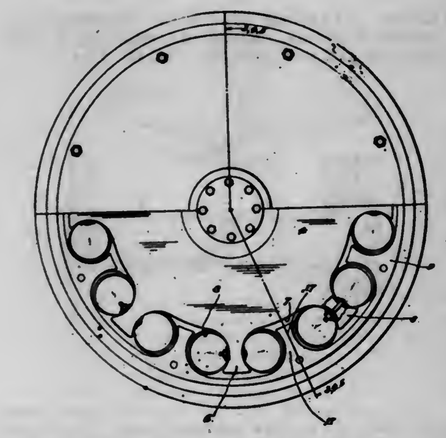
operating the forming devices and to means for ejecting the formed articles from the forming devices.

1,455,635. BELL RINGER. LENWOOD MCCLEARY, Chicago, Ill. Filed Oct. 25, 1919. Serial No. 333,252. 1 Claim. (Cl. 121—2.1.)



A bell ringer including a piston, a cylinder for the piston having an outward lateral extension, a plunger valve slidable in said extension and longitudinally of the piston, said plunger valve having a groove, said cylinder having inlet ports through said extension to cooperate with said groove, means on said extension for attachment of a fluid supply pipe, a spring resting on the upper end of said extension, an enlargement on the valve to rest on said spring, said valve having an elongated slot above said enlargement, a follower slidable in said slot, a screw adjustably extending into said slot from the upper end of said plunger valve to limit movement of the follower, a link connected to the follower, a bell engaging connecting means, and a pin fastening said link, connecting means and piston together.

1,455,636. CLOTHESLINE HOLDER. JAMES C. MCCONNAL, Detroit, Mich. Filed July 11, 1921. Serial No. 483,663. 1 Claim. (Cl. 24—130.)



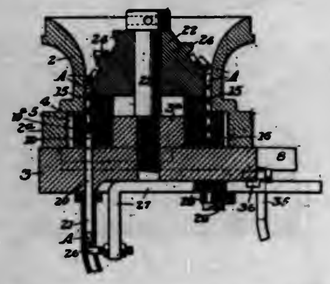
A line holder comprising a back plate, a screw carried thereby and by which said back plate may be connected

to a support, said back plate having openings adapted to receive fastening means by which the plate may be prevented from turning with the screw as an axis, a body extending outwardly from said plate, and having walls curved inwardly from the edges of said plate to the outer

end of said body and curved arms carried by the outer end of said body and curved outwardly relative to said body to cooperate therewith in providing passages with some of the walls of said passages affording binding edges for lines placed in said passages.

1,455,637. WHEEL. CHARLES JUDSON MCCORD, Alpha, Mich. Filed Dec. 30, 1921. Serial No. 526,012. 6 Claims. (Cl. 152—37.)

1. In a wheel, a hub, radial drive spokes on said hub, a felly movable relative to the hub, sets of convolute springs disposed concentrically of the axis of the hub and carried by said drive spokes, and buttresses on said felly engaging said springs to establish resilient connection between the hub and felly and co-acting with said hub for limiting compression of the springs, the springs in said sets each comprising one convolution and having one end attached to said spokes and the other end free.



1,455,638. FIRELESS COOKER AND HEATER. MALCOLM J. MCFARLANE, New Orleans, La. Filed Mar. 8, 1921. Serial No. 450,777. 1 Claim. (Cl. 219—35.)

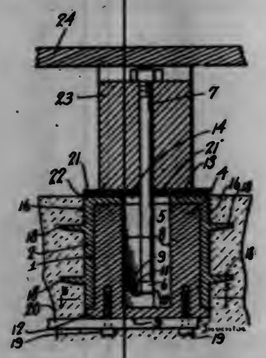
A fireless cooker and heater comprising a housing closed at its top and bottom but having an opening in the side, the said top and side walls of the housing having a facing of insulating material, an insulating disc covering the inside bottom of the housing and having its upper face provided with a tortuous channel presenting exposed arcs concentric with the center of the said disc, a coiled resistance wire disposed in said channel and having its opposite ends passing exteriorly of the

said housing, and a plug socket carried by an exterior portion of the said housing.

1,455,639. FEEDER FOR METAL BLANKS. JOHN A. MCGINNIS, Wheeling, W. Va., assignor to Wheeling Stamping Company, a Corporation of West Virginia. Filed June 27, 1921. Serial No. 480,658. 15 Claims. (Cl. 113—113.)

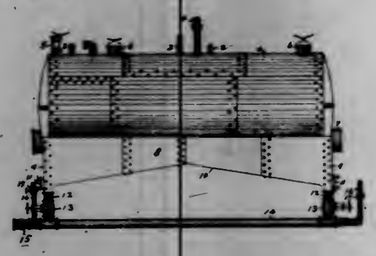
1. In a feeder for metal blanks, a hopper having downwardly curved convex inner walls, a cone-shaped agitator rotatably mounted within the hopper and having a helical lifting rib upon its periphery, said rib having a pitch sufficient to move the blanks circumferentially simultaneously with the lifting thereof, and rotatable feeder means in said hopper below said agitator, substantially as described.

1,455,640. ROCK DRILL. JOHN J. MCNAMARA, Mountain Ranch, Calif. Filed Aug. 20, 1920. Serial No. 405,202. 4 Claims. (Cl. 255—64.)



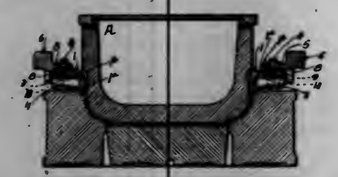
1. A rock drill comprising a drill head having a slot in one end thereof, a drill bit having a shank extended into the slot and a bowed spring member between the shank and a wall of the slot in contact intermediate of its ends with the shank and at its end with the side edges of the slot.

1,455,641. ANCHORING DEVICE. HOWARD C. MAHON, East Liverpool, Ohio. Filed Oct. 28, 1921. Serial No. 511,051. 5 Claims. (Cl. 72—105.)



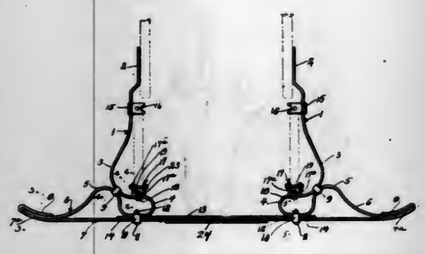
1. An anchoring device of the character specified, comprising an inner section consisting of a flat base and

a body portion formed with a longitudinal slot whose side walls are provided at their inner ends with recesses, an outer section fitting over the inner section and provided in its outer wall with a slot registering with that



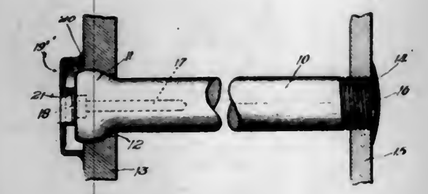
of the inner section and a T-bolt arranged with its head engaging the recesses of the inner section and its shank extending through and above the slots of the inner and outer sections.

1,455,642. STILL. JOHN M. MAHONEY, Houston, Tex. Filed Apr. 14, 1921. Serial No. 461,294. 2 Claims. (Cl. 196—6.)



1. A still including a boiler whose bottom is formed with a collecting vat beneath, the bottom of said vat being oval in cross section and declining each way from an intermediate line, an outlet pipe on each side beneath the vat, valve controlled drain pipes leading from the lowest points of the bottom of the vat and connected with the respective outlet pipes, a valve controlled steam line entering one end of each outlet pipe and a valve controlling the other end thereof.

1,455,643. FOLLOWER RING. STEPHEN W. MANNING, Altoona, Pa. Filed Dec. 10, 1921. Serial No. 521,518. 9 Claims. (Cl. 49—72.)



1. In combination with a spring plate, an expansible follower ring, and connections between the plate and said ring permitting the ring to expand and contract independently of the plate.

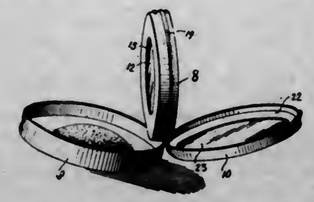
1,455,644. BUMPER. WALLACE S. MARTIN, Monongahela, Pa. Filed Nov. 25, 1922. Serial No. 603,258. 4 Claims. (Cl. 293—55.)

1. In a bumper, side members adapted for attachment to an automobile, said members being provided at their forward ends with curved resilient arms, the side members being further provided with loop elements connecting said side members and the arms, and a bar connecting the forward ends of the arms, said bar being secured to the forward portions of the loop elements.

1,455,645. FLEXIBLE STAY-BOLT CONSTRUCTION. ROBERT S. MENNIE, Chicago, Ill. Filed Aug. 4, 1919. Serial No. 315,178. 6 Claims. (Cl. 85—1.5.)

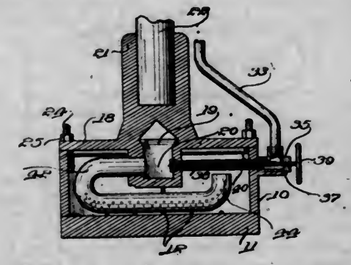
1. The combination with the outer and inner sheets of a boiler having alined openings therein, of a staybolt passing through said openings, and having an enlarged head at its inner end, said head having a spherical zone cooperating with a correspondingly shaped seat to provide a ball and socket joint, the end of said staybolt being substantially flush with the inner surface of said inner sheet, the opposite end of said bolt being provided with a member having also a spherical zone cooperating with a corresponding seat to form a second ball and socket joint whereby angular movement of each of said sheets with reference to the staybolt is permitted.

1,455,646. AIR PUMP AND GAUGE. CLARENCE MILLARD, Arkansas City, Kans. Filed Oct. 11, 1921. Serial No. 506,961. 2 Claims. (Cl. 230—24.)



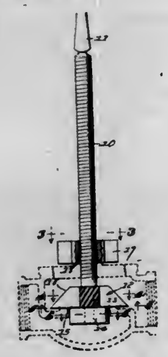
1. An air pump comprising a cylinder, a transverse partition sub-dividing the cylinder into two chambers, a piston operable in one of the chambers, means for connecting the other chamber with the part to be inflated, said partitions having a valve controlled passage between the two chambers and a vent passage for the escape of excessive pressure, a valve closing the vent

passage and operable by excessive pressure to uncover said vent passage, a spring for holding said valve nor-



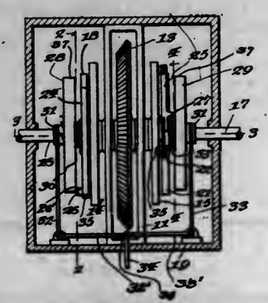
mally seated, and means for varying the effective tension of the spring whereby the pump may be set for inflating to any predetermined pounds pressure.

1,455,647. COMBINATION VANITY BOX. SIMON MORRISON, New York, N. Y. Filed Sept. 28, 1922. Serial No. 591,017. 4 Claims. (Cl. 132—83.)



1. A combination vanity case, comprising a central box and two outside boxes, said two outside boxes closing on said central box in a telescopic manner; a unitary hinge construction to rotatably connect said three boxes; a powder compact or similar cosmetic preparation at one side of said central box and a mirror surface at the other side; a partition in one of said outside boxes, said partition having recesses therein to receive cosmetic preparations and the like; a mirror surface at the bottom of the other one of said outside boxes, and releasable means to keep said outside boxes in a closed position on said central box.

1,455,648. SELF-HEATING TOOL FOR ASPHALT PAVEMENTS. TOM MORRISON, Toledo, Ohio, assignor of one-half to Maurice Shuer and Abraham Hattner, both of Toledo, Ohio. Filed Oct. 10, 1921. Serial No. 506,708. 2 Claims. (Cl. 158—27.)

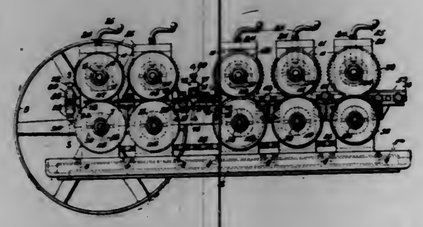


1. In a device of the class described, a hollow body, a cover therefor, a burner and means for mounting the latter within the hollow body in position for directing flame into contact with the upper surface of the bottom of said body, and means for supplying fuel to the burner, said hollow body having a rounded bottom, a handle extending laterally from the body, and a pivoted foldable member for supporting the handle in position for maintaining the body substantially level.

1,455,649. VALVE RESEATER. ARTHUR W. NOYES, Arlington, Vt. Filed Feb. 12, 1920. Serial No. 358,285. 1 Claim. (Cl. 90—12.5.)

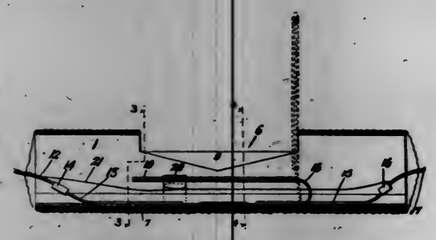
A tool for the purpose described having a shank provided with a wrench seat at one end and threaded substantially throughout its length, the shank at the extremity remote from the wrench seat being reduced and made cross sectionally angular to provide a seat, the terminal of the extension being exteriorly threaded, a reversible bit fitted on said seat and provided with flat and conical cutting surfaces, a circular guide mounted on the threads of the reduced extension and bearing against the bit to maintain the same in place, and a gauge nut mounted upon the threads of the shank for contact with a valve casing.

1,455,650. DIFFERENTIAL GEAR. BRYAN O'DONNELL, Vail, Iowa. Filed Sept. 14, 1921. Serial No. 500,478. 2 Claims. (Cl. 74—7.)



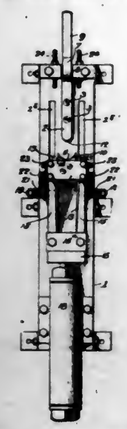
1. A differential including a driving shaft, a pair of longitudinally alined driven shafts, a disk on each end of the driving shaft, a disk on each of the driven shafts adjacent a disk of the driving shaft, each of the first disks having oppositely directed notches, pawls carried by each of the second disks, a pawl of each of the disks normally engaging one of the notches of a corresponding first disk, and means for simultaneously rocking the pawls to disengage the engaged pawls and engage the disengaged pawls with the remaining notches of the disks.

1,455,651. COMPOSITION OF MATTER. NELS L. OLSON, Detroit, Mich. Filed June 17, 1922. Serial No. 568,909. 3 Claims. (Cl. 75—1.)



1. A metallic alloy subjected when in use to external heat at high temperatures composed of iron from ten per cent to twenty-five per cent, chromium from ten per cent to twenty per cent, nickel from sixty per cent to seventy per cent, carbon from two per cent to six per cent, silicon from one per cent to three per cent, aluminum one per cent to two per cent, and manganese from one per cent to two per cent.

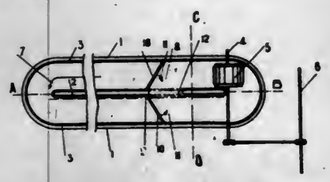
1,455,652. LOCK-SEAM TUBE-FORMING MACHINE. RUDOLPH OSOSKE, Detroit, Mich., assignor, by mesne assignments, to The Economy Gage and Manufacturing Company, Inc., Detroit, Mich., a Corporation of Michigan. Filed Apr. 14, 1921. Serial No. 461,407. 8 Claims. (Cl. 113—33.)



1. A lock-seam tube-forming machine, comprising a series of pairs of rolls for drawing a flat strip of metal through the rolls, drawing fillers between the rolls for progressively locking the edges of the strip into a lock seam, a mandrel with a longitudinal groove therein over which the formed tube is drawn, and other pairs of rolls having greater peripheral speed than the first named pairs of rolls for pulling the tube over the mandrel with the last named pairs of rolls depressing the lock seam into the groove for finishing the tube with a cylindrical outer surface, the machine also being provided with tube straightening means located to receive the tube after leaving the last pair of rolls.

1,455,653. FAVOR AND SNAPPING MOTTO. ARTHUR G. PALMER, Hastings-upon-Hudson, N. Y. Filed May 22, 1920. Serial No. 383,583. 7 Claims. (Cl. 46—46.)

1. In a favor or snapping motto, the combination with a hollow cylinder of a lateral opening therein, a spring mounted device within said cylinder adapted to be projected through said opening when released, means for restraining said device, means for controlling said restraining means and a cover for said opening.

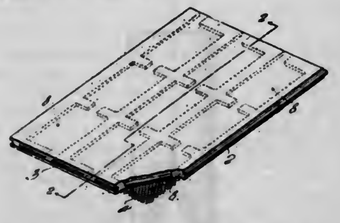


1,455,654. MACHINE FOR FORMING LUG STRAPS. CHARLES H. PEIRSON and WILLIAM A. BOHUS, Philadelphia, Pa., assignors to E. F. Houghton & Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1922. Serial No. 584,701. 5 Claims. (Cl. 69—8.)

1. The combination in a machine for forming lug straps, of a back plate; a block thereon; a movable former; means for moving the former to clamp a blank against the block; a cylinder; a plunger mounted in the cylinder; a cross head on the plunger; and arms on the crosshead extending on each side of the block and arranged to bend the blank around the former as the plunger is raised.

5. The combination in a machine for forming lug straps, of a back plate; a fixed block thereon; a movable former mounted above the block, the former and the block being shaped to curve the end of the lug strap; a spring for yieldingly holding the former; a cam for moving the former towards the block; a cylinder on the back plate; a plunger in said cylinder; a cross head on the plunger; slotted arms projecting from the cross head, the arms having their inner surfaces beveled; a wedge on the inner side of each arm, each wedge having a stud projecting through the slot in its arm; a spring on the stud yieldingly holding the wedge against the arm; a spring attached to each stud and to the arm tending to hold the wedges in the forward position and adjustable stops to limit the movement of the wedges and to allow the arms to be raised independently of the wedges in order to force the wedges towards the former.

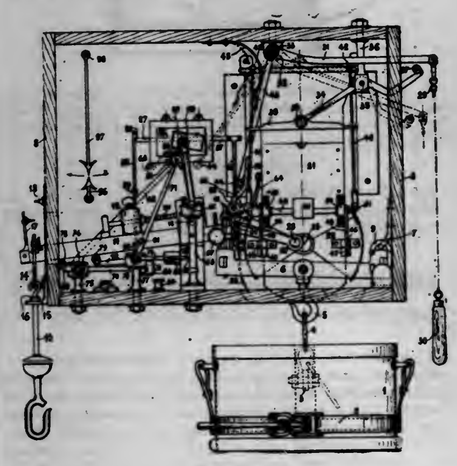
1,455,655. PROCESS OF AND MEANS FOR TANNING HIDES. VITTORIO PERADOTTO, Gallenca, Turin, Italy. Filed Apr. 15, 1922. Serial No. 553,112. 2 Claims. (Cl. 149—10.)



2. The combination with a hide-tanning vat adapted to contain an unheated tanning liquid and having a perimetric wall, of means for maintaining a rapid and continuous circulation of the unheated tanning liquid, a central partition extending longitudinally of the vat and terminating short of the ends thereof, and provided with an opening intermediate its length, and doors hinged to said partition at one end of said opening therein and normally closed to permit circulation of the liquid throughout the entire length of the vat, said doors, when opened, contacting with said perimetric wall and thereby restricting circulation of the liquid to a portion only of the vat.

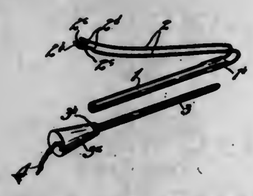
1,455,656. SHAVING BRUSH. ELAINE HALE PHILLIPS and NICOLAS V. DE LIPSKI, New York, N. Y. Filed Apr. 18, 1922. Serial No. 554,846. 3 Claims. (Cl. 15—248.)

1. A devce for attachment to the handle of a shaving brush to catch and retain the drip from the bristles when the brush is inverted comprising a cup having a flexible and elastic body portion extended outward and inward, means at the bottom of the cup for attaching it to the brush, and a ring of absorbent material confined within the body of the cup to retain the drip, whereby the absorbent material may be compressed between said body portion and brush to expel the liquid absorbed thereby.



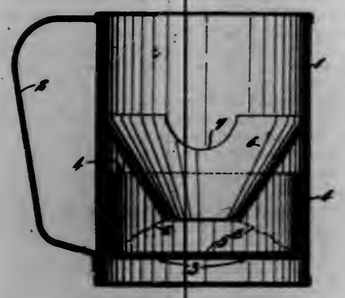
1,455,657. BUILDING SLAB. FRANK PONTELLO, Calumet, Mich. Filed June 1, 1922. Serial No. 565,045. 4 Claims. (Cl. 108—10.)

1. A building slab formed of molded plastic and having air pockets extending through it, each pocket being reduced in width at points intermediate its length and having reduced neck portions at its ends projected through the edge faces of the slab.



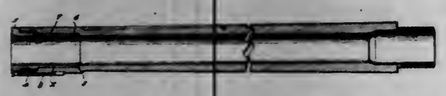
1,455,658. AUTOMATIC GRAIN-WEIGHING AND SACK-FILLING MACHINE. THEODORE MARC POUMADE, Marseille, France. Filed Aug. 13, 1921. Serial No. 492,182. 4 Claims. (Cl. 249—48.)

1. In an automatic grain-weighing and sack-filling machine, an unequal armed beam fulcrumed at one-sixth of its length, adjustable means on said beam for compensating the tare of the sacks, a guided weight hanger freely suspended from the end of the longest arm of said beam, a bridge freely suspended at one end to a stationary part of the machine and at the other from the end of the shortest arm of the beam and having a drum freely suspended at its centre and adapted to have the sack removably secured thereto, in combination with: a pair of semi-cylindrical large delivery doors having sector-shaped sides, mounted on a common pivot and normally closing the mouth of the delivery chute under the action of their own gravity; an adjustable small discharge opening in one of said doors; a small delivery door normally closing said opening and having arms pivoted to the sides of the corresponding large door at a point eccentric to the pivot of said door; hand-operated means for opening simultaneously the large and small doors; lugs on the said doors; hook-ended weighted levers for retaining the two large doors and the small door in open position by engagement with said lugs; a big and a small pivoted trip-hammer adapted to cause said levers to release respectively the two large and the small doors; spring-influenced hand-operated means for setting said hammers in the inoperative position jointly with the opening of the doors; hooks at the rear of the mass of said hammers; means under the direct influence of the beam for causing the big and the small hammers successively to



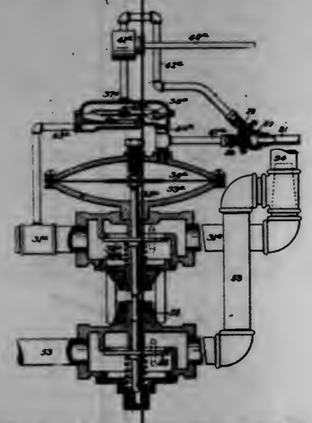
pass from the set inoperative to the operative position, said means consisting of the pivoted three-armed compensators having one arm fitted at the end with a roller in operative contact with the underside of the beam at a different distance from the latter's fulcrum for each compensator and a second arm, opposite the first, provided with an adjustable weight, a nose formed at the end of the third arm of said compensators and adapted to engage the hook of the corresponding hammer and an adjustable push-screw for the said corresponding hammer carried by said arm immediately below said nose; stationary abutments for the weighted arm of aforesaid compensators whereby the latter's movement is stopped just before the beam completely reaches its balanced position; and means for registering each weighing operation; all substantially as described.

1,455,659. HAIR CURLER. JACOB RANZ, St. Louis, Mo. Filed May 23, 1922. Serial No. 562,997. 8 Claims. (Cl. 132—41.)



2. A hair curler comprising a tube, a loop having bent ends inserted within and engaged by the walls of said tube.

1,455,660. FLOUR SIFTER. JACOB RANZ, St. Louis, Mo. Filed Dec. 4, 1922. Serial No. 604,797. 5 Claims. (Cl. 83—60.)

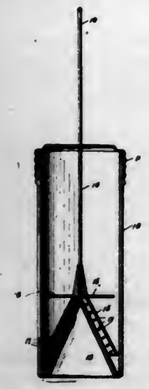


1. A flour sifter comprising a supporting body, a floating sifting member loosely mounted therein, and means for delivering flour to be sifted at a medial point relative to the sifting member.

1,455,661. CHOKE FOR SHOTGUNS. EDWARD L. RHINEHART, Roanoke, Va. Filed Aug. 2, 1922. Serial No. 579,209. 2 Claims. (Cl. 42—79.)

1. A gun barrel having its outer end provided with a cylindrical part of greater diameter than the bore, a tapered shoulder connecting the said cylindrical part with the bore and a screw threaded part of greater diameter than the cylindrical part having interchangeable choke tubes, each provided with a cylindrical part for engaging the cylindrical part of the bore, a tapered end for engaging the tapered shoulder and a screw threaded part for engaging the threaded part of the barrel, a knurled head on each tube overlapping the outer end of the barrel and means for locking the tube in the barrel.

1,455,662. THERMOSTATIC VALVE MECHANISM. FREDERICK W. ROBERTSHAW, Pittsburgh, and GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed Jan. 20, 1921. Serial No. 438,738. 12 Claims. (Cl. 236—80.)



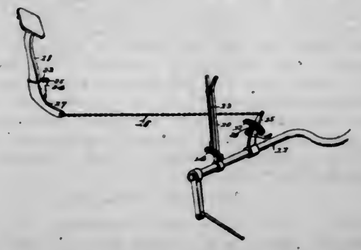
9. Thermostatic valve mechanism comprising a main valve, a diaphragm for actuating the main valve, a diaphragm operated auxiliary valve for controlling the operation of the main valve, and thermostatic means for controlling the operation of the auxiliary valve, together with a second main valve arranged to be controlled by the first named main valve, substantially as described.

1,455,663. THERMOSTAT. FREDERICK W. ROBERTSHAW, Pittsburgh, and GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed Sept. 10, 1921. Serial No. 499,599. 16 Claims. (Cl. 236—102.)

16. A thermostat, comprising a controlling device having a movable operating member, an expansible member, a revolving couple connecting said device and said expansible member, a non-expansible member co-operating with said expansible member for operating the movable member of said device, and means permitting removal of the movable member of said device without affecting the setting of the thermostat, substantially as described.

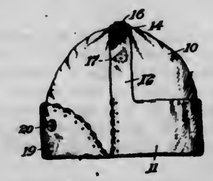
1,455,664. HOUSEHOLD MIXING APPARATUS. JAMES H. RUSSELL, Oklahoma, Okla. Filed Sept. 1, 1920. Serial No. 407,358. 1 Claim. (Cl. 259—113.)

A device of the class described having a receptacle, a substantially conical member therein with its apex uppermost, a hollow dasher of substantially conical formation having an inner transverse wall to engage said apex and maintain the outer wall of the dasher in spaced relation to said conical member, a substantially conical attaching member on the dasher which said transverse wall constitutes its base, a perforated baffling plate on said substantially conical attachment member whereby it may be wedged in place against longitudinal movement thereon, and an operating stem secured to and extending from said attaching member.



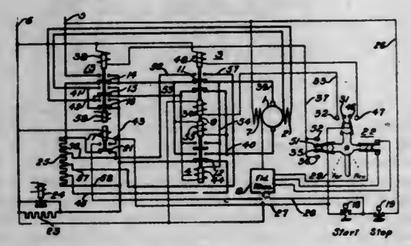
1,455,665. SAFETY RAZOR. JOHN RUZE, New York, N. Y. Filed Aug. 1, 1919. Serial No. 314,675. 1 Claim. (Cl. 30—12.)

A safety razor comprising a body portion bent upon itself to provide a curved head and a threaded base, a handle having a threaded portion for engagement with the threaded portion of said base, a curved guard member having a plurality of semi-circular fingers, the end fingers of which are adapted to have their free ends contacting with the blade of the razor for protecting the user from the sharp corners thereof, and the other fingers having their free ends spaced from said blade whereby the blade is



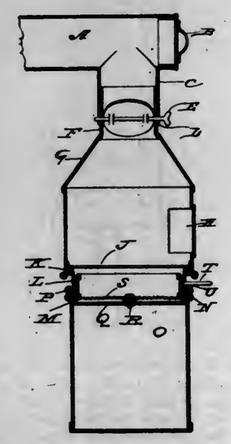
unobstructed beneath the cutting edge thereof, an extension projecting upwardly from said threaded portion and being engaged on diametrically opposite sides by the body portion and a finger of the guard members respectively, and said extension being adapted to terminally engage the guard member as and for the purpose specified.

1,455,666. EMERGENCY BRAKE. CROSS G. SAVELL, Silver City, Miss. Filed May 9, 1921. Serial No. 468,121. 1 Claim. (Cl. 74—39.)



An emergency brake mechanism for cars of the type indicated having a manually actuable brake lever and controller shaft to which said lever is attached, and a cam plate provided with a shank connected with said shaft, a pair of arms attached respectively to the cam plate shank and to the clutch pedal shank, and a flexible connection between said arms and consisting of a chain terminally secured to the extremities of the arms, the arms being struck from plate metal and provided with side ears having registering openings for the reception of a transverse bolt, the side ears embracing the shanks respectively of the clutch pedal and the cam plate.

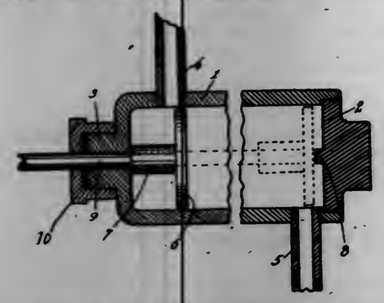
1,455,667. CAP. SIEGFRIED SCHANZER, New York, N. Y. Filed Aug. 4, 1921. Serial No. 489,677. 1 Claim. (Cl. 2—107.)



A cap comprising a body member adapted to fit and cover the head of the wearer, a substantially wide integral extension depending from the back of said member forming neck and ear covering portions adapted to be turned up and down on a fold line between the extension and body member, integral chin straps narrower than said extension depending from and at right angles to each of said ear covering portions and having their ends each provided with a button-hole, one of said chin straps having its outer face provided with a button situated between and within the end portions and side margins thereof, and a button positioned at the apex of said body member and adapted to engage the buttonholes of said chin straps in overlapping relation at a single point when turned up, the button on said chin strap adapted to engage the buttonhole on the other chin strap when turned down holding the ends of the chin straps extending in different directions in lengthwise overlapping condition.

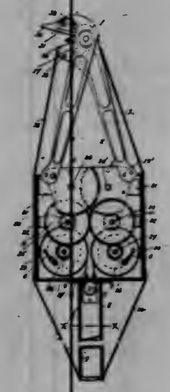
1,455,668. MOTOR-CONTROL SYSTEM. GEORGE B. SCHEER, Berkeley, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 22, 1922. Serial No. 570,108. 9 Claims. (Cl. 172—240.)

1. The combination with an electric motor having an armature and a series field-magnet winding, of a plurality of armature-reversing switches, a dynamic-braking resistor and means for energizing said reversing switches to effect dynamic braking upon failure of power supply to said motor.



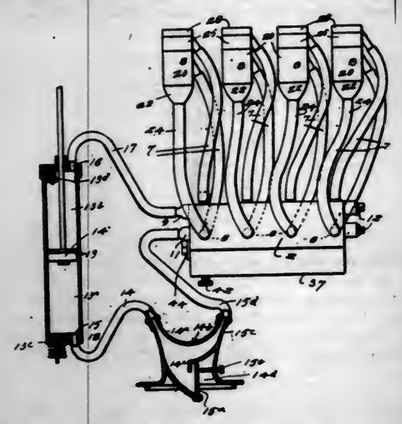
1,455,669. COMBINED DUST CONVEYER AND ASH SIFTER. HENRY S. SCHMIDT, Williamsport, Pa. Filed Apr. 5, 1923. Serial No. 630,039. 2 Claims. (Cl. 83—60.)

1. A dust conveyer of the character and for the purpose stated, consisting of a horizontally disposed pipe or flue having an open end, a removable cap for said open end, a depending outlet branch, a collecting hood having an upwardly extending branch entering said outlet



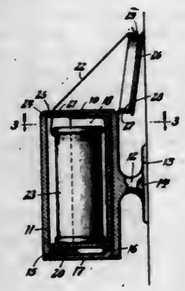
branch, a damper in said branch, a door for collecting hood, a flanged ring below the door in said collecting hood, an ash sifter having its mouth formed with a bead to fit tight against the underside of said flanged ring, and an ash receiver fitting upon said ash sifter.

1,455,670. AUTOMATIC VALVE. WILLIAM H. SCHMIDT, Cincinnati, Ohio. Filed June 17, 1922. Serial No. 568,910. 4 Claims. (Cl. 236—25.)



1. A device of the character described, comprising a cylinder, a piston therein, inflow and outflow pipes from said cylinders, means for positively limiting the piston movement in one direction to a point between the two pipes, and in the other direction to a point short of the end of the cylinder but beyond a position to block the flow between the two pipes, and a rod connected to said piston and passing out through the cylinder at the end adjacent the inflow pipe, said piston being so constructed as to permit restricted flow of a medium of pressure past it within the cylinder.

1,455,671. DISTANCE-OPERATED CUTTING PLIERS. PIETRO SECCAMANI, Brescia, Italy. Filed July 7, 1920. Serial No. 394,537. 6 Claims. (Cl. 164—46.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

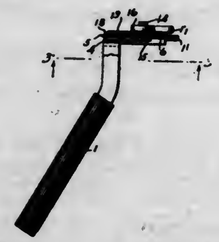


1. In a tool of the character described, a casing having an exteriorly tapered open end, a pair of arms located in said casing and pivoted together independently of said casing, a pair of laterally projecting cutting jaws carried by said arms located exteriorly of the tapered open end of the casing, the tapering exterior of the casing acting to guide a wire into the space between said jaws for cutting action whereby the tool may be operated at a point distant from said wire, and actuating means for said jaws arranged in said casing and supporting said jaws in position therein.

1,455,672. MILKING DEVICE. HENRY R. SEIFERT, East Ellsworth, Wis. Filed Sept. 18, 1920. Serial No. 411,050. 4 Claims. (Cl. 31—100.)

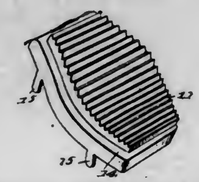
1. A milking device comprising teat cups, high and low teat squeezing means in said cups, a casing having high and low pressure chambers and said high pressure chamber connected to a pump, means connecting the chamber to the high and low teat squeezing means, a vacuum chamber in said casing and connected to the pump and cups, means permitting air pressure to pass from the high pressure chamber to the low pressure chamber at a predetermined pressure in said high pressure chamber, and means exhausting air pressure from the low pressure chamber to the high pressure chamber when the pump exhausts the pressure from the latter.

1,455,673. DENTAL FLOSS DISPENSER. VICTOR J. SHALEK, Oak Park, Ill. Filed Jan. 12, 1922. Serial No. 528,660. 12 Claims. (Cl. 242—138.)



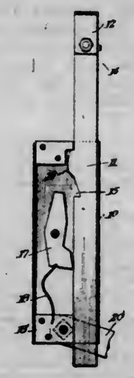
1. In a dental floss dispenser, a container adapted to hold a spool of dental floss, a cover, means pivotally joining said cover to one edge of said container, a clip adapted to hold a strand of floss secured to said cover, at a point substantially diametrically opposite the pivot means, and means for guiding the floss from said container at a point also substantially diametrically opposite the pivot means.

1,455,674. SAFETY RAZOR. JOHN J. SHORT, New York, N. Y. Filed Aug. 4, 1921. Serial No. 489,783. 1 Claim. (Cl. 30—12.)



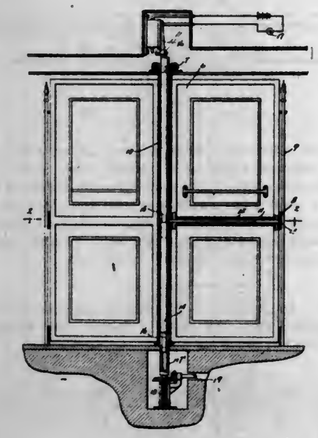
A safety razor comprising a handle mounting a U-shaped frame substantially at right angles thereto a

plate covering said frame, thus forming a slot between the frame and the cover for the insertion therein of a



blade, and means carried by the cover for clamping the blade in place.

1,455,675. EXTENSION PEDAL PAD FOR AUTOMOBILES AND SIMILAR MOTOR-DRIVEN VEHICLES. DANIEL SINCLAIR, New York, N. Y. Filed Apr. 18, 1922. Serial No. 554,977. 4 Claims. (Cl. 74—810.)



1. An extension pad having a rim forming a seat for a surface cushion, a bearing plate fitted in the rim in contact with the rear surface of the cushion, and means for securing the rim and plate to a pedal.

1,455,676. CLUTCH CONTROL. OLIN G. STARK, Tunkhannock, Pa. Filed June 19, 1922. Serial No. 569,192. 2 Claims. (Cl. 74—81.)

1. An attachment for tractors, comprising a housing, adapted to be supported adjacent the clutch control arm, a locking bar movable through the housing and terminally connected with said arm, a pawl pivoted within the housing and adapted to engage said bar to hold the latter in a position to maintain the clutch disengaged, a yieldable element associated with said pawl, and said bar being constructed to cooperate with the pawl to effect a release of itself incident to the movement of said arm as described.

1,455,677. DOOR LOCK. SAMUEL ROSS STEVENS, New York, N. Y. Filed Nov. 2, 1921. Serial No. 512,307. 12 Claims. (Cl. 20—1.01.)

1. A door lock including in combination with a revolving door comprising a plurality of rotatably carried panels, and means providing an area way, the side of which extend adjacent the outer edges of said panels, rods carried by said panels and means for projecting said rods for causing the outer edges of the same to extend beyond the outer edges of said panels, and pass through openings formed in the side walls of said area way.

1,455,678. SWITCH-THROWING MECHANISM. GEORGE STILLE, Staunton, Ill. Filed Feb. 14, 1922. Serial No. 536,522. 7 Claims. (Cl. 246—341.)

3. The combination with a bar controlling a track switch and engaging devices carried by the bar, of car carried means cooperating with said engaging devices, successively, for moving the switch points toward and away from adjacent rails of a track, said car carried means including a bar pivoted for movement in a horizontal plane, and means for retaining the bar last named in a plurality of operative positions.

1,455,679. PREPARATION OF SULPHURIC ACID STARCH COMPOSITION. WILLIAM HENRY STOKES, Coventry, England, assignor to Courtaulds Limited, London, England. Filed Mar. 31, 1922. Serial No. 548,526. 3 Claims. (Cl. 18—54.)

1. The process of making mixtures of starch and sulphuric acid, consisting in mixing the starch, in a finely divided condition, with sulphuric acid of such dilution, and at such moderate temperature, that no gelatinization takes place, and then rapidly adding, whilst stirring, a quantity of concentrated sulphuric acid sufficient to yield, on continued stirring, a homogeneous product of the desired concentration.

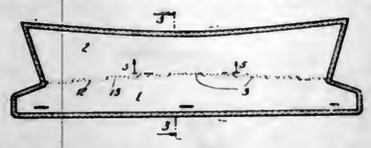
1,455,680. RAIL JOINT. WILLIAM H. SWINDELL and LEWIS PHILLIPS, Waldo, Fla. Filed Oct. 26, 1922. Serial No. 596,995. 4 Claims. (Cl. 238—216.)

1. A rail joint comprising a chair plate, a pair of oppositely disposed angle bars formed with slotted extensions and depending lugs, said extensions seated on said plate and said lugs extending through the plate, and securing elements for said plate, certain of said securing elements extending through said slotted extensions and further extended on said angle bars.

1,455,681. FIRE BOX. ROBERT B. TAYLOR, Baltimore, Md. Filed Mar. 30, 1920. Serial No. 369,912. 1 Claim. (Cl. 110—87.)

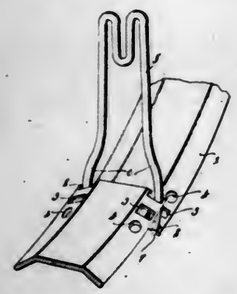
A fire box arch comprising spaced sections and an intermediate section, said sections being arranged in end to end relation, the adjacent ends of the respective sections being cut away, said cut away portions of the respective sections unitedly defining substantially semi-cylindrical recesses, the upper surface of said spaced sections being provided with raised portions having slots opening at the ends of the sections, and lugs carried by the intermediate section and projecting beyond the ends thereof and adapted to be received by said slots, overlapping the spaced sections for the purpose specified.

1,455,682. PACKING. OSCAR W. THUMBULL, Buffalo, N. Y. Filed May 19, 1920. Serial No. 382,578. 7 Claims. (Cl. 288—1.)



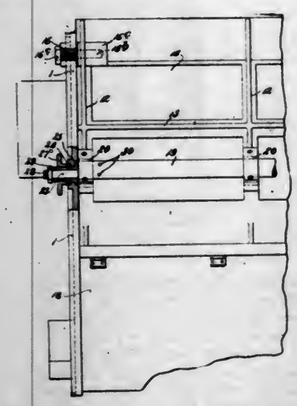
2. A packing formed with that portion along one side wider than the portion along the other side thereof so that when wound or curved into circular form it will be substantially rectangular in formation.

6. A packing having a cushion core, and suitable covering material around said cushion core vulcanized together and to said core with grooves in opposite sides of the packing.



1,455,683. FOLDING COLLAR. JOHN MANNING VAN HEUSEN, Jamaica Plain, Mass., assignor to Van Heusen Products, Inc., a Corporation of Delaware. Filed Nov. 10, 1921. Serial No. 514,165. 5 Claims. (Cl. 139—9.)

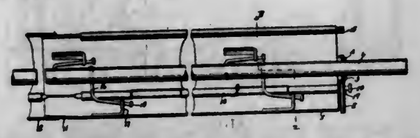
1. A folding or turn-down collar made of a single piece of heavy fabric and having a natural fold portion provided by a series of relatively short, narrow portions of modified weave which are so arranged with respect



to each other that, taken together, they form a generally curvilinear fold portion in the collar.

1,455,684. DEMOUNTABLE RIM. SAMUEL B. VARNER, Granby, Mo. Filed Mar. 25, 1922. Serial No. 546,761. 1 Claim. (Cl. 301—34.)

A resilient wheel rim, each of the end portions of which is provided with longitudinal series of apertures adjacent to its side edges; one end aperture of each series being in the form of a notch in one end of the rim, whereby a double tang tool can be used to expand the rim and position the ends thereof in opposed relation.

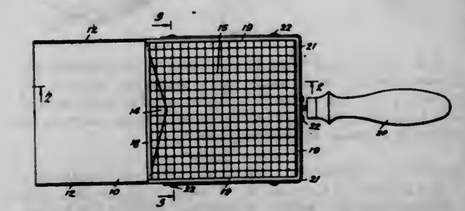


1,455,685. ROLL-BOX STRUCTURE FOR GINS. ARTHUR A. VARDELL, deceased, late of Dallas, Tex., by Highland Gee Vardell, executrix, Dallas, Tex., assignor to Carver Cotton Gin Company, East Bridgewater, Mass., a Corporation of Massachusetts. Original application filed Nov. 30, 1920, Serial No. 427,368. Divided and this application filed Sept. 1, 1922. Serial No. 585,687. 9 Claims. (Cl. 19—55.)

3. A gin comprising a saw cylinder, a roll-box having a movable front wall, a rake-head secured to said wall,

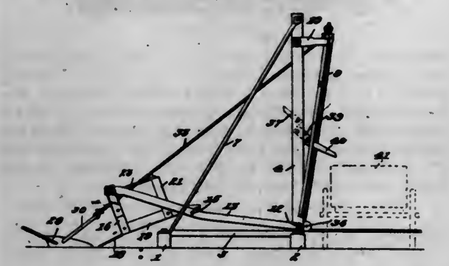
means for adjusting said front wall in a direction axial of the saw cylinder, and means for securing said front wall in adjusted position.

1,455,686. COLLAPSIBLE CORE. JAMES F. WALLACE, Brooklyn, N. Y. Filed Jan. 7, 1922. Serial No. 527,600. 5 Claims. (Cl. 25—128.)



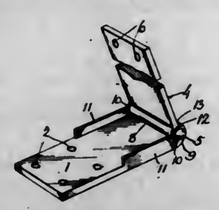
2. A collapsible core of the character described comprising a tubular body divided into longitudinal sections, two of said sections having longitudinally arranged inturned hook edges, said sections with the removable sections being hinged together with longitudinally positioned hinges, a clamping member spanning said inturned hook edges and extending into the hooked parts thereof, said clamping member being slidable into and out of engagement with said hook members, and means operable from one end of the core body for collapsing said sections after said clamp has been removed.

1,455,687. GANG DISK PLOW. STOKELY D. WALTON, Imperial, Calif. Filed Aug. 3, 1922. Serial No. 579,398. 4 Claims. (Cl. 97—53.)



1. An apparatus of the class described comprising an axle having bearing wheels and supported to swing relative thereto at the ends, a jointed pull bar rigidly connected by the rear portion to the axle, an arm connected to one of said wheel supports, a controlling rod pivoted respectively to the arm and to the forwardly directed portion of the pull bar, a beam member swinging at its forward end relative to said axle and carrying a plurality of earth engaging cutting disks, and a brake device adjustably coupling said beam to said axle, whereby the angular position of the beam relative to the axle may be controlled.

1,455,688. SHOVEL. ALBERT WEICKMAN, Harrison, N. Y. Filed Jan. 13, 1923. Serial No. 612,445. 2 Claims. (Cl. 83—60.)



1. As a new article of manufacture, a combined shovel and sieve including a shovel body comprising a bottom, an end flange and side flanges, said bottom having an opening therethrough adjacent the flanged end, a foraminous lining arranged in said lining body adjacent the flanged end for covering the opening, an attaching and covering strip secured to the forward edge of the foraminous material and to the inner side of the bottom and side flanges and inturned beads from the upper edge of the side and end flanges embracing the upper edges of the foraminous lining.

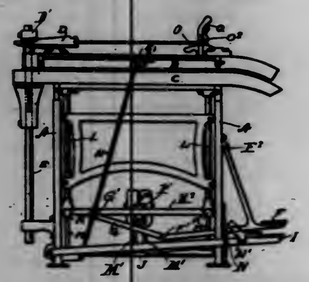
1,455,689. EXCAVATING AND LOADING APPARATUS. GEORGE WEIDINGER, Mount Sterling, Ohio. Filed Sept. 22, 1921, Serial No. 502,498. Renewed Mar. 5, 1923. 3 Claims. (Cl. 214—92.)

1. An apparatus of the kind described comprising a suitable frame, uprights mounted thereon, arms pivotally connected to said uprights, a material carrying platform, means to connect said platform to said arms, means on said connecting means to prevent said platform from tilting backward when raised and to maintain said platform when raised in a substantially horizontal position, a material carrying receptacle adapted to be placed on said platform, a bail for said receptacle, bail abutting means on said platform, power means attached to said bail to raise said platform, and platform tilting means.

1,455,690. HINGE. GEORGE W. WELLS, Amesbury, Mass., assignor to Walker Body Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1922. Serial No. 555,551. 2 Claims. (Cl. 16—128.)

1. In a hinge, a body member having its outer end portion provided with a longitudinal channel and a hood closing the outer end of said channel, and a complementary member having a hinge pin connection with the outer end of said body member and adapted at its outer end portion to fit within said channel, said hood partially inclosing and concealing the hinged end of said complementary member.

1,455,691. AUTOMATIC DOOR CLOSER. LEONIDAS D. WEST, Denver, Colo. Filed July 1, 1922. Serial No. 572,275. 10 Claims. (Cl. 16—57.)

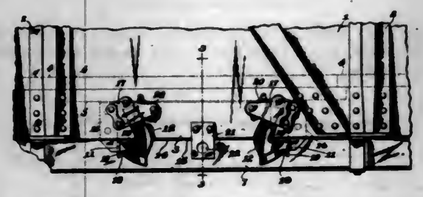


9. A door closer, comprising in combination, a cylinder, a cap secured to each end thereof and adapted to close the same, one of said caps having a hinged portion and a pair of lugs formed integral therewith, the other cap having a central threaded stud with an axial opening therethrough, a tubular piston rod passing through the

opening in said stud, a nut cooperating with said stud and adapted to form therewith a packing box, a piston within said cylinder and threadedly connected with one end of said piston rod, and a yoke piece connected to the other end, the last named end extending through said yoke piece, a nut threadedly connected to said extending end a rod slidable within said piston rod and threadedly connected to the last named nut, a pair of telescoping tubes

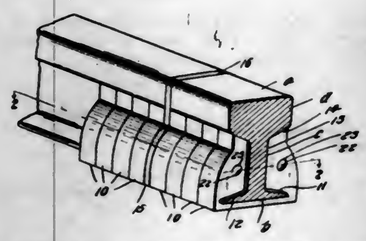
joining the lugs on the cap and the yoke, springs within said tubular members, a valve in said piston, yielding means to hold the valve in closed position, means to permit a liquid to pass through the piston in a direction opposed to said valve, means operated by the rod within the tubular piston rod for controlling the last named means, and a tubular member opening into the piston at two spaced points near one end thereof.

1,455,692. SEAM-PRESSING MACHINE. WILLIAM WILKIE, Glasgow, Scotland. Filed June 28, 1919. Serial No. 307,304. 3 Claims. (Cl. 68—9.)



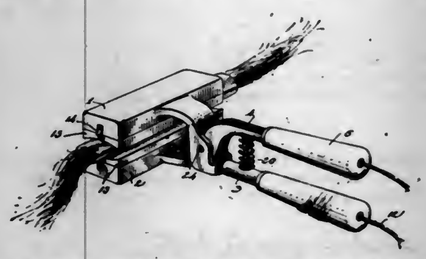
3. In a machine for opening and pressing seams of wearing apparel, the combination of a frame, an upper heated arm supported on the frame; a vertical shaft journaled at one end of the frame; a lower heated arm secured on the vertical shaft and means for drawing fabric between the heated arms comprising a clip slidable on the upper arm, a treadle journaled on the frame, and levers connecting the sliding clip to the treadle.

1,455,693. GRAIN SEPARATOR. ORA WOOD WILLIAMS, Minneapolis, Minn. Filed Dec. 8, 1921. Serial No. 521,002. 8 Claims. (Cl. 130—18.)



1. A separating surface formed with pockets having centrally depending discharge throats that downwardly decrease in depth.

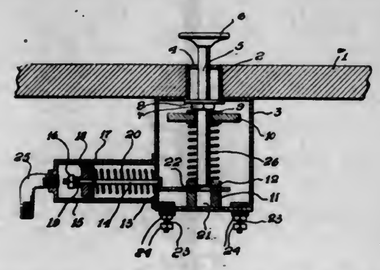
1,455,694. CAR-DOOR-LOCKING DEVICE. WILLIAM E. WINE, Toledo, Ohio. Filed Jan. 12, 1922. Serial No. 528,651. 12 Claims. (Cl. 105—308.)



1. In a door device for railway cars, a door hinged to the car body, a door supporting mechanism embodying means for supporting said door in partially closed position and additional means for holding it in fully closed position, a bracket affixed to the car body and providing a fulcrum adjacent an edge of the door, and a lever seat carried by said door, said fulcrum forming a seat adapted to receive a lever for forcing the door from a partially closed position to a fully closed position.

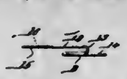
1,455,695. RAIL JOINT. JOSEPH WOLL, McKeesport, Pa. Filed Sept. 28, 1922. Serial No. 591,099. 6 Claims. (Cl. 238—205.)

1. A rail joint comprising means recessed to seat a rail, an anchoring plate for disposition intermediate adjacent ends of the rails, and means to secure said plate to the first mentioned means.



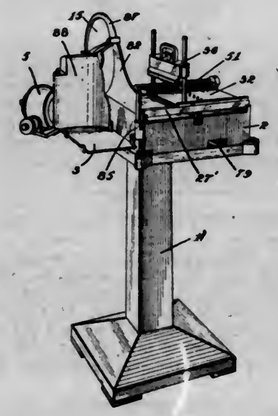
1,455,696. ELECTRIC OVEN FOR HAIR. ALICE M. WRIGHT, Detroit, Mich. Filed Sept. 28, 1922. Serial No. 591,051. 5 Claims. (Cl. 219—24.)

1. A heater comprising two sections having handle portions crossing each other and pivotally secured together, a heating element mounted within each section, and a heating plate detachably secured upon each of the opposing surfaces of said sections.



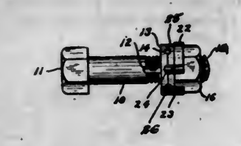
1,455,697. LOCKING DEVICE FOR AUTOMOBILE STARTERS. LAURIE W. YONCE, Jacksonville, Fla. Filed June 22, 1922. Serial No. 570,078. 7 Claims. (Cl. 74—81.)

7. A pedal locking device of the character described, comprising a casing secured to the lower face of an automobile flooring, a spindle fitted within said casing, a locking member secured within the casing and formed with a transverse slot therethrough, a locking plate fitted within the said member, a cylinder mounted on the outer face of the casing, a pressure pipe connected to the outer end of said cylinder, a piston rod connected to



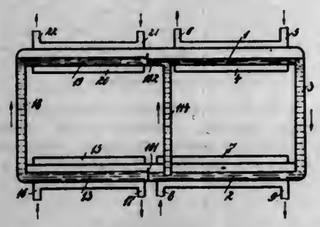
the locking plate, an expansible piston mounted on said rod, a piston expander mounted on the rod, a nut fitted to the outer end of said rod, a coiled spring mounted on the rod between said nut and expander, a spring surrounding the rod between the piston and said casing, and pressure means within said cylinder adapted to impart a reciprocal movement to said locking plate.

1,455,698. HOOK AND EYE. JOHN J. ABRAHAMS, Grand Rapids, Mich. Filed Jan. 16, 1922. Serial No. 529,602. 1 Claim. (Cl. 24—225.)



As a new article of manufacture, a hook formed from a single piece of material, an enlarged apertured end portion, and a tongue forming a continuation of the bill of the hook and projecting therefrom in a reversed direction for the purpose specified.

1,455,699. MEAT-SLICING MACHINE. FRED ADAM, Ford, and NAPOLEON L. ADAM, Sudbury, Ontario, Canada. Filed Oct. 6, 1922. Serial No. 592,784. 3 Claims. (Cl. 17—102.)



1. A meat slicer comprising a casing, a blade mounted at one end thereof a carriage slidable on the casing along the plane of the blade, a supporting plate mounted on the carriage and slidable to and from the blade, a worm supported by the carriage, a nut fixed to the plate and engaging the worm, a ratchet at one end of the worm, said ratchet including a downwardly extending finger, a pair of stop members in the path of said finger, parallel racks connected to said stop members, and a pinion in engagement with said racks.

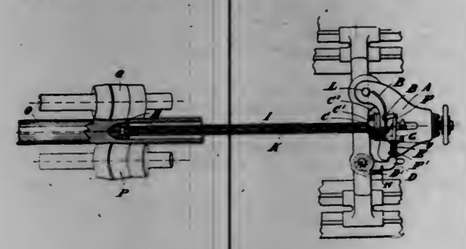
1,455,700. NUT LOCK. ROBERT B. ADAMS, Kempton, Pa. Filed July 8, 1921. Serial No. 483,329. 1 Claim. (Cl. 151—6.)

The combination with a bolt provided with threads and with a longitudinal slot of a washer provided with notches on one face thereof and provided with an inwardly extending lug entering the aforesaid slot, a second washer provided with notches adapted for registration with those first named, said second washer including a projecting element on one face thereof, and a nut having threads for engaging the threads in the bolt and provided with a notch on one face thereof, the notch being proportioned for receiving the projecting element on the second washer, an annular resilient element proportioned to surround the nut, and including an engaging device having an annular portion adapted to project into registering apertures of the second washer and the aforesaid washer.

1,455,701. REFRIGERATING APPARATUS OF THE ABSORPTION TYPE. EDMUND ALTENKIRCH, Fredersdorf, near Alt-Landsberg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Aug. 14, 1922. Serial No. 581,775. 1 Claim. (Cl. 62—119.)

In a refrigerating apparatus of the absorption type the combination of a boiler for containing an absorption liquid and heating means for disengaging a vapor from the absorption liquid, an absorber for containing an absorption liquid and a vapor to be absorbed, an uninterrupted conduit interposed between the absorber and the boiler and adapted to convey the absorption liquid from the absorber to the boiler and means for maintaining a pressure difference between the boiler and the absorber, said means including a hydrostatic column of liquid in said conduit.

1,455,702. OPENER. JAMES BARR, Beaver, Pa. Filed Apr. 4, 1922. Serial No. 549,495. 2 Claims. (Cl. 220—43.)



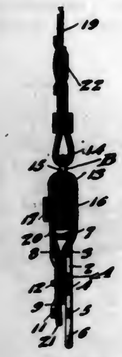
1. In combination with a box including a bottom member and a cover member fitting over said bottom member, the bottom member being provided with an outer annular flange and the cover member having an outer

annular flange spaced above the flange of the bottom member, a ring fitting about the box between said flanges and provided at each end with an outwardly projecting

pressure receiving element, and a loop fitting about said elements so as to positively limit movement of the same away from each other.

1,455,703. PROCESS AND DEVICE FOR PRODUCING HOLLOW BLOCKS FOR MANUFACTURING SEAMLESS TUBES. THEODOR BECKER, Dusseldorf, Germany. Filed Jan. 30, 1923. Serial No. 615,907. 7 Claims. (Cl. 80—13.)

1. The herein described process of producing hollow metal bodies, which consists in rolling a hot metal block or ingot over a piercing mandrel carried by a hollow mandrel rod having the end thereof remote from the mandrel secured in a fixed position, causing the passage of water through said hollow rod to the interior of the mandrel and thence out, during the rolling and piercing operation, then stopping the flow of water and releasing the fixed end of the mandrel rod and moving the fixing means into position to permit the hollow body to be drawn off the mandrel rod in the direction of its axis.



1,455,704. FRICTION DRIVING GEAR FOR MOTOR VEHICLES, MOTOR BOATS, AND AIRCRAFT. ROBERT BLAKOE, London, England. Filed July 17, 1919. Serial No. 311,597. 2 Claims. (Cl. 74—26.)

1. In friction change-speed gear, the combination of a driving shaft; a rotatable driving friction disk; means whereby the disk is driven by the shaft at a point distant from its center; an axle; a driven friction disk splined on the axle and engaging the driving disk, and a reverse driven friction disk also splined on the axle.

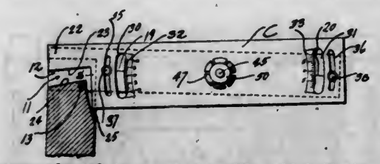
1,455,705. HARNESS TRACE SUPPORT AND ASSEMBLY. PHILIP BOSTROM, Gooding, Idaho. Filed Aug. 26, 1922. Serial No. 584,467. 10 Claims. (Cl. 54—54.)

6. In combination, with a harness including a belly-band billet strap looped to support a trace and portions to support the loop, a buckle having a transverse spreader bar fitted between the ends of said strap to present the bar adjacent the lower edge of the trace and provided with cross-bars engaging the ends of the strap to retain its looped form, and a supporting loop carried by the sup-

porting portions of the harness fitted in the bight of the billet strap and provided with a spreader bar disposed adjacent the upper edge of the trace.

1,455,706. COARSE-PITCH SPIRAL-BEVEL GEAR. FERDINAND A. BOWER and BENTON CATALINE, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 23, 1919. Serial No. 332,798. 4 Claims. (Cl. 74—41.)

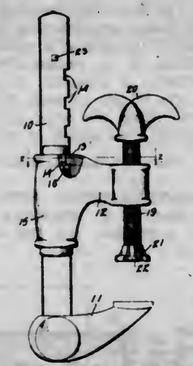
1. A curved tooth bevel gear set comprising a driving pinion having less than 10 teeth and a driven gear continuously meshing therewith, capable of transmitting the driving torque of a motor vehicle when properly constrained to resist motion with respect to each other in other than a circular direction.



1,455,707. RECOVERY OF ETHER. JEAN HENRY BRÉGEAT, Paris, France, assignor to Bregeat Corporation of America, Wilmington, Del., a Corporation of Delaware. Filed Aug. 27, 1921. Serial No. 495,962. 7 Claims. (Cl. 260—151.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

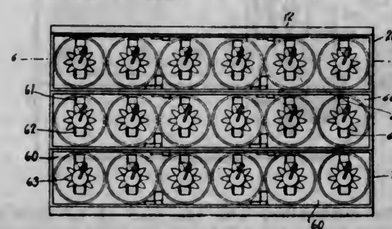
1. A process which comprises bringing a gas containing vapor of ether and alcohol into contact with a sulfonic acid liquid, and thereafter recovering ether from said liquid.

1,455,708. PROTRACTING SQUARE. MILO BROWN, Anderson, Ind. Filed Jan. 6, 1921. Serial No. 435,437. 4 Claims. (Cl. 33—93.)



1. In a protractor, the combination of a stock, a blade rigidly mounted upon said stock and having an indicator

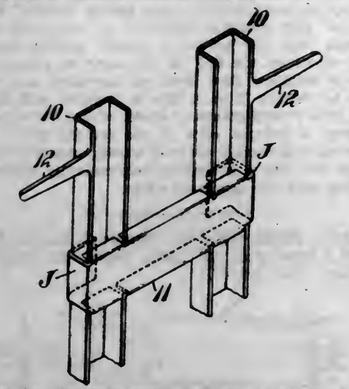
mark thereon, a second blade relatively wider than said rigidly mounted blade, detachable means pivotally mounting said wider blade upon said rigidly monted blade, and centrally thereof, said wider blade having gradulations



thereon adapted to cooperate with said indicator mark upon the rigid blade for indicating the angle between the two blades, and guiding means for limiting movement of said pivoted blade.

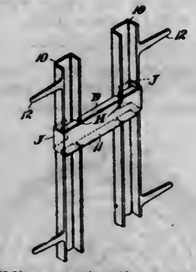
1,455,709. CLAMP. RALPH BURBANK, Memphis, Tenn. Filed Dec. 20, 1921. Serial No. 523,725. 3 Claims. (Cl. 144—303.)

1. A clamp comprising a shank having notches, fixed and movable jaws thereon, said movable jaw having a tooth engageable selectively with said notches and the jaw being mounted for sidewise oscillation on the shank to move said tooth into and out of engagement with said notches, substantially as set forth.



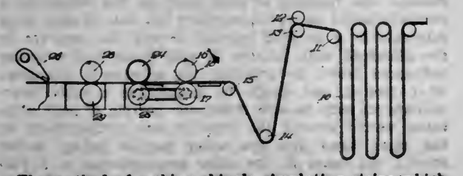
1,455,710. CALCULATING MACHINE. CHENG WEN CHIH, Canton, China. Filed Jan. 31, 1920. Serial No. 355,469. 5 Claims. (Cl. 235—74.)

1. In a device of the class described, a series of rotatable disks, each disk bearing an outer series of numerals and a second series of numerals reading in the opposite direction, and interengaging devices longitudinally movable and acting to permit one numeral of either series to be exposed on each disk, to the exclusion of all other numerals on the same disk.



1,455,711. FRAME CONSTRUCTION FOR FIREPROOF WALLS OR PARTITIONS. CORNELIUS COLLINS, Burlingame, Calif. Filed Nov. 24, 1920. Serial No. 426,189. 3 Claims. (Cl. 72—112.)

1. A frame construction for walls or partitions, comprising a series of channel bar supporting elements, each having on the outer edge of one of its flanges a series of integral prongs adapted to the bent in any direction at right angles to the longitudinal axis of the bar to form



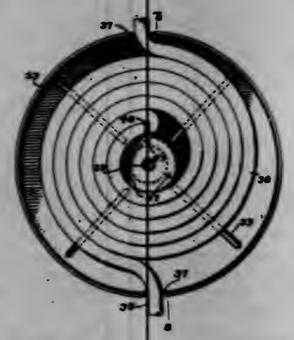
fasteners for plaster-receiving members, each prong comprising a straight projection having its side faces parallel with the longitudinal axis of the bar.

1,455,712. FRAME CONSTRUCTION FOR FIREPROOF WALLS OR PARTITIONS. CORNELIUS COLLINS, Los Angeles, Calif. Original application filed Nov. 24, 1920, Serial No. 426,189. Divided and this application filed Dec. 28, 1921. Serial No. 525,299. 2 Claims. (Cl. 72—115.)

1. In a building construction, a supporting element comprising a series of channel bars arranged in parallel relation, a clip having flanges adapted to fit transversely between the flanges of the channels, a body plate forming a part of said clip with which the flanges are integrally formed, and an end extension formed as a part of said body plate and adapted to encompass the opposite outer sides of the channels whereby the clips will be held in rigid relation thereto and the channels in fixed spaced relation to each other.

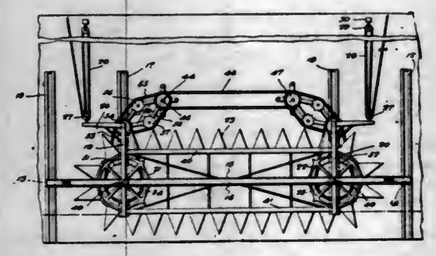
1,455,713. SHINGLE STRIP AND METHOD OF MAKING IT. DONALD A. CUMFER, Detroit, Mich. Filed Sept. 17, 1920. Serial No. 410,841. 1 Claim. (Cl. 91—67.9.)

The method of making shingle simulating strips which consists in providing an elongated sheet of roofing material comprising a base sheet having a coating of plastic



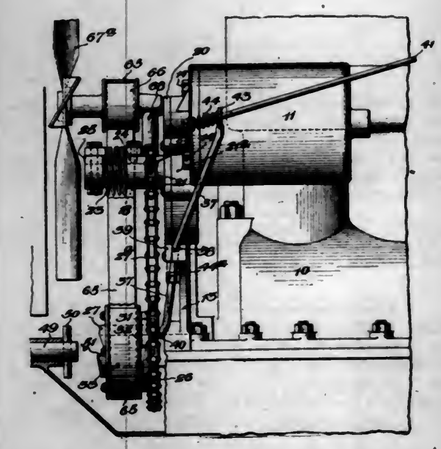
asphalt of uniform thickness and a covering of finely divided mineral substance of contrasting color; continuously moving the sheet, and while moving embedding a group narrow relatively long spaced, parallel straight areas of said mineral substance at separated regular intervals into the subjacent plastic coating until the latter shows on the face of the sheet in simulation of separate shingles, then severing the sheet into shingle strips by cutting it on a line in a plane with like terminal ends of said groups of areas, with the areas extending from a common edge of the severed strips to the transverse mid-portion thereof, leaving substantially one-half of the strips, extending longitudinally thereof, unprovided with the depressed areas.

1,455,714. DUMP WAGON. ROBERT T. DAILEY, Omaha, Nebr. Filed July 12, 1921. Serial No. 484,029. 5 Claims. (Cl. 298—7.)



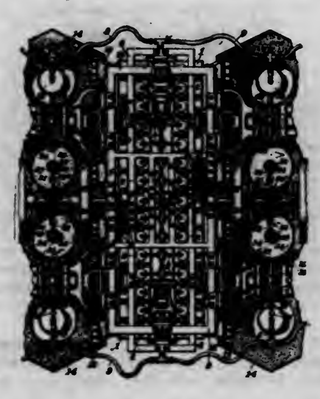
1. A dump wagon having gate leaves pivotally mounted in the sides of the body for rearward swinging movement, a chute plate hinged in the plane of the bottom of the body for disposition in horizontal extension thereof, means for locking the chute plate in an upright position in the path of rearward swinging movement of said gate leaves, and a spout pivotally monted on the chute plate and provided with means for disposing it in alignment with the space defined by the leaves when arranged in operative relation with the chute plate.

1,455,715. EXTENSION DEVICE. JOSEPH DANESE, Philadelphia, Pa. Filed Sept. 10, 1921. Serial No. 499,806. 6 Claims. (Cl. 242—109.)



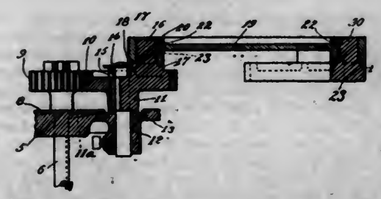
2. An extension device for cables comprising a hollow casing divided by a centrally apertured wall into parallel compartments, an axially concentric drum rotatably mounted within said casing, recoil means tending to restrain the rotation of said drum in one direction, a circumferential flange intermediate the ends of said drum rotatable in a grooved runway around the aperture in the aforesaid wall, notches in said flange and a spring influenced detent for arresting the rotation of the drum when desired, and means for connecting a cable intermediate its ends to said drum, one portion of said cable being wound around the drum in one compartment to the right hand and the other portion being wound around the drum in the other compartment in a like direction, the free ends of the cable projecting through diametrically opposed openings in the peripheral surface of said hollow casing.

1,455,716. MECHANISM FOR PROPELLING VESSELS. ELMER GEO. DARY and ARTHUR PHINEAS CLUTE, Quincy, Ill. Filed Mar. 31, 1922. Serial No. 548,456. 7 Claims. (Cl. 115—64.)



1. In a device of the class described, an endless propelling element, means for mounting the same for vertical adjustment, at the side of a vessel, and means for imparting movement to the endless element, said means last named including a plurality of pairs of sprocket wheels, one of the wheels of each pair being movable toward and away from the other wheel of that pair, and chains connecting the wheels of corresponding pairs.

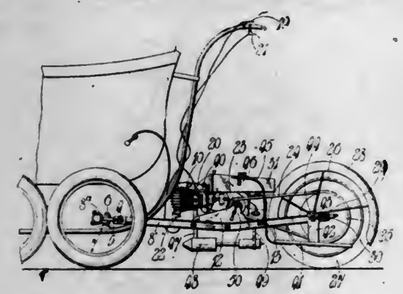
1,455,717. ENGINE-STARTING SYSTEM. JAMES K. DELANO, New York, N. Y. Filed May 11, 1918. Serial No. 233,895. 4 Claims. (Cl. 290—36.)



1. The combination, with the shaft of an internal combustion engine, and a combined fan pulley and clutch member mounted thereon, of a starting motor, and transmission means for connecting said starting motor with the engine shaft, said transmission means including a shaft having a driving connection with the motor armature, a sprocket loosely mounted thereon and movable longitudinally thereof, a second sprocket connected by a drive chain to the first sprocket and provided with clutch means, and movable to cooperate with said combined fan pulley and clutch member in connecting said motor to the engine shaft, and means connecting said first sprocket to its shaft and operative, when the motor drives, to move said sprocket along its shaft in the same direction as the clutching movement of the second sprocket.

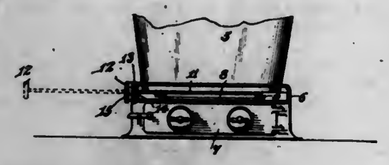
1,455,718. HYDROPNEUMATIC DEVICE. NELSON M. DELONG, Washington, D. C. Filed Dec. 16, 1921. Serial No. 522,816. 17 Claims. (Cl. 230—32.)

8. A hydropneumatic device adapted to be actuated by the force of waves including a submergible chamber having a water entrance, an outlet in said chamber for the exit air displaced by said entering water, and means to collect said air, said chamber being secured to a frame hingedly connected to a rigidly mounted second frame, and means to prevent movement between the frames, said means including a rack and pinion, and a drag on said pinion, said drag comprising a balance wheel connected through a gear train to said pinion.



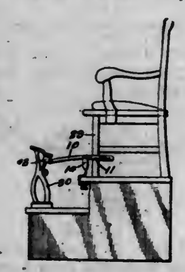
1,455,719. WASHING MACHINE. WILLIAM C. F. DIETZ, Cincinnati, Ohio, assignor to The Boss Washing Machine Company, Norwood, Ohio, a Corporation of Ohio. Filed May 19, 1922. Serial No. 562,210. 5 Claims. (Cl. 184—1.)

4. In combination, a gear, segment or the like, said gear having a depressed top, a wrist pin formed on said gear, a hub for said gear, an oil hole from the depressed face of said gear into the hub, a channel about the base of the pin, said channel having a port to the depressed surface of the gear, and means for oiling the pin, said means comprising a crank plate having a depressed surface, and a sleeve on said plate adapted to seat over the pin, and a port from the crank plate into said sleeve, for the purpose described.



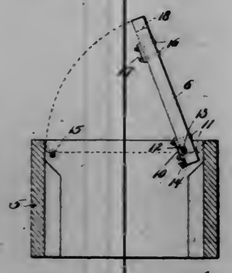
1,455,720. POWER PROPULSION OF ROAD VEHICLES. WILLIAM H. DUNKLEY, Birmingham, England. Filed Jan. 3, 1923. Serial No. 610,494. 1 Claim. (Cl. 180—11.)

A propulsion unit for road vehicles comprising a frame, an axle mounted on said frame near the rear end thereof, a road wheel mounted on the axle and arranged midway between the sides of the frame, a complete power unit mounted on said frame in advance of said axle, means at the front end of the frame for detachably connecting said unit to a vehicle so that said unit is supported at the rear end by said road wheel and at the front end by the vehicle to which the unit is connected,



foot boards on each side of the frame abreast of said road wheel, brackets attached to said frame and supporting said foot poards, and shields attached to foot boards and to an element of said power unit.

1,455,721. GRATE ATTACHMENT FOR STOVES AND FURNACES. RAY O. DURST, Bradford, Ohio. Filed Oct. 5, 1921. Serial No. 505,504. 1 Claim. (Cl. 126—170.)



In combination with a stove a portion of the body of which is depressed and provided with a slot, a grate mounted in the stove and equipped with an arm concealed completely within the latter, a rod arranged through the slot in said stove body and engaged with said grate arm, a collar formed on said rod and engageable in the depression of the stove body, a locking plate mounted on the stove body and movable across the depression of the latter to prevent disengagement of the collar therefrom.

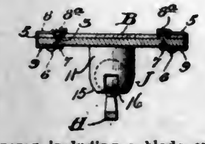
1,455,722. DRESS GUARD AND CHAIR HOLDER. ISRAEL J. EVIN, Altoona, Pa. Filed Oct. 1, 1920. Serial No. 414,109. 5 Claims. (Cl. 15—265.)

1. A clothing guard for shoe-blacking stands including the combination with a seat and a foot rest on the stand, of a support carried by the stand, a guard bar carried by the support and spanning the distance between the foot rest and the seat.

1,455,723. HYDRANT BOX AND LID. GEORGE M. HALL, deceased, late of Baird, Tex., by Alzira C. Hall, executrix, Baird, Tex. Filed Nov. 10, 1921. Serial No. 514,427. 2 Claims. (Cl. 137—13(12).)

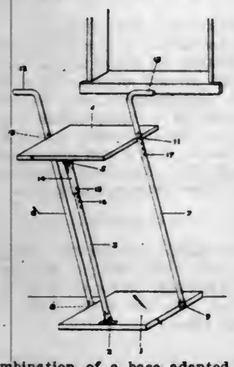
1. A hydrant box of the class specified, comprising a lid or cover, a pivot rod for the lid or cover, and a stop rod disposed vertically below the pivot rod and serving to prevent the lid or cover being opened rearwardly beyond a predetermined distance and insure an automatic gravitating closure of the lid or cover when released.

1,455,724. PHOTOGRAPHIC PLATE AND PROCESS OF UTILIZING THE SAME. ALFRED P. HANTSCH, New Brunswick, N. J. Filed July 28, 1919. Serial No. 313,689. 3 Claims. (Cl. 95—5.)



1. As a new article of manufacture, a photographic plate having a portion of its sensitized side exposed to light until no image can be photographed thereon and having imprinted on said portion certain characters by means other than light exposure, and having a portion which is sensitized for the taking of a photograph in juxtaposition to the first said portion.

1,455,725. SAFETY RAZOR. HARRY BUXTON HARTMAN, Scottdale, Pa. Filed Nov. 18, 1921. Serial No. 516,163. 7 Claims. (Cl. 30—12.)

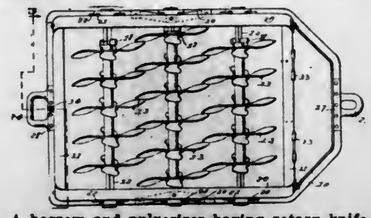


1. A safety razor including a blade carrier, a tubular housing on the carrier, a handle having a slotted end portion, a bolt pivoted in said slotted end portion and projecting into the housing, and a spring surrounding the shank of the bolt and exerting tension against a portion of the housing to yieldingly hold the same against the end of the handle.

1,455,726. SAFETY RAZOR. HARRY BUXTON HARTMAN, Scottdale, Pa. Filed May 3, 1922. Serial No. 558,165. 7 Claims. (Cl. 30—12.)

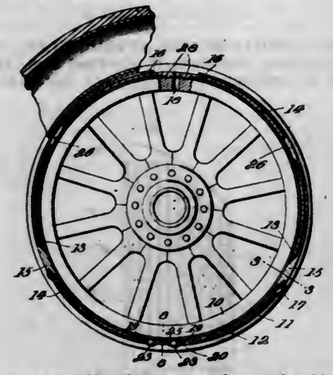
6. A safety razor including a blade carrier, a tubular socket member rigidly secured at one end to the under side of the blade carrier, and the opposite end thereof being provided with a slotted ball seat, a ball having a bearing on said seat, a spring confined between the carrier and the ball for frictionally holding the latter to its seat, and a handle fitted to the ball and adapted to register with said slot to temporarily lock the blade carrier in a set angular position to provide the desired shaving angle for the blade on the blade carrier.

1,455,727. LIFTING DEVICE. EDWARD JOSEPH HILL, Philadelphia, Pa. Filed Sept. 1, 1921. Serial No. 497,545. 5 Claims. (Cl. 214—130.)



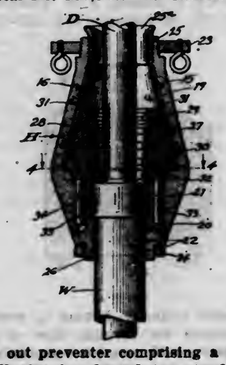
1. The combination of a base adapted to rest on the floor or the like, two tubes or rods pivoted by their lower ends to said base, one to each side; a third tube or rod pivoted by its lower end to another point of said base, which performs a function similar to the first named two tubes or rods, said third tube being provided with a series of holes along its length; a sleeve provided with a hole at its lower end to match holes in said third tube, said third tube being adapted to slip into said sleeve; a pin or bolt adapted to engage said hole in said sleeve, and one of said holes in said third tube and to lock said sleeve and said third tube together, a platform pivoted to the upper end of said sleeve and to intermediate points on the first named two tubes or rods and grips attached to said tubes or rods at their upper ends with which to raise said platform relative to said base through the medium of the three tubes or rods.

1,455,728. PROCESS FOR THE REMOVAL OF WATER FROM COLLOIDALLY-DISSOLVED SUBSTANCES SUCH AS CRUDE PEAT, COAL SLUDGE, AND THE LIKE. HEINZ HORST, Uerdingen-on-the-Rhine, Germany, assignor to Gesellschaft für Maschinelle Druckentwasserung mit beschränkter Haftung, Uerdingen-on-the-Rhine, Germany. Filed May 13, 1922. Serial No. 560,709. 7 Claims. (Cl. 44—27.)



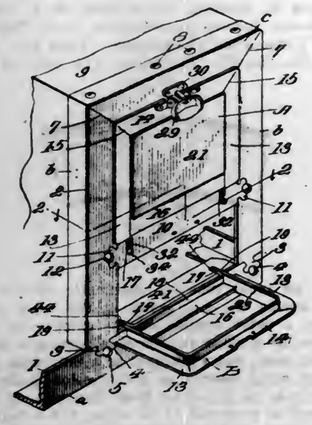
1. Process for the removal of water from colloidally dissolved substances, such as crude peat, coal sludge and the like by the admixture of additional substances of porous and non-porous character in finely divided condition the minimum fineness not to be under 0.1 mm. and in such quantity as to adsorb the colloidal substance present, whereby the water of colloidal substances is freed and may be readily expressed.

1,455,729. HARROW AND PULVERIZER. OSCAR INGMAN, Calumet, Mich. Filed Oct. 16, 1919. Serial No. 331,162. 6 Claims. (Cl. 55—11.)



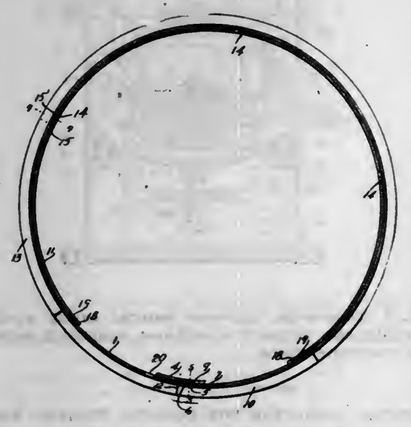
1. A harrow and pulverizer having rotary knife heads disposed in tandem relation and each consisting of a plurality of oppositely facing volute blades having the cutting edges of the blades of one head arranged in shearing relation with the cutting edges of the blades of the other head.

1,455,730. DEMOUNTABLE RIM. OSCAR L. INGRAM, Walla Walla, Wash. Filed Dec. 20, 1921. Serial No. 523,718. 3 Claims. (Cl. 301—28.)



1. In a wheel, the combination of an inflatable tire, a wheel body having pockets, a rim having holes, wedges adapted to pass through the holes in the rim and enter the pockets of the wheel body to secure the rim to the wheel body by the pressure of the air in the tire upon the wedges.

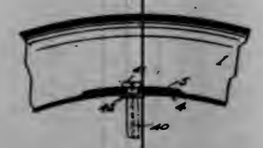
1,455,731. AUTOMATIC BLOW-OUT PREVENTER. THOMAS J. KELLY, Los Angeles, Calif. Filed Jan. 21, 1922. Serial No. 530,026. 10 Claims. (Cl. 166—14.)



1. A blow out preventer comprising a housing through which a drill pipe is adapted to extend, means for anchoring the housing, and means operating to prevent ejection of the drill pipe upwardly from the housing.

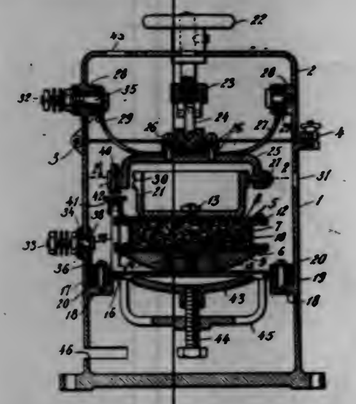
1,455,732. STOVE-DOOR FRAME AND HINGE THEREFOR. FREDERIC G. NICOLAUS and JOSEPH ROY, Cleveland, Ohio, assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 21, 1921. Serial No. 523,890. 23 Claims. (Cl. 126—100.)

1. A door frame composed of an L-shaped strip bent to form a U-shaped frame, the end of the U closed by an additional L-shaped strip, one leg of the L strips extending inwardly, the inwardly extending legs of the frame longer than its other legs, and extending below the bottom of the frame, for the purpose described.



1,455,733. DEMOUNTABLE RIM. JOHN G. REED, Orwigsburg, Pa. Filed Nov. 30, 1921. Serial No. 518,869. 2 Claims. (Cl. 301—25.)

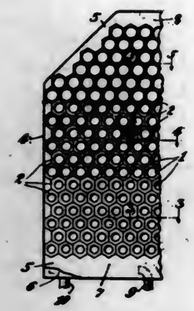
1. In a demountable rim, the combination with a split base ring provided with tire flanges, one of said flanges being cut away throughout the major portion of its length, of a detachable member secured to said ring, a supplemental flange carried thereby forming a continuation of said broken away flange, said detachable member comprising an arcuate strip secured to the inner face of the ring, and provided with openings, and securing de-



vices mounted to rotate in said ring, movable through said openings and selectively engageable with said arcuate member to secure the supplemental flange against transverse and circumferential movement.

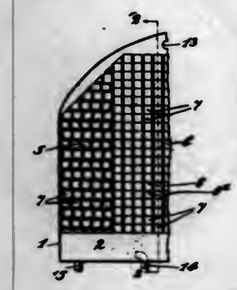
1,455,734. INNER TUBE FOR AUTOMOBILE TIRES. WILLIAM E. ROBERTS, Little Falls, N. J., assignor to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 26, 1921. Serial No. 495,488. 11 Claims. (Cl. 152—13.)

10. In an inner tube for pneumatic tires, a tubular member having its only seams at the inner and outer periphery, a patch applied on the exterior of the completed tubular member and across a portion of said inner peripheral seam, and vulcanized as a unit with the tube, said patch being inserted in a depression in the wall of said article so as to extend flush therewith on its outer surface and be protected at its edges, and a valve nipple extending through the reinforced portion of the tube.



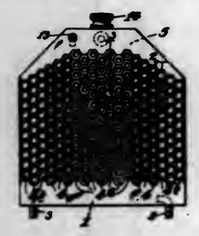
1,455,735. RHEOSTAT. FLORICEL A. ROJAS, New York, N. Y. Filed Mar. 23, 1922. Serial No. 546,149. 43 Claims. (Cl. 219—51.)

1. A compressible resistance material having a substantially zero temperature coefficient, comprising carbon and conductive silicon.



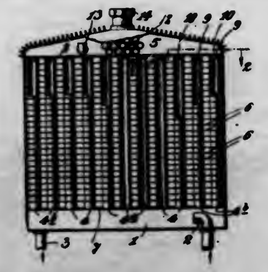
1,455,736. RADIATOR FOR COOLING FLUIDS. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Sept. 13, 1921. Serial No. 500,381. 4 Claims. (Cl. 257—25.)

1. An up-flow condenser comprising an air cooled radiator of the automobile type having upper and lower chambers; means for discharging boiling water or steam into said lower chamber and withdrawing water therefrom; and an intermediate "core" or "honeycomb" embodying a multiplicity of transverse passages for flow of the cooling air, the walls defining said passages being spaced apart to afford interspaces for flow of fluid medium to be cooled therein, said air passages at different levels being of progressively larger flow section from bottom to top



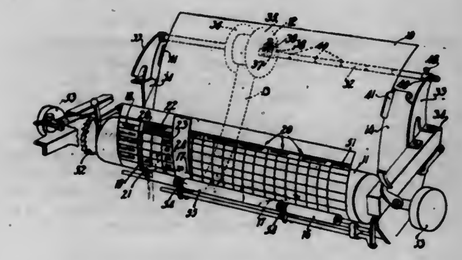
of the radiator and the interstices for up-flow of steam being of progressively less flow section from bottom to top of the radiator.

1,455,737. RADIATOR FOR AUTOMOBILES. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Sept. 13, 1921. Serial No. 500,382. 5 Claims. (Cl. 257—130.)



1. An air cooled radiator having low resistance flow paths for the cooling fluid over the central portions of the area of the honeycomb and higher individual flow resistance for each of the paths at the side portions of said area.

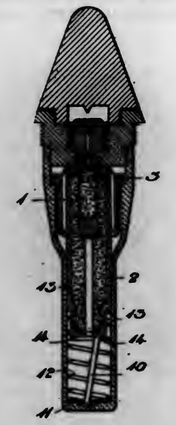
1,455,738. RADIATOR FOR COOLING FLUIDS. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Dec. 6, 1921. Serial No. 520,209. 9 Claims. (Cl. 257—25.)



1. An air cooled radiator having a multiplicity of front-to-rear passages for through flow of the cooling air, the walls defining said passages being spaced apart to afford interspaces for flow of fluid medium to be cooled therein, said air passages being of larger flow section for the sides than for the central portions of the radiator.

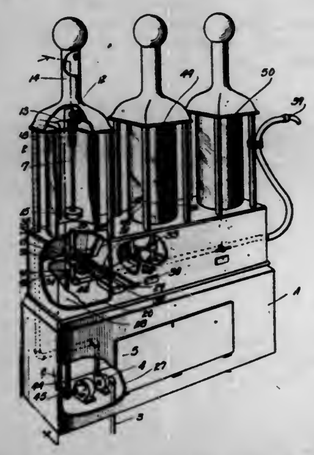
1,455,739. RADIATOR FOR COOLING FLUIDS. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Dec. 6, 1921. Serial No. 520,210. 17 Claims. (Cl. 257—125.)

1. A radiator embodying separate interior passages for up-flow of steam or vapor to be condensed; means including a cross communication between the lower portion of said passages for up-flow supply of steam or vapor to said passages, some of the flow paths normally having greater cooling capacity than others; portions of the flow section which have less condensing capacity being arranged to have less flow capacity than those having greater condensing capacity.



1,455,740. LEDGER SHEET. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 20, 1921. Serial No. 478,799. 2 Claims. (Cl. 281—5.)

1. The combination with a "Boston" ledger-sheet having day columns, each including subsidiary columns for transactions and daily balances, of means to enable the use of said sheet in a combined typewriting and computing machine in which computation of a transaction for any day involves the typing of the previous balance and the running of the same into the register, without the provision on the ledger-sheet of a separate "pick-up" column for each day in which to type the previous balances, said means comprising a temporary pick-up strip of suitable width, usable for each of a plurality of days, whereby, in picking up a previous balance preparatory to entering a debit or credit item for the day, the previous balance may be typed on said temporary "pick-up" strip placed in a suitable position overlying said ledger-sheet.

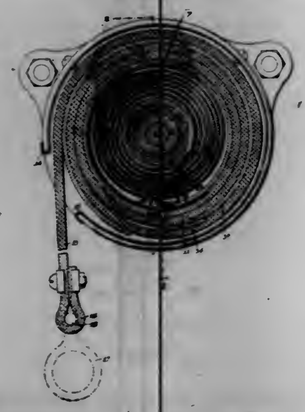


1,455,741. FUSE. ERNST JOHAN TORSTEN WENNERSTRÖM, Bofors, Sweden, assignor to Aktiebolaget Bofors, Bofors, Sweden, a Limited Company. Filed June 9, 1922. Serial No. 566,927. 2 Claims. (Cl. 102—39.)

1. A fuse, comprising a pair of firing members one movable relatively to the other for exploding a charge, said members initially occupying a safety position relative to each other, means releasable under the force of intertia for bringing said members into firing position, and an axially extending bolt housed within one of said members when in safety position, said bolt being adapted

to be withdrawn from said member and abut the rear end thereof when the members are in firing position thereby to prevent the return of the members to safety position.

1,455,742. LIQUID-VENDING MACHINE. FRANK C. BATES, Kansas City, Mo. Filed Nov. 25, 1921. Serial No. 517,448. 4 Claims. (Cl. 221—100.)



1. A fluid dispensing device comprising a reservoir, means for introducing fluid into the reservoir, a discharge pipe leading from the bottom of the reservoir, a valve in the pipe having a stem provided with a pinion, a spring-retractible rack bar engageable with said pinion, means for operating the rack bar in opposition to the spring, a pawl to normally hold the rack in extended position, and means for moving the pawl out of engagement with the rack.

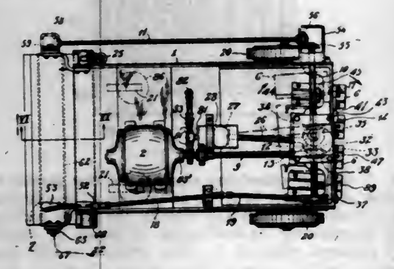
1,455,743. SHOCK ABSORBER. DENNIS B. D. BLAKE, Quincy, Ill. Filed Feb. 9, 1921. Serial No. 443,606. 3 Claims. (Cl. 264—10.)

1. A shock absorber comprising a casing adapted to be applied to the body of an automobile, a coiled band within said casing, one end of said band adapted to be attached to the chassis of the automobile, resilient means

within the casing and connected to said band to apply constant tension thereto as the body and the chassis move relative to each other, and a metallic friction strip disposed between and along adjacent convolutions of said

band, said strip fastened at one end rigidly to said casing, the other end of said strip being free whereby friction is produced between the strip and the convolutions of the band when the band moves in one direction with respect to the casing.

1,455,744. INSULATING TAPE. HARRY I. DIAMOND, Atlanta, Ga. Filed Sept. 26, 1921. Serial No. 503,415. 6 Claims. (Cl. 154—43.)

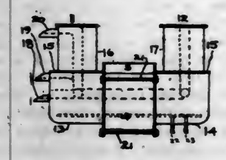


4. A tape having as practically inseparable constituent layers a fabric strip, a soft layer of material both highly adhesive, and highly insulating directly engaging one face of the strip, and a relatively hard, less adhesive insulating layer directly engaging the opposite face of said strip, and a tough, pliable layer slightly adherent to one of the faces; said adhesive layers filling the interstices of the fabric and engaging each other and with the fabric strip forming a unitary ribbon-like solid free from void spaces.

1,455,745. DIAPHRAGM FOR DICTAPHONES, ETC. HENRY C EGERTON, Ridgewood, N. J. Filed May 9, 1919. Serial No. 296,016. 11 Claims. (Cl. 181—32.)

10. The diaphragm for acoustic instruments formed of fabric carrying cementing material, said diaphragm having a relatively flexible edge portion and a substantially projecting conoidal stiffened vibrating portion and a stylus adhesively secured to said diaphragm adjacent the tip of said vibrating portion of the diaphragm.

1,455,746. SCRUBBING MACHINE. QUINTO FAUSTINI, Cleveland, Ohio. Filed Jan. 26, 1921. Serial No. 440,076. 10 Claims. (Cl. 15—52.)

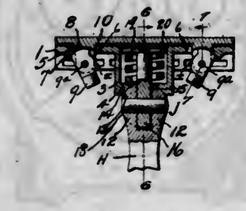


1. A scrubbing machine of the character described, comprising a main frame provided with wheels; a motor mounted therein; a longitudinal driving shaft connected with said motor; a transverse shaft supported at the front portion of the machine actuated by said driving shaft; an eccentric connected with said transverse shaft; an eccentric strap fitted to the eccentric; scrubbing devices; and means connected with said strap adapted to actuate said scrubbing devices in unison.

1,455,747. ELECTRIC PROCESS OF CONTINUOUSLY HEATING METAL. ALBERT E. GREENE, Seattle, Wash., and WILLIAM B. RUNYAN, Dayton, Ohio. Filed Apr. 22, 1920. Serial No. 375,785. 2 Claims. (Cl. 204—64.)

2. The process of treating metal in an electric furnace which consists in forming a secondary circuit of molten metal around a magnetic core, inducing current in said secondary circuit by means of said core, and causing the metal to flow continuously into said circuit and out at a different point heating the metal meantime.

1,455,748. ELECTRIC INDUCTION FURNACE. ALBERT E. GREENE, Seattle, Wash. Filed Feb. 24, 1920. Serial No. 360,934. 19 Claims. (Cl. 204—64.)

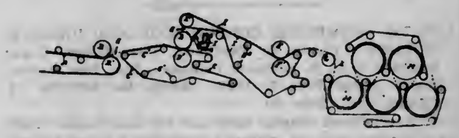


1. An electric induction furnace comprising a primary winding, an endless channel in refractory material to contain molten metal and form the secondary circuit of the induction furnace, an auxiliary channel leading down into said first named channel for pouring molten metal into said endless channel, and another auxiliary channel in refractory material leading upwardly from said endless channel at another point thereof for the exit of metal, whereby an increased head of metal may be maintained on the metal in the endless channel while heating the metal therein.

1,455,749. COTTON BALE AND MATERIAL AND METHOD FOR RENDERING THE SAME PROOF AGAINST FIRE AND COUNTRY DAMAGE. HENRY V. HALEY, Oklahoma, Okla., assignor to International Cotton Protecting Company, Dover, Del., a Corporation of Delaware. Filed Dec. 4, 1920. Serial No. 428,279. 13 Claims. (Cl. 23—5.)

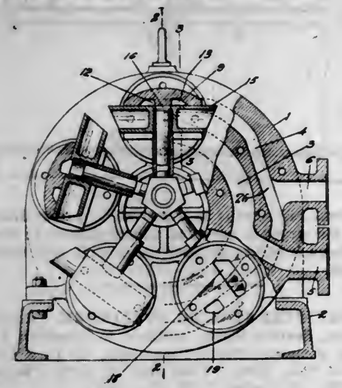
11. A paste for producing a solution for superficially and permanently impregnating cotton bales comprising 66⅔ per cent of boric acid containing a trace of sulfuric acid, 0.5 per cent of zinc and stannous sulfates and water.

1,455,750. SAFETY RAZOR. HARRY BUXTON HARTMAN, Scottdale, Pa. Filed Dec. 13, 1921. Serial No. 522,134. 7 Claims. (Cl. 30—12.)



1. A safety razor including a blade carrier having openings, a blade clamping member, jointed cam elements projecting from and carried by the blade clamp and adapted to enter said openings in the carrier, and the ends of said cam elements being adapted to be shifted to engage with the carrier to lock the clamp thereto.

1,455,751. SAFETY RAZOR. HARRY BUXTON HARTMAN, Scottdale, Pa. Filed July 6, 1922. Serial No. 573,120. 6 Claims. (Cl. 30—12.)



1. A safety razor including a blade carrier and a handle and a spring tensioned universal joint connecting the same, said joint comprising a socket member, means for connecting the socket member to the blade carrier whereby the latter may have a relatively rotational movement on the socket member, and a ball carried by the handle and seated within the socket.

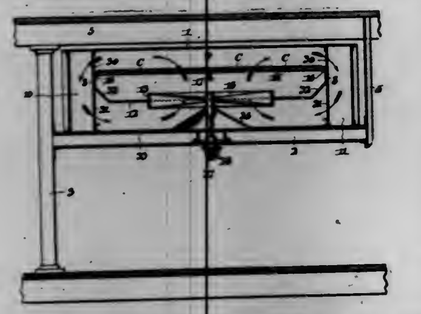
1,455,752. PROCESS OF MANUFACTURING WATER-MARKED PAPER. WILLIAM S. LUCEY, Erie, Pa., assignor to Hammermill Paper Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 23, 1921. Serial No. 479,897. 3 Claims. (Cl. 92—48.)

1. The improvement in the art of making watermarked paper, consisting in thinning out the paper web along the lines of a desired watermark by the displacement of fibers while the web is still wet and soft, but after it has passed the couch roll, and afterwards submitting the wet web to such pressure as will move part of the displaced fibers back into the depressions formed by the watermark before drying the same.

1,455,753. HYDRAULIC PUMP OR MOTOR. WALDEMAR F. MAYER, Philadelphia, Pa., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Nov. 12, 1919. Serial No. 337,421. 5 Claims. (Cl. 121—52.)

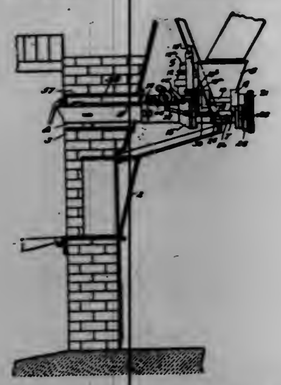
1. A fluid gear comprising cross-heads mounted for reciprocation and serving as valves, a cylinder removably connected to each cross-head, a plunger operative in each cylinder, and means for inducing a movement of the plungers to compel a valve serving movement of the cross-heads.

1,455,754. CLIP FOR FASTENING COVERS TO SEAT FRAMES AND THE LIKE. CHARLES P. TRIMBLE, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 5, 1922. Serial No. 586,223. 5 Claims. (Cl. 155—180.)



1. A clip for fastening covers to seat frames and the like comprising a sheet metal member having near its extremities oppositely disposed imperforate offset portions and having a substantially centrally located protuberance, whereby when the ends of the clip are bent toward each other the protuberance formed by one offset portion will register with the recess formed by the other and the centrally located protuberance will extend outwardly from the face of the clip.

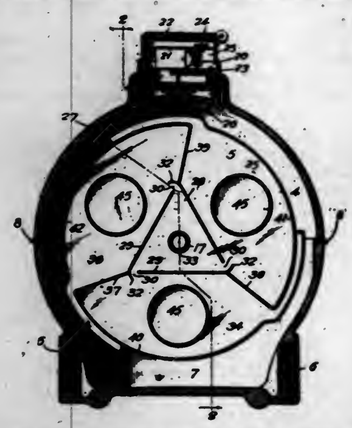
1,455,755. CARPET-DRYING MACHINE. THOMAS ALLSOP and WALTER W. SINSON, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1919. Serial No. 315,123. 10 Claims. (Cl. 34—48.)



9. A carpet drying machine comprising an enclosure divided by transverse partitions into a series of sequential chambers; means for progressing the carpet through the

machine; a group of fans for each chamber mounted to rotate about vertical axes and disposed at intervals in said chamber, said fans being adapted to circulate the air over lateral courses therein; and means for driving

the several fan groups in relatively opposite directions, so that the carpet is subjected to impingement in alternate reversals as it passes successively through said sequential chambers.



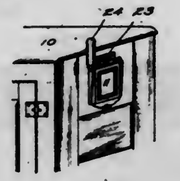
1,455,756. FUEL-STOKING STRUCTURE. EUGENE L. BARNES, Seattle, Wash., assignor to American District Steam Company, North Tonawanda, N. Y., a Corporation of New York. Filed Apr. 7, 1919. Serial No. 287,998. 23 Claims. (Cl. 110—105.)

1. An automatic fuel-stoking structure including a hopper, a conduit member communicating therewith and provided with a fuel-receiving chamber, a conveyor for carrying fuel from the hopper to the chamber, a blast-device communicating with the chamber, a fuel-distributor juxtaposed to the conduit member, and mechanism for operating it in timed relation to the action of the conveyor, for effecting a discharge and distribution of fuel from the chamber to progressively varying positions outside of the same.

1,455,757. LIQUID-MEASURING STRUCTURE. EUGENE L. BARNES, Buffalo, N. Y., assignor to American District Steam Company, North Tonawanda, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,607. 22 Claims. (Cl. 73—37.)

1. A structure for metering water of condensation and the like, including a fluid-operated rotor device comprising a central liquid distributing compartment having a plurality of walls angularly arranged in relation to each other and arranged to be overbalanced and rotated by accumulating liquid, said compartment having a series of discharge openings adjacent the extremities of the walls; a series of liquid-receiving compartments disposed about the central compartment, of odd number, and each having one of its walls formed by the angular wall of the central compartment and having, also, an outside

wall and angular inside walls; a baffle formed on each of the angular walls of the central compartment and extending into the adjacent compartment to provide a liquid-receiver; means forming liquid-discharging channels extending out of the receiving-compartments; and a liquid-inlet extending into the central compartment.

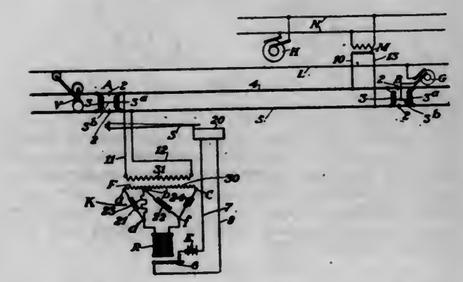


1,455,758. TURNBUTTON FASTENER. DAVID BOURQUE, Amesbury, Mass., assignor to G. W. J. Murphy Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Apr. 13, 1921. Serial No. 460,862. 2 Claims. (Cl. 24—221.)

1. A turnbutton fastener comprising a sheet metal base having an aperture therein surrounded by an inwardly extending flange, a head, a spring in the head and a member connected to the spring, extending through the aperture and having a bearing on the end of the flange.

1,455,759. COMBINED COUPON-BOOK AND ICE-PICK HOLDER. CLAUS E. ERICKSON, Des Moines, Iowa, assignor to C. E. Erickson Company, Inc., Des Moines, Iowa. Filed June 5, 1922. Serial No. 566,070. 2 Claims. (Cl. 248—20.)

1. A combined coupon book and ice pick holder made of a single sheet of material comprising a main body portion having walls formed on its sides at substantially right angles to the body portion for forming a coupon book holder, the free edge of the side walls being bent so that each causes to be formed a conical pocket adjacent to the side of the coupon book pocket for receiving an ice pick, tabs formed from the material of said conical pockets and arranged flush with the back side thereof, said tabs being provided with openings for receiving sup-

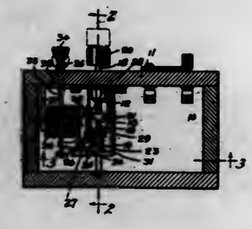


porting members and a tab formed near the lower end of the body portion midway between its sides and provided with an opening for receiving a supporting member.

1,455,760. INSULATING HANDLE FOR SAUCEPANS OR OTHER KITCHEN UTENSILS. PIERRE ARMENGAUD, Courbevoie, France. Filed Feb. 3, 1921. Serial No. 442,144. 3 Claims. (Cl. 16—116.)

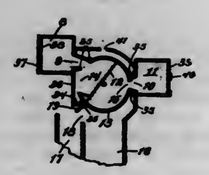
1. An insulating handle for saucepans or other kitchen utensils, comprising a metal shank having an opening near its free end, an insulating sleeve, and means engaging said opening for locking the insulating sleeve relatively to the metal shank.

1,455,761. RAILWAY SIGNALING. JOHN S. HOLLIDAY, New York, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed July 12, 1916, Serial No. 108,770. Divided and this application filed Oct. 11, 1920. Serial No. 416,263. 9 Claims. (Cl. 246—37.)



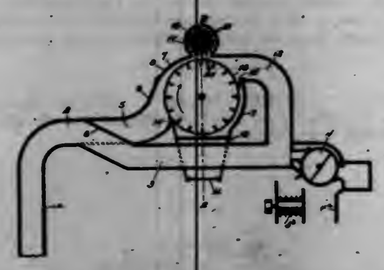
4. In combination, the track rails of a railway in which signaling current and propulsion current differing in frequency may flow at times, a current carrying device receiving energy from said rails, two current delivery terminals, means interposed between said device and said terminals for causing both terminals to be at substantially the same potential for the propulsion current but not for the signaling current, a relay connected with said terminals, and a signal controlled by said relay.

1,455,762. PROCESS OF RECOVERING CORK AND OTHER PRODUCTS FROM BARK. GUY C. HOWARD, Seattle, Wash. Filed Nov. 10, 1921, Serial No. 514,209. Renewed Feb. 3, 1923. 3 Claims. (Cl. 83—75.)



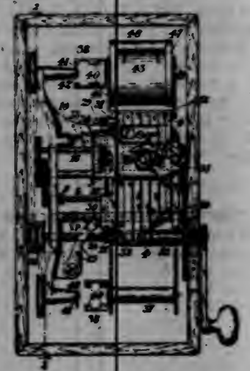
1. A process of treating bark containing cork, consisting in crushing the bar, drying the bark, subjecting the dry, crushed bark to repeated grinding and screening operations until the adhering fibrous matter is removed.

1,455,763. SWITCH. GEORGE C. WERNER, Brooklyn, N. Y. Filed Dec. 10, 1920. Serial No. 429,670. 2 Claims. (Cl. 200—106.)



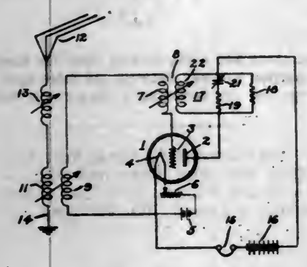
2. A switch comprising two pairs of contact elements, common circuit closing members manually shiftable to engage and bridge one pair of elements, a pivoted latch to engage with the member for retaining it in engagement with said pair of contacts, electromagnetic means for releasing the latch, means for moving the circuit closing member to normal position in contact with the other pair of contact elements, and a pivoted, manually operated lever normally disposed adjacent the latch member, said lever being independent of the electromagnetic means and adapted when operated to attract the latch member, said lever providing separate means whereby the latch may be released independently of the action of the electromagnetic means.

1,455,764. PNEUMATIC ELEVATOR FOR ELEVATING SEED COTTON FOR GINS. CHARLES ROBERT WOOD, Memphis, Tenn., assignor of one-fourth to W. E. Moss and one-fourth to B. C. Goodrich, both of Memphis, Tenn. Filed May 13, 1919. Serial No. 296,851. 14 Claims. (Cl. 19—73.)



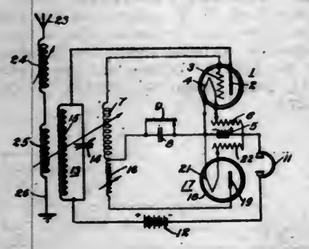
2. A pneumatic elevator for cotton gins, comprising a tube for elevating the cotton, a suction tube, means for creating a suction therein, a valve interposed between the elevating tube and suction tube to alternately establish and close draft communication therethrough and receive the cotton from the elevating tube, a delivery chute into which the valve discharges its collected cotton, means for automatically removing the surplus cotton as deposited when the chute is filled, and suction means for subsequently re-introducing the overflow cotton into the elevator.

1,455,765. COTTON CLEANER AND BOLL CRUSHER. CHARLES ROBERT WOOD, Memphis, Tenn., assignor of one-fourth to W. E. Moss and one-fourth to B. C. Goodrich, both of Memphis, Tenn. Filed Apr. 6, 1921. Serial No. 459,034. 10 Claims. (Cl. 19—38.)



1. Cotton cleaning apparatus comprising a casing, an inlet duct communicating with the casing at one side thereof, an outlet duct communicating with the casing at the opposite side and at the top thereof, a screen drum journaled in the casing, a hood mounted upon the casing and a breaker member journaled for rotation in the hood.

1,455,766. CINEMATOGRAPH APPARATUS. FREDERICK WILLIAM PORTASS, Sheffield, England, assignor of one-third to Charles Portass and one-third to Stanley Moore Portass, both of Sheffield, England. Filed Jan. 6, 1920. Serial No. 349,701. 14 Claims. (Cl. 88—16.)



1. In cinematograph apparatus the combination of a frame, a laterally movable film carrier mounted thereon, means for moving it laterally by intermittent steps, means for rotatably mounting a film on the carrier, claws slidably mounted on the carrier for feeding the film longitudinally, a crank shaft supported on the film carrier reciprocating the film-moving claws, a cam shaft on the main frame, a cam thereon operating to protrude the claws through slots in the film carrier during their travel in one direction, means for withdrawing the claws from the slots and means operated by the lateral movement of the film carrier for reversing the film feed by altering the time of cam operation in relation to the period of claw reciprocation, substantially as specified.

1,455,767. WIRELESS RECEIVING SYSTEM. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1921. Serial No. 526,132. 21 Claims. (Cl. 250—20.)

1. In an electrical system, a regenerative feed-back system adapted to generate continuous oscillations upon an unbalancing of the same and thermally-responsive means associated therewith for causing said system to oscillate intermittently.

1,455,768. WIRELESS RECEIVING SYSTEM. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1922. Serial No. 530,615. 19 Claims. (Cl. 250—20.)

1. An electrical system having a high negative damping effect tending to cause said system to function as an oscillation generator, means tending to periodically introduce a blocking effect, means associated with said system carrying currents to be detected and means for modulating said blocking effect in accordance with the intensity of said currents.

Patents Nos. 1,455,769 to 1,456,495.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 310—No. 4. TUESDAY, MAY 22, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Amendment to Trade-Mark Rules.

(ORDER No. 2,815.)

U. S. PATENT OFFICE, *Washington, May 5, 1923.*

Acting under the provisions of section 26 of the act approved February 20, 1905, the rules of the Patent Office governing the registration of trade-marks are amended as follows:

Rule 28, cancel "or for renewal of registration of a trade-mark," lines 1 and 2, and at the end of the rule add: *Such an applicant for renewal of a trade-mark must file such a designation in writing.*

Rule 59, in each of lines 3 and 4, cancel "or registrant."

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Apr. 27, 1923.*

James P. Williams, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Paragon Electric Company, 329 East Fifth Street, New York, N. Y., for registration of a trade-mark and trade-mark registered January 31, 1899, No. 32,456, to James P. Williams, 39 and 41 Cortlandt Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Williams at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Williams, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 28, 1923.*

The Avery Stamping Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Baldwin Tool Works, Parkersburg, W. Va., for registration of a trade-mark and trade-mark registered January 23, 1906, No. 49,168, to The Avery Stamping Company, corner of Coe and Hamilton Streets, Cleveland, Ohio, and a notice of such declaration sent by registered mail to said The Avery Stamping Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Avery Stamping Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 26, 1923.*

Mary A. Morgan, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of the Windsor Soap Co., Inc., 963 William Street, Buffalo, N. Y., and The Van Camp Packing Company, Inc. of Lemcke Annex Building, Indianapolis, Ind., for registration of a trade-mark and trade-mark registered January 22, 1901, No. 35,817, to Mary A. Morgan, 1330 Dorchester Avenue, Boston, Mass., and a notice of such declaration sent by registered mail to said Morgan at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Morgan, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 30, 1923.*

Haight Fruit Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Llewellyn A. Banks, of 108 West Second Street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered January 14, 1896, No. 27,647, to Haight Fruit Co., of Redlands, Calif., and the Office having been unable to obtain service on said Haight Fruit Co., notice is hereby given that unless said Haight Fruit Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Condition of Applications Under Examination at Close of Business May 11, 1923.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 73,673: Trade-Mark Division, 3,962. Oldest new case, May 12, 1922; oldest amended, May 16, 1922. The dates given are 1922 except where * indicates 1923.) Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Aug. 11	July 11	1,191
128	2. HADEN, C. F. (Acting), Bee Culture; Dairy; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	July 10	July 25	1,564
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	May 17	May 19	1,767
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Heist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Aug. 5	*Jan. 26	1,418
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	May 22	July 8	1,358
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Medicines; Plastic Compositions; Substance Preparation.	Sept. 7	*Jan. 8	1,613
312	7. JARBOE, C. G., Games and Toys; Optics; Photography	July 28	Oct. 2	2,511
133	8. CLIFT, J. W., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Nov. 27	*Jan. 22	1,529
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Aug. 7	*Apr. 11	840
235	10. MITCHELL, T. H., Land Vehicles: Land Vehicles, Animal Draft Appliances; Land Vehicles—Bodies and Tops; Land Vehicles—Dumping; Land Vehicles, Wheel Substitutes; Motor Vehicles.	July 29	July 8	1,379
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggins; Button, Eyelet, and Rivet Setting; Harness; Hides, Skin, and Leather; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Oct. 31	Nov. 7	1,032
322	12. PIERCE, P. P., Machine Elements	Sept. 22	Nov. 13	1,518
329	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	June 8	*Feb. 12	1,316
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	May 13	*Apr. 11	1,208
308	15. REDROW, W. L., Glass; Laminated Fabric and Analogous Manufactures; Paper Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 24	Aug. 30	2,011
112	16. BACKUS, C. D., Radiant Energy Telegraphy; Telephony	June 20	July 1	2,490

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

VANDENBURGH *v.* TRUSCON STEEL COMPANY.

Decided February 19, 1923.

1. REISSUE—DELAY—BROADENED CLAIMS.

Where the specification of an original patent left no doubt that the patentee used a limiting word in his claims deliberately and properly because his device, as he portrayed it, required the limitation, a reissue, with the limitation removed, granted nine years after the grant of the original patent as the result of an afterthought to catch makers who had not been advised in his specification that there was anything covering their structure in his formation was in the teeth of the admonitions of the Supreme Court in *Miller* v. *Brass Co.* (104 U. S.), and the broadened claims were held to be void.

2. CLAIMS—CONSTRUCTION OF—LIMITATIONS OBVIOUS ON CONSIDERATION OF SPECIFICATION AND DRAWINGS—INFRINGEMENT.

Where a claim calls for "a reinforcing bar" and the patentee relies on one figure of the patent, which is only a detail of another figure, which latter shows a single reinforcing bar, and the device shown in the first-named figure was intended to be a lighter construction of the same device as that shown in the second, and it is obvious from the description and source of the claims that the structure was intended to be free of all but one bar, and where the only figure showing two bars discloses a structure which is an application of the device to a different use, *Held* that the combination must be limited to a device with one bar or support and that the patentee can not properly say that to add another bar is only the work of a mechanic.

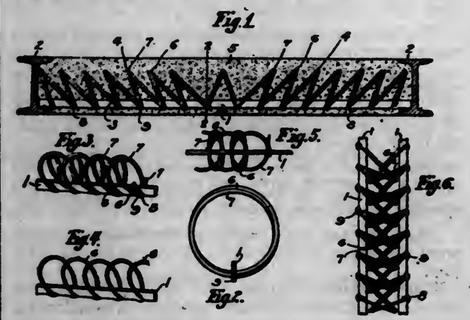
3. INVENTION—TRANSFER OF A DEVICE FROM ONE BRANCH OF INDUSTRY TO ANOTHER—ANALOGOUS USE.

Where the problem was only one of spacing firmly the convolutions of a metal spiral and the use of a kerf and spur for this purpose was old in the metal art, *Held* that the introduction of this expedient into the field of concrete reinforcing did not present a case in which the principle of *Potts* v. *Creager* (155 U. S., 597) applies.

CERTIORARI to the Circuit Court of Appeals for the Sixth Circuit.

STATEMENT OF THE CASE.

This was a bill in equity by Vandenburgh praying an injunction and accounting for the infringement of a patent granted him January 22, 1907, No. 841,741, and reissued to him August 15, 1916. Reissue No. 14,182. The patent is for a reinforcing bar to be used in concrete construction.



The patent since reissue has been the subject of litigation in the second, third and sixth circuits. In all the circuits, the first and second claims of the reissue have been held void because too broad and because secured nine years after the original issue for the purpose of covering intervening devices. In the second circuit, Judge Hough, sitting on the district court, found that claim 3 must be so narrowly construed that defendant's device did not infringe. The circuit court of appeals sustained the third claim and found infringement, reversing the district court's decree and sent the case back for assessment of profit swhich have been found to be about $15,000.00.

In the third circuit, Judge Orr found claim No. 3 invalid for lack of invention. The circuit court of appeals sustained the decree of dismissal by the district court, but on the ground of noninfringement.

In the sixth circuit Judge Westenhaver took the same view as Judge Orr and dismissed the bill. The circuit court of appeals affirmed the action of the district court on the ground that if valid, claim No. 3 must be so narrowly construed that the defendant did not infringe.

The drawings accompanying the specifications of the patent are the same in the reissue and appear below:

Fig. 1.

The specifications say:

The invention has for an object to provide a reinforcing-bar with one or more spirally-disposed coils secured to the bar so as to provide an extended area of contact adapted to resist strain longitudinally and laterally of the bar and to form a truss within the body of concrete or other plaster material which provides the maximum of supporting strength in the arch or surface to be formed.

Other and further objects and advantages of the invention will be hereinafter set forth, and the novel features thereof defined by the appended claims.

In the drawings, Figure 1 is a vertical section showing the bar applied to supporting girders or beams. Figure 2 is an enlarged vertical section on the line 2—2, Fig. 1. Fig. 3 is a detailed perspective of the primary and secondary coils shown in Fig. 1. Fig. 4 is a similar view of a modified form using one coil. Fig. 5 is a detailed plan of the form shown in Fig. 3, and Fig. 6 is an elevation of the two meshing coils used for girder and column construction.

* * * * * * *

The bar may be provided with a primary coil 6, extending in one direction, as shown in Fig. 4, which is sufficient in light construction; but when a heavier construction is to be used a secondary coil 7 is provided which extends in the opposite direction to the coil 6 and through the same so as to cross beneath the coil 6 at a point directly above the bar, thus providing a construction in which all lateral pull or strain of the coil is avoided, owing to the equalization thereof by the oppositely-extending coils and the tendency of the coils to move or flatten toward the face of the bar resisted. This preferred construction is shown in Figs. 1 and 3, and it is also desirable that both of the coils be deflected away from the center of the bar, as shown in Fig. 1, as the greatest supporting strain carried by the arch is at the center thereof, and this deflection therefore resists such strain and tends to draw the coils upward into a position at right angles to the bar.

As a preferred means of securing the coils to the bar I have shown a series of kerfs 8 in one face of the bar inclined away from the center of the bar toward the opposite ends thereof, and the coils are seated within these kerfs and held therein by means of the integral spurs 9, which are forced downward upon the coils when inserted and permanently retain them in position.

In Fig. 6 a modified application of the invention is shown where two of the bars are disposed parallel to each other, with their coils intermeshing; for use in column or girder construction, wherein such a construction provides the maximum of strength with the minimum of weight in the reinforcing material.

In the operation of the invention it will be seen that the bar supporting the coil resists any movement thereof longitudinally of the bar and provides the necessary strength upon which the truss structure formed by the coils is carried.

The first four claims of the original patent were as follows:

1. In a reinforcing bar, a spiral coil rigidly secured thereto at two points in each convolution thereof and extended beyond and free of said bar at the opposite side therefrom to the securing-point.

2. In a reinforcing-bar, a spiral coil rigidly secured thereto at two points in each convolution thereof and extended beyond and free of said bar at the opposite side therefrom to the securing-point, said coils being deflected in opposite directions from the center of the bar toward the ends thereof.

3. A reinforcing-bar provided upon one end with a series of kerfs each having an integral overlapping spur, and a coil disposed in said kerfs, each convolution thereof being retained beneath one of said spurs.

4. A reinforcing-bar provided upon one edge with a series of kerfs disposed diagonally to the length of the bar each having an overlapping integral spur projected toward the center of the bar, and a coil disposed in said kerfs and retained beneath said spurs.

The first and second claims of the reissued patent were as follows:

1. A concrete reinforcing consisting of a bar having a plurality of integral spurs, and a spiral coil permanently secured thereto by having the spurs bent down on the several coils, the coils extending beyond and free of the bar at the opposite side therefrom to the securing point.

2. A concrete reinforcing consisting of a bar having integral means to secure a coil thereto, and a spiral coil permanently secured to the bar in each convolution and extended beyond and free of said bar at the opposite side therefrom to the securing point.

The third and fifth claims of the reissued patent were the same as the third and fourth of the original.

The defendant makes and sells a collapsible spiral, or cylindrical helix used in strengthening concrete columns or pillars. It consists of a cylindrical spiral of steel wire fitted to two T bars or spacers. Each convolution of the spiral engages the leg or outside edge of the T spacers at regular intervals. The engagement is loose fitting so that this construction which is normally stove pipe shaped can be made flat for shipment by moving the metal rods or spacers longitudinally in opposite directions. The method by which the spiral is attached to the spacer bar is a rectangular notch in the edge of the T bar, with one or both corners peened or hammered down so as to retain and loosely hold the spiral. This is said to infringe the claims of plaintiff's reissued patent Nos. 1 and 2 and also claims 3 and 5 which were in the reissue as in the original patent, except that in claim 3 the word end was changed to edge to correct an obvious error.

Mr. Carlos P. Griffin for the petitioner.

Mr. W. F. Guthrie for the respondent.

Mr. Chief Justice TAFT, after stating the case as above, delivered the opinion of the Court.

The expansion and improvement of the art of reinforcing concrete began several decades ago. There were two different needs, one was for strengthening concrete beams and the other for strengthening concrete columns. The term reinforcing bar is usually applied in the art to a rod or bar used to reinforce a concrete beam against the tension longitudinal of the beam itself. The concrete itself has great power of resisting compression, but it has not tensile strength and its weakness manifests itself in cracking along the lower half of the beam. A steel bar placed below the middle of the beam furnishes the useful tensile resistance. But it was found that certain diagonal cracks developed in the beam toward the respective ends of the beam and it was sought to prevent these by minor auxiliary rods attached to the main reinforcing bar. This was the field which Vandenburgh entered and devised an arrangement, shown in Figure 1 of his drawings, of a reinforcing bar embedded in the lower part of the beam with transverse loops or spirals, part on one side of the center of the bar and part on the other and fitted rigidly into the bar so that those on each side leaned at an angle away from the center and in an opposite inclination from those on the other. In strong construction, these spiral loops were doubled by a second spiral which meshed with the first. Now, as the specifications show, this arrangement of the bar and opposing spirals was to apply the truss principle to the strengthening of the beam and to give it the tensional resistance along the lower part of the beam and against the diagonal tensions near the ends of the beam. No one can read the specifications and examine the drawings without perceiving that this was the gist of the Vandenburgh invention. Reference is made to the use of the plan for column construction, but the only use of it for that purpose is shown in Figure 6, which discloses two upright reinforcing bars with their spirals meshing but connected in no other way.

The truss formation was not especially adapted to the needs and strains of the concrete column. The history of that field in the art shows that one of the pioneers was a Frenchman named Considere, who some years before the plaintiff's patent had shown that the tendency of concrete in a column was to expand outwardly under the vertical pressure to which it was chiefly exposed and the best way of reinforcing columns was by pouring the liquid concrete into a hooping made of a series of independent hoops, or into a continuous helicoidal spiral or cylindrical helix of a steel wire or rod, of a stovepipe form. After him, column hooping became common in the art as the only practical method of column reinforcing and the convolutions of the spiral were spaced and supported by steel uprights with which they engaged in various ways. In one French patent, the convolutions were tied with steel wire to the spacers. It is the form of this engagement between the uprights and the spirals which is the crux of the present suit.

[1] The preferred form of Vandenburgh for the engagement between his reinforcing bar and the spiral loops of his truss arrangement is by a kerf or cut in the edge of bar inclined away from its center in which the coil rod is placed and held therein by an integral spur forced downward upon the coil when inserted, which permanently retains it in position. The defendant has a rectangular cut in the edge of the T spacer or upright and retains the spiral rod in it by peening or hammering down the edges of the cut so as to keep the rod from slipping out, but leaving play enough to permit the collapsing of the spiral and shipment in its collapsed form. Others had adopted a similar form of engagement. Observing this, Vandenburgh who had not used or exploited his original patent in any way, went back to the Patent Office and secured a reissue in which he was permitted to broaden his first and second claims with respect to the kerfs and spurs so as to change the word "rigidly" used in the original claim to "permanently." Having done this, he proceeded to sue in the second, third and sixth circuits persons using what he insisted were equivalents of his form of engagement in their column-hooping reinforcement of concrete columns. All the courts, and there are six of them, have held these changed claims of the reissued patent to be void and to give him no right to claim infringement in the collapsible feature of the column hooping. The original specifications leave no doubt that the patentee used the word "rigidly" deliberately and properly because his truss, as he portrayed it, required rigid connection between the spiral loops and the main reinforcing bar. His making his form of engagement loose was an afterthought to catch makers who had not been advised in his specifications that there was anything collapsible in his truss formation. The reissue as to the first two claims was in the teeth of the admonitions of this Court speaking through Mr. Justice Bradley in *Miller* v. *Brass Company* (104 U. S., 350; 21 O. G., 201). They are therefore void.

[2] Counsel for the patentee say now that the collapsible feature was only an incidental matter, and that what they now rely on is the combination under claims 3 and 5 of the reinforcing bar provided upon one edge with a series of kerfs each having an integral overlapping spur and a coil convolution thereof being beneath one of the spurs. We do not think the respondent has this combination. We think the patentee's combination must be limited to a spiral with one bar in the truss formation, or at least one in which the spiral is free at one end and has no second support or spacer such as respondent uses. Patentee relies on Fig. 4 of his drawing and says that to add another spacer or bar is only the work of a mechanic; but he can not properly say so because Fig. 4 is only a detail of Fig. 1 of the drawings and was intended to be a lighter construction of the same beam with the same truss combination as shown in Fig. 1. Moreover, it is perfectly obvious from the description and some of the claims that the spiral of Vandenburgh was intended to be free of all but the bar shown. This is made certain by Fig. 6 which is the only application of the device to column use shown and in that we have two bars standing upright each engaged with convolutions of a spiral, the loops of each spiral meshing with those of the other spiral but free of the other bar. It is clear to us that Vandenburgh having secured a patent for a truss form of reinforcement and finding it unworkable, for it never has been adopted in the trade or in any structure, is through reissue seeking to expand the paper combination he claims into a field in which it does not belong.

[3] But it is insisted that Vandenburgh was the first to introduce into the field of concrete reinforcing the kerf and integral spur to clamp the spiral rod, that this involved invention, and that claim No. 3 should be construed to secure him a reward for this. It may be true that in the field of reinforcing concrete the kerf and spur had not been used before as Vandenburgh used it, but the kerf and spur were old in the art in kindred fields. They were old in metal-working art. Exactly the equivalent is shown in sand screens for mixing the materials of concrete and in sustaining fence wires. It is difficult to differentiate the field of metal working from this art of reinforcing concrete because the problem was only one of spacing firmly the convolutions of the metal spiral and that was a well known device for such a need. We do not think the principle of *Potts* v. *Creager* (155 U. S., 597; 70 O. G., 494) applies in this case. More than this in the very field itself, there was a prior German patent of Kesserling & Moller showing the use of the kerf for spacing a spiral in reinforcing concrete. It does not seem to us that it involved real invention merely to add a spur or clamp or to peen or hammer down the edges of the kerf so as to fix the spiral rod firmly. We find therefore that claims 3 and 5 were without merit as involving invention and that the action of the circuit court of appeals should be affirmed.

CONCRETE STEEL CO. *v.* VANDENBURGH.

Decided February 19, 1923.

CERTIORARI to the Circuit Court of Appeals for the Second Circuit.

Mr. Thomas J. Johnston, *Mr. L. E. Varney*, and *Mr. W. F. Guthrie* for the petitioner.

Mr. Carlos P. Griffin, *Mr. O. Ellery Edwards*, and *Mr. Joseph W. Cox* for the respondent.

Mr. Chief Justice TAFT delivered the opinion of the Court.

This is a review of the decree of the Circuit Court of Appeals of the Second Circuit sustaining the validity of claim No. 3 of the Vandenburgh patent, just considered in the previous case of *Vandenburgh* v. *Truscon Steel Company*, and awarding $15,000 for profits to Vandenburgh for defendant's infringement. The two cases can not be distinguished. We must, therefore, reverse the decree of the Circuit Court of Appeals of the Second Circuit and direct the dismissal of the bill.

Reversed.
